Upanishads of the Krishna Yajur Veda

Dedication:	Page 5
Indroduction:	Page 6 - 10
Preface:	Page 11 - 27
Chapter no. 1— Kathavalli/Kathopanishad	Page 28 - 116
Chapter no. 2— Taittiriya Upanishad	Page 116 - 217
Chapter no. 3— Brahm Upanishad/Brahmo-panishad	Page 217 - 236
Chapter no. 4— Kaivalya Upanishad/Kaivalyo-panishad	Page 236 - 254
Chapter no. 5— Shwetashwatar Upanishad/Shwetashwataro-panishad	Page 254 - 336
Chapter no. 6— Garbha Upanishad/Garbho-panishad	Page 336 - 356
Chapter no. 7— Narayan Upanishad/Narayano-panishad	Page 356 - 370
Chapter no. 8— Amrit Bindu Upanishad/Brahm Bindu Upanishad	Page 370 - 389
Chapter no. 9— Amrit Naad Upanishad/Amritnaado-panishad	Page 390 - 414
Chapter no. 10— Kalagni Rudra Upanishad/Kalagnirudro-panishad	Page 414 - 421
Chapter no. 11— Kshurika Upanishad/Kshuriko-panishad	Page 421 - 433
Chapter no. 12— Sarwasaar Upanishad/Sarwasaaro-panishad	Page 434 - 457
Chapter no. 13— Shuka Rahasya Upanishad/Shuka-Rahasyo-panishad	Page 457 - 490
Chapter no. 14— Tejobindu Upanishad	Page 491 - 650
Chapter no. 15— Dhyan Bindu Upanishad/Dhyanbindu-panishad	Page 651 - 717
Chapter no. 16— Brahm Vidya Upanishad/Brahmvidyo-panishad	Page 717 - 773
Chapter no. 17— Yogtattva Upanishad/Yogtattvo-panishad	Page 774 - 820
Chapter no. 18— Dakshin Murti Upanishad	Page 820 - 839

Chapter no. 19— Skanda Upanishad/Skando-panishad	Page 839 - 849
Chapter no. 20— Shaarirak Upanishad/Shaarirko-panishad	Page 850 - 880
Chapter no. 21— Yogshikha Upanishad/Yogshikho-panishad	Page 881 - 1040
Chapter no. 22— Ekakchar Upanishad/Ekakcharo-panishad	Page 1040 - 1050
Chapter no. 23— Akchi Upanishad/Akchyu-panishad	Page 1050 - 1072
Chapter no. 24— Avadhuta Upanishad	Page 1072 - 1094
Chapter no. 25— Kath-rudra Upanishad/Kathrudro-panishad	Page 1095 - 1131
Chapter no. 26— Rudra Hridaya Upanishad	Page 1131 - 1163
Chapter no. 27— Yog Kundali Upanishad/Yogkundalyu-panishad	Page 1163 - 1218
Chapter no. 28— Pancha Brahm Upanishad/Panchbrahmo-panishad	Page 1218 - 1251
Chapter no. 29— Pran Agnihotra Upanishad/Pranagnihotro-panishad	Page 1252 - 1276
Chapter no. 30— Varaaha Upanishad/Varaaho-panishad	Page 1277 - 1415
Chapter no. 31— Kalisantaran Upanishad/Kalisantarno-panishad	Page 1416 - 1424
Chapter no. 32— Saraswati Rahasya Upanishad/Saraswahirahasyo-panishad	Page 1424 - 1453
Appendix no. 1— Shanti Paath	Page 1454
Appendix no. 2— Rudra Upanishad/Rudro-panishad	Page 1455
Appendix no. 3— Vishnu Sukta	Page 1461
Appendix no. 4— Narayan Sukta	Page 1464
Appendix no. 5— Krishi Sukta	Page 1468
Appendix no. 6— References to Books that explain various Concepts & Terms appearing in the main text of the Upanishads	Page 1470
About the Author—	Page 1472
Diagrams/Sketches explaining certain concepts of the Upanishads	Page

To My Most Beloved Lord Ram

A humble word of dedication

No creature is perfect; it's foolhardy to claim so. The best of paintings cannot replace the original; the best of words cannot express the original emotions and sentiments. Even the Lord was not satisfied by one flower or one butterfly—he went on endlessly evolving and designing newer forms. So, I have done my best, I have poured out my being in these books. Honestly, I am totally incompetent— it was the Lord who had done the actual writing and had moved my fingers as if they were merely an instrument in his divine hands. But nonetheless, it's a tribute to the Lord's glory that he does not take the credit himself, but bestows it to them whom he loves as his very own. And to be his very own is indeed an unmatched honour. However, I still beg forgiveness for all omissions, commissions and transgressions on my part that I may have inadvertently made. It's the Lord's glories that I sing, rejoice in, write on and think of to the best of my ability. I hope my readers will also absorb the divine fragrance effusing from the flowers representing the Lord's books, enjoy the ambrosia pouring out of them and marvel at the Lord's stupendous glories.

I submit this effort at the Lord's holy feet, and finding no words to express my profound gratitude to him, I just wish to remain quiet, and let my silence do the speaking and praying on my behalf.

Finally, I pay my greatest obeisance to Hanuman, the enlightened devotee of Lord Ram, whom I regard as my Guru (a spiritual guide), without whose blessings this effort would not have borne fruit.

Anthology of all the Principal Upanishads of the Krishna Yajur Veda

Introduction

Yajur Veda (Chapter 32)

The hymns of the thirty second Chapter of the Yajur Veda are dedicated in the honour of the Supreme Being. Their Rishis (the sages or seers who first conceived or visualized them) are Brahma Swayambhu (the self-born creator)—verse nos. 1-12, Medhaakaam—verse nos. 13-15, and Srikaam—verse no. 16.

The different Devtas (deities of the hymns) are the following—Atma (consciousness; the ‘self’)—verse nos. 1-12; Sadasampati—verse no. 13; Agni (Fire God)—verse no. 14; Varun (Water God)—verse no. 15; and Sri Mantrokta—verse no. 16.

32/1. The all-pervading and omnipresent Supreme Being is the self-illuminated and self-born Prajapati, the guardian of creation. It is he who is revealed in the form of the Fire that gives light to and illuminates all the directions; it is he who is revealed as Aditya that shines as the splendorous and brilliant Sun; it is he who is revealed as the all-pervading and omnipresent Vayu (vital winds that infuse and sustain life in this creation); it is he who is revealed as the pleasant and pleasing Moon; it is he who is revealed as the radiant and glorious Shukra (sperm, the spark of life); it is he who is the best and the most exalted entity in creation; it is he who is known as Brahm who shows the best path to all the creatures; it is he who is revealed as water that is present in some form or the other in all forms of life that exist (because without water there would be no life); and it is he who is the sustainer and protector of all the subjects of creation (32/1).

32/2. All the dimensions of time and space are created by the Supreme Being who is all-pervading and omnipresent as well as most splendorous, radiant, glorious and magnificent. No one can measure or even touch (i.e. know, understand or comprehend) this Supreme Being from any side, whether it is from the top, from the sides, or from the center (32/2).

32/3. The Supreme Being is honoured by the Mantras such as ‘Hiranyagarbha’¹ (Yajur Veda, 25/10), ‘Yasmaanna Jaataha’² (Yajur Veda, 8/36) and ‘Ma Ma Hinseet’³ (Yajur Veda, 12/102). His glorious name and fame are stupendous, astounding and majestic. Such a divine and magnificent Lord is beyond any the scope of any known fixed standards and neither does he conform to any prototypes. He is unparalleled and unique, and therefore has no shadow or reflection which is even remotely like him (32/3).

[Note—¹Hiranyagarbha—The primordial golden egg from which the entire creation evolved.

² Yasmaanna Jaataha—The Lord from whom no one is better, more exalted and superior.

³ Ma Ma Hinseet—That Lord who is the Supreme Being in creation.]

32/4. The Supreme Being permeates uniformly in all the directions and corners of this creation. He is present in all the creatures who have already taken birth as well as those who are yet in the mother's womb and contemplating to take birth. He is the one who takes a birth, and thereafter repeatedly takes one birth after another in the future. It is he who pervades the present time as well (32/4).

[Note—The Lord is present here and now in this world. He uniformly pervades in all the dimensions of time and space—whether it relates to the past, the present or the future. One need not search the Lord in the past as history, or wait for him to reveal himself in some date in the future. The supreme Lord is present all around us in visible as well as invisible form, in every nook and corner of creation in all imaginable forms. What is needed to 'see and witness' him is the proper instrument for such divine vision—which is of the eye of wisdom, erudition and enlightenment. Since he is not a gross thing like other things of this mortal world, he cannot be seen with the gross eyes of the body which can see only things that have a gross existence.]

32/5. The Supreme Being alone pervades in all the Bhuvans (worlds). Nothing was created before him. This creator called Prajapati lives with his subjects in the creation, and he is endowed with all the sixteen Kalaas (qualities, attributes and virtues; parts and aspects) that are discernible in this visible world. He also bears the source of the three types of illumination in creation. [These three sources of illumination are the sun, the fire and the electric.] (32/5).

32/6. The Supreme Being has made the heavens majestic, glorious and radiant. He has made the earth like a solid foundation and endowed it with all the necessities of life to make it enjoyable, pleasant to live, hospitable and inhabitable so that the creatures who would come to live in it would live happily and comfortably. He has established and provided stability to the sun and the heavens. He has created countless worlds in the vast space of the sky. We cheerfully and with great devotion offer our worship, pay our obeisance and make our offerings to that Supreme Being who sits in a magnificent heavenly vehicle¹. Who else can we pray to; who else should we pray to? (32/6).

[Note--¹This has reference to the Sun who rides on a glorious and splendourous chariot pulled by seven magnificent horses symbolising the seven colours of the spectrum as he moves across the sky from the east to the west. Many Upanishads have asserted that the Sun is the most evident and glorious manifestation of the supreme transcendental Brahm as it represents the latter's stupendous splendour, radiance, vibrancy, life-bearing potentials, the power to annihilate if the need arises, and the dynamic energy and powers that keep the wheel of creation rotating smoothly.]

32/7. The Supreme Being provides sustenance and protection to all the creatures by the way of nutrients present in the nourishing products (food and drink) created by him for their benefit in the world. He is subtly observed and subtly perceived everywhere in the heavens as well as on the earth by those who are wise and

enlightened. He is the one in whom the sun rises and shines¹. We honour and offer worship to this Supreme Being who is an embodiment of bliss and happiness. That Supreme Being is described in detail in the two Mantras ‘Aapo Ha Yad Brihati’² (Yajur Veda, 27/25) and ‘Yaschidaapaha’³ (Yajur Veda, 27/26) (32/7).

[Note—¹This is obvious because the ‘sky’, where the sun rises and sets, is regarded as the nearest analogue for Brahm. The sky has numerous attributes and qualities typical of Brahm—such as being vast, measureless, fathomless, infinite, colourless, taintless, uniform, all-pervading, all-encompassing, omnipresent and incorporating everything in existence within its outer limit for nothing exists outside the periphery of the sky.

²Aapo Ha Yad Brihati—The Lord who is like the great ocean of water that first appeared on the surface of the earth at the beginning of creation.

³Yaschidaapaha—The Supreme Being observed water all around him as a vast endless ocean. (He then ordained the creator called Daksha Prajapati—literally, the creator who was an expert in the art of creation—to create the subjects of this earth who would do fire sacrifices and perform other religious ceremonies.)]

32/8. Those who are wise, erudite and learned see the eternal and universal presence of the Supreme Being in all the things of this creation in a concealed, latent or subtle form. They recognise him as the divine one who is eternal, immanent, immutable and omnipresent as well as is the sustainer, protector and a giver of shelter, solace and succour to the entire creation. He pervades uniformly and universally in all the subjects of the creation (as the pure consciousness or Atma as well as the vital winds called Pran). It is in him that the entire creation would collapse and merge (dissolve) at the time of conclusion, and it is from him that it would be born again in the new phase of creation (32/8).

32/9. Only those who are wise, realised, enlightened and aware of the esoteric secrets of the transcendental are able to throw light on the sublime truth of that absolute Supreme Being who is like the eternal fount of elixir known as Amrit; only they can unravel the secrets of the Amrit because they have tasted the nectar themselves. This nectar-like divine entity is as unknown as the secrets hidden in a deep cave in the city of Gandharvas. [The Gandharvas are celestial musicians and their city is regarded as very attractive but illusive; it is impossible to know the reality of the magical world they create. The analogy here means that the Supreme Being is almost impossible to be comprehended except by those who are very wise, expert and enlightened.]

The honourable Supreme Being is illuminated (i.e. highlighted and made known) only by the intellectual mind (i.e. by ‘Gyan’—by wisdom, erudition, sagacity and knowledge of the reality and truth).

A wise and enlightened man who reverentially accepts and gratefully welcomes the transcendental supreme Brahm, enshrining his three august ‘Pada’¹ (literally, the holy feet) in his own self (i.e. in his heart), such a man indeed becomes a most honourable and exalted being who is regarded as the sustainer and protector of even those who are themselves capable of sustaining and protecting others (32/9).

[Note--¹The word *Pada* literally means ‘feet or steps’. Here the term implies the three glorious and divine attributes, qualities and virtues of the Supreme Being—which are ‘Sat’ or truth, ‘Chit’ or consciousness, and ‘Anand’ or blissfulness. Any spiritual aspirant who imbibes or cultivates these noble and auspicious virtues in himself would obviously become equivalent to the Lord who possesses these eclectic divine virtues.]

32/10. The Supreme Being who uniformly pervades in the third abode (i.e. the heaven in the physical plane, and the Sushupta or deep sleep state of consciousness at the subtle plane) where those who are wise, erudite, self-realised and enlightened find an easy access and freely roam about is a universal friend of all. That Lord is the creator of all as well as the sustainer, nourisher and protector of all. He knows everything in all the worlds; he knows everything about all the inhabitants of these worlds (i.e. he is omniscient and all-knowing; nothing is hidden from him) (32/10).

32/11. When those who are truly wise and learned understand the reality of everything in existence—of all the creatures, all the created worlds, all the directions and all the corners of the creation, when they honour and pay their homage to the sublime and transcendental Divinity known as the Absolute Truth which is eternal, primeval, perpetual and infinite (i.e. the supreme Brahm) by offering prayers to it, admiring it and worshipping it with devotion, verily then such persons are able to merge their own Atma (their own ‘self’) with the supreme Atma of creation (the supreme Brahm) (32/11).

32/12. When those who are self-realised, wise and enlightened become aware of the ‘truth and reality’ behind everything in existence, stretching from the sky to the earth, such as all the material things and the sense objects of this world, all the different worlds that are in existence, and all the directions of creation—besides realising the stupendous glories, powers and authority of the Atma (pure consciousness)—it is then that they experience and become aware of the presence of the Supreme Being (the supreme transcendental Brahm) in a sublime, subtle and divine form of the Absolute Truth that is irrefutable, immutable, indivisible, unwavering and unequivocal.

This realisation makes them aware of their original divine and eclectic form in which they had been before they were sucked into the quagmire of delusions and faults associated with ignorance of this fundamental spiritual truth. [That is, they realise that they are the same Brahm that is Truth personified, and that they have forgotten their auspicious and noble heritage to become an ordinary creature who is mired in countless miseries, confusions, perplexities and consternations that are caused by delusions that are the hallmark of this artificial creation.] (32/12).

32/13. We humbly pray to the Lord of the world who is worthy of being welcomed and accepted. The Lord is a friend, ally and supporter of the exceptional and wonderful king of Gods called Indra. He is honoured and welcomed by us for providing us with wealth and prosperity that are worthy for us and meant for our use. He is honoured and welcome by us for bestowing us with the best of wisdom, erudition, sagacity and intellect. We offer this oblation to him for this purpose (32/13).

32/14. Oh Fire God! Please bless us with eclectic wisdom and the finest of intellect that are so much desired and sought after by the Gods as well as the Pittars (spirits of dead ancestors who have become semi-gods) so that we become wise, sagacious, intelligent, clever, prudent, scholarly and learned. We offer this oblation to him for this purpose (32/14).

32/15. Oh Varun God (the deity of water; also the Sun)! Oh Agni God (the Fire God) who is the sustainer and protector of the subjects of creation! Oh Indra (king of gods and of the rain-bearing clouds) and oh Vayu God (the Wind God)! Oh the supreme

Creator! Please bless us with the best of wisdom, erudition, sagacity, intelligence, prudence, scholarship and knowledge. We offer this oblation to you all for this purpose (32/15).

32/16. Oh Gods! Please enhance and firmly establish in us the strength of Gyan (wisdom, enlightenment, knowledge, erudition, sagacity and skills) and Kshetra (the physical strength of arms and body as a whole, implying a healthy, strong and robust body). Let us have these two magnificent glories and achieve fame and majesty due to them. We offer this oblation to you all for this purpose (32/16).

Anthology of all the Principal Upanishads of the Krishna Yajur Veda

Preface

‘That which is wisdom, intelligence and steadfastness, that which is the inner immortal light within all living beings, that without which no action is performed—may that, my mind, will for me what is good’ (Yajur Veda, 34.3).

‘It is most important to note that even the wisest of Guru is not able to impart knowledge without the help of scriptures; therefore it is imperative for a wise student or disciple to have direct access to the scriptures. Since no knowledge is available and sustainable without the scriptures, it is of utmost importance to have knowledge of the scriptures. Therefore the aspirant should diligently and sincerely search for the scriptures everywhere in this world even if it involves going to far off places in search of them. When truthful scriptures are accessed and studied thoroughly and implemented in life, spiritual success and its attendant rewards are available very soon. Success and accomplishment in any field, let alone spiritual practice, is not possible in the entire world without a thorough study and implementation of the various principles and doctrines expounded by the scriptures’. [Yog Kundalini Upanishad, Canto 2, verse nos. 10-12.]

‘Then said I, Wisdom is better than strength: nevertheless the poor man’s wisdom is despised, and his words are not heard’ (the Book of Ecclesiastes, 9/16, the Old Testament of the Holy Bible). ‘Now therefore, if you will indeed obey My voice and keep my covenant, then you shall be a special treasure to Me above all people, for all the earth is mine’ (the Book of Exodus, 19/5, the Old Testament, Holy Bible); then ‘I will certainly be with you’ (the Book of Exodus, 3/12, the Old Testament, Holy Bible).

‘This is the scripture whereof there is no doubt, a guidance unto those who ward off (evil); Who believeth in the unseen, and establish worship, and spend of that We have bestowed upon them; These depend on guidance from their Lord. These are the successful.’ (the Holy Quran, Surah ii, verse nos. 2-5). ‘And believe in that which I reveal---and part not with my revelations for a trifling price, and keep your duty unto Me; Confound not the Truth with falsehood, not knowingly conceal the Truth’ (the Holy Quran, Surah ii, verse nos. 21-42). ‘Read: And thy Lord is the most bounteous; Who teacheth by the pen; Teacheth man that which he knew not’ (the Holy Quran, Surah xcvi, verse nos. 3-5).

The present volume contains all the thirty two Upanishads of the Krishna Yajur Veda. The sequence in which they appear in this volume follows the true Vedic tradition as laid down by one of the major Upanishads, viz. the ‘Muktikopanishad’, in its Canto 1, verse no. 55. It says—

_____ कठवल्लीतैत्तिरीयकब्रह्मकैवल्यश्वेताश्वतरगर्भनारायणामृतबिन्दुमृतनादकालाग्निरुद्रक्षुरिकासर्वसार—
शुकरहस्यतेजोबिन्दुध्यानबिन्दुब्रह्मविद्यायोगतत्त्वदक्षिणामूर्तिस्कन्दशारीरकयोगशिखैकाक्षराक्षयवधूत—

कठरुद्रहृदययोगकुण्डलिनीपञ्चब्रह्मप्राणाग्निहोत्रवराहकलिसंतरणसरस्वतीरहस्यामां—
कृष्णयजुर्वेदगतानां द्वात्रिंशत्संख्याकानामुपनिषदां स ह नाववत्विति शान्तिः ॥५५॥

There are thirty two Upanishads in the Krishna (dark) Yajur Veda, and their 'Shanti Mantra' is 'Saha Navavatu Saha Nau Bhunaktu'.

These thirty two Upanishads are the following—(1) Kathvalli, (2) Taitiriya, (3) Brahm, (4) Kaivalya, (5) Shwetashwatar, (6) Garbha, (7) Narain, (8) Amrit-bindu, (9) Amrit-naad, (10) Kalagni-rudra, (11) Kshurika, (12) Sarvasar, (13) Shukarhasya, (14) Tejobindu, (15) Dhyanbindu, (16) Brahmvidya, (17) Yogtattva, (18) Dakshinamurti, (19) Skand, (20) Sharirak, (21) Yogshikha, (22) Ekakshar, (23) Akshi, (24) Avadhut, (25) Kath-rudra, (26) Rudra-hridya, (27) Yogkundali, (28) Panch-brahm, (29) Pranagnihotra, (30) Varah, (31) Kalisantaran and (32) Saraswati-rahamasaya.

The Upanishads are the perennial philosophy of life and its truth, and they endeavour to teach the spiritual seeker the way to access this eclectic truth, to realise who he actually is, and find eternal peace, happiness, contentedness and bliss for himself by reaching his goal of spiritual liberation and deliverance once and for all. The amazing aspect of the Upanishads is that though they talk and preach about the same subject they appear fresh every time one reads them, and their philosophy is as applicable now as they were when they were first conceptualized. Each reading provides a newer insight to the secrets of life and the way to unravel them.

Now let us have a very brief pre-view of each of the Upanishads that appear in the Krishna Yajur Veda.

Chapter 1 is the famous Upanishad known as Kathwalli or Katho-panishad. It has two Cantos, each having three Vallis. It describes the spiritual knowledge given by the God of Death, i.e. Yam, for the benefit of the enlightened Nachiketa, the son of Vajsrava.

When Nachiketa was disillusioned by the way his father was donating useless old cows at a fire sacrifice, he mildly rebuked the father, at which the latter disowned him by giving him to Yam. Pleased by Nachiketa's maturity of wisdom and enlightenment, Yam granted him three boons. The answers to the two questions which Nachiketa asked, i.e. which is that holy fire which ought to be worshipped to attain heaven and what happens to the creature after death, forms the basis of the grand spiritual discourse of Yam which forms the basis of the eclectic knowledge expounded and elucidated in this Upanishad.

Chapter 2 is another famous Upanishad called the Taittiriyo-panishad. It forms a part of the Taittiriya Aranyak of the Taittiriya branch of the Krishna Yajur Veda. This Aranyak has ten chapters, out of which the seventh, eighth and ninth chapters have been recognised as Upanishads, hence the prefix 'Taittiriya'.

The Upanishad has three Cantos called 'Vallis', each having a number of sub-cantos called 'Anuvak'.

The first Valli is called 'Shiksha Valli' and it has twelve Anuvaks. The second Valli is called 'Brahmanand Valli' and it has nine Anuvaks. The last Valli is called 'Brighu Valli' and it has ten Anuvaks.

Chapter 3 is Brahm Upanishad or Brahmo-panishad. Dedicated exclusively to the exposition of the divine and eclectic form of the supreme transcendental Being known as Brahm, this Upanishad has a total of twenty three verses. It describes, inter alia, the

four legs of Brahm and its three symbolic forms represented by the three intertwined strands of the sacred thread worn by Hindus along with the symbolism of the tuft of hair on the head, as well as the importance and significance of Tapa (austerity, penance and sufferance of hardships), Satya (steadfastness in 'truth'), and the unity between the Atma, the pure consciousness, and Brahm, the supreme transcendental Divinity.

Chapter 4 is called Kaivalya Upanishad or Kaivalyo-panishad. As the name suggests, it describes the supreme state of spiritual realisation when all sense of duality are removed and only 'one, unique, un-paralleled, non-dual, immutable and indivisible universal Truth' known as Brahm and its representative, the conscious Atma, remain. This state is possible only with the awareness of what Brahm is and what Atma is, as well as experiencing and witnessing of this Truth first hand in all aspects of creation. This eclectic knowledge of divine realisation was revealed by the creator Brahma himself as an answer to sage Aashwalaayan's query.

Chapter 5 is Shwetashwatar Upanishad or Shwetashwataro-panishad. This is one of those Upanishads which are exclusively dedicated to the theme of Brahm, much like Brahmo-panishad, and repeatedly stresses the importance of realising this grand quintessential Truth of this existence. It was first revealed to sage-cum-seer named Shwetashwatar (6/21) and hence bears his name. Amongst the many interesting aspects of this Upanishad are the two beautiful analogies of the *wheel* and the *river* to explain the fundamental principles of Vedanta, the exposition on the principles of *Sankhya Shastra* and *Sankhya Yoga*, the use of a metaphor of *two birds* sitting on a tree to beautifully describe the relationship between the Jivatma (the creature) and the Parmatma (the Supreme Being, the Lord of creation), how the giant wheel of creation and destruction called the *Brahm-Chakra* is rotated by the supreme Brahm, and what is implied by the cycle of deeds and their unavoidable consequences, known as the great *Karma Chakra*. The process of evolution has been also outlined in Canto 5, verse nos. 10-12.

Chapter 6 is a medico-philosophical Upanishad called Garbha Upanishad/Garbho-panishad. It is a rare text which judiciously combines metaphysics with medical science as it incorporates embryology and anatomy while describing the process of how the elements of Nature come together to form the complex structure of the living entity known as the 'creature' or Jivatma. It is a wonderful sample of how, in ancient times, philosophy was mixed with hard-core science, and how the ancient sages were well versed in both. This establishes one very important point—and that is that the people who taught the Upanishads were acclaimed experts not only in the field of metaphysics, theology and spiritualism alone but also in other fields, especially those that had an empirical and scientific basis.

This Upanishad was preached by sage Pippalaad, and is in the form of five long paragraphs much like modern text books. It appears that he gave five lectures, and they were collated, edited and written down in the form of this Upanishad.

Chapter 7 is Narayan Upanishad/Narayano-panishad. Dedicated to Lord Narayan, also known as Vishnu and Viraat Purush, this Upanishad expounds and elucidates the great metaphysical and spiritual importance and significance of this form of transcendental Divinity. Narayan is the primary cause of creation and of whatever that exists; he has manifested himself in everything that exists, being immanent and

omnipresent. Narayan is a manifestation of the Supreme Being's (Brahm's) glorious virtues of providing sustenance, protection and nourishment to the creation created by him. There are in all five paragraphs in this Upanishad.

Chapter 8 is called the Amrit Bindu Upanishad or Brahm Bindu Upanishad. It is so-called because it describes the path by which the spiritual seeker can reach that one cardinal point of eternal beatitude and felicity which is known in the fields of spirituality, metaphysics and theology as 'Brahm'. This one fount or wellspring of elixir called Amrit is the quintessential object sought by the soul of the creature, and once it is reached, nothing remains further to be searched or researched.

It elucidates how the Mana (the thinking mind and the emotional/sentimental heart) are the cause of all bonds and fetters that shackle a creature on the one hand, and can provide freedom to him on the other hand. It then goes on to enunciate how to control this Mana (i.e. the thinking mind and the emotive and sentimental heart) and how it can be made an instrument of attaining Mukti (liberation and deliverance; emancipation and salvation). It goes on to explain the concepts of Gyan and Mukti, and cites the instances of reflection of one moon in different vessels full of water, the case of the clay pot as artificially separating the space of the sky, the bee getting trapped inside the flower in its longing for nectar, the colour of milk being the same in all samples, and the presence of butter hidden inside milk to elucidate great metaphysical truths about the 'self', the Atma and Brahm.

Chapter 9 is called Amrit Naad Upanishad/Amritnaado-panishad. It is based on the philosophy of Yoga or meditation by which a spiritual aspirant establishes a union between his individual self and the cosmic supreme Self known as Brahm. It has thirty nine verses.

It goes on to describe the various limbs or branches of Yoga, and the most acclaimed of all meditation exercises that is known as 'Pranayam' which entails control of the vital winds inside the body and diverting their energy towards spiritual upliftment. The benefits of Yoga are outlined in this context.

Finally, this Upanishad deals with the vital winds called the various Prans which sustain and protect the body. It describes their importance, location and symbolic colours. It concludes that when an ascetic who practices Pranayam manages to concentrate his vital life forces called Pran in the head, he finds final deliverance from this gross body when he dies, and therefore he does not have to take birth again.

Chapter 10 is Kalagni Rudra Upanishad/Kalagnirudro-panishad which is revealed in the form of a dialogue between sage Sanatkumar and Kalagni-Rudra. It describes the proper way of marking and wearing the 'Tripund' (three horizontal or vertical lines marked on the forehead of devotees of Lord Shiva using the ash of the sacrificial fire) along with its spiritual and metaphysical importance and significance. This Tripund is an auspicious symbol of Lord Shiva who is regarded as the greatest of ascetics and the wisest, most enlightened and omniscient Lord in creation. The wearer of this sign of the Lord, if he is not an imposter, becomes a personification of the Lord along with the auspicious and glorious virtues he stands for.

Chapter 11 Kshurika Upanishad/Kshuriko-panishad is so named because it acts like a 'knife' that helps the spiritual aspirant to cut through different hurdles that come in the way of his spiritual progress, and helps him to attain his objective of obtaining final liberation and deliverance from the fetters that shackle him to this body and the

various torments that it is subjected to in this deluding world of artificiality. It advocates the employment of various Yoga practices to achieve this end.

The steps to be followed in doing Yoga, which are meditative exercises to control the vital wind called Pran as well as unclogging of the hitherto blocked Naadis, are described in graphic detail. With Naadis open, the vital winds can move freely inside the body, and with practice of Yoga sufficient energy is generated inside the body itself when the body is well ventilated. This stokes the latent fire present inside the body further, and the Pran winds move up the body to finally escape from it into the outer sky by rupturing the skull and escaping into the outer sky to merge and become one with the cosmic air or wind element present outside the body much like the heated air, in the form of steam, escapes from the spout of a kettle never to return into the body of the kettle again.

Chapter 12 is known as Sarwasaar Upanishad/Sarwasaaro-panishad. As the name suggests ('Sarwa' meaning 'all, comprehensive', and 'Saar' meaning 'essence, basic, fundamental, principal doctrine'), this Upanishad presents a precise and comprehensive definitions to many metaphysical terms. Thus, definitions of concepts such as 'Bandhan' (getting bound in shackles), 'Mukti' (being liberated from the fetters that confine the creature's soul or Atma and prevent its independence and salvation), 'Vidya' (truthful knowledge of the reality and expertise in it), 'Avidya' (lack of this knowledge which is tantamount to ignorance, remaining deluded and bound if fetters), of the four states of existence of the pure consciousness and the five 'Koshas' or the sheaths that surround the true 'self' of the creature, the concept of a 'Jiva' (the independent living being), the 'Kshetrageya' (the authority who has complete command over this individual being), the 'Jiva-Atma' (the soul of this individual creature), the 'Parmatma' (the supreme Soul of the creation), 'Maya' (delusions and misconceptions about the reality) etc.—all have been beautifully incorporated in this Upanishad.

Chapter 13 contains the Shuka Rahasya Upanishad/Shuka-Rahasyo-panishad. It is so named because in it Lord Shiva has elaborately expounded upon the four great sayings of the Vedas, called the 'Maha Vakyas', to unravel their profound secrets and explain their metaphysical importance and spiritual significance for the benefit of sage Shukdeo, the son of sage Veda Vyas, the legendary classifier of the Vedas and the author of the Purans, at the latter's request.

The four great sayings are the following—'OM Pragyanam Brahm' (OM salutations! The highest form of knowledge is Brahm), 'OM Aham Brahmasmi' (OM salutations! I am Brahm), 'OM Tattwamasi' (OM salutations! That Brahma is you), and 'OM Ayamatma Brahm' (OM salutations! This Atma is Brahm).

Chapter 14 is Teja Bindu Upanishad/Tejobindu-panishad. This magnificent Upanishad is virtually like a citadel and a strong fort of the philosophy of 'Advaitya Vedanta' which extols the eclectic philosophy of non-duality and uniformity in creation. It describes the supreme transcendental Divinity known as Brahm in a very holistic manner.

There are six elaborate Cantos in this Upanishad. From the practical standpoint, this Upanishad has a profound positive value in today's world of depression and darkness.

Chapter 15 is called Dhyān Bindu Upanishad/Dhyānbindu-panishad because it extols the importance of ‘Dhyān’, literally the concentration of the stupendous powers of the various faculties of the mind to deeply contemplate and fixedly ponder on the great spiritual truths of existence and creation as envisioned by the scriptures to unravel their enigmatic secrets.

This Upanishad describes the two basic concepts of metaphysics—viz. the divine word OM, and Yoga. It analyses the various components of OM with metaphysical perspective, and then explains the meaning of the different components of Yoga such as Pranayam (breath control), Aasans and Mudras of Yoga (sitting postures), Shadanga Yoga (the following of the six-fold path for spiritual enlightenment and salvation), the various Chakras (subtle cosmic energy centers in the body), Prāṇas (vital winds), Haṁs Vidya (acquisition of truthful knowledge pertaining to universal Spirit that lives in the heart as a symbolic swan), Kundalini (the coiled subtle energy center located at the base of the spine), and Naad (the all-pervading cosmic background vibration in ether that are represented by the word OM) etc. The culmination of Yoga is the experience of spiritual ecstasy and a profound degree of bliss. It also enables the aspirant to realise his mystical powers and access the stupendous energy of the Spirit that normally lies untapped inside an individual.

The eternal metaphysical question ‘why does the immaculate and uncorrupted Atma appear to be corrupted and tainted while it lives in a gross body of the creature and interacts with the world’ has been explained beautifully in verse nos. 93/1-93/15 of this Upanishad.

Chapter 16 is called Brahm Vidya Upanishad/Brahmvidyo-panishad. This Upanishad discusses the ways by which Brahm, the supreme transcendental Divinity, can be realised by a spiritual aspirant, along with explaining the esoteric and mystical form of that Brahm. This Upanishad starts with a discussion of the subtle meaning of the four sublime letters that constitute the ethereal word OM which is metaphorically used as a classical synonym of Brahm. It goes on to describe the difference between Brahm, the transcendental and eternal Supreme Being, and the ordinary Jiva, the mortal living being or creature, and how this same Jiva can become as exalted as Brahm and be known as a Haṁs or a divine Swan when it becomes enlightened about the Atma or the pure consciousness present in his bosom. This eclectic knowledge about Divinity helps the creature break free from all fetters that shackle him down to this mortal existence and pave the way for his obtaining eternity.

Chapter 17 is the Yogtattva Upanishad/Yogtattvo-panishad. The name of this Upanishad itself indicates what it is about. The word has two components—Yog and Tattva. Yog means meditation as a means of bringing about a union between the soul of the individual and the Soul of the creation, to establish harmony between two entities that have been artificially separated though they are inherently the same. Tattva means the essence and principle of anything. Hence, the combined meaning is clear—the text strives to establish a unity between two inherently divine entities which are essentially and by principle one and the same but had been inadvertently and erroneously separated from one another. They yearn to be re-united into their original indivisible and non-dual form as the Principal entity of creation that is wholesome, absolute and truthful.

This is a revealed Upanishad as it was taught or preached by Lord Vishnu, the sustainer and protector of creation, when Brahma, the creator of the visible creation, approached the former to advice a method by which the creation that was being

unfolded by him could free itself from the unending cycle of birth and death to find its final freedom and rest. So Vishnu taught Brahma about the essential features of Yoga, its benefits and its different aspects. Regular practice of Yoga enables the practitioner to be able to break free from the unending cycle of miseries and transmigration, and instead find liberation and deliverance from it.

It describes the concept of Kaivalya (the 'only one') and stresses that Yoga is the best path leading to it. In the realm of Yoga, it deals with five types, i.e. Mantra Yoga, Laya Yoga, Hath Yoga, Raaj Yoga and Purna Mano Yoga, and narrates their various aspects.

Chapter 18— The Dakshin Murti Upanishad is dedicated to Lord Shiva who is regarded as knowledge, wisdom and enlightenment personified, and therefore the most competent one to expound upon, teach and preach subjects related to the divine wisdom pertaining to the field of metaphysics and spiritualism. This Upanishad highlights the significance and importance of the 'Shiva Tattva' or the Shiva principle, the essence and basis for which Shiva is recognised as the greatest Lord and worshipped as such.

Iconographically, this form of Shiva has other names also besides 'Dakshin Murti', such as 'Dakshin Mukhi' and 'Dakshinaa Murti'.

The word 'Murti' means a 'form or image', the word 'Mukhi' means 'facing', the word 'Dakshinaa' means 'giving away liberally as charity or donation', the word 'Dakshin' has three connotations here—viz. 'south', 'right' and 'knowledge and wisdom', and the word 'Shiva' of course means 'someone who is a personification of such glorious virtues as auspiciousness, beauty, truth, knowledge, enlightenment, wisdom, renunciation, dispassion and detachment from all things material and false, someone who is meditative and contemplative, someone who is self-realised and Brahm-realised etc.'

So we have a comprehensive picture of what this Upanishad aims to worship—it does not aim to worship Lord Shiva as the God of death and destruction but as the most enlightened and wise teacher of the philosophy of Brahm whom he personifies. Since Lord Shiva faced 'south' when he taught the ancient sages and seers who had approached him in some earlier time to gain divine wisdom and metaphysical knowledge which only he could impart to them, he was known as 'the Lord facing south'. Since the knowledge imparted by him was astoundingly unique and the most 'right or correct and precise knowledge' of metaphysics which granted 'a divine wisdom as well as vision' to its followers, it was called 'Dakshin'. Since he was liberal in giving it to the sincere spiritual aspirant, he was called 'Dakshinaa Murti' or the 'one who is an icon of charity and donation, one who is very generous in giving away what is asked for without holding anything away from the alms seeker'. What did he give away? He gave away 'knowledge and divine wisdom', and only one who has something can give it to others, therefore he is deemed to be a 'Murti', or an image, a personified form of such knowledge and divine wisdom.

Since it was first revealed by Lord Shiva himself, it is a revealed Upanishad. The leading sage who was given this knowledge by Shiva was Maarkandey, who later revealed some relevant part of it when he was approached by other sages and seers led by Shaunak and others who asked him nine questions which form the basis of the present Upanishad. The nine questions briefly are—what is the esoteric and eclectic knowledge of the Shiva principle, who is the deity worshipped in this principle, what are the Mantras (mystical and spiritual formulas in the form of words or letters), what is the kind of devotion needed for its success, how can that esoteric and eclectic

knowledge be obtained, what is the instrument to felicitate it, what offerings are to be made, what is the appropriate time for doing it, and what is its ultimate goal?

Chapter 19—Extolling the principles of Non-duality, the Skanda Upanishad stresses that there is no basic difference between Hari (Vishnu, the sustainer) and Shiva (the concluder), on the one hand, and Shiva and the Jiva (the living being) on the other. In other words, the three are one and the same; they are like the three corners of a triangle known as creation. They are manifestations of the same divine non-dual entity known as Brahm which has assumed three distinct forms to perform three distinct functions in this creation.

This Upanishad is a sort of an extension of the Dakshin Mukhi Upanishad (Chapter 18) which says that Shiva is the only ultimate truthful Lord called Brahm, and that the Shiva and the Atma of a creature, the Jiva-Atma, are one and the same.

Chapter 20— Shaarirak Upanishad/Shaarirko-panishad basically deals with the profound secrets of creation, the Genesis of Creation and its expansion. It describes its fundamental basic elements or units of this creation and the way they expanded and developed into such a complex structure that defies definition. In its twenty verses it encapsulates the entire process in a clear and step-by-step format. It narrates succinctly the concept of what constitutes the body, its subtle and gross sense organs, their functions, the four types of ‘Antahakaran’ which constitute one’s inner self (i.e. one’s sub-conscious; his conscience) that mould the individual’s thought processes and outlook as well as his personality, behaviour and temperament etc. It outlines the three famous Gunas or inherent qualities that are present in all living beings in varying ratios, tones and combinations, and which determine each individual’s special nature and characteristics. Then it goes on to describe the various ‘Tattvas’ or fundamental elements that have together made up this world, starting at the micro level of the subtle body having seventeen elements, and extending right up to the vast cosmos having twenty four elements that make up Nature and the controlling Authority of the entire setup, i.e. the Supreme Purush who is non-dual and is therefore the universal Truth and the Absolute.

Chapter 21—The Yogshikha Upanishad has six elaborate Cantos dealing with the concept of Yoga. The word ‘Shikha’ literally means ‘a peak, a crest, an apex, a flame, the highest point’. Hence the composite word obviously refers to the knowledge which helps the wise person who possesses it to reach the climax of spiritual achievements that is possible by employing Yoga as a tool for this purpose. This eclectic knowledge ignites the hidden potentials in him like a flame of light that removes the darkness of ignorance and its attendant delusions.

Yoga and Gyan are the two famous paths of Brahm realisation or becoming knowledgeable about the ultimate, irrefutable and immutable Truth of creation. This Brahm realisation is equivalent to ‘self’ realisation because the Atma or the pure consciousness of the individual creature and the cosmic Consciousness known as Brahm are basically one and the same Divinity. This Upanishad presents a magnificent judicious mix of metaphysical philosophy of Yoga based on the principles of Vedanta along with the Tantra philosophy of Yoga and its practical aspect of exercises and meditation techniques.

This Upanishad is one of the ‘revealed Upanishads’ because it was revealed by Lord Shiva to Brahma the creator.

Chapter 22—The Ekakchar Upanishad/Ekakcharo-panishad has been revealed in the form of a sublime prayer coming out of the heart of a truly realised and enlightened sage/seer who sees the same Divinity known as the supreme transcendental Brahm, the Supreme Being having the unique virtues of being ‘Ek’ or one and non-dual, and ‘Akchar’ or imperishable and eternal, as being universally present in the entire creation in a uniform and non-dual manner. In fact, this Upanishad derives its name ‘Ekakchar’ from these two principal sublime qualities of Brahm—i.e. Ek and Akchar.

This divine Being is present everywhere, from the macrocosmic level of the cosmos right up to the minutest atom at the micro level because it is all-pervading, all-encompassing and all-inclusive.

Chapter 23—The Akchi Upanishad/Akchyu-panishad is dedicated to the Sun God and has two parts. In the first part, sage Sankriti has prayed to the Sun God and asks him to show the world true light. The Sun is a visible manifestation of the glorious divinity, the radiant splendour and magnificence of the supreme transcendental Brahm. In the second part, the Sun God describes to the sage the metaphysical knowledge of this Brahm, called the Brahm Vidya, and emphasises that Yoga is the true and effective means to realise this Brahm. The path that leads to Brahm-realisation has seven distinct signs or stages, called the ‘Seven Bhumikas of Brahm Yoga’. (Refer also to Varaaha Upanishad, Chapter 30). Each marks a distinct stage of enlightenment and they have been elaborately described in part two of this Upanishad. These seven stages are listed in ordinal numbers, with the seventh number marking the ultimate order which is equivalent to Brahm-realisation. The distinctive characteristics of each stage have been clearly brought out in a beautiful way in this Upanishad.

Being revealed by the Sun God himself, it is one of the ‘revealed Upanishads’.

Chapter 24—The Avadhuta Upanishad deals with the concept of Avadhut Sanyas which is a spiritual way of life of an ascetic marked by exemplary renunciation and total detachment from the world and its material sense objects along with its deluding charms as lived by a most enlightened and self-realised person. Emphasis is laid on describing his enlightened thought processes and mental bearing which is central to a man’s behaviour, personality and temperament. It is marked by an extreme sense of dispassion, detachment, equanimity, fortitude, holiness and piety. This attitude of the mind and intellect would automatically lead to a commendable state of all-round calmness of demeanours and tranquility of the mind.

This Upanishad was expounded by the great seer and sage Dattatreya who is considered as an incarnation of the Trinity Gods (Brahma the creator, Vishnu the sustainer, and Shiva the concluder) to answer queries on the subject raised by sage Sankriti. Dattatreya is regarded as the patron saint of all Avadhut Sanyasis.

The word *Avadhuta* is an acronym derived from the first letters of the following words—the letter ‘A’ from Akshar meaning imperishable, eternal and infinite; the letter ‘Va’ from Varenya meaning worthy of accepting and honouring; the letter ‘Dhu’ referring to the worldly deceit and conceit known as Dhut; and the letter ‘Ta’ from the word Tyakta meaning to abandon and discard. Hence, the term Avadhut refers to the person who moves straight to his aim of life, which is self-realisation and truth-realisation, as well as liberation and deliverance of the soul from the cycle of transmigration and worldly miseries, and obtaining eternity and peace. This is accomplished by discarding all deceits and conceits associated with life in this materialistic world of delusions and artificiality.

The Avadhuta state is one of the highest categories of the life of Sanyas. This Upanishad details its characteristic features, especially the mental state more than the physical state, and highlights the fact that such people are free from external pretensions of piety and holiness, and remain perpetually engrossed in contemplation and meditation.

Chapter 25— The Kath-rudra Upanishad/Kathrudro-panishad is also called ‘Kanth-rudra Upanishad’. In this Upanishad, which is one of the many revealed ones, deals with the esoteric and enigmatic but most eclectic and divine knowledge pertaining to the supreme transcendental Being known as Brahm. It is enunciated by Prajapati Brahma, the patriarch of creation, when approached by the Gods with a request to preach them the great knowledge pertaining to the divine entity known as the Atma and how to realise it. During the course of unfolding of the great tenets of the Atma, Prajapati elucidates about the life of Sanyas which is spiritual path marked by profound renunciation obtained as a result of becoming aware of the reality and truth behind the façade of falsehood and deception. This Upanishad compliments the Avadhut Upanishad which is Chapter 24.

Other metaphysical concepts that are covered are Maya (delusions) and Brahm (supreme and absolute Truth from which everything, including Maya, has originated) and their relationship, the various Tanmatras (subtle sense perceptions) and the genesis of creation, the concepts of the Panch Atmas (the five vital winds) and Panch Koshas (the five sheaths that surround the pure consciousness). It goes on to establish that the supreme universal Consciousness called Parmatma is the only Lord of creation called Ishwar, and it is the same entity that is revealed in the form of the individual living being called the Jiva.

Chapter 26—The Rudra Hridaya Upanishad is very significant in the sense that it establishes the principle that Lord Vishnu the sustainer and protector of creation, and Lord Shiva the concluder of creation are one and the same entity. This sets at rest once and for all the eternal dichotomy that has existed from time immemorial about the separate existence of these two Godheads. In fact, they represent the two soldered ends of the circle or wheel of creation and prove the dictum that what has come into being would certainly come to an end one day.

Rudra is one of the main names of Lord Shiva, and the word Hridaya means heart. Thus the composite word ‘Rudra Hridaya’ implies the Upanishad that teaches the fundamental principles behind the concept of Shiva.

It was expounded in the form of a dialogue between sages Veda Vyas, the legendary classifier of the four Vedas and narrator of the Purans and Mahabharat, and his son Shukdeo, the sage having the body of a parrot. When Shukdeo asked his father who was the most exalted amongst the Gods, the answer was ‘Rudra’, i.e. Shiva. Thereafter, the magnificent knowledge that Rudra and Vishnu are one, the three forms of Rudra to indicate the Trinity Gods (Brahma, Vishnu and Shiva), its reflection in the three forms that the Atma symbolically assumes (as the Jiva, Parmatma and Atma), and the fact that one is spiritually liberated when one acquires this supreme transcendental knowledge is elucidated in detail.

The Upanishad extols the greatness of the tenet of non-duality espoused by the Upanishads and forming the basis of the philosophy of Advaita Vedanta.

Chapter 27—The Yog Kundali Upanishad/Yogkundalyu-panishad, as the name suggests, is dedicated exclusively to Yoga—its exercises, its practice, its pitfalls and

precautions, its spiritual benefits, and how it can lead to one's liberation and deliverance from this trap-like perishable body as well as from the cycle of birth and death. It has three Cantos. It is one of the main Yoga Upanishads and come under the category of the revealed ones— as it was revealed by the patron God of Yoga himself, i.e. by Lord Shiva, to the creator Brahma (refer Canto 3, verse no. 1). It was also preached by Shiva to sage Gautam (Canto 1, verse no. 3). In its three Cantos it describes such topics as the four types of Pranayams (viz. Surya Bhedan, Ujjayi, Shitali and Bhastrika), the three types of Bandhas (Mool, Uddiyan and Jalandhar), the detailed process of kindling the dormant Kundalini fire, the special meditative technique called 'Khechari' which empowers the practitioner with certain unique abilities such as the ability to float or fly in the air, and the spiritual rewards of Yoga such as achievement of Mukti or liberation and deliverance of the soul from the fetters of the gross body.

Chapter 28—The Panch Brahm Upanishad is again one of the revealed ones as it was first preached by Lord Shiva to sage Gaalav (refer verse no. 33). Later on, this profound metaphysical knowledge was passed on in the form of a discourse that was given by sage Pippalaad when he was approached by sage Shaakalya with the question—'what or who was produced in the beginning of creation' (verse no. 1).

Primarily, this Upanishad describes the five symbolic forms of the one supreme transcendental Divinity known as Brahm. Pippalaad reveals that these first five forms of Brahm had a great symbolic and metaphoric value and significance. They were respectively called Saddyojaat (the 'first born'), Aghor (literally the 'formidable one'), Vamdeo (one of the eleven forms of Shiva, the radiant and glorious one), Tat-purush (literally 'that Purush', referring to the Viraat Purush), and Ishan (Shiva's one name; also called Sadaa Shiva, the eternal, auspicious and truthful Being; the one who gives liberation and deliverance to the creature; the one who lives in the zenith of creation).

These five independent forms are only a matter of existential perception, for basically they are the same non-dual supreme Divinity which has revealed itself in all these forms.

Iconographically, this Panch Brahm is depicted as the five-faced Shiva, called 'Panchaanan', symbolising the composite authority and the dynamic cosmic powers of the Supreme Being at one place. The face that is turned towards the zenith is called 'Ishan'; the one facing north is called 'Vamdeo'; the one to the east is 'Tat-purush'; the south facing face stands for 'Aghor'; and the one to the west side is known as 'Saddyojat'. This image of Panchaanan Shiva has ten arms, fifteen eyes, is seated on a bull, wears an elephant hide around the waist and the tiger skin on the upper part of the body, has matted hairs and a tall crown. His weapons are Shakti (thunderbolt), Khatvanga (a magical wand) and a Trident. He also holds an Akshamala (the prayer rosary), a fruit (symbolising his power to grant boons and blessings), a snake (indicating his fearless and venomous nature that would tolerate no nuisance), a Damaru (the hand held drum indicative of the cosmic Naad, the cosmic primordial sound that existed at the beginning of creation as well as the thunder and rumble of dooms day), and the Utpala flower (a blue species of lotus symbolising purity and holiness; the flower called *nymphaea cerulean*). The other remaining hands are held in Abhaya Mudra (the posture giving fearlessness to his devotees) and Vara Mudra (the posture that grants boons and blessings).

Chapter 29—Pran Agnihotra Upanishad/Pranagnihotro-panishad, as the name suggests, has two components—Pran and Agnihotra. The second word ‘Agnihotra’ refers to the offering of oblations to the consecrated sacred fire, while the first word ‘Pran’ refers to the vital and primary life giving and life sustaining forces of Nature present in the individual’s body. Therefore, this name assumes two connotations—one, to offer oblations to the sacred fire to pay obeisance to and honour the all-important Pran and Fire which are deified forms of the vital life giving and life sustaining forces in Nature, both at the cosmic level as well as at the individual level of creation (verse nos. 6-14), and two, to honour the Supreme Being, who is the Lord of the entire creation including the Pran and Fire, and who has empowered Pran with its stupendous and magical ability to inject life even in the inherently inert and dead entities such as the gross body of the mortal creature, by offering this Pran itself as an oblation to him. At the macro level of creation, this Supreme Being is called Viraat or Vaishwanar, and at the micro level he is called the Atma (verse nos. 15-18).

Verse nos. 21-22 draw a parallel between a human body and the venue of an elaborate fire sacrifice, describe their symbolic similarity in great detail by incorporating the various components of a fire sacrifice and going on to explain how the human body perfectly fits in the scheme of things and can seamlessly replace the venue and other details of the physical fire sacrifice done by the spiritual aspirant in the external world—complete with the altar, the implements and other things needed to perform the various rituals, making of offerings, oblations and libations, the participants such as the different priests, the attendants, the patron and his family members, the post, the rope and the sacrificial animal et al. In fact, this Upanishad highlights that the fire sacrifice done within the body is more effective and better placed for the person’s spiritual elevation and aid in his final emancipation and salvation than the formal ritual of the fire sacrifice done mechanically in the external world.

Chapter 30—The Varaaha Upanishad/Varaaho-panishad has been taught by Lord Varaaha, the Boar incarnation of Lord Vishnu, the sustainer and protector of creation and the Supreme Being, to sage Ribhu. Hence, it is one of those Upanishads that were revealed by the Lord himself. It espouses and expounds the eclectic philosophy of ‘Advaitya Vedanta’, i.e. the doctrine of ‘non-duality and uniformity’ in creation. It can be broadly classified into two components—the first half is dedicated to an elaborate discussion of this philosophy and how this changes the world view of the enlightened man (Canto 1-3) as preached directly by the Lord, while the second half is an exposition of sage Ribhu for the benefit of another sage Nidagh on how this enlightened view can be actually realised by inculcating divine values in life (Canto 4) and by doing Yoga (Canto 5).

In Canto 1, it presents a long chain of Tattvas (fundamental principles of creation) and finally concludes that inspite of gaining access to the highest level of metaphysical and theological knowledge the best path of obtaining liberation and deliverance is Bhakti or devotion to God.

Canto 2 deals with the four preliminary disciplines called ‘Saadhna Chatushtaya’—viz. the true nature of the Atma as the true ‘self’, pure consciousness and bliss, how the self-realised person becomes one with the Parmatma, the Supreme Being, how this lead to freedom from the fetters of Karma (deeds and actions), and how meditation leads to dissolution and overcoming of the mind etc.

Canto 3 extends the ideas of Canto 2 and goes on to describe the Parmatma or the Supreme Soul as an embodiment of Sat-Chit-Anand (truth, consciousness and

bliss). It is stressed here that the best and most effective way of attaining him is Bhakti or devotion.

Canto 4 is divided into two sections like the Vedas—the first section is the Mantras, and the second is the Brahman. There are in all 42 Mantras in section 1 which list the seven Bhumikas (stages of development of wisdom), while the second section consisting of 43 verses are like the Brahmam which give a detailed description of all the stages. It, inter alia, describes the concept of Jivan Mukti, and cites the examples of sage Shuka and Vamdeo as epitomes of this type of Mukti. As for the Bhumikas, one should also refer to Chapter 23 titled Akchi Upanishad.

Finally, Canto 5 is exclusively dedicated to Yoga and its practice. It describes the various aspects and limbs of Yoga, such as Angas (limbs or branches), Bandhas (control of vital energy of the Pran), Chakras (subtle energy centers in the body), Naadis (nerves), OM and its use for Japa (repetition).

Chapter 31—Kalisantarna Upanishad/Kalisantarno-panishad is a very short Upanishad belonging to the Krishna Yajur Veda tradition, having only three verses. It was revealed by the creator Brahma to the celestial sage Naarad.

The name of the Upanishad has three parts, viz. ‘Kali’, ‘Sant’, and ‘Tarna’. The first word ‘Kali’ refers to the present fourth era of the 4-era Hindu celestial cycle, an era considered as the most sinful and full of perversions from which a person finds great difficulty to find liberation and deliverance. The second word ‘Sant’ refers to saintly and pious people, and the third component ‘Tarna or Taran’ means to actually find liberation and deliverance from or protection from some kind of noose or snare or from a most difficult situation. Hence, the combined word means an Upanishad which provides an easy formula by which saintly and pious persons can find emancipation and salvation as well as protection for themselves from all types of torments and horrors even during the most difficult period of their lives.

It extols the glory of the holy and divine name of the Supreme Being called Hari, who is also known as Lord Narayan or Vishnu, in his two incarnations as Lord Ram and Lord Krishna. Therefore it is often referred to as *Hari Naam Upanishad*—an Upanishad which espouses the holy name of the Lord as the all-inclusive and infallible panacea for all spiritual ills during the most difficult phase of creation, i.e. the present evil-ridden era called Kaliyug.

The Upanishad prescribes the great well-known and most popular Mantra of the Lord which has sixteen words and relates to the holy names of Lord Vishnu in his incarnations as Ram and Krishna. The Mantra ‘Hare Ram Hare Ram, Ram Ram Hare Hare; Hare Krishna Hare Krishna Krishna Krishna Hare Hare’ is set to different tunes and is sung melodiously, either alone by the devotee or in a group, to the accompaniment of various musical instruments. This melodious singing of the holy name of the Lord is called ‘Kirtan’.

Chapter 32—The Saraswati Rahasya Upanishad/Saraswatairahasyo-panishad. It was preached by sage Ashwalaayan to other sages who had approached him to learn about the great mystical secrets of Goddess Saraswati, the goddess personifying all arts, sciences, crafts and skills as well as all wisdom, erudition, expertise and knowledge. Since speech is the medium by which one teaches others and is the vehicle for dissemination of information, wisdom, skills and knowledge, Saraswati is also said to be patron goddess of speech.

This Upanishad is roughly divided into two parts—the first part is like the Mantra part of the Vedas wherein the Suktas or devotional hymns dedicated to the

goddess are said (verse nos. 1-35), and the second part is like the Brahmin section of the Vedas wherein an elaboration is done of what has already been said in the Mantra part and their spiritual and other benefits are enumerated (verse nos. 36-68). The Mantra part of this Upanishad is also classified as a Sukta—i.e. a devotional hymn.

This Upanishad winds up this anthology of the Krishna Yajur Veda Upanishads.

A number of **Appendices** have been added to this volume to add a spiritual flavour, special vibrancy and dynamism to this volume. Appendix no. 1 has the Shanti Paath that is common to all the Upanishads of the Krishna Yajur Veda. Appendix no. 2 is the short Rudro-panishad which has great relevance to a number of Upanishads that deal with Rudra or Lord Shiva in different contexts. Appendix nos. 3 and 4 contain the Vishnu and Narayan Suktas which are devotional hymns of the Vedas dedicated to Lord Vishnu and Narayan respectively. Similarly, Appendix no. 5 has the Krishi Sukta of the Vedas dedicated to agriculture which produces food which sustains and protects life in this creation.

There are various angles by which a picture can be viewed, and each angle would add a special dimension to the overall beauty of the picture, making it appear fresher and newer. The metaphysical, theological and spiritual knowledge contained in the Upanishads are profound, vast and timeless, but at the same time this knowledge becomes esoteric and difficult to comprehend, primarily because of the various terms, phrases, words and concepts that form an integral part of the lexicon of the Upanishads, and are employed to disseminate this stupendous body of knowledge are themselves not properly explained and understood. To address this problem, this humble author (Ajai Kumar Chhawchharia) has published independent Books in English which endeavour to explain in detail, in simple language, virtually all such terms, words, phrases and concepts that are used in the Upanishads at one or the other point during the course of their narration, and which need explanation, elaboration and analysis from an ordinary person's perspective.

Therefore, in Appendix no. 6, a comprehensive list of such Books is given, with the Title of the Book, the websites from where they can be easily accessed, and the URL of independent books so that the interested reader can very easily access and download them.

At the end of this book, some **diagrams and sketches** are added which give a visual representation of some of the quintessential esoteric concepts that form an integral part of the Upanishads.

It would be pertinent and interesting to add a brief note herein below on “why the main body of the **Yajur Veda Text** has come to be known as **Krishna** and **Shukla**, meaning ‘black’ and ‘white’ respectively.”

The ‘Yajur Veda Sanhita’ (a collection of Mantras or hymns) is classified into these two types for a variety of reasons. One of the probable reasons for this Yajur Veda having two names is that the collection in the Sanhita that came to be known as ‘Krishna’ had a mixture of prose and poetry, and hence considered ‘impure and corrupted’. This is because primarily the Vedas were composed in poetry form with the verses structured according to one or the other methods of poetical composition called ‘Chandas’. Prose as style of composition came later on and was regarded as an

interpolation, interposition or juxtaposition which is all tantamount to corrupting the original method. Hence, that text which had both the poetry and prose was deemed to be 'corrupted and impure form of the Vedic text', and therefore called 'Krishna'—the dark one. On the other hand, the Sanhita which had only poetry was considered unadulterated and pure form of the Vedic text, and hence called 'Shukla' or the white one, the colour 'white' being the colour of purity, immaculacy, divinity and holiness.

Since the primary use of the hymns of the Vedas in earlier times was for incantatory chanting during religious fire sacrifices, the poetical mode of composition was more suitable than the prose model. That is why these hymns were composed in 'Chandas' which are the different styles in which Sanskrit verses are composed. Later on, when these verses were also being used for purposes other than the fire sacrifices, the prose model evolved and developed. The Upanishads are mainly in the prose model because they are philosophical treatises and not ritualistic incantatory chanting.

Another plausible reason is that the verses of the Krishna Yajur Veda are more difficult to understand than those of the Shukla Yajur Veda. Hence, the former were called 'dark' or Krishna because of the difficulty in their comprehension and explanation as compared to the more easier ones classified as 'white' or Shukla. The Krishna Yajur Veda Sanhita was more prevalent in the south of India while the Shukla was more common in the north of the country.

The third reason is that the original classifier of Vedas was '*Krishna* Dvaipaayana Veda Vyas' who taught the text of the Yajur Veda to his disciple called Vaishampaayana. Hence, the original version of the text was named 'Krishna' in order to commemorate this fact.

There is a fourth probable reason as outlined here. The chief exponent of the Yajur Veda is regarded as the ancient sage Yagyavalkya. He was one of the several disciples of sage Vaishampayana. Once the teacher asked his disciples to perform the 'Brahmavadhya' sacrifice (a type of elaborate penance) for him. Yagyavalkya was so confident of himself, his knowledge and competency that he offered to do it all by himself for his teacher. The teacher thought that he was haughty and boastful. So, disowning or disinheriting him from his line of disciples, he commanded that Yagyavalkya should return all that he had learnt from his teacher. The sage returned all the Mantras of the Yajur Veda that he had learnt from his teacher by 'vomiting' them out. The rest of the disciples were very cunning; they transformed themselves immediately into partridges, called Tittars, and gobbled up everything. From that developed the Krishna Yajur Veda's Taittiriya branch. It is called 'Krishna' after the teacher and 'Taittiriya' after the partridges. Also, since they were 'vomited products' they were regarded as polluted and impure. Such body of knowledge came to be known as 'Krishna'—the impure one.

Now, not to be demoralised so easily and determined to get back his lost knowledge and wisdom, Yagyavalkya worshipped the Sun God who blessed him with a fresh set of Mantras of the Yajur Veda. Since it came from a 'bright source' represented by the sun, this set of Mantras was called the 'Shukla Yajur Veda'. [The word 'Shukla' means 'bright or light or illuminated'.] The sage revised this into fifteen sub-texts, called the Vajasanis, i.e. those belonging to the horse race. This is because the Sun

God had assumed the form of a 'horse' to teach him, and the word 'Vajis' means a horse.

Yagyavalkya had fifteen disciples (e.g. Kanva, Madhyandin etc.) who mastered one each of these fifteen sub-text created by Yagyavalkya. [Vishnu Puran, 3-5; Vayu Puran, 60-1.]

And finally I wish to say a word to express my deep and overwhelming sense of gratitude and thanks for my Guru, Lord Hanuman ji, as well as to my beloved Lord Ram, the heart-and-soul of my very existence, but I feel shy because words cannot do justice to my inner-most feelings, they cannot sufficiently thank the Lord for the extent of benevolence, munificence and benediction that He has been gracious enough to shower upon me, and without whose wish, direct intervention and constant guidance this volume, like the others in the series, would not have materialised at all.

I humbly present this book to my esteemed readers with a sincere request to excuse me for the errors of omission and commission, and this request is out of the depths of my heart. At the same time, I ask forgiveness from my beloved Lord Ram for all my incompetence and childishness by submitting before Him—'Oh Lord! I have uttered what I did not understand, things too wonderful for me which I did not know' (Bible, Job 42/2), but 'must I not take heed to speak what the Lord has put in my mouth?' (Bible, Numbers 23/12), for 'the Spirit of the Lord spoke by me, and His word was on my tongue (when I spoke what I said)' (Bible, 2 Samuel 23/2).

I write these books as a means of my thanksgiving to my Lord—'Oh! Give thanks to the Lord! Call upon His name; make known His deeds among the peoples' (Bible, 1 Chronicles 16/8). For this purpose, I—'Sing Psalms to Him; talk all His wondrous works! Glory in His holy name. Let the hearts of those rejoice who seek the Lord! Seek the Lord and his strength, seek His face everyone. Remember His marvelous works which He has done; His wonders and the judgments of His mouth' (Bible, 1 Chronicles 16/8-12).

Before concluding finally, the author wishes to express his sincere feelings of deep and overwhelming gratitude for his beloved Lord Ram for whose love and service he has embarked on this adventurous journey, and he wishes to thank the Lord from the deepest recesses of his heart for everything by humbly offering this short prayer quoting the Holy Bible, for he has no word of his own to say anything—'O LORD our Lord, how excellent is thy name in all the earth! Who hast set thy glory above the heavens. Out of the mouth of babes and suckling hast thou ordained strength because of thine enemies, that thou mightiest still the enemy and the avenger. When I consider thy heavens, the work of thy fingers, the moon and the stars, which thou hast ordained; What is man, that thou art mindful of him? And the son of man, that thou visit him? For thou hast made him a little lower than the angels, and hast crowned him with glory and honour. Thou maddest him to have dominion over the works of thy hands; thou hast put all things under his feet: All sheep and oxen, yea, and the beasts of the field; The fowl of the air, and the fish of the sea, and whatsoever passeth through the paths of the seas. O LORD our Lord, how excellent is thy name in all the earth!' (The Holy Bible, Old Testament, Psalm 8/1-9).

I wish to once again thank the Lord God of all—‘Oh, give thanks to the Lord, for He is good! For His mercy endures forever’ (Bible, 1 Chronicles 16/34), and seek his refuge ‘Say: I seek refuge in the Lord of Daybreak; From the evil of that which He created; From the evil of the darkness when it is intense; And from the evil of malignant witchcraft; And from the evil of the envier when he envieth.’ (*the Holy Quran, Surah cxiii, verse no. 1-5*). ‘Say: I seek refuge in the Lord of mankind; The King of mankind; The God of mankind; From the evil of the sneaking whisperer; Who whispereth in the hearts of mankind; Or the Jinn and of mankind.’ (*the Holy Quran, Surah cxiv, verse no.1-6*).

Amen!

Upanishads of the Krishna Yajur Veda

Chapter 1

Kathavalli/Kathopanishad

This is a famous Upanishad narrating the episode of a highly enlightening conversation between Yam, the God of death, and Nachiketa, the wise grandson of Vaajsrava. The word ‘Vaajsrava’ means one who has acquired immense fame and obtained great glory as the result of making huge donations of food and other eatables which are given away as a means of doing charity during the course of religious ceremonies and observance of religious duties. Therefore, Nachiketa’s grandfather was honoured with this title because he had done great sacrifices during which he had liberally donated food to Brahmins and other needy persons. His name was Aaruni, and his son, the father of Nachiketa, was Uddyalak. Aaruni belonged to the line of great sages coming down from the legendary sage Gautam.

The word ‘Nachiketa’ meanwhile means one who is free from all delusions, ostentations and deceptions. So it was an appropriate name for the son because, as compared to his father, he was a wise, self-realised and enlightened person from his birth much like the enlightened line of sages to which he belonged.

This Upanishad belongs to the Kath branch of Krishna Yajur Veda, and it has two Cantos, each having three sub-cantos called Valli. The word ‘Vali’ means a line, a row, an offering made to a deity. Hence, each line of this Upanishad has the same significance and importance for a man as an offering he makes to the holy fire or to his chosen deity.

Nachiketa’s father Uddyalak performed a fire sacrifice called ‘Vishwa Jeet’ which is a religious ceremony done to empower the performer with the ability to conquer the whole world, and had made perfunctory token donations of worthless cows who were old, past their prime of health, and in a miserable condition. They were so useless that they weren’t fit to be given as charity during religious ceremonies, because only useful things having worth are to be donated during such rituals to derive any honourable and worthwhile rewards consequent to such religious exercises. Otherwise they have an opposite affect. So the son felt very sad and sorry at the ineptitude of his father’s wisdom when he saw such cows being given as charity during a fire sacrifice by him, and objected to his father doing so. He felt that his father would never attain any spiritual benefits which are consequential to any fire sacrifice by donating worthless things. He wished to open his father’s eyes regarding the grave folly he was committing.

He sarcastically asked his father to who would he like to give his own son as a donation, at which the father got annoyed and said in disgust and exasperation that he would give Nachiketa to Yam, the God of death.

Being thus snubbed by his father for an honest attempt at showing him the great error he was committing, Nachiketa felt very sorry for him and left his parental home. He went to the Yam God because he felt that he was now assigned to him by his father, and pleased him by his maturity of wisdom. Yam asked him to request for three boons to be granted at which Nachiketa asked for the following three—first was to ensure his father’s welfare, second pertained to the knowledge of the Agni Vidya (the metaphysical knowledge related to the sacred Fire), and the third was concerned with the Atma, the pure conscious soul.

Yam tried to deflect his query to test his sincerity, integrity and commitment. Finding him eligible for this grand metaphysical and spiritual knowledge, Yam finally conceded and preached to him all the different aspects of Atma and Parmatma (i.e. the individual soul of the creature and the cosmic all-pervading supreme Soul) along with the knowledge pertaining to them. This is the subject covered in Canto 1.

Canto 2 narrates the hurdles that the creature encounters in attaining the supreme Soul called Parmatma (or the supreme transcendental Brahm), and how to overcome them. The all-pervading, omnipotent, omnipresent and omniscient nature of the Parmatma or the supreme transcendental Divinity known as Brahm, the various symbolisms involved while dealing with that stupendous indescribable entity that is beyond comprehension and understanding, the importance of Yoga (meditation and contemplation) as well as the importance of having deep faith and unwavering conviction in the truthfulness and divinity of Brahm, and what constitutes 'Moksha', or the attainment of final emancipation and salvation—these and other relevant topics have been succinctly and articulately described in Canto 2.

Finally, having obtained this metaphysical insight into the ultimate truth of Brahm, the enlightened Nachiketa found his final rest with self-realisation and Brahm-realisation.

-----Shanti Paath-----

ॐ सह नावतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजसि नावधीतमस्तु । मा विद्विषावहै ।
 ॐ शान्तिः । शान्तिः । शान्तिः ।

The meaning of this Shanti Paath is given in appendix no. 1.

Canto 1, Valli 1

1. OM Salutations! It is well known that sage Vaajsrawa's son Vaajsrawas¹ (also known as Uddyalak) had performed a great religious sacrifice (called Vishwa Jeet) with a desire to obtain the benefits that accrue with the performance of such exercises, during which he had made huge donations². He had a son named Nachiketa (1).

[Note—¹The grandfather of Nachiketa belonged to the line of great sages who traced their heritage to the great sage Gautam. Vaajsrawa is a title bestowed upon the grandfather of Nachiketa, i.e. sage Aaruni, because he had given huge amount of food items as donation during fire sacrifices and had made immense charity by feeding large number of people during the course of his religious duties. The word 'Vaajsrawa' has two components—viz. 'Vaaj' meaning 'food', and 'Srawa' meaning 'fame spread by word of mouth'. Therefore the name refers to a man whose fame had spread far and wide as someone who gave huge amounts of food as donation, or a man who had acquired great fame and glory as a result of donating food and feeding people. His son was Uddyalak and the grandson was Nachiketa who is the protagonist in this Upanishad.

²The sacrifice that he performed was called 'Vishwa Jeet' which literally means the fire sacrifice that empowers the performer with sufficient powers that makes him unconquerable in this world. Here this conquest does not refer to territorial gains because Uddyalak was a sage, but it refers to his desire to become invincible in

knowledge and acquire fame and honour in the world as a man who performs great religious sacrifices involving huge donations. He did the fire sacrifices not selflessly or for obtaining any spiritual benefits from them but as a means of acquiring worldly fame as a highly religious man who does big sacrifices and gives huge donations. It was with this intention that Uddyalak had performed the sacrifice, but he was quite unlike his father Vaajsrawa, being a miserly and worldly man as compared to his enlightened, broad-hearted and noble father.

So, instead of giving away healthy cows as donation during the course of the fire sacrifice, he preferred to meet the obligatory requirement of making such donations by perfunctorily giving away old, sick and useless cows which were in a miserable condition and almost dry because they could not produce any milk just to fulfill the formality of making charity during the fire sacrifice. In earlier times, cows were considered as priceless assets of sages and Brahmins, and it was a standard practice to give cows to them as donation. A Brahmin's material wealth was measured, inter alia, in terms of the number of milk-giving cows that he possessed as much as the quantity of gold he had. But to give worthless things during religious rituals is considered a sacrilegious act and defilement of the holy institution of making charity. So Uddyalak, though belonging to the line of enlightened sages, had committed a grave sin, and this saddened the heart of young Nachiketa.

From all accounts, Nachiketa's father Uddyalak was a rich man because only rich people could afford to do elaborate fire sacrifices involving huge financial outlay, including big donations.]

2. When the feeble and old cows were being brought to be given away as charity to the priests who had performed the sacrifice¹, the young Nachiketa saw them. Watching their miserable condition and the futility and sinfulness of giving such cows as charity during any holy ceremony, wisdom sprouted in his heart and he felt pity for his father at the folly that he was committing. He felt very remorseful and lamented at the prospects of his father's spiritual welfare² (because giving away anything that is worthless as donation during religious ceremonies was highly inappropriate and unethical, and such act would nullify the good effects of the elaborate fire sacrifice that his father was doing; instead it would have an opposite effect and result in his being demoted to an ignominious hell) (2).

[Note—¹There were four categories of priests called Ritwij who participated in a fire sacrifice. (a) The first category consists of the chief priests such as Hota, Adhwaryu, Brahma and Udgata. They were entitled to the largest portion of donation, and if the cows were to be donated, they had the largest share. (b) The second category of priests were junior to them, and they were called Prastotaa, Pratiprasthaataa, Brahmanaanchasi and Maitraa-varun. They worked under the chief priests in that order respectively. Their share of donation was half of what was given to the chief priests. (c) The third category of priests were called Achaawaak, Neshtaa, Aagnidhra and Pratihartaa respectively. They were junior to the second category and their share of donation was one-third of what the chief priests got. (d) And finally, the fourth category, i.e. the lowest helpers or the junior most priests who were probably only apprentices were also four types who worked under the instructions of the third category. They were called respectively Graavastut, Unneta, Pota and Subrahmanya. Their share of donation was equivalent to one-fourth of what the chief priests got.

The Hota—he is the priest who offers oblation to the sacred fire; he uses the hymns of the Rig Veda. The Adhwaryu—this is the priest who chants the hymns of the Yajur Veda. The Brahma—he is the head priest who is a representative of Brahma the creator; he uses the hymns of the Atharva Veda. The Udgata—he is the priest who sings the hymns of the Sam Veda.

Each of these chief priests has a hierarchy of assistants or juniors who would help them in the performance of the elaborate rituals associated with a fire sacrifice.

Depending upon their position in this strictly hierarchical setup, the donation received during a fire sacrifice was also divided amongst them.

²Nachiketa was astonished and confounded at his father's way of miserly thinking and his mean act of giving away old and useless cows to Brahmins during a fire sacrifice. He was surprised at the lack of basic wisdom on the part of his father because a man of his standing was not supposed to be so stingy and ignorant that he would not know that giving away worthless things as donation, especially during the course of a religious exercise such as a sacred fire sacrifice, is a sacrilegious act which is unpardonable and it literally defiles the fire sacrifice itself. Further, charity has an underlying spirit of selflessness, generosity and magnanimity which his father obviously lacked. The sacrosanct spirit of charity entails that one gives to others what one would prefer to keep for his own use or accept himself, and this charity is to be done with all humility and a sense of sincere detachment with things that one regards as most valuable and useful himself—but true charity does not mean donating things that are primarily worthless and useless, things that are meant to be disposed off nevertheless but are used for making a donation with the ill-intention of gaining false fame and glory as a donor. Therefore, by donating useless cows, the father of Nachiketa was virtually insulting the holy institution of making donation and giving of charity, and was defiling the sanctity of such exercises during a fire sacrifice. Was he not aware of the horrendous consequences that such an act would have for him and his family?

Aside of this, there was the question of why was he doing it at all? This fire sacrifice called 'Vishwa Jeet' was done by him to acquire immense fame, but the way the father was being miserly it would only result in having a negative affect instead of a positive one, inviting infamy and leading to the demotion of his soul.

So, Nachiketa was very peeved and dismayed that this demeaning act of his father would give a permanent bad name to his family, and in future he would have to bear the brunt of this ignominious deed of his father. Not only worldly infamy, this sacrilegious act would also be denigrating for the spiritual well being of his father as well as for the rest of the descendents because of the curse that the Brahmins would cast upon them.]

3. Nachiketa thought to himself—"These cows are so feeble and miserable, they are past their prime years and health, they appear to have no desire to drink water and no inclination to graze upon grass, they have been milked and have become dry (i.e. they are past their age of producing milk), and they have become so old and wretched that they cannot reproduce. By giving such worthless cows as donation it is certain that my father would not only get ignominy but also would be committing a grave sin that would deprive him of all the happiness in this world. Instead, he would be condemned to hell. [Hence, I must warn him.]" (3).

4. With this noble thought in his mind, Nachiketa approached his father and said, 'Oh dear father! Whom would you like to give me as donation?'¹

[In other words, if you decide to sacrifice your son, or abandon him, by giving his custody to someone else, whom would you prefer?]

He asked this question twice or thrice. Initially the father just neglected him but on his insistence he became extremely annoyed and said in exasperation—"I would give you to Death God (Yam)"² [That is, should I decide to abandon you, I would prefer to give you to the God of Death known as Yam.] (4).

[Note—¹Nachiketa was very peeved and perplexed when he watched that his father gave away worthless cows from his stock of cows and kept healthy ones for his own use. After all, who would enjoy the milk of these cows still in the family cow-shed? Perhaps the father wished to kill two birds with one arrow—by giving the old and

worthless cows he would free himself of the burden of taking care of them on the one hand, and reap the benefit of the good act of performing a fire sacrifice in which huge number of cows were given as charity to Brahmins on the other hand. But Nachiketa was alarmed that this foolish act of his father would have the opposite effect—i.e. instead of having any positive affects, such thoughtless deed would be ruinous not only for him but for the entire family as well. He thought that he must warn his father that he does not approve of his actions, and he would not like to enjoy any property and prosperity or fame and glory derived with such an unreligious, ignoble, selfish, unrighteous and sinful act. So he went to his father and sarcastically asked him if he would be willing to donate his own son as the ultimate sacrifice because he felt very ashamed to be called a son of such a miserly father who gave away old and useless cows as donation. Nachiketa also seems to taunt his father, as if saying—‘Suppose one day you deem me to be useless for you, and then you would not hesitate to give me also as a donation in one of your future fire sacrifices. Say, I wish to know to whom would you give me as charity?’

²The father of Nachiketa admonished his son at having the temerity of confronting him with such a ridiculous question because no father wishes to give his son to anyone as donation. After all, the father does so many things and takes so much trouble in this world so that the benefits derived from his enterprise can be enjoyed by his son as much as he enjoys them himself. A person who has no son would lose interest in acquiring the material assets of this world because there is no one after him to enjoy the fruits of his troubles. So when Nachiketa asked this question from his father, the latter thought it to be a silly and impertinent query, and thus reprimanded his son for it. He felt so disgusted that he chided him by literally saying ‘go to hell’! It was not that he did not love his son Nachiketa, but it was simply said in annoyance like any father’s response would be to untimely nagging and impertinence shown by his immature son.

Yam is extensively covered in the 1st and 10th Mandals of the Rig Veda. Sukta 10 of the tenth Mandal is totally devoted to him. *Yam* personifies the concept of death and life after death. As opposed to *Nirriti* who is also the God related to death, *Yam* deals with giving justice to the dead person depending upon his deeds that he has done during his lifetime. Therefore, he is also called the patron God of Dharma, because he gives the dead person an abode in the heaven for his righteous and noble life, whereas *Nirriti* is the patron God of death and destruction due to sins and evil way of life. According to legends, *Yam*’s sister is *Yami*. His father is named *Vivaswat* or *Vivaswaan*, and he is also called ‘*Yam Vaivaswat*’ (Rig Veda, 10/14/5). His mother’s name is *Saranyu* (Rig Veda, 10/17/1-2). He is regarded the patron God of those who are dying or death personified (Rig Veda, 10/165/4) as well as of the Spirits of those who have already died and have become ‘*Pittars*’ or ‘spirits of dead ancestors’. Hence, he is the king of the *Pittar-Loka*, i.e. the abode of the spirits (Rig Veda, 9/113/8, 10/16/9). He decides where the dead creature goes according to the deeds done by the latter in his previous life (Rig Veda, 10/14/1). He resides in the outer heaven. Out of the three *Lokas* (mythological worlds), the first two, i.e. ‘*Bhu*’ (earth; the terrestrial) and ‘*Bhuvaha*’ (the sky just above the surface of the earth; the space of the solar system) is the realm of *Savita* (the God who is treated as synonymous of Sun), while the third world, the ‘*Swaha*’ representing the heaven, is the abode of *Yam* (Rig Veda, 10/35/6). He is the patron deity of the south direction. In some places he is also regarded as the son of a *Gandharva* and a marine beauty (Rig Veda, 10/10/4).

Iconographically, he is depicted as riding a buffalo or bison, and holds the baton or mace to punish the guilty as well as to threaten those who do not obey him. River *Yamuna* is said to be his sister.

According to the Purans, he was cursed by sage *Animaandavya* and was born as *Vidura*, the low-caste *Shudra* (*Mahabharat*, *Adiparva*, 108/16).

Yam has the following connotations— (i) the God of death and one who judges the creature for his deeds during his life and ascertains the reward or punishment that he deserves for them; he is therefore also called Dharma-Raj or the king who upholds Dharma even after death, (ii) self control of sense organs, and (iii) noble actions to concentrate the mind on the absolute truth, i.e. the Brahman— this is a form of Yoga.]

5. When his father sternly rebuked him in this way, Nachiketa became pensive. He thought to himself—‘I occupy a high place amongst those who are regarded as the best sons of their fathers or best disciples of their teachers. I at least have a place amidst those who are regarded as ordinary or mediocre sons and disciples. But surely I do not belong to the lowest type or the third class of sons or disciples¹ that I deserve being condemned to the service of the God of Death (Yam) by my own father. Certainly, there must be something good in store for me that my esteemed father has cast me to the custody of the Death God². What service can I render to Yam who henceforth becomes my guardian from this moment?’³ (5).

[Note—¹There are three categories of sons or disciples—(1) The best ones are those who do not wait for their father or teacher to tell them to do anything as they are ever vigilant and foresee the needs of their fathers or teachers in advance and act even before they are asked to do so. They are ever eager to serve them, very careful and diligent in their service, take initiative by putting the first foot forward to serve their fathers or teachers, and consequentially they become most dear to the latter. (2) The medium ones are those who wait for instructions before acting. They are disciplined in their behaviour but do not take the initiative on their own. (3) The lowest category of sons or disciples is that who do not act in spite of their fathers or teachers asking them to do anything. They are either defiant and arrogant and disobedient or plain lazy and careless in their attitude for service. Such sons and disciples are not liked either by their parents or their teachers.

²So Nachiketa wondered why his father had treated him with such disdain and disinherited him by casting him out of his flock of disciples when he had never disobeyed him even once. No father would like his son to die and go to Yam who is the patron God of death, and surely it is not expected from his own loving father because had it been so he would not have been so stingy as to keep healthy cows and give away old and decrepit ones as charity. Surely he wished to keep the healthy cows for the benefit of his family, and a son is not only the most valuable asset in a father’s household but most important member of the family.

³When anyone gives anything as donation, the donated thing belongs to the person to whom it is given. The person who receives the donation becomes the rightful owner from that moment. So, when Nachiketa’s father said that he is casting him to the custody of Yam, the God of death, Nachiketa henceforth became the ward of Yam. Now he had a moral duty to serve his new guardian with the same diligence and sincerity with which he had been serving his father until now. So it would be fit and proper for Nachiketa to go to Yam forthwith and serve him as his new guardian.]

6. Nachiketa saw that his father was very upset and hurt at having said angry and inappropriate words in the heat of the moment. So he approached him calmly in order to assuage his ruffled feelings, console him and soothe him down.

He said to his father in sagely words—‘Oh dear father! You must pay attention to the hallowed tradition of noble behaviour, righteous conduct, pious demeanours and religious observances that have been a part of our great tradition from time immemorial, coming down from hoary past when your ancestors had observed them most stringently, and which are being observed even in the present time by your peers and other righteous persons.

Human beings (or any living creature for that matter) are mortal. They become ripe like a grain of crop, become old and worn out in due course of time, and finally die, only to be reborn again like the new crop that grows from the seed of the earlier harvest (6).

[Note—Nachiketa tells his father that in the first place the charity which he had thought he was doing was not the right way to do it because one should not give worthless things as donation, especially during a fire sacrifice. He should recall the noble tradition of ancient sages to which he belonged, sages who had performed great sacrifices and given away the best of things that they had at the time most willingly and happily. He must realise the grave error he had committed by donating decrepit cows. Secondly, now that he has given his son to Yam, he should not have any remorse because a righteous and noble man has nothing more important for him than upholding his own words. So he must now allow his son to go to Yam, i.e. die, most willingly, happily and without demurring a moment. This is the best way to uphold that great tradition. Perhaps this was the greatest repentance for him for defiling the sanctity of the fire sacrifice by donating old and useless cows to Brahmins. Perhaps this charity or donation or the sacrifice of his own son during the fire sacrifice would absolve him of all his sins. So he must not have any regret and remorse.]

7. [Reassured by the maturity of wisdom and enlightenment shown by his son, Uddyalak gave Nachiketa his permission to go to Yam's place. When Nachiketa reached Yam's place he found that he was not there. So he waited for him for three days without eating or drinking anything as a token of his determination to die if Yam did not consent to meet him. By and by, when Yam returned, his consort told him about Nachiketa waiting for him.]

‘Oh Vaivaswat (Yam)! The Vaishwanar Agni, i.e. the universal and all-pervading ‘fire element’ represented by the Fire God comes to pay a visit to a householder in the form/guise of a Brahmin guest. Righteous and noble people welcome such guests with this understanding. Therefore they welcome the guest with due honour and respect by offering them water, washing their feet and giving them a comfortable seat to sit upon comfortably. Hence, go and offer him (Nachiketa) water as libation and wash his feet. [That is, you should not neglect Nachiketa and instead show him the same respect that you would normally do for an honoured guest. He has been waiting for you for three days without food and water, and now you should immediately calm him down and assuage his ruffled feeling by being very humble and welcoming.] (7).

8. If a Brahmin guest stays hungry in the household of a man, then it is an unpardonable sin and it brings curse upon the stupid and lowly householder. It is such a great sinful act that all the good and auspicious deeds done by this man and their consequential rewards go in vain. All his desires and aspirations, all his hopes and expectations of acquiring known and unknown things become null and void. Even if the rewards are well within his sight, even if success is within reach, he is not able to get them; they elude him. Neither can he enjoy the rewards and reap the benefits that come with the fulfillment of his desires and aspirations; none of his hopes and expectations are ever fulfilled and prove rewarding for him.

Even the auspicious rewards that would normally accrue to him for doing such noble deeds as digging wells and establishing other water bodies such as wells, ponds etc. for the use of the society are offset by insulting his guest. This curse destroys his sons and animals etc. [That is, all the good effects of observing religious sacrifices, giving alms and donations and making huge charities for the general welfare of the

people at large, and similar other auspicious activities, also nullified by not showing due respect to the guest who has come visiting him in his household.].’ (8).

9. Hearing the words of sane advice given to him by his consort, and afraid of the horrendous consequences of insulting an honoured Brahmin guest by keeping him waiting without food and water, Yam went immediately to receive Nachiketa and showed him due respect by offering water to him and washing his feet as a token of great respect.

Yam said to him, ‘Oh Brahmin! You are my honoured and revered guest, so I bow respectfully before you. Let me be forgiven for being the cause of your inconvenience that you had to spend three nights at my place without food. Please excuse me for it. I promise you three boons which I would grant you for these three nights, one boon for one night. Go ahead and ask whatever you wish’ (9).

10. Nachiketa replied, ‘Oh Death God! Let my father, the son born in the lineage of sage Gautam, i.e. Uddyalak, be calmed down in relation with me. Let him be happy and without any anger and remorse for me¹.

When you send me back home, let my father welcome me with the same love, affection and respect that he had for me earlier. Let him willingly accept me as his son.

This is the first boon that I wish be granted to me (10).

[Note—¹‘Let him forgive me and have no ill-will for me. Let him forgive me for my audacity and temerity of questioning his actions and pretending to be wiser than him by pointing to him the wrong he was doing by giving old and useless cows as donation. I should have shown more prudence and caution by keeping quiet and respecting the traditional custom and decorum of not raising fingers at one’s father and his wisdom. I ought to have maintained the dignity of his stature as my respected father as well as the fact that he is considered a great sage with an established fame and reputation, I should have realised that he is much senior to me inspite of the fact that I was correct and he was wrong. So I am indeed sorry for my actions and impatient behaviour. It is my impertinence that resulted in his getting so agitated and losing his peace. I am indeed sorry for it, and so would request you to bless me that my father gets back his peace of mind which he has lost because of my childish and impertinent behaviour. But I had no wrong intention of insulting him or causing harm to his reputation; rather I was worried about his spiritual welfare and the infamy that he would get by committing the sacrilegious act of giving inappropriate donation.

Please forgive me and bless me that he does not turn me away or treat me as an outcast when I go back home’.]

11. Yam replied, ‘When he would see you freed from the clutches of death when you go back to him, be assured that your father Uddyalak, the son of Aaruni, would, under my influence, not only recognise you as his own son Nachiketa but also welcome you with the same love and affection that he had for you earlier.

He would be freed from all anger and regrets for you; he would no longer feel aggrieved and suffer from any sorrows at having lost a son. Having got back his beloved son, he would spend the rest of his life sleeping comfortably in peace. [That is, instead of getting annoyed at seeing you again, he would rather feel very fortunate at having found his lost son and got him back from the mouth of death.].’ (11).

12. Nachiketa said, ‘Oh Yam God! There is no fear from any quarters in the heaven. Even you as death personified have no influence there. Old age does not torment

anyone there. A creature overcomes thirst and hunger in the heaven, and having vanquished all sorrows and pains, he lives happily and most cheerfully in the heaven (12).

13. Oh Yam! You are well acquainted with the Agni Vidya¹ (i.e. the science and knowledge pertaining to spiritual energy which is as potent as the fire element) that entitles and empowers a man to reach the heaven and enjoy its benefits. I am devoted to you and eager to learn about it². So be kind to preach me about that Agni Vidya by which one can attain heaven and enjoy its eternal peace and tranquility. This is the second boon that I wish be granted to me' (13).

[Note—¹The *Agni Vidya* pertains to the metaphysical knowledge of the various facets of the eternal fire element which is at the root of creation because any form of life necessitates the presence of energy and heat and light which are the eclectic virtues possessed intrinsically only by the fire element. Now let us have a broad glimpse of the different forms in which this fire element has been worshipped down the ages.

The *Vaishwanar Fire (Agni)*—The legendary 'fire element' has a very prominent place in the scriptures. The Fire God or *Agni* appears in the Vedas as follows—Rig Veda—1/1; 1/12; 4/5; 5/1; 6/7-9; 7/1, 3-6; 12-13; 8/1, 23, 39; 10/1-7; 12/1-122 etc.; in Sam Veda—1-51; 53-55 etc.; in Yajur Veda—1/5; 2/4; 7/24; 18/72 etc.; and in Atharva Veda—6/119; 8/3; 12/3.

Since it was the first born amongst the various Gods, it was called 'Agni' meaning the one who comes first, that which precedes others. It is the inherent 'fire' element in the form of the vital spark of life and warmth present in all the living creatures that distinguish them from non-living creatures. It is all-pervading and omnipresent, and infuses life to all the creatures (Kaushitaki Brahmin, 4/3; Brihad Aranyak Upanishad, Canto 5, Brahman 9, verse no.1). This fire helps in digestion of food (Shatpath Brahman, 148/10/1).

He is the foremost amongst the Gods worshipped on earth (Shatpath Brahman, 6/1/11). He is compared to the Sun in the heavens. He has 7 tongues representing the 7 colours of the rays of the Sun or the colours of light (Rig Veda, 1/146/1; 3/6/2). Since he provides nourishment to the Gods by accepting the offerings made to the sacrificial fire at the time of fire sacrifices, he is deemed to be their sustainer and father (Rig Veda, 1/69/1). Other names of the Fire God called Agni or Agne are the following—Vishwavedus, Kavi, Kavikratu, Jaatvedus, Vaishwaanar, Tanunpaat, Maatrishwaa and Naraashansa. It is believed that he was born from the mouth of the Virrat Purush (Rig Veda 10/90/13).

The fire element has *three* legendary forms—viz. the 'Agni', which is the terrestrial fire on earth represented by the word Bhu, the 'Jatvedas', which is the fire of the sky represented by the word Bhuvaha, and 'Vaishwanar', which is the fire of the heavens represented by the word Swaha (Brihaddevitakaar, 1/67). The term appears in the Rig Veda approx. sixty times and is more often than not synonymous with both life as well as the fire element.

According to some ancient scriptures, the holy fire has *five* forms which have been elaborately described in Chandogya Upanishad, canto 4, section 10 to 13. They are the following--(a) 'Garhyapatya' (the fire of the household hearth; the main fire of the formal fire sacrifice), (b) 'Dakshinagni' (the fire used as a witness to making charities or any other religious festivity; the fire lit at the site of a sacrificial fire ritual, near its south end), (c) 'Ahavaniya' (the fire to invoke the Gods during a ritualistic sacrifice), (d) 'Sabhya' (the fire of the Vedic period which was continuously lit) and (e) 'Awasathya' (the fire of the later Smriti period). Worship of the three important fires have been described in Chandogya Upanishad, canto 2, section 24, while canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance.

The *Garhyapatya* fire—This is the householder's fire. A householder has land and farm representing 'earth' in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire place in the house. Hence, the *Garhyapatya* fire, or the householder's fire, is intrinsically present and is implied in these 4 entities. It is an integral part of these four. The earth has the 'fire element' because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The fire was the central piece of all religious life in early times of the Vedic period when a fire sacrifice was deemed to be the best religious activity that a righteous man can expect to do. In this context, the *Garhyapatya* fire is the main fire lit during such formal fire sacrifices. The fire pit was either square-shaped or rounded. In the context of the fire sacrifice, it was used for the purpose of daily rituals, cooking or warming the offerings, heating of the vessels, to perform circumambulation, to act as a main cauldron or reservoir of the sacred fire which was to be kept perpetually burning throughout the life of the householder once it was lit.

The *Dakshinagni* fire—This fire is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

Like in the case of the *Garhyapatya* fire, the fire that was lit in the main sacrificial shed or site just near the main fire pit but to the south of it and where donations and charities were made was called *Dakshinagni* fire. The fire pit for this fire was semi-circular or bow-shaped.

The *Ahawaniya* fire—This fire is lit to invoke the Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since *Pran* is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The 'electric' is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possesses most stupendous powers and strength is likened to the presence of *Brahm* in it even as the great power and strength present in a man is due to the *Atma* or *Pran* present in him. Even as a man is useless without the presence of *Pran* in him, the Electric would lose its importance if there was no *Brahm* present in it which gives it its punch and strength.

The following are also regarded as the five fires— (i) The Sun, (ii) The Lightening, (iii) The Terrestrial fire, (iv) The Master or Lord of the household, and (v) The Chief Priest.

Scriptures ordain that a learned person should worship the fire element by doing five types of sacrifices in his life. These are called the *Panch Maha Yagya* (the five great sacrifices). They are the following—(1) *Bhut Yagya* refers to taking care of other creatures in creation, such as feeding animals and providing for their protection and shelter. (2) *Manushya Yagya* refers to doing the same thing for fellow human beings as done for animals and other creatures of this creation. (3) *Pitri Yagya* refers to offering oblations to dead ancestors and doing religious activities for the peace of their souls. (4) *Dev Yagya* refers to the performance of fire sacrifices in which offerings are given to the sacred fire which sustain the Gods and are done to honour them. (5) And *Brahm Yagya* refers to the study of the Vedas and other scriptures that enlighten the man about the ultimate Truth known as *Brahm*. These five sacrifices have been described in *Ashramo-panishad*, verse no. 3.

²Firmness of faith and conviction are the necessary requirements for acquiring knowledge of the spiritual truths. If one lacks these qualities, then it would be like climbing a slippery pole. Nachiketa emphasised the fact that he has these qualities in him and so he must not be denied the opportunity of acquiring this knowledge of spiritual energy that would entitle him to ascend to heaven when he so wishes.]

14. Yam said to Nachiketa, ‘Oh Nachiketa! I am well versed in the ‘Agni Vidya’ that you wish to know about. It is able to provide an eternal and imperishable life in the heaven to those who know it and are well conversant with it; it is the foundation upon which the entire edifice of heaven and eternity is based. Hear carefully about it from me and understand its import fully.

This profound metaphysical knowledge about the ‘Agni Vidya’ entitles and enables a person to reach or access the heavens (which is a metaphoric way of saying that it gives him immortality and beatitude). It is also the foundation and sustainer of this world as well. It is the dynamic force in creation that empowers, energises, supports, sustains and protects all forms of life, both in the mortal world on the earth as well as the immortal world in the heaven.

It is very esoteric and mysterious, and you must regard it as secret that is hidden in a deep cave. [That is, it is very difficult to understand it correctly or even have access to the knowledge pertaining to it. It is equally difficult to find someone who would explain it in detail. But impressed by your sincerity and steadfastness of purpose, I shall narrate it to you in detail.] (14).

[Note—*Agni* means fire, and *Vidya* means knowledge. Taken together, this knowledge refers to the inherent strength, energy and power of the pure conscious ‘self’ or Atma that resides in the subtle heart of all living beings. This is the dynamic energy of the ethereal Spirit that helps the creature to rise above the mundane and reach for the ‘sky’ or heavens. This is metaphoric way of saying that if a man takes the shelter of his conscience which is the voice of this inner ‘self’ and obeys its orders, he can become god-like and attain immortality and happiness that is available to those who are sinless and free from all worldly taints. This is the picture at the micro level. From the cosmic perspective it refers to the dynamic forces of Nature in the form of the fire element that provides the basic energy and vitality for the creation to come into being in the first place and then sustain what has been created.

As any specialised field of science and art requires expert knowledge and skills specific to that field in order to derive any real and tangible benefit from it, the knowledge of Agni Vidya would enable the person who has this knowledge to attain great heights of spiritual achievements that are not available to those who lack it. The term ‘fire’ is also symbolic of wisdom, erudition and enlightenment because without these virtues the inherent spiritual strength of a man cannot be known by him. It also stands for having great zeal and enthusiasm for reaching great heights of spiritual freedom.]

15. After that, Yam explained to him about the ‘Lok Agni’ in detail. This ‘fire’ is the primeval cause for the creation known as the ‘Loka’ coming into being¹.

On the physical plane, Yam explained to him the details of how to build the sacrificial fire pit using bricks where this all-pervading cosmic fire is symbolically established at the micro level of creation². He described in detail the type and number of bricks to be used for the purpose of constructing the fire pit.

Nachiketa heard the teaching in rapt attention and repeated what he had learnt for the satisfaction of the Yam God. [In order to test his attentiveness and intelligence, Yam asked him to repeat what he had learnt, at which Nachiketa repeated verbatim what he was taught.]

Yam was extremely pleased by the boy's concentration and ability to grasp things taught to him. He said to him—(15).

[Note—¹This 'fire' represents the cosmic dynamic creative energy of the supreme transcendental Brahm which the latter employed to unfold this vast and multifarious creation. It is a metaphor for the knowledge, expertise and skill that Brahm inherently possessed that enabled the latter to mould such a stupendous variety of creation from virtually nothing. This is a highly technical field requiring expertise of the highest order. It can be compared to the modern atomic or aerospace sciences which are highly technical fields of knowledge, and not every Tom, Dick and Harry can be an expert in it. That is why this Agni Vidya is not only regarded as the basis of creation but highly esoteric and mysterious as well. It not only provided the basic know-how to get the process of creation started but even provided the very first spark to ignite the cosmic cauldron.

Thus, the Agni Vidya refers to the wisdom and knowledge which one employs to harness and establish control over the stupendous dynamic energy, powers and strength of the eternal 'fire element' which is the basis of creation and which is the primary vital spark that not only initiated the process of creation in the beginning but sustained it once the thing came into being. Energy and strength are needed for anything to happen. Such a gigantic creation also needed an atomic explosive spark to provide the initial ignition to get the chain reaction of creation started. Heat and energy are the prerequisites for any activity, whether at the visible gross level or at the invisible subtle level. Nothing in this world can survive even for a moment without heat and energy. This is why 'fire' is deemed to be at the base of creation. Once a man is able to control this magnificent cosmic power of creation and harness its astounding energy, nothing can beat him again. He becomes a 'superpower' in the realm of creation.

In other words, from the metaphysical perspective, a person who can use the energy of the Pran (vital winds) and Atma (consciousness) present inside his body can achieve great things which defy imagination. The Agni Vidya would therefore refer to the harnessing of the inherent spiritual strength and dynamic energy of the pure consciousness present in a man and use it to attain liberation and deliverance from this world. It can be used to attain the state of eternal blissfulness that is akin to being in heaven.

²When the performer of the fire sacrifice sees the astounding powers of the raging fire in the sacrificial pit and observes that it burns everything put into it, and that it selflessly passes over these offerings to the Gods for whom they are meant after due purification, the spiritual aspirant learns a great spiritual lesson from what he observes. He learns that one should be as fierce and unrelenting as the fire to destroy every worldly impurity and spiritual obstacles that comes his way, and be as selfless as the fire so that whatever he possesses is passed on for the benefit of others. If this happens, he would acquire as great a power as the fire greatly honoured by all.

³In ancient times it was an established belief and tradition that the way to attain heaven was through the path of the fire sacrifice. The fire sacrifice was in effect a method to harness the dynamic cosmic energy inherent in the all-pervading fire element which would sufficiently empower the person performing the fire sacrifice to achieve his goal. The sacrificial pit and the heat generated from it remind one of the modern day nuclear reactors. Even as the strength and energy and powers of the atom can be harnessed for beneficial or ruinous effects through the nuclear reactor, depending upon the temperament and mental setup of the person who masters the science of atomic energy, the fire sacrifice could be similarly used either for auspicious purposes such as attaining eternal peace and tranquility for the tormented soul, or for attaining worldly glory and conquest. Harnessing of nuclear energy requires expertise, knowledge and skills not easy to master and not accessible to all. Building and operating a nuclear facility also is a daunting and elaborate job.

Similarly, the ancient fire sacrifices required special skills and expertise, and it was not simply lighting any odd evening village community bonfire to the merriment of all those who sit around it to gossip about the day's events.

The fire sacrifice was a 'must do' exercise that in ancient times was the only means of attaining heaven and getting riddance of sins. It was ordained that a man must perform a fire sacrifice before his death so that the negative affects of any deed done by him during the past and present lives are nullified and the way to his liberation and deliverance is cleared.

From this perspective of doing a fire sacrifice to attain spiritual eternity and liberation, the 'units' of the special knowledge that Yam described to Nachiketa symbolically pertain to the steps to be followed in the construction of the fire pit—such as the type of bricks used, the number of bricks to be used, the geometrical design of the sacrificial pit, the type of wood to be used in the ceremony, the Mantras to be chanted, and other such finer details which must be diligently and strictly followed if any spiritual benefit is to be derived from the entire exercise. So, the sacrificial fire pit is like an oven in which the fuel of wood is added and the science of Mantras is used to order to generate immense energy that can empower the patron performing the fire sacrifice with stupendous potentials.

By way of explaining the details of the physical construction of the fire pit, Yam was metaphorically explaining to Nachiketa the different forms of 'fire' as a manifestation of the supreme transcendental Brahm's astounding dynamic energy, stupendous potentials, magnificent powers and cosmic strength. The visible symbol of the eternal fire is the sun in the sky, and the energy inherently present in the body of all living beings. It is a well known fact that no life can ever exist without heat and energy of the fire element. In Chandogya Upanishad of the Sam Veda tradition (Canto 4, Sub-cantos 5 and 7) it has been stated that Brahm is characterised by light and illumination (as opposed to darkness) which are the characteristic virtues of the fire element. The entire Canto 3 is dedicated to the praise of the Sun God as the essence of life, and Sun is the celestial pitcher of fire element which burns eternally inside it.

The 'fire' has immense importance in metaphysics as it is a symbol of life, vitality, energy and the purity and strength inherent in the consciousness known as the Atma of the entire living world. Without 'fire' everything is deemed to be dead and gone.]

16. The exalted Yam God was very pleased with Nachiketa when he observed his divine virtues and rare intelligence, his phenomenal memory, steadfastness of purpose, sincerity and integrity. He blessed him thus—'I am so pleased with you that I hereby grant you an additional boon that henceforth this astounding metaphysical knowledge called 'Agni Vidya' will be known after you (i.e. it will have your name attached to it and would be recognised as 'Nachiketagni')¹. Now you should accept this symbolic magnificent garland from me as a token of my blessing for you. The magnificent beads of this garland represent all the units of knowledge pertaining to the eternal fire element, which are like individual gems. This knowledge is the basic requirement for achieving success in spiritual progress of an aspirant, and especially useful during fire sacrifices, because without this knowledge no fire sacrifice can be completed successfully (16).

[Note—¹It is standard practice even in our time that when a person discovers something new, the discovery is named after him. Nachiketa was the first human to have acquired this astounding knowledge pertaining to the correct way of performance of the fire sacrifice, the esoteric knowledge regarding the correct way of constructing the fire pit and arranging the rest of the accoutrements, and the correct

objective to be aimed at and achieved by this exercise, and so it is apt to name the entire knowledge after him.

Yam God is also known as 'Dharma Raj' or the deity who presides over all conducts which are called righteous, noble and auspicious. Therefore, Yam is the custodian of all the virtues of righteousness, nobility and auspiciousness. It is his duty to ensure that the laws of Dharma are strictly enforced, and those who do not adhere to them are punished for their misdemeanors. He is like the conscious keeper of creation. So when he found that Nachiketa was a unique model of auspiciousness, nobility and righteousness as is borne out by the fact that he did not hesitate to even chide his own father for his unrighteous way of making charities, willingly courted death for his convictions, and then asked for his father's peace and forgiveness without any rancour and ill-will in his heart, Yam was extremely obliged to bless him.

The word 'Nachiketa' means one who is untouched by worldly delusions and attachments. Only such a man who is untainted in every manner and detached from all attachments is entitled, eligible and qualified for claiming eternity and knowledge of Brahman that is supreme, transcendental and eternal. Attainment of heaven is a natural spin-off of having attained such an exalted stature that makes one equivalent to Brahman.

In Rig Veda, 10/135, Yam asked Nachiketa which chariot he rode to reach the heaven. The obvious answer is the 'chariot of dispassion and detachment from everything false and perishable, the sincere desire to pursue what is auspicious and righteous, and being uncompromising as far as one's convictions and faith in what is true and correct are concerned'. Nachiketa was selfless and righteous to the extreme as he was worried for the spiritual welfare of his father, and his detachment from the material world is obvious from the fact that he did not think twice before leaving the comforts of his house and coming to face the death god willingly. This fire of spiritualism burning in the heart of the young Nachiketa enabled him to go straight to the heavenly abode of Yam and confront him with confidence. Whereas others in his place would have been frozen stiff in fear at the prospect of meeting the God of death, Nachiketa waited for him patiently, determined to meet him instead of running away from the place. Perhaps this confidence of Nachiketa would have stunned Yam himself so much that he would have felt proud to have such an exalted soul as his disciple, for surely Yam must never have encountered a man earlier so willing to serve 'death' at the altar of righteousness and propriety.]

17. A wise aspirant should invoke this divine and eclectic knowledge known as 'Nachiketa Vidya' (pertaining to the stupendously powerful fire element of creation) having three subtle dimensions¹.

He should declare his tremendous faith and allegiance to this divine knowledge by affirming it thrice. [When one says anything thrice or repeats his desire to accept it thrice, it shows his firmness in his conviction and determination of his mind. To say anything thrice is used even today to confirm something, to firmly assert that what is being said is true and correct and one has no doubt in his mind regarding its authenticity and truthfulness. The repetition of any word thrice is confirmation of one's commitment in what he is being said by him.]

He is able to fulfill his obligations to three entities with which he is linked in this world because of the incidence of his taking birth in it, but he remains completely detached and indifferent to them. [These three entities to which he has moral obligations are his two parents, viz. the father and the mother, and his teacher. He physically serves them and remains obedient to them, but not emotionally attached to them. He treats them as mere co-travelers in the journey called life. Nachiketa is a living example of this type of person. He served his father to the best of his ability,

but was not emotionally attached to him. He even fulfilled his obligation to him by warning him of the grave error he was committing by donating old cows even at the cost of annoying him and having to leave the comfort of the household.]

Such a wise, self-realised and enlightened man is able to fulfill the obligatory three deeds ordained by the scriptures for all human beings², and finally gets across the cycle of birth and death³.

Such a holistic and comprehensive approach to metaphysical principles and doctrines of spiritualism entitles him to overcome the barrier—in the form of an endless cycle of birth and death—created in his path to ultimate emancipation and salvation.

Having acquainted himself with all the finer nuances of this divine knowledge called the Nachiketa Vidya or Agni Vidya, complete with its three dimensional spiritual philosophy, an exalted, self-realised and enlightened man is able to have a first hand experience of the divine Brahm who is honoured and praised by way of doing fire sacrifices. Brahm is indeed the deity in whose honour the sacred fire is lit and oblations made to it. The reward of this auspicious and highly rewarding spiritual exercise is that the aspirant finds eternal peace and tranquility for himself and his soul⁴ (17).

[Note--¹The term *Trividya* has two parts—viz. ‘Tri’ meaning ‘three dimensional, and ‘Vidya’ meaning ‘specialised knowledge, skills, expertise and erudition’. Hence, the combined word *Trividya* refers to the triad of knowledge pertaining to creation. It has many hues and shades of meaning. Let us examine these various connotations one by one.

(1) It refers to the three paths leading to Brahm, the paths that a spiritual seeker seeking to know Brahm follows. They are—(a) Karma Yoga, (b) Gyan Yoga, and (c) Bhakti Yoga.

(a) Karma Yoga expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get ‘involved or attached’ to those deeds or action in as much as we shouldn’t be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one’s offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person’s subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

(b) Gyan Yoga involves the intellect and mind to determine and delineate the true and the false; it helps to access and understand the reality and falsehood behind the manifested visible world which appears to be ‘real’ but is actually like a ‘shadow of the truth’. This Gyan Yoga helps to establish the mind firmly into seeing unity in diversity. Those following Gyan Yoga are called ‘seers’ because they can ‘see’ beyond the visible, multifarious and bewildering variety of this false world. Gyan Yoga is in the realm of the intellect and discriminating mind of a creature.

(c) Bhakti Yoga refers to having devotion for a chosen Godhead who is a person’s ideal, on whom he showers all his adoration, and on whom he focuses his attention. He is emotionally and sentimentally involved with his deity. Hence, the heart is the realm of Bhakti Yoga; it helps to commune with the divine.

(2) The three Paths followed by a creature according to the deeds done by him are referred to in Shwetashwatar Upanishad, 4/7 of the Krishna Yajur Veda tradition as follows—(1) the path that goes to the heaven where the Gods live, (2) the path that leads to the world of spirits, and (3) the path which leads to the world of mortal creature on this earth. These have been elaborately described in Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 36, 5/10-5/11, 6/1/1-6, 6/2/2,14-16, etc.;

Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahmin Upanishad, Canto 1; Taittiriyo-pahishad, Valli 2, Anuvak 6; and Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3 of it.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1.

(3) The other interpretation of this phrase is that the three paths are the following—(1) the path of Dharma marked by auspiciousness, virtuousness and righteousness, (2) the path of Adharma marked by inauspiciousness, sins, perversions and guilt, and (3) the path of Gyan or the path dominated by truthful knowledge, wisdom, erudition and enlightenment.

(4) These three dimensions are symbolic of the three legs of Brahm representing the three planes of creation in which the dynamic powers of Brahm represented by the fire element exist—viz. the past, the present and the future; the mortal world represented by the earth, the immortal world represented by the heaven, and the afterlife represented by the world of the Spirits or the nether world.

(5) The three primary Vedas known as Rig, Sam and Yajur, and the knowledge contained in them is also known as Tri-Vidya.

(6) The three steps to benefit from these Vedas are first to access them, then to acquire their knowledge intelligently and with due understanding, and then to apply it in practice in one's life for the ultimate spiritual welfare of the soul.

(7) Having knowledge of the truth about the three types of bodies of the creature and establishing coordination between these three bodies so that their efforts can be directed towards one's spiritual objective instead of letting these bodies act like obstacles in one's spiritual path. If not handled properly, these three bodies can act like an uncrossable boarder for the creature's Atma. These three bodies are the following—the gross body consisting of the sense organs of perception and action, the subtle body consisting of the mind and intellect, and the causal body consisting of the Atma or soul of the creature.

(8) The three states of existence of pure consciousness—the waking state of consciousness called 'Jagrat', the dreaming state called 'Swapna', and the deep sleep state of consciousness called 'Sushupta'.

(9) The three legendary rewards of righteousness and auspiciousness—viz. 'Artha' or material well being and prosperity, 'Dharma' or possessing noble and righteous qualities, being virtuous and upright, and 'Kaam' or being successful in fulfilling all worldly desires.

(10) The three phases of creation—viz. the creation, the development and sustenance, and the annihilation of creation.

(11) The three qualities that determine the basic character of a creature. they are 'Sata Guna' or noble qualities, 'Raja Guna' or mundane and ordinary worldly qualities, and 'Tama Guna' or mean and base qualities.

(11) The three classes of society and the knowledge regarding the laws that each of these categories should follow. These three classes are the Brahmins who are people supposed to be learned and wise, and are generally teachers and priests; the Kshatriyas who are the warrior class and assigned the duty to give protection to the other classes, and the Vaishyas who take care of trading and farming so as to provide the basic necessities of life to the other classes. However, there is a fourth class called Shudra whose main function is to serve these three classes in a general way.

(12) The ability to have knowledge of what happened in the past, what is happening in the present, and what would happen in the future.

(13) According to some, the two parents of a man—viz. the father and the mother—and the teacher form the three points of this Tri-vidya because they mould the entire character of a man. While the parents are responsible for his physical existence as well as his basic character building right from the man's earliest days, the teacher is responsible for his formal education as well as his moral bent of mind. The three are the ones who shape a man's character and personality more than the scriptures.

(14) The three aspects of formal religion—doing rituals such as fire sacrifices and observance of sacraments, hearing of scriptures, and doing Tapa (austerity and penance, enduring sufferings) and giving Daan (charity and donation) are also to be properly coordinated for any worthwhile benefit.

(15) The knowledge pertaining to the three holy fires also comes within the purview of the Trividya. These fires are—(a) ‘Garhyapatya’ (the fire of the household hearth), (b) ‘Dakshinagni’ (the fire used as a witness to making charities or any other religious festivity), (c) ‘Ahavaniya’ (the fire to invoke the Gods during a ritualistic sacrifice).

Nachiketa’s knowledge is called a three-faceted spiritual knowledge or *Tri-vidya*. The three aspects of this knowledge are to be properly coordinated to harness the latent energy, powers and strength that they encapsulate in them much like the latent qualities of the individual atom which reveal themselves when this single atom combines with other atoms to form things that are so useful to existence, such as for example a ‘water molecule’. Each water molecule consists of two atoms of hydrogen and one atom of oxygen. Taken independently, these atoms have different qualities and attributes which are phenomenally different from water. Without water element, life is just not feasible on this earth, but simply putting hydrogen and oxygen together would not create water.

This is what is meant here—knowledge and its units have to be properly coordinated in order to benefit from them.

²The three duties of a creature as a human have many connotations as follows—(1) To search for the ‘truth’ of life by studying the scriptures, understanding what they imply, and then implementing it in practice the doctrine of the scriptures. (2) To diligently follow the tenets of Dharma as prescribed for the three phases of life, viz. the life as a Brahmcharya when he lives a celibate life and studies the scriptures, the Grihastha when he enters the householder’s life, marries and raises a family, provides for its happiness and welfare, and takes care of the society, and Vaanprastha when he passes on the baton to the next generation and prepares to live a life of renunciation and withdrawal. (3) Offering of religious prayers three times a day—at dawn, at noon and at dusk. This is called observing ‘Sandhaya’ when prayers are offered to the Sun God or any other deity. The Mantra used is usually the Gayatri Mantra. (4) Other three obligations are the ones which a man has towards his father, his mother and his teacher. (5) Doing Yagya (a fire sacrifice or observance of any other religious vow), making Daan (donation, charity and giving alms), and undergoing severe hardships in the form of Tapa (following rigid religious austerity and observance of penance, suffering hardship as a means of purification of the soul and the washing off of all the impurities clinging to it).

³To ensure that the Atma is able to cross the hurdles created by these three bodies, and find its ultimate liberation and deliverance. The statement that the wise and enlightened man who has mastered this Tri-Vidya is able to cross the cycle of birth and death and find his ultimate liberation and deliverance means that his Atma is able to cross the three barriers in the form of these three types of bodies of the man, viz. the gross body, the subtle body and the causal body, that come in the way of his Atma from finding its liberation and deliverance from this world. These three bodies surround the Atma like the impregnable walls of a fort.

⁴This is because he would have studied the Vedas from metaphysical angle and not simply to acquire fame and wealth by participating in elaborate religious ceremonies which require some expert to chant their hymns. When he studies the Vedas and their Upanishads and extracts the essential truth being described in them, he is filled with immense satisfaction that comes with knowledge acquired for upliftment of one self. Spiritual knowledge is liberating and it fills him with an exhilaration of self-realisation. He exults and realises who he actually is. When this is aided by deeds that are commensurate with the noble and lofty ideals enunciated in the scriptures, the aspirant’s spiritual progress gets a boost and he is catapulted to a

higher state of existence not available to other men who are engrossed in this world and eclipsed by the dark shadow of ignorance and delusions that are the hallmarks of this mundane existence.

When a wise person realises that it is not ‘he’ but some other divine power that is responsible for creation, development and destruction of this creation, and that he is simply an inconsequential pebble or a particle of dust in the vastness of the cosmos, he feels humbled and all his sense of false pride is punctured like a balloon. It is then that he attempts to find his true identity when the scriptures tell him that he need not be so dejected at being inconsequential, for he is not an ordinary being but the supreme Brahm personified. But that realisation is not meant to stoke arrogance; it instead kindles renunciation because with knowledge comes awareness of the falsehood of this world and the truthfulness of the pure conscious Atma or soul.]

18. An erudite, sagacious and wise man who is well versed with the esoteric knowledge called ‘Trinaachiketa Vidya’ (i.e. the knowledge pertaining to the cosmic dynamic energy of creation having three dimensions and bearing the name of Nachiketa as explained in detail in verse no. 17) performs the fire sacrifice after properly selecting the correct type and number of bricks to construct the fire pit and then correctly lighting the sacred fire, is able to enjoy the happiness and bliss that is available in the heaven even before leaving this body at the time of death. That is, such a man can reap the rewards of eternal peace, bliss and happiness while they are still alive (18).

[Note—In ancient times, the fire sacrifices were regarded as the ultimate religious deed that a man can do to entitle him to enjoy the rewards that come with being auspicious and righteous. These fire sacrifices were supposed to ensure that the performer goes to heaven and enjoy its eternal happiness and pleasures. But if a man rose above the mere ritualistic aspect of the fire sacrifice and understood its spiritual and philosophical importance, he could enjoy the same benefit here in this life itself. He would become so wise and enlightened that he would realise that the supreme transcendental Brahm that is being worshipped through this fire sacrifice is resident in his own bosom as the pure conscious Atma. Therefore there is no need to search this eternal fount of happiness outwardly somewhere as it is present inside one’s own self. He would also realise the futility of pursuing this world and the fact that the gross body is not his ‘true self’. The ‘true self’ is the Atma which is eternally blissful and happy. This realisation helps to infuse him with a sense of internal calmness and bliss of realisation of the truth about himself. He no longer worries about death and afterlife as he realises that the Atma never dies, and that therefore there is no question of having an afterlife.]

19. Oh Nachiketa! This is the Agni Vidya which can bestow heaven and its joys to those who know about it and adore this knowledge with the proper erudition and wisdom. You had wanted to know about it, and so I have described it for you. Henceforth, in order to commemorate this occasion, this knowledge would be known after you, i.e. this knowledge would bear your name for ever—it would be called ‘Nachiket-Vidya’. It was the second boon that you had asked for. Now, what do you wish to have as the third boon?’ (19).

20. Nachiketa replied, ‘There is great confusion about one point. Some wise ones say that after the death of a man the Atma or soul survives, but there are others who say that nothing remains after death. I wish to know from you what the reality is (i.e. I wish to ascertain what happens to the creature after his death)*. Your answer would

conclusively settle this confusing subject for me and remove all my doubts. This would be your third boon for me.’ (20).

[Note—It should be noted here that Nachiketa has no confusion in his mind about the existence of the Atma because he believes in heaven and hell. This is proved by the fact that he had warned his father that violating of the sacrosanct principle of giving only useful and worthy things as donation during a fire sacrifice, things that are considered as valuable by the donor himself, would result in his going to hell. Then Nachiketa approached Yam and sought to know about the sacred knowledge pertaining to the holy fire that can provide heaven to the soul of the creature. These two events prove his belief in the presence of a hell or heaven where the soul or Atma of the creature goes after death, thereby affirming his belief in the presence of life after death. If there is nothing after death, then who would suffer by going to hell or enjoy anything by going to heaven? When the man dies, the body is either cremated or buried, which means it does not survive post death. If the body is the ‘true self’ then there should be no question of either suffering or enjoying hell or heaven respectively after death of the man for the simple reason that the body has obviously died and its existence terminated.

Therefore, there must be something other than the body that survives after death and which would be recognised as the ‘true self’ of the man. This entity is the pure conscious Atma which is the true self of a creature, and it is the one that either suffers in hell or enjoys the comforts of heaven. So when Nachiketa asks this question, he cleverly circumvents the fact that he knows that the Atma exists so that Yam would be compelled to answer him fully and preach him about the Atma in a holistic manner.

Nachiketa was being very wise for now he would have an opportunity to hear direct from the God of Dharma about all the metaphysical and spiritual aspects of the Atma.

*This question has been elaborately elucidated by other Upanishads as well. They are, inter alia, Brihad Aranyak Upanishad, 3/2/11-13, 3/9/28, 5/10, 5/11, 6/2/2.16 of the Shukla Yajur Veda tradition; Chandogya Upanishad, Canto 5, Section 3-10 of the Sam Veda tradition; and Kaushitaki Brahmin Upanishad, Canto 1 of the Rig Veda tradition.]

21. Yam said to Nachiketa, ‘In some ancient time even the Gods had doubted about the Atma or pure conscious Soul. Surely, this knowledge is very difficult to access and understand, for it had confounded even the Gods. So please excuse me from answering it and ask for some other boon instead of it’ (21).

22. But Nachiketa was not at all confounded by or afraid of the gravity of the subject he had chosen to know (learn) about. He was determined to unravel the secrets of the Atma and not get deflected from his chosen path. So he persisted, saying, ‘Oh Death God (Yam)! You have said that the Gods had contemplated on this subject but could not decide upon it, and that this subject is not easy to comprehend and access. Besides this, there is no one other than you who is wiser and better qualified to elucidate upon this profound and mysterious metaphysical knowledge, and there is no better learning opportunity that I would ever come across again. So, there is no better or equivalent boon that I can substitute it with’. [In other words, I stick to my request that you teach me about the Atma with all its intricate fine details along with all the complexities and various shades of meanings and concepts associated with it.] (22).

23. Yam tried to deflect (i.e. test) his determination by offering him numerous allurements of material wealth and such other enticements that would have dazzled anyone else. This is did to test his sincerity and eligibility for accepting this great

metaphysical knowledge. Yam enticed him by saying, ‘Oh Nachiketa! You can ask me for sons and grandsons who would live for a hundred years, for countless livestock (cattle and other household animals), elephants and horses, as well as for as much gold as you wish to have. You can ask me for huge kingdoms extending to as much territory as you want, and you can ask me for a long life for as many years as you wish to live (23).

24. If you think that there is anything else or any other boon that is dear to you, you can ask me for it. Permanent material wealth and prosperity as well as means of livelihood can be sought by you. Oh Nachiketa! I can bless you that you would have unchallenged sway over the vast realm of this earth and easily get whatever the best of things you desire to enjoy in this world (24).

25. Oh Nachiketa! Any or all of the material comforts and enjoyments of this mortal world that are most rare and difficult to achieve or acquire, and even be imagined, can be asked gladly by you as a grant of boon from me, and you should certainly have it. You can be provided with the Apsaras (the beautiful damsels living in the heaven and who dance for the Gods) who live in heaven along with divine chariots and the best of musical instruments (so that you can enjoy the life of a king). Humans cannot have access to such beautiful women as the celestial Apsaras. You can employ these heavenly women to serve you as you wish, but oh Nachiketa, do not ask me about what happens to the Atma after death of a man’ (25).

[Note—The God of Death had granted a wide choice to Nachiketa about all the material comforts and enjoyments of this world in order to entice him with their allurements so that the latter would be lured by their charm and thereby release Yam of the compulsion of having to divulge that esoteric and mysterious knowledge that had been traditionally secret and highly mystical to be easily divulged and taught; it was a subject held taboo since ancient times. Yam had also tried to employ this method to test the sincerity and determination of Nachiketa, because this knowledge should only be given to the most eligible and competent of seekers. Yam wished to inculcate deep renunciation in his disciple because as a wise teacher it was his moral duty to ensure that the knowledge that he was about to impart would go to correct hands. First Yam had tried to discourage him by pointing to him the difficulty of understanding this knowledge, and then tried to test his sense of renunciation by enticing him with the best of things available in this existence. But Nachiketa was not moved; he was as firm as a rock in his determination and conviction that there is nothing in this existence that is superior to and a better giver of eternal peace and bliss than the knowledge of the Atma which is pure enlightened consciousness and a fount of eternal peace, happiness and bliss.]

26. Nachiketa replied, ‘Oh Yam! There is no certainty about all the things you have described and promised to give me that they would survive tomorrow or not. They are themselves perishable and they eat away into the inherent strength and vitality of the body and its sense organs¹. The long life which you wish to grant me would be less if I would like to fully enjoy the comforts and pleasures that you promise me, for these have no end and life cannot be stretched indefinitely because everything that has come into being must invariably come to an end. Hence, no matter how big or long-lasting they might appear to be, they cannot be eternal or infinite.

So please keep all the boons that you wish to grant me with yourself; I do not want any of them. Keep these chariots as well as the dancing and singing girls with you, I do not want anything to do with them (26).

[Note—¹When a man is provided with material comforts of this world, he begins to enjoy them so much that it becomes difficult for him to remain detached from them while still enjoying them. He becomes naturally engrossed and submerged in them, and the consequences are absolutely denigrating for his soul as well as for the natural stamina, vitality and strength of the body which wears off due to indulgences. That is why people of modern materialistic society are so mentally fragile and restless as well as bodily feeble and inept, disposed to so many diseases and devoid of mental peace and poise as compared to those who lived a less materialistic life long ago.]

27. No man can be satisfied by material wealth and prosperity. Once I have had the rare and unique privilege of having your Darshan (divine sight and communion), these things I can generate myself by the good affects of your blessings upon me; they would come to me just by my merely wishing for them. As long as you are the Lord of Death, I can be certain of living as long as I wish (because now that I have had your blessings, death cannot touch me against my wishes, and this boon is incidental to my having your divine sight and it comes to me as a special privilege even without my asking for it).

But this is not what I ask. My request to you is about the knowledge of the Atma, its essential form and nature, and all the metaphysical and spiritual aspects associated with it (27).

28. Oh Yam! This human body is perishable and subject to old age and death. Which wise man would be so foolish as not to be aware of this fundamental fact? And being aware of it, which wise man would desire to have transient comforts, pleasures and enjoyments that come with the company of beautiful Apsaras or acquisition of other material wealth and prosperity in this world, especially when he has had the rare and unique privilege of having an opportunity of coming in direct contact with immortal Gods or other divine Souls like you? (28).

[Note—When a man gets a once-in-a-lifetime opportunity to seek something he wishes, then surely he would pick up the best he thinks of. A wise man knows that whatever exists must come to an end, because this is the law of Nature and creation. Nothing is immortal, and therefore the best of enjoyments and comforts would have to come to an end one day, after which there would be sorrow and misery. After all, one wishes to have material wealth for one's happiness and comforts, but if they cannot give him eternal peace, happiness and bliss because of their inherent flaw of being mortal and perishable, if the constant fear of their being snatched from him one day keeps nagging at him day in and day out, there is no point of losing sleep over them.

A wise man would be he who chucks such uncertain things and pursue things that are evergreen and constant so that the rewards are also long-lasting and steady. So if one can find a way by which happiness and peace can be made perpetual and eternal, which wise man would let go of such an opportunity? In short, Nachiketa says that he won't fall for the enticements offered by Yam, and he must be given what he has asked for.]

29. Oh God of Death! The profound knowledge about the Atma regarding which people have doubts as to whether it survives after death or not, or whether the Atma has any existence after the creature dies and his body perishes, please preach me about the truth of it, and tell me what is the fact according to you.

This magnificent knowledge pertaining to the Atma is very mysterious, esoteric and profound as much as it is rare and unique. Nachiketa does not want anything other than this request, which is firmly etched in his mind and heart, to be

fulfilled. In other words, I do not want anything except the knowledge of the Atma.’ (29).

*****Thus ends the first Valli of Canto 1*****

Canto 1, Valli 2

1. [When Yam was sure that Nachiketa was of a firm determination, infused with great renunciation and fearless in his spiritual pursuit, qualities necessary for acquiring the profound knowledge pertaining to Brahm and the Atma, he began to preach him. In the beginning, Yam enumerated the stupendous importance and significance of this knowledge.]

Yam said to Nachiketa, ‘The laudable and virtuous path of spiritual welfare and auspiciousness, that which gives eternal happiness and fortunes, is different from the path which provides worldly gains and material welfare, the path which leads to things dear to ordinary mortal beings.

The first path is called ‘Sreya’ (one that is auspicious, virtuous, eminent and good; one that provides good fortunes, a great name and fame; the path of truthful knowledge and wisdom) while the second path is known as ‘Preya’ (the opposite of Sreya—i.e. one which leads to downfall, denigration and demotion; one that gives ignominy and infamy; the path of ignorance and delusions). Both these paths have separate destinations, and pursuing them provides different fruits or rewards. Both have their own inherent attractions, benefits and charms, and therefore both try to pull the creature towards themselves.

Out of these two, those who follow the path known as Sreya are rewarded with an all round spiritual welfare, happiness and auspiciousness which is sublime, divine, truthful, real and eternal, while those who prefer to follow the second path known as Preya are deprived of this benefit, lose their chance of becoming spiritually exalted and liberated, become fallen and get mired in a swamp of worldly delusions (1).

[Note—The human body has been acquired by a creature after a lot of difficulty and after he has had to pass through a maze of numerous births and deaths. The birth as a human gives him an unique opportunity to mend his future in as much as besides enjoying or suffering from the accumulated affects of the deeds done by the creature over different births, he can do something purposefully with due application of intelligence, wisdom, diligence and willingness to rectify the future.

A man is placed uniquely in the hierarchy of creation because it is only a man who is able to determine his future and destiny, he can decide what would or should be his future. This he does by willingly and diligently making a choice and selecting an option best suited for him from a horde of choices open in front in order to decide the course of his own future.

The human birth is the only chance that a creature gets to break free from the endless cycle of birth and death. This is obviously true because no other form of life has the same level of intelligence, erudition and wisdom that a man has, and no animal, for example, can read the scriptures and benefit from their eclectic wisdom. So, to fritter away this golden opportunity by pursuing sensual pleasures and material comforts of this world, which are nevertheless perishable, instead of ensuring upliftment of the state of the Atma or soul so that it does not have to re-enter the cycle of birth and death but get the final liberation and deliverance from this endless cycle of misery and pain, would be a most foolish thing to do.

Therefore, those who pursue the path called ‘Sreya’ which leads them to spiritual liberation and self-realisation are the ones who enjoy eternal happiness and bliss as compared to those who pursue the path called ‘Preya’ which would tie him down to

the world and its alluring charms which are very attractive on their face value but hollow from the inside.]

2. Both these options, known as Sreya and Preya respectively, present themselves before a man. A wise, erudite and sagacious man is one who then analyses both these options and understands the subtle but profound differences between them along with the separate rewards or fruits that are got by pursuing them independently.

Armed with this wisdom and knowledge, he chooses the eclectic and sublime path known as Sreya as the best choice for him because it would bestow him with eternal happiness, everlasting peace, tranquility and bliss which would give his tormented soul perpetual succour and solace by helping it to break free from the fetters of ignorance and delusions which had forced the creature to remain trapped in an endless cycle of birth and death for uncountable number of lives.

On the other hand, those who are less enlightened and wise, who do not realise the folly of what they are about to do, choose the path of Preya, i.e. the path which leads to the mundane worldly cycle of seeking things that a person does not possess at any given time, and then trying to ensure that the newly acquired thing remains with him for ever. His entire attention is focused on acquiring newer things of material comfort and sensual pleasure in ever greater quantity and quality, and then worrying about their preservation and safety. [He has no time to think for what would happen to his 'self' once this golden opportunity is lost, and that the things he is so diligently pursuing are all perishable and can never be the cause of permanent peace and happiness for him. Once old age and time takes over and he has to die, he becomes worried about his possessions, and this worrying thought overshadows him like the dark veil of death. Such a man who is worried about anything perishable cannot ever hope to find eternal peace and happiness. This cycle is never-ending because there is no end of desires and needs, and they cannot be ever satisfied, no matter how hard a man tries and no matter how many births he takes in order to accomplish his objectives. He falls into a quagmire from which it is impossible for him to extricate himself.

Obviously a man is deemed to be wise when he chooses something that has a permanent and high value though it might not immediately be so pampering for the senses, and not something that seems shining on the face of it and very charming for the senses but which would result in permanent worry and misery for him. So an erudite man would prefer to follow the path of self-realisation and Brahm-realisation instead of spending his time in worthless pursuit of the material comforts and sensual pleasures of the world which is nevertheless deluding and based on ignorance.] (2).

3. Oh Nachiketa! You are so erudite and wise as well as fortunate that you have voluntarily discarded all the transient and impermanent attractions and charms of this materialistic world and did not fall in their trap. You could not be attracted by and shackled to the illusive and transient happiness, comforts and pleasures of this world, such as for example those expected from one's sons, wife and material things of this world. Even the magnificent attractions of the heaven could not sway you from your chosen path.

The deluding allurements that act like fetters shackling numerous ignorant men to the illusionary charms of this perishable world and keep them hooked to it for ever have not been successful in trapping you. In this, you are indeed very fortunate (3).

[Note—Yam had tried his best to dissuade Nachiketa from pursuing the knowledge of the Atma which is not only the ultimate 'true self' of the creature at the microcosmic level but also the ultimate Truth of creation known as the transcendental supreme

Brahm at the macrocosmic level. Nachiketa had opted out of the perishable things of the world and instead decided that he would follow the path that would lead him to something that is eternal and truthful as described in Valli 1 of this Canto. Wise as he was, Nachiketa was not to be taken for a ride by false charms as he rejected all the offers made by Yam and stuck to his bargain for acquiring the knowledge which would make his 'self' immortal and eternally peaceful and blissful, thereby enabling him to find liberation and deliverance from the endless cycle of miseries and torments associated with numerous births and deaths.]

4. These two paths (known as Sreya and Preya as described in verse no. 1 and 2) are very opposite to each other, and their rewards are also diametrically opposed to each other.

Oh Nachiketa! I regard you as a traveler on the path of Sreya because you wish to seek the ultimate Truth and acquire knowledge of the sublime and divine entity known as the pure conscious Atma, the pure 'self', which is synonymous with the cosmic universal 'Self' called the supreme transcendental Brahm, the Supreme Being. This knowledge is eternally liberating for the soul of the creature and provides it with deliverance and salvation. This is because you could not be enticed with the dazzle and splendorous charms of either this materialistic world or that of the heavens (4).

5. Those fools and ignorant ones who are under delusions that they are wise, erudite, sagacious, skilled and learned inspite of their being surrounded by the dark shadow of Avidya (lack of true knowledge) and Agyan (ignorance), keep stumbling and falling repeatedly as they follow the dark path full of delusions and pitfalls, thereby injuring themselves much like a blind man who repeatedly falls and injures himself on an uneven and obstacle-ridden path.

They are so engrossed in pursuing the material enjoyments of this world that they have no time to spare for self-realisation and contemplation. They neither go anywhere themselves nor can lead others to any fruitful destination like a blind man who himself does not where he is going, so how can he lead others? (5).

[Note—In other words, there are people who claim to be experts in the tenets of the scriptures and consider themselves as wise ones who can show others the correct path to liberation and deliverance. But they are under illusion of being wise and knowledgeable, for they are tied in shackles of ignorance because they do not understand the essential meaning of the doctrines of the scriptures. They remain attached with this material world and roll in its material comforts, sensual pleasures, and gloat in the acclaim that comes with knowledge and expertise along with the fame and honours that are incidental to such expertise and skills. They would never ever think of renunciation and detachment from it. On the one hand they sit on huge dais and lecture on metaphysics and spiritualism, and on the other hand they surround themselves with all the luxury one can imagine in this world. They teach others about the perishability and transient nature of the world, that what is seen around is not the truth, that the 'truth' is the Atma and not the gross physical world, that the Atma is inherently eternal and nothing is needed to make it eternal, that the best method to break the chain of birth and death is to realise this truth about the Atma and remain aloof from the deeds done by the body and expect nothing from these deeds so that no consequences accrue for the Atma or the 'true self'—but themselves they do elaborate rituals and sacrifices and fear from death. They do not believe in what they preach.

They are sought after by others as their teachers and guides, say how can such people show the correct path to others when they themselves are not aware of it? The actual 'truth and reality' eludes them; they can never find emancipation and salvation

for their souls. These people remain trapped in the cycle of birth and death. Their desires never end and so they are never contented, and un-contentedness can never give eternal rest and peace to the creature.]

6. Those who are trapped by the magical charm cast by the dazzle and enchantment of worldly wealth and material prosperity, they remain engrossed in enjoying their acquisitions. Thought of what would happen to their destiny and their soul do not bother them in the least because for them what matters is the current moment and the present life. Such ignorant men treat the illusionary world and the gross body which lives and interacts in this world as the real thing and the truth. For them nothing else exists; nothing else matters and has any relevance.

Such proud and deluded men who think that the body is the only thing that is true and really matters are ignorant of the factual position and foolish enough to deny the existence of the ethereal Spirit. They are so deluded that they regard the perishable world and the decayable body as the real thing and their 'true self' respectively at the cost of neglecting the 'actual truth' that is eternal, infinite and imperishable. [The 'actual truth' is that the world is perishable and an imaginary creation of the mind, and the body is equally perishable and not the 'true self' of the man. On the other hand, the Atma or the pure consciousness is not only eternal and imperishable but also the 'true self' of the man.]

As a result, they repeatedly have to die and take birth again and again. Such people remain under my (Yam's) control as I am the God of death and determine when they have to die. I am also the God of Dharma and therefore decide what fate beholds such men¹ (6).

[Note—¹When they think that their body is their true self, they have to own up the various deeds done by the body, because it is the body and not the Atma that does anything in this world. They think that they have done this and achieved that, and therefore they are entitled to enjoy their benefits. If they are entitled to enjoy the benefits then they would also have to suffer for their sins and misdeeds. Besides this, life is so short in its span that no man can claim that he has had sufficient time to fully satisfy himself from all the comforts and pleasures that the world has to offer, or fulfills all his desires and aspirations. He yearns for still more, and at the time of death his Atma remains clung to unfulfilled desires and aspirations which force the man to take another birth. And the cycle continues to rotate endlessly.

All these factors combine to decide what birth the Atma—which in fact is the actual 'self' of the creature who has forgotten about his true identity as the pure consciousness because of ignorance and delusions that have cast their long shadow upon the intellect of the creature—would take. Hence, a man who is submerged in pursuing the dazzle of wealth and the blinding brilliance of material prosperity forgets who he actually is and begins to hallucinate like a man seeing a mirage in a desert or a man under the charm of a magician. As long as the charm lasts, he would not believe that what he sees is not the truth. And the only way to remove the spell of charm is to become alert and pay attention to the advice given by wise and self-realised teachers as well as by the self study of the scriptures.]

7. This magnificent, profound, eclectic and sublime knowledge about the Atma or pure conscious soul which is the true 'self' of a creature and a microcosmic counterpart of the macrocosmic transcendental Brahm who is the Supreme Being in creation and the ultimate goal of all spiritual endeavours, is not so easily accessible to all and sundry (i.e. everyone does not have an opportunity to even hear about it). If fortunately they do have access to it then only a minority amongst them is able to understand or grasp its profound tenets and their far reaching spiritual import. Out of

them those who actually implement this knowledge in their lives and mould their thinking and deeds accordingly are even rarer.

It is very difficult to find a learned and wise man who can sufficiently expound and elucidate upon this great metaphysical knowledge. It is equally difficult to find a competent and eligible candidate who has the mental caliber and aptitude to entitle him to be imparted this knowledge. And it is similarly rare to find someone who is an expert in this divine knowledge in the true sense (7).

[Note--A person who is learned, skilled, wise, erudite and enlightened enough to first understand this grand knowledge himself and then is able to articulately and skillfully describe or teach it to others is indeed most rare and difficult to find. Such men are most honourable, laudable, reverend, fortunate and exalted. Likewise, the person who eagerly seeks and achieves success in obtaining this holy knowledge, and then is able to put to practice its grand and magnificent tenets is equally rare and difficult to find; he is equally exalted and fortunate, and equally honourable, laudable and reverend. Such persons are deemed to have a life which is said to be 'fulfilled' in the sense that they have not frittered it away in pursuance of falsehoods and delusions, and instead have used it to acquire something worthwhile and permanent, something that is truthful and liberating for their souls. They have achieved the main objective of having the faculty of intelligence and wisdom which distinguishes a man from animal or other forms of animate life. Verily, such an expert teacher and his enlightened disciple who have factually understood about the Atma are equally praiseworthy and exalted; they are identical in their spiritual stature. Such people are most rare and difficult to come across.]

8. This holistic and magnificently truthful knowledge about the divinity of the ethereal Atma, known as 'Vidya', cannot be understood or known by being taught by a person who has not himself realised this profound 'truth' and has not personally experienced its impact upon his daily life. That is, this profound metaphysical knowledge cannot be taught by a person who has only a literal knowledge about it as described in the scriptures instead of actually understanding the profound import of the scriptural teachings as experienced in actual life. This is because this enigmatic subject is very profound, esoteric and mysterious besides being astoundingly sublime and subtle. It is beyond the purview of rational debates and mundane logics which are the yardsticks of a man's intelligence and expertise.' (8).

[Note—The emphasis here is on first hand experience and verification of the truth of what is learnt and taught by implementing in one's daily life, and not mere theoretical and literal knowledge. Once a man experiences or witnesses anything himself, it becomes firmly etched in his mind and he is fully convinced about its truthfulness. Without first hand experience, the factor of doubt lingers on, especially on a subject that appears to be so greatly abstract on the face of it. The concept of 'self-realisation' is basically self experiencing or self witnessing. It is like a science student understanding any theory by doing the practical of it in his school laboratory when he actually witnesses the practical aspect of what he has learned in theory. This exercise not only clears all skepticism in his mind, but he cannot also now be misled or fooled about the concept by anyone trying to give a wrong explanation of it to him.

As is very obvious here in this example, only an 'experienced' teacher would be able to explain all the intricacies of any subject to his students, and a novice or an inexperienced teacher would only disseminate half-baked and unclear knowledge, adding to confusion rather than clearing doubts. He would fail to fully satisfy the queries raised in the mind of an intelligent student, which in turn would have disastrous effect upon the student's all round educational benefits. A student with erroneous conceptions and false ideas about the subject he learnt from the teacher

would be more dangerous than an illiterate fool because the future generation depends upon the knowledge shared by the former after the teacher is dead and gone.]

9. Lauding Nachiketa for his steadfastness of purpose, an inborn propensity for acquisition of the best of what is available, and for seeking out the truth inspite of all odds, Yam said to him very affectionately, ‘Oh dear Nachiketa! The gift of mature wisdom, sharp intellect and an exalted mental setup marked by prudence, understanding and steadfastness of purpose that you have for acquisition of truthful knowledge is no ordinary thing to be possessed of. It is no mean achievement and it cannot be obtained by dry debates and logics. [That is, such erudition and sagacity, such maturity of thought and diligence in pursuing the truth and remaining focused on one’s goal with a steady mind and intellect cannot be achieved by simply studying the various branches of the scriptures, such as logic and philosophy, etc.] It can be obtained only as a result of listening attentively to discourses on the ultimate Truth from the mouth of a truly wise and self-realised person. Hence, you are indeed most lucky and steadfast in pursuit of your chosen goal, and in that you are indeed laudable¹.

Oh Nachiketa! I sincerely wish that I have such sincere and wise seekers of truth like you as my disciple² (9).

[Note--¹The importance of hearing the principles of the Atma from a self-realised teacher has been repeatedly emphasised in this Upanishad. This is because only a person who has had first hand experience of anything is competent not only to teach about it but also to remove all doubts that might vex the mind of an intelligent student of the subject. Besides this point, everyone knows that only highly gifted students can really make path breaking discoveries and do extensive research. Millions of students pass out from universities and colleges each year, but only a small decimal fraction of them opt for a rigorous life shorn of all the worldly pleasures by devoting it to research, discovery and invention, or to serve the downtrodden section of the society by sacrificing personal privileges and comforts while the majority of their peers opt for a cushy job and a high lifestyle that come with acquisition of special skills and education.

There are many instances in history when great discoveries and inventions as well as astonishing accomplishments have been made by men who have remained focused and steadfast in their goals, and have trodden the difficult path of sacrifice and sufferance.

In the present context, ‘self realisation’ would inculcate in a man awareness of the falsehood of all the allurements of this perishable world by pointing out the fact that this body which enjoys the world is indeed perishable and it is not the true ‘self’ of the person. On the contrary, the ‘self’ is eternal and imperishable, and it is perpetually in a state of blissfulness and peace. It is ignorance about the truth that creates an illusionary veil of miseries for the Atma when it thinks that it has a body which is its ‘true self’. Once this veil is removed, once this cloud of illusions and delusions is removed, the shine of the Atma breaks through and lightens up the inner self of the person much like the rays of the sun breaking through thick banks of clouds to illuminate the world, thereby dispelling all darkness and their attendant phantoms and ghosts.

Communion with self-realised persons kindles a burning desire to achieve permanent peace and tranquility by realising the truth about the Atma which is the real identity of the individual. This helps one to break free from the chain of miseries caused by ignorance and delusions, and realise the eternal nature of the Atma which is eternally happy and blissful.

²Every worthy teacher would say such a thing, because only a sincere student can imbibe what the teacher teaches, pay attention and respect to him, and carry forward

the torch of knowledge that the teacher wishes to pass over to some worthy disciple before his days are up. To teach something serious and having deep import to a fidgety student more concerned about the next meal or to pass an examination in order to land a high-paying job is a waste of breath as far as the teacher is concerned. That is why when a teacher finds that one of his students is very diligent in his studies, an natural affectionate bond develops between the teacher and the taught, and the former goes beyond his mundane duties to explain even those intricate matters of any subject that he would rather not divulge to anyone else, not even to his unworthy son. In fact, an accomplished teacher begins to love his intelligent and ardent disciple more than his own offspring.]

10. I am aware that all the rewards in the form of worldly assets and prosperity obtained by doing worldly deeds are impermanent and perishable because they pertain to the world which itself is transient and perishable. Since they are perishable and impermanent, it is not possible to obtain or derive something that is imperishable and permanent from them, such as the attainment of the eternal bliss and peace consequent to self-realisation and enlightenment¹.

That is why I have chosen the sacred knowledge known as ‘*Nachiket*’² which is symbolic of the sacred fire of renunciation in which all worldly desires are burnt. By choosing to do the physical fire sacrifice with material things obtained from this mortal world but internally remaining detached from them, by understanding the spiritual significance and importance of such a fire sacrifice instead of paying attention to its external rewards, I ensured that not only will my Atma (soul; the pure consciousness) be purged of all impurities associated with having worldly desires, aspirations, yearnings and hopes (because they are shackling and degrading for the exalted stature of the eternally free and enlightened Atma, and are best avoided) but also obtain liberation and deliverance from the bondage of delusions and ignorance associated with this transient world full of miseries and torments. This paved the way for my emancipation and salvation. That is, inspite of doing a physical fire sacrifice in a physical world and employing physical things needed for such exercises, I could manage to obtain a reward that is ethereal and spiritual³ (10).

[Note—¹People organise elaborate religious events, give huge donations, offer oblations to Gods and perform fire sacrifices in the hope that these exercises would take care of their spiritual welfare. But this is a horribly misplaced conception because all the material things employed to do any of these rituals, such as large amounts of money spend on elaborate religious exercises and giving donations are obtained by doing deeds with selfish interests in an illusionary dream-like world, and therefore they are more like acts done on stage by a trickster magician to deceive the audience than having any real pith and substance. When the very basis of doing anything is fictitious and imaginary, then it is absurd to expect that the result would be real and have any substance. It is more like a castle of clouds in the sky, visible and apparent but without any real existence.

²The concept of *Nachiket* fire has been elucidated upon in detail in the earlier Valli no.1 of this Canto, in its verse nos. 12-19, and the importance of renunciation has been highlighted in verse no. 3 and 26-27.

³Even though I had to do fire sacrifices and observe other religious duties as ordained by the scriptures, I could still attain the eternal and imperishable stature of being a ‘Yam’. In other words, by exercising self-control or self-restrain, I was blessed with supernatural powers and authority so much so that I am now able to exercise control over all others in this existence as the patron God of Death and upholder of the baton of Dharma (righteousness, auspiciousness, probity and propriety. I observed all the formalities and did all the sanctioned deeds but remained non-attached with them; I did not allow myself to get mentally involved in them and

neither did I yearn for any good results from them, nor had I any desire to enjoy their good effects. This diligence and wisdom on my part made me so exalted and enabled me to reach the citadel of spiritual accomplishment whereby I became the torch bearer of Dharma and the one who judges other's destiny when they die.]

11. Oh Nachiketa! You have voluntarily and cheerfully, as well as patiently and without any remorse or second thoughts, forgone or relinquished your chance of accessing and enjoying the comforts and pleasures of heaven even when they were evidently within your sight and reach¹. You were not lured by the blinding charm of the heaven which is full of all the imaginable things which give comfort and pleasure, a heaven which is obtained as a long-lasting reward and a trophy for meticulously performing various fire sacrifices and other religious duties, a heaven where there is everlasting fearlessness (from all kinds of sorrows and torments), a heaven which is praiseworthy, being revered and lauded by all the scriptures as the best destination obtainable by a creature for doing righteous and auspicious deeds.

This decision of yours is most laudable and wise; it shows you in a very good light and proves that you are an enlightened soul difficult to come across.

[In other words, you have a deep sense of renunciation in you, and all things which are perishable and demeaning for the spiritual enhancement are not attractive for you, making you an eligible candidate for accepting the profound knowledge pertaining to the Atma. In this, you are indeed most fortunate and intelligent, wise and enlightened because it is very difficult, if not impossible, to relinquish such privileges especially when they are being offered without even undergoing any hardships such as doing severe Tapa, or observing austerities and doing penances. This steadfastness of purpose, maturity of spiritual wisdom and ability to determine what is of real worth and what is merely a magical charm has indeed endeared you to me. I am really glad and proud of you.]² (11).

[Note—¹It would be noted that Yam had earlier offered the best of pleasures and wealth of this world as well as of the heaven to Nachiketa in order to judge his sincerity as well as the level of his renunciation and wisdom to decide whether he was competent enough as a seeker of truthful knowledge pertaining to Atma, and whether he should be accepted as his disciple. Nachiketa had rejected them all to prove that he was indeed an eligible candidate. Refer Canto 1, Valli 1, verse nos. 23-29.

²Yam wishes to convey his appreciation of Nachiketa and his readiness to accept him as his disciple. The knowledge that Nachiketa wishes to acquire is very esoteric and sublime, and it needs a focused mind and a sharp intellect which cannot be distracted or blunted by any kind of enticements or distractions that would sway the attention of an ordinary student. The entire object of this exercise is to highlight the qualities that one should possess if one is to obtain self-realisation and thereby break free from the fetters of ignorance and delusions that tie an ordinary creature to the endless cycle of birth and death.]

12. [This verse describes how one can have a first hand experience of the supreme transcendental Being residing in one's own bosom as the Atma.]

The supreme transcendental and divine Lord (i.e. Brahm) is most primary and primeval. He lives in the secret cave-like inner self or the sublime heart of a creature. That Lord is so esoteric, enigmatic and mysterious in nature and surrounded by a magical veil creating a deception about his true nature and form that he becomes most difficult to be seen or witnessed or perceived without special efforts even though he is present everywhere in this visible world (because he is all-pervading and omnipresent). He lives ensconced in the mind-intellect complex of the creature (thereby giving the latter its power to think, analyse, determine and show intelligent

behaviour). He is beyond the reach of worldly charms and the material objects of the sense organs. [That is, Brahm is not reachable by the gross organs of perception of the body and cannot be either understood by the low level of the mind though he is present universally everywhere in the world, even in the mind-intellect complex as well as the subtle heart of the creature.]

In other words, this divine entity is so profound and magnificent that it transcends all known definitions and criterions by worldly standards.

The only way to witness and have a first hand experience of this most exalted and holy Being is by the means of 'Adhyatma Yog'¹ which entails a judicious combination of spiritualism and metaphysics with meditation and contemplation upon the eclectic and sublime Truth that is Absolute. [This is possible only when the seeker has an uncorrupt intellect not tarnished by worldly delusions and its illusionary veil of enticing charms and alluring attractions, and a mind open enough to be receptive to the truth which is beyond the purview of conventional logic and rational debates.]

When one successfully witnesses and experiences that supreme fount of spiritual bliss, he is not affected by worldly sorrows and joys. [This is because such a self and Brahm realised person understands that his 'true' self is the pure conscious Atma which is not only eternally blissful and happy but also a microcosm of the universal Soul known as the quintessential Truth called Brahm. He also understands that such emotions as sorrow and joy relate to the gross body and not to the Atma, and that this body is as perishable and impermanent as the things that are the cause of sorrow and joy in this world. Therefore he is unaffected by either of them.] (12).

[Note—¹The word *Adhyatma Yoga* consists of two parts—viz. 'Adhyatma' meaning something that pertains to the spirit, and 'Yoga' meaning a union or joint. Therefore, the means by which a man is able to establish a relationship between his present existence as a mortal being surrounded by worldly delusions and its attendant miseries as well as all the mundane worldly affairs that he is forced to attend to while he is alive, and his ethereal and divine existence as an eternal being in the form of the spirit or the pure consciousness Atma which is free from all these fetters and inherently blissful and peaceful as well as wise and enlightened, is called 'Adhyatma Yoga'.]

13. Oh Nachiketa! Persons who are wise and enlightened like you are able to fully understand the profound spiritual importance and significance of the great truths of the pure consciousness known as the Atma or the universal 'self'. This esoteric and most secret knowledge is unraveled to them by hearing attentively about it, by intelligently grasping its meaning, by contemplating and deeply pondering on its spiritual import, and by not only accepting this irrefutable and quintessential truth but also implementing it in one's routine life¹.

Hence, it is my firm belief that the door to Brahm realisation is permanently open for you. [That is, seeing your commitment and firm conviction, I am sure nothing in this world can ever sway you from the spiritual path chosen by you, and no obstacle can ever stop you from realising your goal of reaching Brahm and enjoying the attendant beatitude and felicity. No one or thing can pull you down from the high citadel of spiritual bliss that you have accessed.] (13).

[Note--¹By properly analyzing what has been heard, one is able to become firmly convinced of its veracity and authenticity. Then when one applies the principles learnt in daily life, he experiences them in practical terms. This helps to bolster his faith in them and he needs no further prodding to remain firm in his conviction. When he learns about the great doctrines and maxims of the scriptures relating to the divine and holy Atma and the ultimate Truth of creation by either hearing about it from his

teacher or by studying about it himself from the scriptures, he comes to know about its essential form and nature which are sublime and subtle to the extreme. Application of intelligent mind helps him to understand and accept its import and significance fully, and then when he deeply contemplates and meditates upon its profound and truthful tenets, he comes face to face with that supreme Truth residing in his own bosom as his 'self' known as the Atma. This realisation makes him euphoric and ecstatic because he would have accessed that effervescent fountain of eternal beatitude and felicity that has been eluding him for generations till now. Having found it, he never thirsts for bliss and never feels scorched by worldly miseries anymore.]

14. Nachiketa replied, 'Oh Yam! Please preach me about the principle of the Atma which you regard as being independent of all deeds, which is beyond the rewards obtainable by doing various fire sacrifices, which is untainted by doing unrighteous deeds which are prohibited by the scriptures, which is different and separate from this world based on the theory of cause and effect, and which is separate and independent from the three dimensions of time such as the past, the present and the future (i.e. which is constant in all the three planes of time and space).

Please acquaint me about that supreme transcendental and quintessential Truth (14).

[Note—The peace and bliss that is obtained by realising the truth about the Atma cannot be obtained by doing good deeds, including auspicious ones. Similarly, the Atma cannot be tarnished by doing inauspicious deeds. The obvious reason is that the deeds, whether auspicious or not, are done by the gross physical body which is different, independent and separate from the Atma.

The world relies on the principle of cause and effect—i.e. if something has happened, there must be a cause that makes it happen. This implies that there was a beginning when a particular thing sprung forth. It would produce its own affects which would be the cause of other things to happen. This chain reaction does not apply to the Atma because the Atma is eternal, infinite and imperishable. Being such, it is also beyond the purview of the changes that happen in this world as each moment become a past the other moment. 'Truth' does not change like other things, including time which is divided or fractioned into past, present and future.]

15. Yam replied, 'Oh Nachiketa! I shall describe to you that supreme transcendental ethereal and divine entity and its state of exalted existence which has been repeatedly expounded and elucidated upon by the Vedas and its holiness and divinity reiterated and lauded by them. All the Tapas (austerities, penances, sufferance) and other righteous and auspicious deeds that the man does for his spiritual upliftment and attainment of emancipation and salvation of his soul are also meant as an offering for that entity and are done with the express purpose of realising that state of exalted existence by the spiritual seeker.

Such seekers who aspire to achieve their spiritual goal of 'Brahm realisation', to reach that citadel of exalted existence and obtain that divine stature which is most unique, eclectic and sublime, endeavour to observe various strict codes of conduct that can enable them to achieve success in their efforts. Such strictness includes observing the principles of Brahmacharya. [This is a life of extreme self control of the sense organs and observing continence, abstinence, renunciation and dispassion. This entails sacrificing worldly comforts and pleasures which are however perishable and transient in order to obtain eternal and permanent beatitude and felicity.]

Oh Nachiketa! That stupendous and magnificent state of Brahm realisation in which one comes in direct communion with the holy and divine entity is unique and

one of its kind. Verily, that splendid, glorious and astoundingly sublime entity known as 'Brahm' is represented by the monosyllable word-symbol of 'OM'¹ (15).

[Note—¹The word *OM* in the present context is a synonym for the supreme transcendental Being who is the cause of coming into existence, the development and the end of all that exists. The Sanskrit word for a 'letter' is 'Akchar' meaning something that is not perishable. Since OM is a monosyllable word, it is called an Akchar, and it aptly describes Brahm which is also imperishable, indivisible and one. OM is, for all practical purposes, a hypothetical name given to Brahm which is the ultimate Truth and Absolute in this creation. This is because when ancient sages and seers began to search for a word or symbol that would be the nearest analogue to what they meant and wished to describe in words, and which would incorporate the entire gamut of definitions explaining the phenomenon known as Brahm, they visualised it as a sound element reverberating in the cosmos, which they preferred to call Pranav and which was translated by them as the word 'OM'.

The monosyllabic word OM was found to be the nearest sound analogue to the cosmic vibration and its energy which was at the root of all physical existence as we know it today. Those wise sages and seers then used the various connotations of this OM to explain the concepts pertaining to Brahm, and treated OM as a synonym for the latter, a name and symbol for Brahm.

Further, they analysed this sound OM and split it into three or four constituent parts, such as the letters A, O, U and M, just for the sake of scientific analysis, study and comprehension of its profound importance and impact. Thus, they were able to explain the inexplicable Brahm by employing this means, albeit in a round about manner, which can just give an idea of the real thing to the seeker of the Truth. OM helped them to study Brahm from various angles and different perspectives for the sake of unraveling the great esoteric secrets of creation.

However, this analytical study which tries to limit Brahm by giving it a name of OM having three or four components A, O, U and M does not in any way alter the fundamental nature of the object of study—that is, it does not alter the fact that Brahm is unlimited and infinite, that it is immutable and indivisible, and that it has no name and form. In fact, even the Vedas which have tried to analyse Brahm in voluminous texts threw up their arms and surrendered by proclaiming that Brahm defies all explanations and definitions when they said 'Neti Neti'—that is, Brahm is neither this nor that, it is 'not this, not this'.]

16. This OM is the 'Akchar (i.e. imperishable; immortal) Brahm'; this OM is the most exalted, supreme and transcendental Brahm. An aspirant who realises the deep meaning and profound import of this Akchar* is able to achieve all that he aspires for; all his wishes are fulfilled (16).

[Note—Two aspects of Brahm are being described here—one is that Brahm which is the primordial, primary, eternal and infinite entity which is un-manifest, beyond description and has no physical limitations, attributes and characteristics, while the other form is the manifested revelation of this entity which has certain attributes and qualities. The former form of Brahm is called 'Nirguna Brahm', or Brahm which has no physical attributes, qualities and characteristics, while the latter variant is known as 'Saguna Brahm', or Brahm which has such attributes, qualities and characteristics. Both aspects of Brahm are equally true because they essentially deal with the same Truth, the first is that Truth in its primary form, while the second is its secondary form. Wiser and more erudite seekers seek the first form of Brahm much like an intelligent and highly successful student aims for the best of the available colleges to study any subject, while the same subject can be studied at any mediocre college as well. It is actually upon the student to make the best of the opportunity available to him, for merely getting into a top rung college does not guarantee any success in the learning process if the student is not serious about his studies. Similarly, worshipping

and pursuing both the Nirguna as well as the Saguna Brahm can be equally liberating for the soul of the seeker, what is more important here is the diligence and sincerity of the person.

These two paths are called the path of Gyan or knowledge and the path of Bhakti or devotion respectively. To worship something which has no physical presence and which cannot be visible seen and perceived but merely experienced and witnessed at a higher level of the mind and intellect is a difficult bargain for an ordinary man not too well groomed in metaphysics and spiritualism, except in case he has had an opportunity to have a communion with a wise teacher or if he has the inherent mental bearing and intellectual prowess for contemplation and deep thought. That is why realising Brahm by following the path of Gyan is considered a bit difficult by ordinary standards. On the contrary, those who prefer to follow the second path of Bhakti have an easier means because they have a known deity as their ideal and God on whom they can devote all their attention even while remaining engrossed in doing their mundane worldly duties and keeping their worldly obligations. But even as a medicine would benefit the patient whether or not it is taken by him willfully or is given to him against his wishes, both forms of worship of Brahm are beneficial for the spiritual well being of the aspirant.

*The word Akshar means ‘a letter’ also besides meaning ‘imperishable and immortal’. Therefore besides referring to Brahm it also refers to the monosyllabic word OM. This word is a Mantra which is a mystical formula vested with great powers and used in religious practices such as for the purpose of incantatory chanting during fire sacrifices, or repetition while turning the beads of the prayer rosary, or for concentration of mind during the practice of Yoga (meditation). An aspirant might have wishes other than obtaining emancipation and salvation in his mind while employing this OM Mantra, such as for example conquest during wars, or establishment of fame and glory, or even obtaining huge assets and a perpetual life so that the pleasures of the world can be enjoyed by him. Just like the case that the same drug which is used by a doctor to cure serious ailments can be used by others to kill, and the same atomic energy that can light the earth for eternity can also be used for destruction, this Akshar Mantra of OM can be either employed to achieve liberation and deliverance from this cycle of birth and death, or obtain mundane benefits.]

17. This imperishable OM (representing Brahm) is the ultimate and the best dependable means by which a spiritual seeker can become acquainted with the Atma; it can lead to self-realisation. It is the best means to employ in order to contemplate and meditate upon the supreme transcendental Being. [This is made possible by doing Yoga when OM is used as a Mantra to concentrate attention on the pure consciousness residing inside the body. OM is the universal Mantra used to repeat the holy name of the supreme Lord to focus one’s attention during meditative sessions. This OM helps to support the aspirant in his spiritual endeavour. It is the most reliable means by which one can realise his spiritual goal of Brahm realisation which would in turn not only provide immense eternal bliss to the seeker but also ensure his emancipation and salvation.]

When an honest and sincere seeker comes to know about the astounding powers and potentials of this OM, he relies upon it to reach the pinnacle of Brahm realisation. [Those seekers who understand that OM is a synonym for the supreme Brahm develop reverence for it with the same intensity that they have for Brahm, and faithfully rely upon it to reach Brahm. They are spiritually rewarded with the honour of having realised Brahm.] (17).

[Note—OM is the nearest analogue for Brahm, the macrocosmic and all pervading Supreme Being from whom the five basic elements of creation, i.e. sky, air, fire, water and earth, have come into being. Out of these five, sky and air are the subtlest

elements. Sound is an attribute of these two elements because friction in the air creates sound, and it needs the space of the sky to propagate. If one were to analytically break the entire creation into its basic and elementary units, one would come to these basic and fundamental five elements. Then one would observe that out of these five, sound is the one which represents the composite energy of both the sky and the air which are the subtlest of the five elements.

When analysed further, he deduces that when sound is traced back to its origin, there was 'no sound'—i.e. there was utter silence of nothingness! This silence spread and covered the entire length and breadth of the sky—i.e. the entire space of existence. Silence is synonymous with peace and tranquility—what more evidence would one need for this than the very evident fact that no sound is allowed around hospitals and sanitariums where a man goes to find solace and succour from his sufferings, or around schools where one goes to acquire knowledge!

This profound silence of nothingness is eternal because it is present before the first ripples of creation manifest themselves, and it would remain when everything finally comes to naught at the end of the creation. Therefore it is synonymous with the peace and bliss that the tormented soul yearns for; it is synonymous with Brahm. The attainment of this eclectic state is *Brahm realisation*.]

18. This eternally enlightened and wise Atma which is pure consciousness and the universal truth in this creation neither takes any birth nor does it die. The Atma is not born from anyone, nor does it give birth to anyone. This Atma is without a birth, eternal, constant, imperishable, truthful and universal. It does not decay and perish or develop into something better. It does not perish even after the body dies and perishes (18).

19. If a killer thinks that he can kill someone, or if someone thinks that has been killed by someone else, then both are wrong and ignorant. None of them know anything about the Atma, because the Atma—which is the true identity of any living creature—cannot kill anyone (as both the creatures have the same Atma in them), and it cannot be killed either by someone else (as it is eternal and infinite and imperishable). [The fact is that the Atma is present equally in both the killer and the killed. What is slayed is the gross body and not the Atma which is an ethereal and sublime entity like the sky or air. Can anyone kill or dismember the sky or the air? It is a height of absurdity and incredulity even to imagine doing it. Likewise, it is absolutely impossible to kill the Atma. Since the same Atma resides in the killer and the victim, how can one kill one's self in another form?] (19).

20. The supreme transcendental Consciousness is present in two forms—in a microcosmic and most atomic or miniscule form as the Atma of a living creature known as a Jiva¹, and in a macrocosmic form at the colossal level of creation known as the Viraat² which pervades the entire creation. The microcosmic form of the Atma lives in the cave-like subtle heart of the Jiva (the living creature).

Only few fortunate seekers who are selfless in their outlook, deeds and demeanors as well as untouched or un-swayed by worldly miseries and sorrows having their origin in ignorance and delusions are able to have an opportunity to visualise, witness, experience and realise the existence of that supreme entity known as pure consciousness in their heart. [That is, only few people are able to experience the presence of the Atma in their heart and thereby witness the presence of the supreme transcendental Brahm in their own self instead of somewhere outside in the heaven etc.] (20).

[Note—¹A person is known as a *Jiva* for three reasons. One, he is a ‘living’ entity and not a dead one, and second, he has a ‘soul’ or Atma residing in his own inner being. The third reason is that he is bound by fetters of ignorance as he is not able to see the Supreme Being residing so close to him in his own self and instead tries to seek him outside in the world such as the heaven by doing religious deeds. The result is quirky and hilarious. He pursues this world madly in search of happiness and peace, not realising that the fount of eternal happiness and peace is within his own self! This is the irony of the situation.

So, an ignorant person is one who does not realise this basic fact that this Atma which resides in his own self is his true ‘self’, while a wise person is one who realises this fact and is convinced of its veracity. Even as an ignorant person would remain in a dark room if he does not know where the switch of the electric light is located or how to light a lamp though the lamp is full of oil and the match is right in his hand, persons who are ignorant of the true nature of the Atma do not ‘see’ it (i.e. do not experience and witness it) and ‘benefit’ from its brilliant light of consciousness. That is, they fail to obtain eternal peace and tranquility by finding enlightenment and liberation from the fetters of ignorance in the light of self realisation and spiritual awakening.

²On the other hand, a wise seeker realises that the Atma residing in his bosom is an image of the supreme and pure consciousness of creation known as Brahm. This Atma is eternally blissful and is the true identity of the creature. The creature itself is an image of *Viraat*, i.e. it is the microcosmic manifestation of the macrocosmic Viraat Purush. The gross body of the individual living creature is the manifestation of the cosmic gross body of Brahm known as the Viraat Purush. Therefore, the individual creature is, in effect, Brahm in a miniature form. This profound realisation removes all causes of sorrows and miseries, because these negative emotions pertain to the gross body consisting of the perishable sense organs which is not the true self of the creature, and not to the subtle body consisting of the mind-intellect as well as the causal body wherein stays the Atma which is the actual ‘self’ of the individual. Such persons find eternal peace and spiritual comfort not available to their less fortunate brethren.]

21. The supreme and the most divine entity known as Consciousness is so esoteric, magical and mysterious that it defies explanation and logic. In spite of it being perpetually and permanently present at a certain place (for example the heart of an individual) and even while it appears to be asleep (when the body is asleep), it can be found somewhere else and it can move about everywhere without hindrance¹.

That supreme and majestic entity has no notion of self pride and ego whatsoever. Who else but me is competent to know him or be acquainted with him²? (21).

[Note—¹The supreme Brahm, who is the Lord of creation, has paradoxical qualities in him, such as those mentioned above—being unmoving as well as being constantly on the move, being fast asleep and moving about simultaneously. That is why Brahm is said to be beyond comprehension and the reach of the rational mind. Brahm displays such mysterious qualities as being minute like an atom as well as being so vast that numerous universes form only a part of his entire being.

By saying that he is permanently present at a definite place it is meant that one has not to wander about endlessly and without any hint of where to find him because he is present in his own bosom. He has only to search out the truthful Lord of creation in his own self. Again, by saying that Brahm is found elsewhere at the same time it is meant that he is omnipresent and all-pervading, being available to his devotees wherever and whenever they need him. Further, the idea that he is asleep has its foundation in the fact that the Atma, which is the pure conscious Brahm personified, is oblivious to the turmoil of the delusory and ignorance-ridden artificial external world, and instead it remains calmly ensconced in the heart of the creature and

submerged in the bliss obtained by meditation and contemplation. In other words, the Atma is perpetually in a state of bliss and peace symbolised by its sleeping posture. But this sleep does not mean that it is ignorant of what is happening around it, for if this were to be true, Atma would not be known as omniscient and all-knowing. Therefore, it moves everywhere in a subtle and ethereal form, reconnoitering and learning everything as the sub-conscious. The 'sub-conscious mind' remains active even while the 'conscious mind' is asleep—and this is why a man dreams.

²Atma and Brahm are dignitaries not easily known by all and sundry. They are accessible to those who are blessed with especial spiritual skills and metaphysical erudition. Yam means to say that only those who have woken up to the fact about the falsehoods of the mirage-like illusionary world along with its deluding charms which are transient and which trap the creature in their snare, and as a result of this awareness they have decided to forego everything which is untrue and impermanent in their pursuit of the ultimate Truth which would give them eternal peace and bliss—only such people are the ones who are eligible and competent enough to realise and gain access to the Atma and Brahm. That is, 'self-realisation' is the key to unfolding the mysteries of the Atma which is pure consciousness, and this is available only upon renouncing the illusive charms and deluding affects of this artificial material world. Such a renunciation is a difficult proposition for an ordinary man who is overwhelmed by the world's overbearing nature and bowled over by its magnificent and fascinating allurements.]

22. That unique divine entity known as the supreme transcendental Consciousness or Atma is without a physical gross body though it lives inside a creature having a gross body. It is immortal and eternal though it lives amongst those who are mortal and perishable. Wise and erudite men do not become ruffled and agitated or get emotionally upset and miserable once they have realised that supreme transcendental Atma which is all-pervading, all-encompassing and omnipresent (22).

[Note—The Atma is an ethereal entity and not gross like the body of the creature. But the irony is that the all-pervading, universal, infinite, imperishable, eternal, sublime and subtle Atma has to live in this body which is perishable, transient, mundane and gross. That is, the Atma lives in the body which shows none of the stupendous properties of the Atma. In fact, the body has attributes which are the opposite to those possessed by the Atma. So when the spiritual aspirant becomes aware of his true identity as the Atma, he would deem to have acquired the auspicious virtues possessed by the Atma as distinct from the attributes of the body.]

23. [In this verse, Yam describes the fortunate ones to whom the Atma reveals its virtuous form as their own 'self'.]

The holistic and eclectic knowledge of the supreme transcendental entity known as the pure consciousness or Atma is just not possible by giving and listening to religious discourses, or by the use of mind and intellect to learn about its presence and authenticity by applying logic and analytical abilities, or by hearing about it through scriptural discussions and debates. In fact, only those who are accepted by the supreme Lord as being worthy of such knowledge are fortunate enough to access it¹. For them, the Atma reveals its true form and nature, its true essence and virtuous existence all on its own² (23).

[Note—¹Only those persons who have a burning desire accompanied by diligence and sincerity to know about and attain closeness with Brahm and Atma, those who are steady and focused enough to overcome all spiritual hurdles and strive to achieve success in experiencing and witnessing Brahm and the Atma—only such people can have access to both. The rest fall aside and get lost like so many students who drop out of school and college before completing their educating.

²A wise, erudite, sagacious and enlightened seeker knows the basic fact that his Atma and his pure consciousness are one and the same entity. Aside of this fact, the Atma and Brahm are also one and the same entity. Therefore, having 'self-realisation' is like revealing one's true self and its true form. That is, it is unveiling the true form and nature of the Atma as the 'self', and at the same time realising the fact that the supreme Lord called Brahm resides in one's own bosom as his Atma or consciousness.

In other words, the seeker who has realised his 'true self' has indeed realised the truthful form and nature of both the pure consciousness Atma as well as the supreme transcendental Brahm.]

24. [In this verse, Yam describes the unfortunate ones who cannot have any access to the knowledge pertaining to the Atma.]

Those who remain indulgent in doing misdeeds and committing sinful acts (i.e. acts which are unrighteous and inauspicious), those whose sense organs are not calmed and in their control (i.e. those who have no self restraint, those whose sense organs are fidgety and restless, ever yearning for self-gratification, and those who cannot find peace as a consequence of this constant nagging), and those whose mind and intellect are equally restless and fidgety like the sense organs (i.e. those whose mind has not fully developed renunciation, detachment and dispassion from this world and its dazzling charms)—such persons cannot have access to the eclectic and sublime knowledge of the holy and divine Atma, they cannot experience and witness this astounding phenomenon of self-realisation and its accompanying thrill of eternal bliss and happiness in the absence of a holy and pious way of life even though they might be exceptionally brilliant in other forms of knowledge¹ (24).

[Note—¹To successfully realise the supreme Lord and establish an everlasting bond with him, it is not at all necessary that the person should be well educated and groomed in the scriptures and have scholarship in them, or be an expert in the knowledge which would make him worldly wise. The condition that makes him eligible to access the Lord, i.e. the criterion that makes him eligible for self-realisation and having an experience of the brilliance effusing from the Atma, is sincerity, steadfastness, honesty and focused pursuit of his spiritual goal besides firm faith and unwavering conviction in the divinity of his Atma and his own self. Without the fulfillment of these basic requirements, no one can ever expect a communion with his true self, which is his pure consciousness known as the Atma, which in turn is Brahm personified.]

25. [This verse tells us why that supreme Brahm cannot be known and comprehended.]

All living beings including the Brahmins and Kshatriyas¹ etc. are like fodder for that transcendental Supreme Being who gobbles up the entire creation at the time of death (i.e. at the time of final conclusion of the creation), including 'death' itself which aids him in eating everything (i.e. bringing an end to everything) in this creation but finally becomes his food along with others.

Say, who can ever know about such a mysterious and esoteric Being, whosoever he is and wherever he is? (25).

[Note—¹Humans are considered as the highest positioned species in the evolutionary ladder. Amongst the humans, the Brahmins who are the wise and senior most member of the human race are the most highly respected ones and symbolically occupy the throne of evolution as its emperor, while the Kshatriyas are the second in command and the warrior class in human society who can be likened to the numerous kings under the emperor. The symbolism is meant to stress the point that when such highly

placed and able members of the world are not left alone by that secret force of creation known as Brahm and they become his fodder, then what should one say of lesser mortals—they don't stand any chance. In other words, the astounding and most mysterious cosmic force that is the unquestioned and unchallenged dynamic Authority in this creation has the ability to devour everything in existence and still not feel whetted with it. It outlasts everything that exists, or would exist forever in any future frame of time. How is it ever possible to describe it; how is ever feasible to characterize it with this or that attribute or quality? How can one fathom the fathomless, and measure something that has no dimension?

That is why the wise scriptures prefer to describe it with the words 'Neti-Neti', i.e. 'not this, not this', or 'neither this nor that'.]

Canto 1, Valli 3

1. [In this verse, Yam asserts that the Jivatma, or the individual creature with the pure conscious soul known as its Atma, and Parmatma, or the supreme Soul, are intricately related to each other. But these two forms of the same conscious Atma have certain basic differences which distinguish one from the other. He also ascertains their habitat is in the heart of the individual.]

Yam said, 'A creature achieves a human body as a reward of its auspicious and righteous past life and the good deeds done in them. The best and the most holy location in this otherwise gross and impure body is the inner-self represented by the cave-like space of the subtle heart. So, when the creature is blessed with the boon of having a human body, its pure 'self' takes up residence in this holy site of the inner realms of the subtle heart.

The principal entity that lives in this inner-self exhibits two different personality traits which vary from one another. One is like a shadow and the other is like the sunlight. These two varying personalities are due to the fact that one facet of the principal entity enjoys or suffers from the deeds done by the creature while the other does not as it remains aloof and indifferent from the deeds done¹.

This fact is affirmed by those who are experts in the Vedas as well as by those who have selected the Nachiketa Agni three times and even by those who worship the five types of the legendary fire² (1).

[Note—¹The shadow is formed of any object that has a physical existence and not of an imaginary object. The very fact that a shadow has been formed proves the existence of the object. But a shadow can only form when there is sunlight, and not in the dark. Therefore, the object of which the shadow is formed is the 'principal' that is the cause of the formation of the shadow on the one hand, and on the other hand highlights the importance of the sunlight also. If this principal object is removed, no shadow would be formed in spite of the presence of the sunlight, and therefore the ability of the sunlight to create shadows would not be known. The shadow mimics the actions of the principal object; it moves with the object and does what the principal does. The sunlight is constant and steady, shining everywhere equally, and is not affected by the location of the principal object or what it does. On the contrary, the shadow is dependent upon the principal object. Whereas the shadow is dark and gloomy, the sunlight is bright and illuminating. The principal entity that links the shadow with the sunlight is the object of which the shadow is formed; in fact this principal object stands between the sunlight and the shadow to give both of them their importance and highlight their existence in relation with each other.

From practical point of view, this verse simply means that the pure conscious Atma or 'self' of the creature is essentially the same but still there appears to be two different types of creatures exhibiting two opposing characteristics. One type is that creature who remains engrossed in doing worldly deeds, enjoying or suffering from their consequences, and the other type is that who remains indifferent and unconcerned with what the body does. The former type of creature is ever restless and agitated, never finding peace and happiness as he is constantly being buffeted by the world and subjected to all types of turmoil associated with it. The latter type of creature on the other hand remains aloof from the deeds and is free from their consequences, thereby remaining in a perpetual state of calmness and peace.

The point to note is that the same Atma resides in both the creatures, but exhibit absolutely opposing characteristics. The first type of Atma is like the sunlight—brilliant, illuminating and enlightened, while the second type of Atma becomes its shadow—dark, gloomy and depending upon the mercy of the gross body to have its existence. This is because it is the gross body that does deeds, and if the gross body does good deeds, this second type of Atma would get happiness. Otherwise, if the body does sinful deeds this Atma would have to suffer the evil consequences.

The formation of the shadow is dependent upon the presence of the gross body, for no shadow is formed if there is no solid obstacle between the sunlight and the screen. The analogy is very clear here—the Atma that suffers from or enjoys the rewards of the deeds done by the creature is dependent on the gross body because it is the latter that actually does the deed and not the Atma. If there is no solid obstacle like the gross body of the man, no shadow would be formed inspite of the presence of the sunlight. Similarly, if the Atma decides that the body does not exist as far as it is concerned, and therefore it has got nothing with what the body does or does not, then obviously the Atma would not have to suffer from the consequences of the deeds done by the body.

This explains why the same pure conscious Atma is called a 'Parmatma' on the one hand and the 'Jiva' on the other hand. The same Atma has assumed two forms and both these entities are truthful themselves. But whereas one aspect of the Atma which represents its pristine form is eternally pure and uncorrupt and freed from the fetters of delusions and ignorance, the other aspect becomes mired in delusions and ignorance and as a consequence gets trapped in this mortal world. The former is called the Parmatma which is like a fount of light, and the latter is called the Jivatma which is like the shadow of its former self.

We observe here that there are *two versions of the same Atma*. Though primarily being one and the same, the Atma that resides in the bosom of the individual creature as its 'self' and the cosmic Atma that is universally present everywhere as the 'consciousness', begin to exhibit different attributes when the creature comes in contact with the external world through the medium of its body and its sense organs. The body is gross and so is the world, so their contact and communion has its negative effects upon the immaculate and pristine nature of the Atma. The Jivatma begins to think, erroneously though, that the 'body' is its true self instead of the pure consciousness known as the Atma residing in its bosom. This creates a paradoxical situation—on the one hand the Atma is regarded as pure and uncorrupt and untainted by falsehoods, and on the other hand the Atma appears to be neck-deep involved in worldly activities and tarnished by worldly corruptions. This latter type of Atma is attached to the gross body and the gross world. It seeks gratifications from the sense objects of this material world.

There is another interpretation of this verse. The creature is called a Jivatma because it consists of a body which has life and consciousness in the form of the Atma in it. This creature develops two types of tendencies when it begins to interact with the world of sense objects having their own fascinating charms. The Jivatma either remains detached from them or falls prey to them. In the former case, it remains in a total neutral and detached state of existence, a state which is natural and

inherent to the Atma, while in the latter case it gets sucked in the vortex of worldly delusions and consequentially lose its primary sheen, its pristine glory and its divine nature. The Jivatma of the first kind is like the Parmatma who is immaculate, holy and divine, while the Jivatma of the second kind becomes an ordinary Jivatma.

Therefore, what was primarily a symbolic *source of light* has now become like its *shadow*; what is shining white as a symbol of purity and dignified majesty now becomes dark and gloomy; what was eternally blissful and tranquil now becomes sorrowful and agitated; what was deemed to be enlightened and a fount of all knowledge now becomes mired in delusions and overcast by the long shadow of ignorance that follows it.

This is what is meant here—the Atma is inherently pure and conscious; it is a fount of wisdom and enlightenment; it remains un-obsessed with the world and free from its delusions. But when the same Atma comes in contact with the gross body and gets involved with its nefarious deeds, it gets sucked in the vortex of delusions, and under ignorance-laced charms of this world it forgets its prime nature and becomes a ‘shadow’ of its original ‘brilliantly lit’ form as the immaculate Atma.

The tainted Atma is a ‘shadow of the immaculate Atma which is the principal. The sunlight is the light of wisdom, enlightenment and self-realisation which enables the creature to make out the difference between the two types of Atmas—one Atma that is tainted and one Atma that is not tainted. Only in the light of this wisdom about what is true and what is false, what makes one creature find his liberation and deliverance while living in this world with a gross body and what makes the other remain trapped in the cycle of birth and death that the wise and erudite Jivatma become enlightened and see the reality.

This concept has been elaborately explained in verse nos. 3-7 by using the analogy of the ‘chariot’.

²This paradoxical fact is proclaimed by all wise ones, such as the people who are well versed in the knowledge of Brahman based on the Vedas, by those who are worshippers of *Nachiketa Fire*, or those who are deeply renunciate people who have nothing to do with this world and worship the fire element as the only source which can purify them and purge them of all their impurities, thereby paving the path of their attaining emancipation and salvation, and by those righteous householders who follow the path shown by the scriptures by diligently worshipping the five forms of the fire known as *Panch Agni* and perform the five forms of fire sacrifice known as *Panch Yagna*.

The *Nachiketa Agni* has been described earlier in this Canto in Valli 1, verse nos. 13-19.

The *five forms of Fire* ordained to be worshipped by the householder are the following—The five holy fires have been elaborately described in Chandogya Upanishad, canto 4, section 10 to 13. There are five formal divine fires—(a) ‘Garhyapatya’ (the fire of the household hearth), (b) ‘Dakshinagni’ (the fire used as a witness to making charities or any other religious festivity), (c) ‘Ahavaniya’ (the fire to invoke the Gods during a ritualistic sacrifice), (d) ‘Sabhya’ (the fire of the Vedic period which was continuously lit) and (e) ‘Awasathya’ (the fire of the later Smriti period). Worship of the three important fires have been described in Chandogya Upanishad, canto 2, section 24, while canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance.

The Garhyapatya fire—This is the householder’s fire. A householder has land and farm representing ‘earth’ in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire place in the house. Hence, the Garhyapatya fire, or the householder’s fire, is intrinsically present and is implied in these four entities. It is an integral part of these four. The earth has the ‘fire element’ because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy

inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The Dakshinagni fire—is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

The Ahawaniya fire—is lit to invoke Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in creation. The ‘electric’ is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possess most stupendous powers and strength is likened to the presence of Brahm in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahm present in it which gives it its punch and strength.

The five holy fires also refer to the five noble deeds or five auspicious deeds that every householder is supposed to do. They are called Panch Mahayagya and are the following—(a) Brahma Yagya—study and teaching of the Vedas and other scriptures that enlighten the man about the ultimate Truth known as Brahm, (b) Deva Yagya—the performance of fire sacrifices in which offerings are given to the sacred fire which sustain the Gods and are done to honour them, (c) Pitri Yagya—paying homage to the spirit of dead ancestors, offering oblations to them and doing religious activities for the peace of their souls, (d) Service to mankind called ‘Jiva Yagya’, and (e) Bhut Yagya—service to all the creatures including animals, insects, plants etc., such as giving them food, shelter and protection, i.e. taking care of them. These five sacrifices have been described in Ashramo-panishad, verse no. 3.]

2. [Yam now prays to the Supreme Being in order to invoke his blessings in order to empower himself to be able to cross over this seemingly endless ocean-like world. In order words, he wishes to emphasis that even he, who is superior to all other Gods and has therefore been made the custodian of Dharma (the upholder and torch bearer of righteousness and auspiciousness, probity and propriety), who is wiser than the rest of the Gods and had himself preached the auspicious Nachiketa Agni Vidya to Nachiketa, has to pray to the ‘Authority’ which is supreme in this creation. So, all those who seek emancipation and salvation must seek the intercession of that supreme Authority to succeed in their spiritual endeavours. Merely following any of the sanctioned paths leading to emancipation and salvation, no matter how potent and effective they might be and how diligently they are followed, or how eligible and competent the aspirant or seeker is, would be fruitless if the supreme Lord is not benevolent upon him.]

Yam said, ‘Let us be properly acquainted with the sacred Nachiketa Agni (the purifying fire of renunciation—refer 1/1/16) which is like a bridge to take the sincere spiritual aspirant across this fathomless ocean-like world of endless miseries and torments. Let such people be enlightened about the imperishable Brahm which is like a float (or boat; a ship) on which the aspirant can find fearlessness while crossing this horrifying ocean-like world.’ (2).

[Note—Two things are to be noted here—one, renunciation, dispassion and detachment with the body and the world are prerequisite essentials for stepping on the path of emancipation and salvation, and second, one has to take the support of the imperishable Atma and seek the blessings of the supreme Lord in order to do so. Firm belief in the imperishable nature of the Atma or the ‘true self’ of the aspirant ensures that he has not to seek Brahm anywhere outside than in his own bosom, making the entire exercise very easy even for them who have no wherewithal for elaborate rituals and sacrifices in order to attain freedom from the miseries engulfing them in this mundane world. In fact, emancipation and salvation are easily available to everyone, even the poorest and the humblest in the society, given the right approach to them. Emancipation and salvation do not depend on elaborate sacrifices or religious exercises. And this verse points this approach.]

3. [The following verses use the analogy of the chariot to elucidate the method of reaching the supreme Brahm.]

Oh Nachiketa! You can take the example of the chariot to understand what I (Yam) mean. Regard the Atma of the creature (i.e. the Jivatma) as the owner or the passenger of the chariot; the body as the chariot (vehicle); the Buddhi (intelligence) as the charioteer; and the Mana (mind and heart) as the rein (which controls the horses symbolising the various sense organs of the body)¹ (3)

[Note--¹The sense organs are very restless and fidgety, ever eager to cantor away in different directions like the horses attached to the chariot. If the horses are not put under tight leash, the chariot would topple over. Likewise, if one does not control his sense organs which pull him in different directions, he would fall over the brink. For example, the eye sees one thing and gets enchanted with it, inspiring the mind in turn to yearn for it. This mind then plots and plans how to get access to this thing and acquire it. It then orders the organs of action such as the hand and the leg to attempt to acquire this object. Meanwhile, the eye sees something else more enticing than the first, and changes its priorities. While all this is happening, the ear, the tongue, the nose and the skin wish to have different things simultaneously and pull the mind in different directions. They all want that the mind pay them equal attention, all at the same time. The result is obvious to see—the man is tossed like a leaf on a heaving ocean, his mind wanting one thing now and rejecting it in preference to another the next moment. There are five organs of perception—viz. eyes, nose, ears, tongue and skin, and if each behave like untrained spoilt horses, one can well imagine the disastrous consequences for the man and his peace of mind.

Refer Brihad Aranyaka Upanishad, Canto 2, Brahman 5, verse no. 15 and 19.]

4. The wise ones say that if we were to treat the sense organs of the body as the horses of this chariot, then the different perceptions and functions of the world which relate to each of these individual organs of perception and action respectively are like the paths upon which these horses prefer to gallop away with the chariot. [That is, the sense objects of the world attempt to pull the respective sense organs towards themselves by offering to gratify their natural urges. As explained in verse no. 3 above, the result is that the man is tossed violently like a plank of wood on a rough ocean.]

Meanwhile, the Atma of the creature (the Jivatma) which lives in this body consisting of the gross sense organs and the subtle mind-intellect complex is called the ‘Bhokta’—i.e. someone who either suffers from the miseries that come his way by getting involved in the world, or the one who enjoys the pleasures and comforts of this world (4).

[Note—This Atma is the true ‘self’ of the creature, and as such it is deemed to be the one which employs this body with all its components to fulfill its desires. In the

present case where the example of the chariot is cited, it would mean 'to reach its destination'. If this Atma or the 'self' of the creature is wise and enlightened then its 'destination' would be to attain the supreme stature of being one with the universal Brahman and find the final emancipation and salvation for its self. On the other hand, if the Atma is unwise and covered by a veil of ignorance and delusions then it would think that enjoyment of the sense objects of the world is the aim of getting the body. The former Atma is regarded as the wise owner of the chariot who reaches his destination comfortably and in the least possible time, while the latter Atma is regarded as the stupid owner who does not know how to harness the horses, resulting in his chariot rocking and rolling on the way till it breaks apart midway, throwing him off to the ground and getting injured seriously.

In other words, the Jivatma (the Atma of a creature) is the passenger who would either reach his destination if the chariot (body) moves ahead properly, or would get waylaid, fall down and get injured if the chariot becomes uncontrolled. If the creature decides that it should pursue the pleasures of the world, then it is tantamount to its allowing the horses to run amok and throw the chariot off balance, while if it chooses to reach the high citadel where the Emperor (the supreme Brahman) resides then it would be wise for it to let the intelligent charioteer do the driving and keep the horses under tight leash. The former type of creature is called a deluded worldly creature, while the latter is known as the wise and enlightened creature. A spiritual aspirant is expected to be like the second Jivatma. The first type of Jivatma is the one who has to suffer because pursuing the world creates a chain of other delusions in its wake which have the net affect of trapping the creature in their magical snare from which it becomes difficult for it to extricate itself, while the second type of Jivatma is freed from the clutches of these delusory and entrapping falsehoods and is able to reach the truthful spiritual goal which gives it permanent peace and happiness.

The Jivatma, or a living being having an Atma, has wandered in numerous births and suffered a lot. Finally, he has got a golden opportunity to reach his destination without much trouble by sitting in a chariot represented by the body. The sense organs of the body are like the horses that pull it along. Now, if the Jivatma leaves the running of the chariot to an expert charioteer represented by his intelligent mind and its discriminatory and analytical abilities, he can be rest assured that he would reach his destination comfortably, while if he does not allow this expert charioteer to be at the helm of affairs and lets the horses representing the sense organs pull the chariot as they deem fit, then the chariot is sure to topple over, because the horses begin to pull it in all directions.

How does the wise intellect act as the expert charioteer of the Jivatma? When the Jivatma has become wise about his own welfare, he gives the brief to his wise intellect to act accordingly. The brief is to take him to the destination known as 'Brahman realisation' where there is perpetual peace and happiness. The intellect then takes control of the reins of the mind and heart in its hand and leads the horses represented by the sense organs towards the desired destination. The chariot moves smoothly and without causing any trouble for its exalted passenger.

The sense organs have a natural tendency of gravitating towards the sense objects of this world which are very alluring for them. It is indeed very difficult to pull them away from this world much like it is very difficult to move a horse against its wishes if it is grazing grass and refuses to budge. If either the Jivatma (i.e. the creature who is treated as the passenger in this example) or his charioteer (the intellect) are a little careless or callous towards their own fate and allow themselves to become dependent upon the horses (i.e. allow themselves to become subservient to the impulses of the sense organs), then the consequences would be disastrous for the welfare of the passenger who would never reach his destination happily and comfortably even if he manages to reach there at all. So, if the Jivatma puts his destination in the hands of the wise intellect which in turn would keep the sense organs restrained by using its sway over the mind and heart as well as the sense organs, i.e. by 'reining in' the

‘horses’ respectively, the chariot and the passenger would both reach their destination comfortably and in one piece as it were.]

5. Those who are of a low or corrupted intellect, those whose intellect has been eclipsed by delusions and ignorance about the ‘truth’ and is unaware about the real destination of the creature’s soul, and those who have no control over their sense organs and are unable to restrain them, are like the passenger of the chariot whose charioteer is not a skilled one and who is unable to control the horses which become wild and run amok in their path (5).

[Note—With reference to what has been said in verse nos. 3-4 above, if the charioteer is not an expert man, then the uphill ride of the chariot to take the passenger (the Jivatma or creature) to his destination in the citadel where the ‘truth’ symbolised by the supreme Brahm resides becomes a perilous journey. There is a great chance that the chariot would topple over some precipice or ridge and spiritually kill the creature. In other words, if the sense organs are not kept under proper control either because the intellect is not wise enough or the mind is weak and fragile, then inspite of the fact that the creature is innocent and sincere in reaching the goal of spiritual realisation, the destination becomes difficult for him reach. So the emphasis here is to first properly train the intellect and enable it to exercise control over the mind and heart (the Mana). It is only then that the creature is able to control the sense organs of the body.]

6. On the contrary, those who have a wise and well-trained intellect as well as a mind and heart which are well under control, such people are able to keep the sense organs of the body fully under their control much like the horses that are kept tightly under leash by an expert charioteer who knows how to rein them in and drive the chariot properly towards its destination (6).

[Note—The reasoning given above in verse no. 5 is extended further to emphasis that if the creature is wise and he can properly train his intellect to select the path carefully and diligently besides honing its skills at controlling the mind and using it as a rein to tame the sense organs of the body, then the creature is rest assured of reaching his spiritual goal of Brahm realisation or self-realisation with ease.]

7. Those whose intellect is under the spell of delusions and ignorance, those who have not been able to control their mind, and those who remain perpetually in a state of impurity¹ are not able to attain the supreme stature of Brahm-realisation or self-realisation.

Instead, they remain trapped in the snare cast by this world (and continue to rotate in the endless cycle of birth and death accompanied by its attendant miseries and sorrows)² (7).

[Note—¹The *impurity* here refers to the condition in which the sense organs are perpetually engrossed in enjoying their respective sense objects of the material world, the mind remains engrossed in thinking of the pleasures and comforts of this world and how to enhance and retain them, and the intellect is busy either supporting the mind in its worldly efforts or trying to find justifications for its own delusory dalliances. In this process, the Jivatma becomes tainted by the impurities of the world in which his body, mind and intellect remain engrossed. It is a natural phenomenon that one is affected by his surroundings. The surrounding in the present case is the corrupted world, so how can the Jivatma expect to remain free from its affects?

The sense organs of perception are five—ear which hears, eyes which sees, tongue which tastes, nose which smells, and skin which feels or touches pleasant things and derives immense pleasure from such contact. These sense organs, along with the five organs of action such as the hands which take or accept any material

thing, legs which take the creature towards its desired destination, the mouth which speaks and eats, the genitals which help it to enjoy sensual pleasures, and the excretory organs which help to eliminate the waste accumulated inside the body and empty its bowls so that it becomes ready to accept more rubbish, are like the receptive antenna for the subtle body of the creature consisting of the mind and intellect.

The mind and intellect is the apparatus which processes the incoming information gathered by the sense organs and then decide what to or what not to do. In other words, they act like the secretariat of the emperor-like Atma which sits ensconced in the causal body of the creature in the exalted space of its subtle heart. If an emperor has wise ministers manning his secretariat, then he gets enhancement in his fame and majesty, while corrupt and unscrupulous ministers lead him to his ruin.

²When under delusions, the creature begins to think that his body is his true self instead of the Atma, and then he thinks that the deeds done by the body have been done by him, and therefore he is entitled to their rewards. Since aspirations, yearnings, hopes, desires and expectations have no upper limit and they go on increasing when fed by ignorance and delusions of the creature vis-à-vis this world, then the creature can never ever hope to find contentedness and fulfillment, and this in turn drives him to strive for more and make greater efforts in order to seek contentedness and fulfillment. The chain keeps the creature bound to this world and its material charms, leading to the creature being forced to take a new birth every time he sheds his old body in the hope of enjoying the rewards of deeds done in his past life which he had not been able to fully and satisfactorily enjoy then.

At the same time, the creature has to suffer from the evil consequences of bad deeds done by him in the previous life if some residual punishment is still overdue because every punishment must run its full course if one is to be fully cleansed of the bad affects of the sinful act.

In short, the creature gets trapped in this world and coloured or tainted by its various shades of good and bad characteristic features.]

8. On the contrary, those who have a wise and enlightened intellect, those who have been able to exercise control over their mind and through the combined effort of both the intellect and the mind have put their sense organs under leash, and those who are free from all worldly corruptions and pollutions or impurities—they are the ones who are able to reach the pinnacle of spiritual attainment symbolised by Brahm realisation from where there is no return. [That is, they obtain final emancipation and salvation for their souls when it merges with its primary source, the supreme transcendental cosmic Soul of creation, and become inseparably one with it. So there is no question of their soul coming back to the world as a creature or Jivatma any time again in the future.] (8).

[Note—This verse describes what happens to the creature who is wise and follows the path of self-realisation. Such a creature is able to break free from the endless cycle of birth and death, and instead obtain salvation known as Kaivalya Mukti, which is liberation from the fetters that shackle the creature's soul or Atma to this mundane artificial world and deliver it from the torments of this world.]

9. A person who has a friendly charioteer who is wise, erudite, skilled and enlightened, and has his mind and heart under tight control (i.e. has a focused mind and restrained emotions), is able to cross over from this world and reach the supreme abode of Lord Vishnu (who is the Viraat Purush, the macrocosmic grand manifestation of the supreme transcendental Brahm and the Lord from whom the rest of the creation, including the creator of the visible creation known as Brahma, was

born). That is, such a wise and erudite man is able to find his true destination in the form of the supreme abode of the Lord where his soul would find its final rest (9).

10. Compared to the sense organs of the body which are gross in nature, their respective sense perceptions which are subtler in nature are better and superior¹. Compared to these sense perceptions, the Mana or the mind is better and superior because it is subtler than the former². Compared to the Mana (mind), the Buddhi or the intellect is better and superior because it is subtler than the Mana³. And finally, compared to the Buddhi, the Atma which is pure consciousness is better and superior because it is the subtlest entity in the entire setup⁴ (10).

[Note—¹There are five *sense organs* of perception—viz. ear, nose, eye, tongue and skin. They form different components of the gross body of the creature. Their respective *perceptions* are hearing, smelling, seeing, tasting and feeling or touching. These perceptions are subtle in the sense that they cannot be physically touched or felt like their respective sense organs, but can only be perceived. For example, one can touch the nose or the ear, but one cannot imagine actually touching and feeling the sense of smell or hearing.

²The next entity in this progression is the *mind* which is subtler than and superior to the perceptions because it can control them. Only an entity that is superior to the other can exercise control over the latter. Since the sense perceptions are subtle and the mind is able to control them, it follows that the mind is superior and more subtle than these perceptions.

³The *intellect* is superior and subtler to the mind because it can control the mind. The intellect does not have any contact with the gross organs or the gross world, is more concerned with pursuing higher objectives for the creature such as the study of the scriptures and their intelligent interpretations, and giving righteous and noble advice to the mind as well as the Atma in the form of the ‘voice of conscience’ which would in turn drive the creature to opt to do righteous things instead of unrighteous things. The intellect is in direct contact with the Atma which is the ethereal and subtlest entity residing in the body of the individual creature.

On the face of it, the mind-intellect appears to be one entity, but this is not the case. They are two components of the brain—the first is the ‘mind’ that deals with the mundane affairs of life because it is in direct contact with the organs of the body and thorough it with the outside world, controlling the functions of the body and its interaction with the external world of material objects, and the second component is the ‘intellect’ that deals with the higher and ethereal aspects of life which require intelligent thinking, rational logic and analytical interpretations. This setup is like the air that has two layers—one which is heavier as it is nearer to earth, and the other which is rarefied as it is higher up in the sky. The air nearer to earth is polluted and heavy, but the air higher up is clean, pristine and light.

⁴The *Atma* is the Lord and Master of the whole setup and the subtlest entity in the creature’s body. It is the ethereal Spirit which has characteristic that are opposite to what is possessed by gross body of the creature. Even as a thing that is light and subtle is able to lift itself up and can rise higher into the atmosphere as is evident in the case of gas or hot-air filled balloon, the ethereal Atma can reach the highest pinnacle of Truth and spiritual achievement. It can extricate the creature from the swamp of worldly delusions in which he finds himself. The sense organs on the other hand have just the opposite tendency. These organs tend to pull the creature down towards the gross world and its gross objects. Even as a dense and viscous liquid such as honey is very sweet and alluring on the face of it, the attractions of the material world are also very enchanting and alluring for the sense organs of the creature who wishes to enjoy their sweetness and charms in a perpetual way just like a man wishes to keep on eating honey every now and then, remaining oblivious of the fact that that this indulgence might be injurious to his health.

So a wise man who wishes to rise above the mundane and reach the citadel of truthful spiritual enlightenment relies upon the strength of his Atma rather than on the body and its sense organs.

This concept has been elaborately explained to sage Narad by sage Sanatkumar in Chandogya Upanishad of Sam Veda tradition in its Canto 7. This Upanishad has been published in the series as part of the anthology of Sam Veda Upanishads.]

11. From this glorious and majestic Atma honoured by the epithet of ‘Mahat’ (i.e. one that is great and majestic), the invisible dynamic forces of creation called ‘Avyakta’ i.e. that which is not visible; that which is not manifest) is superior and subtler. [This invisible cosmic dynamic force of creation is the primary ‘Nature’ from which the rest of creation has come into being.]

The ‘Purush’ (i.e. the Virrat Purush) is superior and subtler than this Avyakta (invisible cosmic Nature)².

There is nothing superior to the Purush. He is the ultimate and final Authority in creation. That Purush is the final frontier, so to say, and he is the final abode for the soul of the creature (11).

[Note—¹The individual Atma is the microcosm of the colossus cosmic Consciousness. When Brahm, the cosmic Consciousness that is the ‘cause’ of this creation coming into being, decided to initiate the process of creation, its dynamic forces revealed themselves first. These forces at the cosmic level are collectively called ‘primary Prakriti or Nature’. It was from them that the rest of the process rolled forward. These forces were subtle, invisible and infinite just like the capabilities of the mind and intellect in the case of the individual creature.

²The supreme Brahm metamorphosed as the Viraat Purush once the process of creation started. This Viraat Purush is the macrocosmic gross body of Brahm, and is therefore also called ‘Ishwar’ or the supreme Lord. Since the man is an image of this Purush at the microcosmic plane of creation, he is called the de facto ‘lord’ of the mortal world because he is the most powerful and intelligent of all the species on earth.

It is from the Viraat Purush that the creator Brahma was born atop the divine lotus that emerged from his navel. In this role, the Viraat Purush is called Vishnu. Since this Purush is the original ‘creator or cause’ of this creation, he is actually the ‘real father’ who loves his off springs very dearly. This is why Vishnu or Viraat Purush is called the sustainer and protector of creation.

Being the cause of the entire creation, the Viraat Purush is the apex of the triangle-like creation which has the visible world on this earth of which the individual creature is a unit as the base and the Purush as its apex. The Purush shines from the top like the Sun in the sky. That supreme entity is called a ‘Purush’ because it uniformly pervades in and completely fills everything that exists. (Refer reverend Adi Sankracharya’s commentary on this Upanishad. This definition of Purush has been affirmed in Brihad Aranyak Upanishad, 2/5/18.)

The question arises that when a creature goes to the abode of Vishnu, why does he not return to this world? The answer is that when the creature finds a better environment for himself, when he finds that he has obtained an eternal fount of bliss and happiness, obviously he would not wish to return to the miserable existence from which he had tried to flee and reach this exalted stature. This is the thinking of the wise soul, whereas those who are under delusions come back because they get distracted midway as they are not sufficiently enlightened about the real goal of life. They find it hard to believe that there even exists a sublime state where there is eternal bliss and happiness, an exalted stature that is invisible but nevertheless true, because they are accustomed to believing in only those things that they can physically see and touch. So they believe that the world of material charm that is physically seen

and experienced by them is more truthful and tangible than the abstract state of self-realisation and ethereal existence.]

12. The Atma, the pure consciousness, which is present universally and uniformly in all the living creatures, does not shine (i.e. it does not make its presence felt) on its own. It is revealed to or it can be visualized by those who have a deeply penetrating spiritual insight and a sharp and receptive intellect (12).

[Note—The supreme Brahm or cosmic Soul which is the life and consciousness present in the bosom of all living creatures, right from the patriarch of creation known as Brahma to the single cell organism, is a very mysterious entity. It is covered by a veil of Maya or delusions which hides its true identity because it wants to remain anonymous and concealed from the glare of public eye much like the emperor who remains comfortably ensconced in his palace and accessible only to a handful of senior councilors. Who are such fortunate ones who have access and hold witness to Brahm's presence? They are the wise and enlightened ones who have firm conviction and faith in the proclamations of the scriptures about the truthful existence of such an entity. To take a simple example, only a doctor or a nutritional expert knows the beneficial affects of water; for the rest of us it just a medium of quenching thirst and cooking food. The water is the basic ingredient of milk and not vice versa. Food cannot be cooked and digested without water, and life cannot exist in its absence. Water is the elixir of life, and this honour is not available to milk.

So ordinary people go for the immediate benefits that the world offers to them, instead of trying to find out the foundation upon which the world rests. This research is the search of the ultimate Truth of creation. Since this Truth as far as life in this world is concerned is the pure consciousness known as the Atma, only those who are wise, intelligent and focused are able to realise this Truth because any research requires special skills, concentration, steadfastness and intelligence.

Further, since the Atma is universally present in all the creatures, it is not visible to the physical eye of the body because no one can see his own self except in a mirror or as an image in any other reflective surface. This mirror in which the Atma is reflected is the wise and enlightened mind-intellect that aids in self-realisation. It is in this mirror that one is able to see his 'true self' being reflected. If the mirror is tarnished and blackened, the image is not visible. Since this mirror is subtle and not gross like the glass mirror of this world, the image seen is equally subtle and beyond the criterions applied to images seen in this gross world.]

13. [This verse describes the progressive dissolution of all the diverse entities in this visible creation into one single divine entity that is supreme transcendental and universal Truth known as Brahm.]

A wise and erudite man should first dissolve or withdraw the different organs of perception and action represented by the faculty of speech etc. into the Mana (emotive mind). Then he should dissolve or withdraw the Mana into the Buddhi (the intellect). The intellect should be withdrawn or dissolved into the Atma which is enlightened pure consciousness that resides inside the individual creature. Finally, this individual Atma should be dissolved or merged into the supreme transcendental Atma of the creation that has a cosmic and universal dimension. This gives the final peace and tranquility to the creature for which he was so eager (13).

[Note—(a) This verse narrates the process of regression of creation. When a wise man realises the 'truth' of creation and wishes to go back to the origin of everything, he first withdraws the tentacles represented by his sense organs that are the antennas that help 'him', i.e. his 'true self' the Atma, to perceive the world. The mind is the controlling center of all the sense organs, and so when the mind decides to shut its doors to them, the sense organs are deemed to be withdrawn and dissolved in the

mind. The intellect is the senior half of the mind. Whereas the mind is like the office clerk who deals with the ordinary matters of the office, the intellect is the supervisor who deals with matters that require analysis and decision. All these components are actually the huge secretariat working for the Emperor's representative known as the Atma residing in the inner palace of the heart. They all serve this single Governor-General or Viceroy. That is, the final Lord is the Atma which is the 'true self' of the man. When the man has access to this exalted being, he need not bother about the subordinates such as the prime minister the intellect and his junior ministers such as the mind and other units of the secretarial setup. But soon the wise and enlightened man realises that this Atma is not the 'ultimate Authority'. On research he discovers that it is an entity that is transcendental and supreme, and that it is defined by the terms Absolute, Truth and Reality. This divine, esoteric and holy entity is Brahm.

In other words, the wise and erudite man concludes that if his 'true self' is said to be the pure conscious Atma, that this Atma of his is only an image of the supreme transcendental cosmic Atma which is infinitely and eternally more superior and powerful than this individual Atma of his, that the Atma is the ultimate Absolute, Truth and Reality, and since 'truth' cannot be two but only one, he finally concludes that his actual origin is in the cosmic Absolute known as Brahm. He also discovers that this method of regression from the known world to the unknown world is the easiest way to trace his origin in Brahm.

He can also visualize the process of creation by retracing this process of regression, and discovers that everything sprung forth from this single point known as Brahm and then progressed in successive steps to create this world as it is seen now and as it would be seen tomorrow in some different form because it is still continuing to develop and unfold. If the man's single 'individual self' with such limited reach and resources can have such varying personalities and stupendous abilities that it can create such a majestic world having a vast array of colours and contours, what wonder there is in the fact that Brahm who has infinitely greater powers and authority than the man's single self can create this vast universe?

(b) When a man is not aware of the reality, he is afraid of a length of rope thinking it to be a serpent. But when he becomes wisened to the reality, he loses all fears. Similarly, as long as the man thinks that the world is real he has fear of it in him, but as soon as the reality dawns upon him about its falsehood and pretensions, the fear vanishes. This is the difference between mind and the intellect—the former is subject to what the sense organs inform it, while the latter can analyse things for its self and then determine what is true and what is false.

Thus, the sense organs of perception which are the cause of all wrong information are withdrawn or eliminated from the scene, and with their elimination the mind finds peace and is freed from being constantly bombarded by wrong information. When the mind becomes calm, it frees the intellect to devote its energy to higher pursuits. At the later stage, the intellect also loses its relevance for the Atma which does not need its service any more because the Atma is self enlightened and self capable. So when the creature has realised his own true form, he does not need the support of the intellect to reach his spiritual goal. The intellect is needed only till the time full knowledge is not obtained about the truth, but once it is available, it becomes redundant.]

14. [This is a general call for spiritual awakening and acquisition of truthful knowledge.] 'Oh ignorant men! Wake up from the sleep of ignorance and shed your delusions. Go to the learned ones and acquire knowledge about the Truth'.

Those who are well versed in the scriptures and the essence of the profound Truth assert that this path leading to the acquisition of knowledge of the Truth is as difficult and intractable as the sharp edge of a knife¹ (14).

[Note--¹In other words, only a razor sharp and intelligent mind can enable the man to access this majestic and magnificent knowledge about the Atma. Any slip or carelessness would cut and bleed him seriously much like playing fools with the knife would cause a deep wound and might even prove fatal for him. That is why it is said that the path of 'Gyan', or pursuing the 'truth' by following the path of knowledge acquisition, is very difficult, daunting, hazardous and exceptional. It is full of pitfalls and very arduous to tread upon. There is a special Upanishad called the Kshurikopanishad of the Krishna Yajur Veda tradition that deals precisely with this concept and it is Chapter 11 of this volume.]

15. [This verse enumerates some of the uncountable virtues of the Atma.]

That which is beyond the reach of words (i.e. which cannot be described in words), that which is beyond the reach of touch (i.e. which cannot be verified by touching and feeling to establish its truthfulness), that which is without a form and shape (i.e. which has no fixed physical identity and contour, no physical attributes of colour, shape and texture that can be seen), that which is imperishable and does not decay or diminish, that which is beyond the purview of taste and is therefore bland or neutral (i.e. which has no attributes, characteristics and qualities), that which is eternal, constant and omnipresent, that which is without any smell (i.e. that which has no 'stink' emanating from it indicating its divinity and holiness; that which is beyond the purview of the perception of smell and related to this gross world because smell originates in things that grow on earth), that which has no beginning or end, that principal which is beyond (superior to) the definitions of majesty, grandeur and magnificence, and that which is steady, unchanging, immutable, indivisible and eternally truthful—verily, by being acquainted with such an eclectic, divine, holy and astoundingly magnificent entity known as the Atma, a man is freed from the mouth (clutches or fear) of death' (15).

[Note—This eclectic state of existence can be achieved only by the man who is wise and self-realised because he has come to understand the metaphysical truth about his own self that his true identity is the Atma which has the stupendous qualities mentioned in this verse, and that this Atma is no ordinary entity. Besides this fact, he also becomes aware of the fact that the body is not his true self and its decay or sufferings should not affect him in any way. It is the body that dies and suffers, and not the Atma because the latter is an eternal and blissful entity. This fundamental realisation frees him from all causes of fear of death. Refer also to note to verse no. 12-13 above.]

16. Those wise ones who preach and listen to this profound wisdom preached by Yam for the benefit of Nachiketa and listened attentively by the latter, are lauded and honoured even in the Brahma-loka (i.e. in the abode of Brahma in the heaven). That is, those who become learned in this great wisdom about the Atma are honoured even by the Gods because this knowledge was difficult for them to access (as mentioned by Yam himself in Canto 1, Valli 1, verse no. 21-22.) (16).

17. A person who attentively hears the secrets and mysteries unraveled in this holy scripture with firm faith and conviction in the assembly of Brahmins (learned people), or during the days when dead ancestors are honoured and oblations are offered to them¹—verily, such people become eligible and competent to obtain an eternal reward by way of attaining eternity and truthfulness for themselves as well as for their ancestors. [That is, they become eternally freed from the bondage of birth and death along with their ancestors if this Upanishad is heard and understood during the auspicious period when ancestors are honoured.] (17).

[Note—¹While one is offering oblations to dead ancestors, one comes face to face with the reality and certainty of death and what would happen to him after death. It is the ripe time to hear this Upanishad because it helps a man to focus his attention on doing something that would free him from becoming a wandering ‘spirit’ instead of finding permanent liberation and deliverance. The stature of dead ancestors is not a very high one because these spirits keep on lingering in a state of suspended animation in some junior heaven, waiting for their time to come back to this world or go higher up to the heaven. The very fact that the ancestors are living in a ‘spirit form’ and need water and food to quench his or her thirst and hunger establishes that they have not found permanent peace. Worst, they depend upon their descendents to give them water and food, so they are not even independent like the man who at least can fend for himself.]

At such a time, when a man hears about permanent liberation and deliverance and freedom from the fear of death, he literally grabs it with both hands. His mind is most receptive now while he is remembering the fate of his ancestors who have become ‘spirits’ instead of finding permanent emancipation and salvation as compared to the time when he is comfortably enjoying the fruits of his worldly exploits, when he is rolling in wealth and sensual pleasures and is therefore the least concerned about what happens after death.]

Canto 2, Valli 1

[Previously it has been said that the glorious Atma which is the pure conscious self of the creature can be witnessed and experienced only by a sharp and penetrating intellect. Now the question arises what special qualities does the intellect have without which the Atma cannot be realised? Therefore, this Valli elucidates upon the reasons why Atma cannot be so easily realised so that remedies can be found to remove these hurdles because only when a disease is properly diagnosed can remedies searched for it and administered to cure it.]

1. The self-created supreme Lord known as ‘Swaayambhu’ had created the different organs of perception in the body with their receptive openings facing outwards¹. That is why the creature can perceive external stimuli originating from the sense objects of this material world, but is unable to perceive anything related to the Atma residing in his own bosom so close to his self.

Those fortunate and steadfast persons who have a strong will power and a burning desire for ‘seeing’ (realising, witnessing, getting acquainted with) the truthful ‘Pratyhagatma’ (i.e. the pure conscious Atma which is all-knowing, omniscient, self-illuminated and eternally enlightened) endeavour to exercise exemplary control over their sense organs, such as for example the eyes. [When they wish to see the sublime and divine light burning eternally inside their own bosom, they would have to shut the window to the outside world. In other words, when they close the window of the body by which the mind-intellect sees the outside world, it is only then it would be stopped from being promiscuous and turn inside to see what is available there. When the eyes are closed tight shut, the mind would not be disturbed by the enchanting sights of the external world, and it is only then that it would be able to focus its attention on the light emanating from the Atma. When the external window is closed and still there is light inside, the mind-intellect is left to wonder about the source of this illumination. It is only then that it discovers the presence of an enigmatic and mystical entity that is

all-knowing, omniscient, self-illuminated and self-enlightened residing in the bosom of the self This is the Atma that the mind-intellect has been searching for.] (1).

[Note—¹All the organs of perception face outside—viz. the eyes open outside the body and so do the nose, ears, mouth housing the tongue, and the skin which also acts as the external covering of the body. The senses that they perceive, or the stimuli that they pick up would naturally come from the area where they are directed at much like an electronic radar or radio telescope in modern times which picks up signals from the area of the sky where they are pointed. That is why we can hear the sound emanating from the outside world but not hear the beating of our own heart, or we can see an injury on the skin but not the clot of blood inside the body for instance. We can see such a beautiful world outside but we cannot see the internal organs of our own bodies, such as the heart or the lungs. If the sense organs cannot allow us to observe such basic parts of the body because of the fact that these sense organs are only pointing outwards and therefore cannot 'see' inside, how can we expect to show us the Atma? The answer to this perplexing question lies in controlling these organs from remaining hitched to the outside world of material objects so that the mind-intellect can have time and energy to devote to the realisation of the Atma.

²The organs have a natural affinity for the pleasures and comforts obtained from the objects of this world. They would not like any restraint being imposed upon themselves much like the horses of a chariot. Therefore, it requires a Herculean effort to divert them from the outside to the inside much like the effort to divert the flow of a river. It is not though that it is impossible to do so for we have witnessed how a man can, given the will, effectively tame the river and build huge dams on it to harness the energy of the humble water to produce electricity and irrigate lands which had not known these benefits for centuries. So everything is possible if effort and sincerity is there.

The stimuli received from the external world are processed in the brain consisting of the mind and intellect. So as long as the organs of perception are not stopped from remaining busy in their nefarious activities, the mind-intellect complex will have no time to devote to higher objectives of life. But when the sense organs are restrained it can do so.

Therefore, only when one is able to see oneself with his 'inner eye' of wisdom and enlightenment as not being the gross physical body but something higher and ethereal, all his desires and tendency to be extrovert would vanish, and he experiences absolute peace and tranquility. This is the culmination of 'self-realisation' process.]

2. [This verse describes the subtle difference between a wise man and an unwise man.]

Unwise, deluded and ignorant people are the ones who remain engrossed in pursuing the pleasures and comforts offered by the objects of the material world which are inherently perishable and transient. Such persons remain trapped in the tentacles of death which is spread everywhere¹.

On the contrary, wise and enlightened persons recognise the futility of this pursuit and instead concentrate their attention on something that is eternal, truthful, perpetual and steady. They therefore focus their attention on realisation of the pure conscious Atma and shun any desire for having anything of the external world which is transient and impermanent² (2).

[Note—¹Anything which is transient and subject to decay and ruin is a metaphoric representative of death because death is the opposite of permanence and eternity. The world would come to an end one day along with all its fascinating and enchanting allurements, and so would the body of the creature along with its sense organs. So, both comrades would die and become history one day. It is highly stupid to hoard assets which are perishable and impermanent. Such people are called 'ignorant and

unwise' because they yearn for perishable things instead of yearning for things which have permanence and stability.

²On the other hand, a person is considered wise, sagacious and prudent when he would desire for things which have a long life so that one can enjoy the pleasures associated with them for eternity. On research it is found that the world and its objects do not fit the bill, so a wise and erudite man avoids them by a long barge pole. He comes to realise that the only entity which is eternal and steady is the pure consciousness present in the form of the universal Atma in his own bosom. This is why he does not desire any thing pertaining to this material world.

Every noble impulse has its roots in mankind's higher nature. The more he attunes himself to it, the more powerful and potent its influence grows. This is the difference between a wise and self-realised man vis-à-vis an unwise man engrossed in pursuing the pleasures of this perishable world—the former has attained a higher state of moral and spiritual living as compared to the latter.]

3. It is on the inspiration and behest of the Atma that a person comes to know whatever is to be known in this world and enjoys the pleasures of whatever is to be enjoyed in this world, such as seeing and enjoying different sights (by the faculty of sight located in the eye), tasting and enjoying everything that is worth it (by the faculty of taste located in the tongue), smelling and enjoying everything that is worth smelling (by the faculty of smell located in the nose), hearing words and enjoying their worth (by the faculty of hearing located in the ear), touching and feeling everything and deriving immense pleasure and comfort from such sensations (by the faculty of touching and feeling that are located in the skin), and enjoying sexual gratification and pleasures (through the genital organs).

Thus, what is not known to the Atma? The Atma enables a man to learn everything in this existence as it is the 'only' conscious entity present inside the otherwise gross and inert body which would not have been able to do anything left to its own accord. The Atma is indeed most enlightened about everything, being omniscient and all-knowing.

In other words, what can be out of reach of the knowledge of the Atma, and by extension what can not be known through the medium of the Atma?

This is verily that entity. [In other words, the supreme, transcendental, esoteric and mysterious entity that knows everything and which is powerful enough to enable the sense organs of the body and the mind-intellect to know about both the gross as well as the subtle things in this world is known as the Atma.] (3).

[Note—The creature learns about the external world and develops attraction and then attachment for it only because the consciousness present in his bosom makes him enlightened about it. In other words, one creature recognises the presence of the other creature because the consciousness present in the first creature makes him aware of the second creature. Likewise, it is the consciousness present in the body that enables the mind and intellect to determine that any given object is charming or repulsive. This is proved by the case when the dead body from which the consciousness has left not being able to do anything—it would not get attracted towards anything at all and neither would it develop revulsion for anything. The body is not alive on its own but it depends upon the Atma to keep it alive and enjoy the objects of this world. In other words, the only element of any real worth in the body is the conscious Atma.]

4. That consciousness by which a man is able to consciously see things that appear to be real both during sleep as well as during the waking state of his existence is called the Atma. It is a great and majestic entity honoured by the title of 'Vibhu' (meaning the Supreme Being who is omnipresent, all-pervading, omnipotent, all-powerful,

eternal, steady and magnanimous by nature). By knowing it or becoming aware of it (i.e. by becoming self-realised because the Atma is the truthful 'self' of the creature), a wise and self-realised man does not grieve and feel sorrowful or miserable under any circumstances (4).

[Note—Self-realisation entails the realisation of the fact by the man that the Atma is his truthful identity, that this Atma is the Supreme Being or Brahm personified, and there is no difference between the two of them. Since the exalted Atma is blessed with the virtues defined as 'Vibhu', i.e. the qualities possessed by the supreme Brahm, and this Atma is the 'true self' of the man, it follows that he is also as exalted as the supreme Brahm in his purest form. With this view, the man has no reason to feel dejected and sorrowful for anything as he is no ordinary being but the Lord himself personified.]

5. When a wise, erudite and self-realised person is enlightened of the fact that this Atma is the one who enjoys the rewards of all deeds (i.e. is the supreme authority for whom all deeds are done and is the one who is being served by the body when it does any deed), that this Atma is the one who bears the Pran etc. (i.e. it is the authority which enables the body to have 'life' by bearing various life-giving and life-sustaining vital winds and performing various functions pertaining to the sustenance of life in this world), and that this Atma is the authority who rules over all time frames such as the past and the future (i.e. is the authority that has been the king and commander of the world since its conception and would be so even till eternity)—such erudition and enlightenment precludes the necessity for the man to struggle to protect such an exalted and all powerful entity known as the Atma. [For example, a man need not bother about the safety of the Emperor as the latter is capable of taking care of himself.]

Such an exalted, divine, transcendental and supreme Atma is indeed known as the 'Ishan' or the Lord of this creation. Verily, it (the Atma) is that (Brahm) glorious Divinity which possesses these virtues (5).

[Note—A man does anything for his own comfort and pleasure. Does he know who he is, or is he aware of the person whom he so proudly calls 'I or Me' and for whom he and his body have been toiling for so long? This verse answers these fundamental questions—for now it is established that it is the Atma which is the true 'self' of the man and the entity for whom all efforts of the body are made.

Only a living body bears the Pran (breath) and other vital winds, and since consciousness and intelligent behavior is the yardstick to judge whether anything is worthy to be called 'living', it follows that the Atma is the one which bears the signs of life because a body bereft of the Atma cannot bear any signs of life.

Everything, including the body, is perishable and impermanent in this creation. So what was that which was present before everything else came into being, and what is that which would be present after everything comes to a naught so that new life can sprout from it? Well, the unequivocal and resounding answer to this quintessential question is that it is the 'pure conscious Atma'.]

6. Those wise and erudite persons who are aware of the existence of the divine Being who was born as a result of Tapa (severe penances) even before other elements such as the water etc. were created at the beginning of creation, and that this divine Being subsequently took up residence in the cave-like heart of all living beings that came into existence when the world was created (as their Atma)—such persons are the ones who know the truth and the reality of this supreme Principal of creation. [They are the ones who realise that it is the supreme Authority who lives amongst all the creatures, does everything, and enjoys the results of every deed.]

Verily, that divine entity is indeed the supreme, transcendental, esoteric and majestic Atma representing Brahm (6).

[Note—In the beginning there was only Brahm who had no attributes and definitions. This Brahm was known as Ishwar because it was the Lord of what was to come into being in future. Since something cannot be produced from nothing, it follows that this 'Brahm' was the divine and mystical entity that existed between the time the previous creation was consumed and the new came into being. Brahm had 'life' and was 'conscious' because only a living entity having consciousness can do Tapa and decide that it would do something, which in the present case was to initiate the process of creation.

So, when Brahm in the form of Ishwar decided to do Tapa in order to initiate creation, the first unit that was born or revealed was known as Hiranyagarbha, the cosmic subtle body of creation. This Hiranyagarbha was all-knowing and omniscient like the parent Brahm. The genesis of creation describes how the other building blocks of creation known as the primary 'Bhuts' or primary elements such as sky/space, air/wind, fire/energy, water and earth, in increasing degree of grossness, came into being from this primary Hiranyagarbha. When the creation finally took its shape, Brahm assumed a cosmic form that was sublime and invisible but all-pervading and omnipresent. This was the gross body of Brahm, and it was called the Viraat Purush. When the creature's body was created, it was in the likeness of this Viraat Purush, and Brahm entered this body as the Atma or soul and ruled the world from inside the creature's inner self. Since Hiranyagarbha is the first manifestation of the un-manifest Brahm and therefore its closest representative, he was regarded as being synonymous with Brahm. The Viraat Purush was Brahm's gross cosmic body, and its image in the form of the creature's body was therefore Brahm in a microcosmic revelation.

In other words, the Lord who rules the world from inside the bosom of the creature is none other but Brahm.]

7. The cosmic dynamic force and vital life-infusing energy of Mother Nature which is endowed with divine god-like powers is called Aditi (called the 'mother of Gods'). She has manifested herself as the Pran (i.e. as the life giving and sustaining vital winds present in the body). This Aditi accompanied all the other Bhuts (the primary elements of creation such as the sky, air, fire, water and earth) as they revealed themselves in the form of this creation. Once this gross world was moulded out of the Bhuts, this Aditi secretly and quietly entered the gross body and took up residence in the secret cave-like chamber of the subtle heart from where she controlled all the activities.

Verily, this Aditi is nothing but dynamic powers of the supreme, transcendental, esoteric and majestic Brahm manifested in the form of the pure conscious Atma that lives in the heart of the creature (7).

[Note—The cosmic dynamic forces of creation are visualized as Gods who personify them. At the cosmic level of creation, these dynamic forces of creation revealed themselves as the Prakriti or Nature. Since this creation was nurtured by this Prakriti or Nature in its womb, it was called 'Mother' of creation. That is why we refer to it as 'Mother Nature'. According to mythology, the mother of Gods is known as Aditi, and that is why Mother Nature is referred to as Aditi. When this visible world came into being, Brahm entered in the body as the Atma which is the pure consciousness, but the Pran and other life-giving forces were called Gods as they were assigned specific functions in the whole setup.

Since the philosophy of the Upanishads treat Brahm as a non-dual, immutable and indivisible Divinity, it follows that whatever that exists in this creation is one or the other form of Brahm. Therefore, not only the Atma but also the Pran and the other

Gods that govern this body of the creature are Brahm personified. Even the Bhuts are Brahm in these forms.

Now, life and Pran (i.e. the vital winds which infuse life in the otherwise life-less body of a creature) are synonymous with each other as much as is life and Atma (which is pure consciousness present in the creature's bosom). While the Atma represents the all-knowing and omniscient Brahm, the Pran represents the creative and sustaining aspect of the latter and it is therefore known as Aditi. Together, Atma and Aditi represent the majestic and stupendous authority of Brahm. This is the essence of this verse.

'One who gives birth, one who initiates, one who teaches, one who feeds, and one who protects from fear—verily, all these five are to be treated as a Father' (Subhashita Manjari).]

8. Just like the hidden embryo that is nourished in the womb of a woman, the most powerful fire element known as Jatveda¹ (so called because it is as glorious and brilliant as the Sun God—the 'Jatveda') is present between the two Aranis².

When this Jatveda fire is ignited by rubbing of the Aranis, it is regularly and consistently worshipped and adored by worshippers who offer oblations to it during a fire sacrifice.

Verily, this primarily invisible cosmic 'fire' element that reveals itself as the sacrificial sacred fire is most powerful and potent as well as so sacred that the entire fire sacrifice revolves around it, and all offerings meant for the Gods are given to it instead of the Gods. It is indeed Brahm personified. [All the offerings made to the physical fire burning in the fire pit are meant for the Fire God, the deity who is worshipped in this physical form and who is regarded as a personification of Brahm and a representative of all the Gods.]

It is the Atma because without the fire being lit, the fire sacrifice cannot progress even for a fraction of a second (8).

[Note—¹The *Jatvedas* is the name of the Sun God as well as the Fire God. The sun is indeed the most evident form of the fire element and possesses all the virtues and qualities of the latter. This Jatveda fire is like the cosmic fire present in the cosmic cauldron represented by the celestial sun which is comparable to the pit of the fire sacrifice done by the creator at the time of the beginning of creation. The Tapa that the creator did at he beginning was to create the energy needed to initiate the process of creation; it was done to empower the creator to initiate the process of creation. This Tapa is the symbolic rubbing of the Aranis.

With reference to the fire element we find that essentially it has only one uniform identity known as 'fire', but its energy, vitality, heat and light is revealed in an astounding variety of forms and shapes giving rise to the situation where this one fire is known by different names. Likewise, the same non-dual Brahm which has conceived the cosmic embryo called the Hiranyagarbha (like the woman harbouring the embryo conceived by her in her womb) reveals its self in the form of this myriad world (just like the embryo taking birth as an infant of different species) of such stupendous variety that it defies imagination.

Since only the emperor is paid tribute and not the junior kings, and since without 'fire' the embryo would not have got its energy to develop into a creature and then create an entire world around it by its own efforts, this Jatveda fire is honoured and revered as the manifestation of the supreme, transcendental, esoteric and powerful Brahm who is very enigmatic and all-pervading.

There is a great significance of using the analogy of the fire produced by rubbing the Arani to symbolise Brahm. It implies that Brahm is present everywhere and at all times just like the fire element, but it requires a lot of vigorous and diligent effort and holiness of purpose to actually invoke and reveal him much like rubbing the drills to

create the fire during the sacred fire sacrifice. Once revealed, this fire needs to be honoured and revered with due respect, and it then becomes most potent and provider of all desired rewards, whether they are related to worldly matters or spiritual matters. The stupendous potentials and powers of the 'fire' are too obvious and well known to be elaborated upon—it can burn to ashes all the impurities with which it comes in contact and purify the primary element which had those impurities. In other words, with Brahm realisation, all the impurities clinging to the creature are eliminated and the glorious nature of its true 'self' known as the Atma comes to the fore.

²The *Arani* is the wooden drill consisting of two parts used to kindle fire during a fire sacrifice. Its two parts are rubbed vigorously against each other to light the hidden fire element present inherently in the wood, and it is this fire that is first used to light the firewood put in the fire pit of the fire sacrifice.

The Agni or fire represents the cosmic forces that stand for energy, vitality, heat and light. This fire element is universal and is invisibly present everywhere, but it reveals its presence only if the circumstances become favourable—and the rubbing of the Aranis during the holy ceremony is symbolic of this favourable circumstance.

The two parts of the Arani represents the two aspects of this creation—one that is visible and gross, and the other that is subtle and invisible. When the worshipper researches about the latent 'truth' inherent in these two forms of creation, it is his symbolic vigorous rubbing of the Arani to light the fire. The symbolic 'sacred fire sacrifice' in this case is the endeavour to attain Brahm-realisation and getting acquainted with the Truth and Reality of creation, an objective for which even the physical fire sacrifice is actually done.

Performance of fire sacrifice should be done by expert men who are well versed in its intricacies. The offering made to the fire pit is consumed by the burning fire, which means that they are 'accepted' by it. Only a senior can accept an offering made by those who are junior to him, and offerings are made to honour and pay one's tribute to those who are truly exalted, honourable, revered and worthy for offering obeisance. A fire sacrifice is made to honour Gods, and these Gods are represented by the 'fire element' alone because it is invoked first and it also reveals first during the entire exercise. In fact, if the fire cannot be kindled, the entire sacrifice would lose its relevance. Therefore, the most important element worshipped during the fire sacrifice is the sacred and divine fire which is Jatveda as it represents the fire of the Sun.

The *embryo* in its initial phases is just a jelly-like blob of mucous which gives no hint that one day a complex structure called the creature would emerge from it. But as this embryo grows it develops different organs having varying shapes and functions. All eggs are also similar in shape from the outside, but when they hatch they reveal a wide variety of animals, birds, worms and insects.

When the first primordial embryo was produced as a result of doing Tapa by the creator, it was nurtured in the womb of Mother Nature which is the dynamic active principal of Brahm. So the embryo, known as the Hiranyagarbha, represented the 'fire element' in its nascent form, and it was nurtured by Brahm in the cosmic womb of Nature. It was from this embryo that the Viraat Purush was born. This Viraat represented the sum total of all the gross bodies of the would-be creation because it was from him that the rest of the creation would eventually evolve. Hence, the 'spark of life' represented by the fire element was revealed first in its tangible form as Hiranyagarbha which incorporated the entire forthcoming creation in its bosom much like an ordinary embryo of any living creature. The embryo of any living creature is the cosmic embryo called Hiranyagarbha in a miniature form.]

9. All the dynamic forces of creation personified as various Gods live in the vast realm having the dimension measured by the point from where the sun rises and where it sets. No one can cross this boundary as it is the farthest point of creation.

This outer boundary of creation is symbolic of that Brahm (who has been described in the previous verses) (9).

[Note—The rising of the sun is a metaphor for the dawn of creation, and its setting for the conclusion of creation. Everything that has come into existence naturally must exist within this boundary. Since Brahm is all-encompassing and all-inclusive, since nothing exists outside of Brahm, this outer periphery of creation from where the sun rises or the creation originates, and where it sets or the creation concludes, is Brahm. Nothing exists beyond this outer boundary; hence there is no question of anyone ever going outside this periphery.]

[Note—Everything that exists, including the Gods, are tied to this central core of creation called Brahm. This Brahm is like the hub of a wheel. If Brahm were to be removed from the scene, the entire edifice of creation would fall apart much like a wheel from which the central hub has been removed—all the spokes and the outer circumference of the wheel are kept in position because they are tied to the central hub, and once this is removed, all would dismantle on their own.]

10. [This verse deals with the concept of non-duality pertaining to Brahm.]

That essential Principal that is reflected in this body as its life and soul is the same that is reflected outside of it, and vice versa. A person who (is foolish and ignorant enough to) sees duality in this essentially non-dual divine entity is indeed deluded and he goes from one mortal existence to another, i.e. he oscillates between birth and death (10).

[Note—Brahm is the ultimate entity which lives in the body of the creature as its consciousness known as the Atma or soul as well as its vital life in the form of the Pran. This is at the micro level of the individual creature, and the same thing is replicated at the macro level of the entire creation. It is the same Brahm in the form of consciousness that does this or that while in the body of this or that creature. At the same time, this consciousness of the individual creature known as its Atma is the ultimate consciousness and truth in creation known as Brahm. Therefore, anyone who sees any difference between the two is deluded and ignorant of the fact.

Such people think that ‘I who am living on this earth and the supreme Lord who possesses the pitcher of eternity and bliss living high up in the heaven are two different entities’. This is the cause of all their miseries because they spend numerous lives searching that ‘high heaven where the pitcher of bliss and eternity is to be found with the supreme Lord’, which they would never find because it is not anywhere ‘there’ but ‘here’, inside their own bosom itself about which they are not aware.

This is the reason why those who have an erroneous notion of duality about Brahm keep on taking births and dying continuously, whereas those who realise Brahm as a universal non-dual entity which resides in their own self as well as in the rest of the creation in equal measure find eternal peace and rest for their souls. They would not have to search Brahm and the pitcher of eternal bliss anywhere else but their own bosom.]

11. This essential Truth (known as Brahm who is the Supreme Being) is realised only through the medium of a wise, erudite, enlightened and fine-tuned mind-intellect apparatus which is free/clear of all delusions, confusions, perplexities and distractions as well as is steady, focused and diligent in its pursuit.

There is no question of there being any kind of duality or doubt leading to any confusion or perplexity regarding this essential Truth. But unfortunately, in spite of this unequivocal fact if a person still persists with his delusions about it, then such unfortunate ones court and accept death willingly, and go on courting and accepting it endlessly (11).

[Note—This world is perishable and impermanent; the only thing that is not is the eternal Truth known as the pure conscious Atma. This Atma is synonymous with Brahm. Since ‘truth’ can be only one and not two, those who have doubts about whether something that is true is one or two are indeed stupid and deluded to the extreme. Such people hanker after the pleasures and comforts of the visible world because they think that what is practically seen and witnessed is more tangible and trustworthy than something that is simply not visible and witnessed directly. In this world they see a myriad variety of things and uncountable number of creatures, some as friends and others as rivals and enemies etc. Thus they remain trapped in a mirage-like world of ‘this’ or ‘that’ experience and this or that relationship. They forget that all this or that is perishable along with the world in which such things live.

The fundamental thing which would not perish and would last forever, but ironically which is not so easily visible and remains hidden behind a veil of illusions, is the eternal Truth which ignorant and deluded people have denied in the first place when they sought their peace in the perishable objects of the artificial world and had not believed what the scriptures have asserted. Therefore, they cannot find eternity and peace. They go from one life to another pursuing that illusive peace and bliss in their ignorance of the truth.

Such people seek solace and comfort in objects of the world which are inherently impermanent, so how can they give him eternal peace and bliss? They forget the irrefutable truth about the real source of eternity and everlasting peace and bliss as proclaimed by the Upanishads, and therefore they go on taking birth and dying endlessly.]

12. The supreme transcendental Being known as the ‘Purush’ (i.e. one who resides inside any place and completely owns that place; here referring to Brahm) resides in the thumb-sized subtle space or sky (known as the ‘Hirdya-Akash’) present in the heart of the living being as his Atma or pure consciousness. This supreme Lord known as Ishan is the omniscient one who knows about the past and the future (as well as the present), and is the Lord who rules over all time zones (refer verse no. 5)¹.

A wise, self-realised and enlightened person who has become acquainted with that Supreme Being as described above has no cause of fear from any quarter; he does not worry for his own self and protection of his gross body. [This is because he has understood the eclectic truth about his truthful identity, that ‘he’ is not the gross body but the Atma, and that no one can ever harm the Atma as it is eternal, imperishable, ethereal and most powerful entity in this creation. At the same time, he does not have any malice towards and hatred for anyone; he does not speak ill of anyone because the same Atma that resides in his body also resides in the body of the other person.]²

Verily, that most exalted, supreme and transcendental Being described in this verse is indeed Brahm (12).

[Note--¹That is, being eternal and the all-knowing almighty Lord of creation, he commands everything in existence, whether it belonged in some time in the past, would belong to the future, or belongs to the present time. As he is eternal, he outlives all mortal creation and its creatures, and therefore he precedes and follows everything that has a physical existence in this creation. Refer Dhyan Bindu Upanishad, verse no. 19; Shwetashwatar Upanishad, 3/13.

²A person who has become wisened to the great and irrefutable truth about the Atma which is his truthful ‘self’ realises that the Lord of creation is residing very near to him. In fact, the Lord is protecting the person from within him by residing in his own heart, as well as from the outside by being omnipresent everywhere and ready to reveal himself whenever needed. Further, erudition and enlightenment about the all-pervading nature of Brahm also ensures that the wise man begins to see the same Brahm in all the creatures uniformly, and therefore he treats all of them with the same

respect and love which he would reserve for his dear Lord. This outlook, whereby he stops criticizing others and hating them, preempts all ill-wills, and with it all causes of fear of being harmed by one's enemy are eliminated. Now there are no enemies but all are brothers having the same Lord as their parent.

A wise man realises that his soul is immortal and is distinct from the gross body. It is this body that becomes old and dies; it is this body that is hurt and suffers from injuries. The Atma can neither be hurt nor can it die as it is blessed by the divine virtue of eternity and imperishability. Once this wisdom dawn upon him, all reason of fear of death vanish.]

13. That supreme transcendental Being residing as the Atma in the thumb-sized subtle space of the heart of the creature is like a flame with no smoke. [That is, it is like a brilliantly burning fire which has no smoke. This is a metaphoric way of saying that the Atma or the supreme Brahm have no taints or faults that can taint or tarnish their exalted stature.]

That Lord is the ruler who rules over all that exists—whether it relates to anything that existed in the past or would exist in the future (or pertains to the present).

Verily, that supreme, transcendental, esoteric, unique and majestic entity is indeed Brahm (13).

14. Even as the rain water falling upon summits of hills and mountains go downhill and form numerous streams going in various directions, meandering along vast stretches of endless land, a person who sees duality in this world, i.e. who sees, believes and follows numerous paths shown by so many religious dispensations, doctrines and philosophies, gets entangled in their labyrinthine confusions, and forgets in the process about the fundamental Truth¹. Such persons follow these uncountable paths and get lost in them much like the water getting lost in the vast plains once it comes down from the summit of the mountains² (14).

[Note—¹There are many religious believes, philosophies and doctrines in this world. All basically teach the man about the supreme Lord known as Brahm, albeit in different languages. If that Lord is truthful then he cannot be two or more, but only 'one' and unequivocally 'one'. These numerous paths create a lot of confusion for a spiritual aspirant as to which is the 'more truthful' path than the other. These labyrinthine religious theories make him forget that all these different paths and doctrines tell about the 'same' universal and immutable Truth known by numerous words and names. Therefore, the man gets trapped in the perplexities and confusions created by the unnecessary web of philosophies and doctrines propounded by different streams of religion. He forgets that all teach about the one and the same Being who has manifested as the pure conscious 'self' of the man himself.

What more proof does a discerning man need for the existence of the 'universal self' than his own body in which this 'universal self' called the Atma resides? On close examination he discovers that his body functions in the same way, has the same ingredients, has the same anatomy, biochemistry and physiology etc. as the one of his enemy as well as his friend. Surely there must be some entity or force that is common to all living beings. This common denominator is the universal Atma or soul so much venerated and regarded as Brahm personified.

So, the only difference between wisdom and ignorance is how this entity 'I or Me' is interpreted. A wise man knows that his gross physical body is not 'I or Me', instead it is the pure conscious Atma that comes under that definition. On the other hand, an ignorant man thinks that his gross body which he sees with his own eyes and which relates more to his physical existence in this material world and helps him

to relate with it at the gross physical level of existence is the one that is regarded as his 'I or Me'.

²The allegory of the rain water coming down from the top of the hill or mountain forming numerous streams and then dispersing and getting lost in the vast plains below is a symbolic way of saying that if the man gets misled by numerous doctrines, he becomes lost and loses his own truthful self in the vast plains symbolic of the endless nature of various dispensations, doctrines and philosophies.

Besides this, he remains dissatisfied with his present life and the doctrines he follows at present because they have not given him his desired peace of mind and rest to his tormented soul. So naturally he gets disillusioned and seeks a second opinion. This goes on endlessly because there is no dearth of moral and spiritual advisors and self-proclaimed spiritual doctors. Instead of getting any cure, the disease gets worse and chronic. The only remedy then is to seek the guidance of a realised man who knows the truthful way out of this quagmire. And this guidance is provided in the Upanishads, such as the present one.]

15. Oh Gautam (i.e. Nachiketa, as he is born in the lineage of sage Gautam—see note to Canto 1, Valli 1, verse no. 1)! Even as any type of water when added to a larger body of clean and pure water becomes clean and pure like the latter¹, a wise man's Atma also becomes pure and clean when he understands this fact (as elucidated and expounded in this Upanishad)² (15).

[Note—¹There is another interpretation of this verse. Yam has used this analogy of the water assuming the characteristic of the larger body of water to explain the concept that the individual Atma of the creature, no matter how tainted it had become due to its follies in this world, when it merges with the cosmic Atma it loses its taints and flaws and instead becomes as pure as its parent body, the cosmic Atma. In other words, once the wise and enlightened man realises his 'true self' as an image of the supreme transcendental Brahm, he would have literally poured his egoistic self in the vastness of the cosmic Brahm, and then all his past sins and evil vestiges are washed off and he becomes indistinguishable from this cosmic Brahm.

Another way of explaining this concept is this. When any given amount of water is put in a vessel it acquires the contours and characteristics of this vessel. For example, it assumes the outlines and colour of a glass tumbler in which it is held, though everyone knows that water has no shape and colour. Similarly, when the Atma enters a body of a creature, it has to assume the characteristic features and special attributes typical of that particular creature. For example, though the Atma in a grown-up man and a child is the same, their behaviour varies vastly, and similarly the behaviour of a man would naturally be vastly different from a monkey.

The consciousness is like a pure drop of water—it is inherently pure, unpolluted and clean even as a molecule of water consisting of two atoms of hydrogen and one atom of oxygen is inherently and fundamentally pristine pure and absolutely clean. From the atomic view point, no one can corrupt this water molecule. What is regarded as 'dirty water' is the external feature of water, not its basic chemical formulation which remains constant and uncorrupted in all forms of water. Similarly, the Atma is constant and uncorrupted, but it depends upon the person in whose body this Atma resides how he uses this clean slate to write upon—it may be corrupted if the unwise person allows his mind to become dirty and tarnished by pervert thoughts, and it can be crystal clean and shining if the person diverts his attention to nobler thoughts and higher meanings in life.

In other words, this explains why and how the same Atma can become mired in Vasanas and Vrittis (worldly passions and desires and their attendant temperaments and tendencies) and lead to the downfall of the man if he is negligent and careless about his own spiritual welfare, while the same consciousness can make a man

become elevated to a high pedestal of self-realisation and enlightenment that would pave the path for his liberation and deliverance, his emancipation and salvation.

²One should therefore abstain from unnecessary and endless debates as well as from following numerous paths seeking spiritual solace and salvation because these numerous debates and paths would create more confusion and perplexities. Instead of it a wise man should follow the *one* path shown here by this Upanishad—it is the path of non-duality, the path that shows the universality and uniformity of the truthful pure consciousness known as the Atma, and its unique esoteric and enigmatic qualities which make it so divine and holy. This Atma exhibits all of the vital characteristic virtues so unique to the supreme transcendental Divinity known as Brahm, and they include such virtues as being, inter alia, eternal, imperishable, omnipresent, omniscient, omnipotent, almighty, all-pervading, all-encompassing, and a fount of beatitude and felicity.]

Canto 2, Valli 2

1. The abode of that supreme transcendental Brahm—who is known as ‘Aja’ (unborn; without a birth because he is eternal and imperishable)¹ and resides in the bosom of the individual creature as its Atma (pure self and consciousness)—has eleven doors². A person who devotedly and faithfully worships and honours that reverend Lord (i.e. Brahm as the Atma) has never to worry about any grief or miseries (for such negative concepts do not touch him)³.

He becomes free from the fetters caused by doing deeds (as every deed would have certain affects or consequences, and the creature that does the deed is bound by the laws of nature to suffer or enjoy these consequences). Therefore, such a man is freed from the chain of deeds and their consequences even while he is alive⁴.

That enigmatic and majestic entity, the realisation of which sets the man free from the chain of his deeds and their consequences, and which lives in the abode (the body) having eleven doors, is verily the one divine entity known as the supreme transcendental Brahm (who resides in the bosom of the individual creature as the pure consciousness known as the Atma or soul) (1).

[Note—¹The question arises that if Brahm or Atma is *unborn*, then why did take a birth? The answer is that the Atma has not taken a birth, but only changed its abode from the old body to the new body. The body is subject to old age, decay and death, while the Atma which represents the supreme Brahm in the body of the individual creature is imperishable, constant and eternal. This phenomenon has been explained by the example of the caterpillar going from one twig to another by contracting its body and withdrawing itself from the first twig and then alighting on the new twig by expanding its body and catching hold of the new twig to transfer itself to its new abode. This example is cited in Brihad Aranyak Upanishad, Canto 4, Brahman 4, verse no. 3 of the Shukla Yajur Veda tradition.

²The abode of the Atma in which it resides in order to fulfill its obligations of having to undergo sufferance due to the bad deeds done by it during its previous life or to enjoy the rewards of the good deeds done in that life is the gross body of the creature in the present life. It is compared to a *city* or fortress because the sovereign Atma representing Brahm resides in the central citadel of the body known as the heart. Even as any city or fortress has doors or gateways, this body also has *eleven doors*. They are the following—two eyes, two ears, two nostrils, one mouth, navel, anus, genitals and Brahm-randhra (the hair like slit on the top of the head).

³A citizen living in a city or fortress who is acquainted with the king does not have to worry about anything, as all matters that might worry a man, such as attack

from enemies, or being robbed by thieves, or any other worldly worries or pecuniary needs, etc. are all taken care of in the kingdom of a generous and benevolent king. This is a metaphoric way of saying that when a wise, erudite and enlightened man understands that the supreme Lord is within his own self, he simply not bothers about the outside world or even about the protection of the body (i.e. the city in which he lives) because it is the duty of the king (i.e. the supreme Brahman) to take care of the welfare of his subjects and give them protection. Thus the man is freed from such mundane worries to freely pursue his vocation and profession, which in this case would be self-realisation and Brahman-realisation which leads to liberation and deliverance of the soul from the fetters that shackle the creature to the cycle of birth and death.

⁴It is the body that does any deed, and not the Atma. Under the influence of various Vasanas and Vrittis (worldly desires and passions and relevant temperaments and behavioural patterns), the creature begins to erroneously identify itself with the deeds done by the body because it is deluded into believing that the gross and perishable body is its 'self' and therefore the deeds done by the body are being done by 'him'. He forgets that this is not the case, as the 'true self' is not the gross body but the pure, incorruptible consciousness known as the Atma. Now when deeds are done by someone, then the same person is bound to either suffer or enjoy their consequences.

Therefore, once the Atma begins to erroneously identify itself with the body, it sets off a chain reaction that binds it to the deeds done by the body and their consequences. Once realisation dawns upon the intellectual horizon of the creature that its Atma is immaculately pure and his true conscious 'self', while the entity that does the deed is the body which is a distinctly separate entity from this Atma, he has neither to suffer from the bad effects of those deeds nor entitled to enjoy the good effects. That is, he becomes totally detached and dispassionate from the deeds and their results or rewards because they do not affect him in any way. Hence, the fetters created by the deeds in the shape of compulsory sufferance or enjoyment do not impinge upon this man's Atma. This is tantamount to saying that such a wise and self-realised man continues to do deeds with his body but remains free from their consequences. This is possible under one specific condition though—and it is total neutrality, a sense of complete detachment from and profound dispassion towards the deeds and their consequential good or bad results.]

2. [This verse describes the manifold forms in which the same conscious Atma has manifested itself.]

The divine entity (referred to in verse no. 1 above) which is sinless, pure, immaculate, incorrupt, holy, virtuous and true is like a wise Swan. [It is the 'Swan' because it is the wisest amongst all living entities. The word also implies that it lives in the subtle space of the heart of the living being just like a swan floating on the surface of a tranquil mountain lake. In fact, many Upanishads treat the Atma living in the heart of the creature as the Swan—e.g. the Hamsopanishad.]

It is honoured by the epithet of 'Shuchi' means someone who is marked by purity, holiness, virtuousness, cleanliness and immaculacy. It also means one who is shining white like the celestial Sun; someone who is sinless and faultless.

It is all-pervading and omnipresent like the space of the sky. Therefore, it is also as vast, fathomless and immeasurable like the deep space of the sky called the 'Antariksha'.

It is like the 'Hota', i.e. like the holy man who offers oblations to the sacred fire during the fire sacrifice. [Since the word 'Hota' is directly linked to the sacred fire, it implies that this divine entity is synonymous with the fire element. In other

words, it possesses all the glorious virtues of the sacred fire that is universally worshipped by all those who wish to worship Gods.]

It is like the central part of the venue where the fire sacrifice is held and the Vedas are recited. That is, it is the central fire pit bearing the sacred fire where the Hota offers oblations to the Fire God representing the supreme cosmic powers of creation. [That is why it is called 'Vedishad'.]

It is like an honoured guest (an 'Atithi') in the household represented by the gross body of the creature. [This is because the Atma, the pure consciousness that resides in the body of the creature is regarded with the same reverence as one honours one's guest.]

It resembles the Soma liquid kept in a vessel to be used during fire sacrifices, hence called 'Duron-sat'. [It refers to the Atma residing in the heart of the creature. The heart is the 'vessel or container' in which the Atma lives. Since it is a holy and pure entity, it is compared to the Soma which is a sanctified liquid used during fire sacrifices.]

It has revealed itself in gross visible form as humans ('Nri-shat') as well as in subtle and invisible forms as Gods and other spirits ('Var-sat').

It is as the vast and measureless sky ('Vyom-sat'). It is revealed as myriad life forms universally present in water as the water-borne creatures (such as snails, oysters, alligators etc.—i.e. it is 'Abjaa') and on earth as various life-bearing forms such as crop represented by rice grains ('Gojaa').

It is manifested as the sacred 'truth' (Divinity; Brahm) that is revealed as the result of 'fire sacrifices' ('Ritjaa').

It is revealed as the grand rivers etc. that have their origin in the mighty mountains ('Adrijaa').

It is the cosmic Truth that is universal and uniform, that is most grand and majestic, that is magnificent and stupendous ('Ritam Brihat') (2).

3. That eclectic, powerful and mysterious divine entity which takes the Pran wind (i.e. the exhaled breath) upwards and the Apaana wind (i.e. the inhaled wind) down the intestines¹ while living secretly ensconced in a microscopic form (as 'Vaaman')² in the core of the heart of the living being as the pure 'consciousness' is the one that is lauded, worshipped, revered and honoured by all the Gods³. [That entity is the supreme transcendental Brahm present as the pure conscious Atma of the creature residing in his bosom.] (3).

[Note—¹This concept has been elaborately explained in Brihad Aranyaka Upanishad, 3/4/1-2.

²According to the commentary of revered sage Adi Shankaracharya on this Upanishad, the word *Vaaman* refers to the one who is worthy of worship and adoration. Obviously, if there is any entity that is worth adoring and honouring in the body it is the 'consciousness' called the 'true self' of the man. This consciousness is eternal, imperishable, divine and holy as compared to the rest of the components of the body which are not only worthless and subject to decay and ruin but would be of no consequence if there were no consciousness in the gross body. A dead body is useless even though all the components of a dead body are the same as when it was alive, except for the fact that 'consciousness' has left it.

This word 'Vaaman' also refers to the dwarf incarnation of Lord Vishnu in which the Lord had measured the entire world in his two steps, with the third used to subdue the haughtiness of king Bali. This word is used to denote an entity that is dwarfish in appearance but is nevertheless colossus and most majestic beyond imagination.

³The Gods mentioned here refer to the patron Gods of all the different functions of life and the various organs of perceptions and actions in the body. The organs of the body perform their functions to help and serve that supreme 'consciousness' known as the Atma or the 'true self' of the creature which keeps the otherwise dead and inane body alive and active besides being an intelligent entity. These individual organs of the body, such as the eye, nose, ear, tongue and skin (i.e. the organs of perception) as well as the hands, legs, mouth, anus and genitals (i.e. the organs of action) serve their Lord (Brahm or Atma) and pay tributes to him just like citizens serve and pay tributes to their king.]

4. When the living entity (i.e. the conscious Atma or soul or Spirit) present in the body of a man leaves it or discards it at the time of death and goes to another body to assume another birth, the earlier body becomes worthless and despicable; nothing is left in it that is of any worth or of any importance. It is shunned by all, even by those who had been so closely related and attached with it. The body that was so important and loved just the other moment becomes hated and treated with contempt when 'life and consciousness' leaves it. [A dead body is disposed of as early as possible. No one adores it and feeds it anymore. It becomes a liability on the same family members who had so dearly showered their love and affection on it while it was alive. What makes them loathe it now? What is that thing that this body now lacks which has suddenly made it so useless and loathsome?]

Verily, that entity which gave the body its worth and after leaving of which the body becomes absolutely useless and immediately disposable is the supreme transcendental Being that is known as Brahm. [This Brahm was a resident in the body as the pure consciousness called the Atma or soul.] (4).

[Note—Even as the citizens suffer as soon as the king abandons the city and goes permanently to another place to reside, the organs of the body become redundant when the Atma leaves it. That is the reason why the Gods of the various organs pay tribute to the Atma because they know its worth and importance vis-à-vis their own survival. Refer Brihad Aranyaka Upanishad, 4/3/37-38.]

5. No man (or any living being who has a body) is kept alive by either the Pran (breath) or the Apaana (the wind that moves down the intestines and controls ingestion of food, its digestion and the elimination of waste through the excretory organs). The principal entity that keeps a man alive is another one and it is upon this entity that even these two vital winds called Pran and Apaana themselves depend.

So it follows that this principal entity is surely separate and distinctly independent from the body and its various components, both the gross as well as the subtle. [This exalted and supreme entity is the pure consciousness known as the Atma living inside the bosom/heart of the man.] (5).

[Note—None of the organs of the body or its various functions can have independent existence; all of them are interdependent. They work in coordination with each other so that the body can function normally. Coordination implies that they cannot keep the body working on their own individual account or ability, and have to rely upon others. So there must be something that coordinates their activities and inspires them to do so, someone to command and regulate them besides providing them with their respective authority, power and energy to function. Surely that entity is superior to them much like a King who uses the different organs of the state machinery to help him look after his kingdom and carry on with his work though the king himself does not do anything physically. All the seemingly independent units of the state machinery have their own importance and use, they have been delegated the power and authority of the King and act on his behalf, but if the King leaves the kingdom

they all lose their importance and relevance. Here, the Atma is like the King while the organs and other vital factors in the body are like the ministers and other functionaries of the King. They serve the King and act on his behalf, and get rewarded accordingly. But their authority and power comes from the King; they cannot supersede the King.]

6. Oh Gautam (i.e. Nachiketa who was born in the family of sage Gautam—see note to 1/1/1)! However, now I shall narrate to you the esoteric secrets of Brahm who is most enigmatic and mysterious, Brahm who is eternal, infinite and truthful.

I shall also describe for your benefit what happens to the Atma after death of the creature (i.e. where it goes, what is its fate, and what becomes of it after the body perishes) (6).

[Note—This topic of death and what happens after death is a most debated one and many Upanishads have dealt with it in detail elsewhere. Some of these are the following—Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 4/3/36, 4/4/1, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahman Upanishad, Canto 1; Taittiriyo-pahishad, Valli 2, Anuvak 6; Katho-panishad, Canto 1, Valli 1, verse no. 20; Canto 1, Valli 2, verse no. 1-6; Canto 2, Valli 2, verse no. 6-8; Canto 2, Valli 3, verse no. 4-17; Subalo-panishad, Canto 11.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1.

The *three great Truths* to be remembered at the time of *death* have enunciated in Chandogya Upanishad, 3/17/6. They are—(1) You are eternal and imperishable; (2) You cannot be demoted, degenerate, become fallen and digressed; and (3) You are basically most sublime, subtle, atomic and a microcosmic image of the vast and macrocosmic supreme Brahm.

The metaphor of the *tree* has been brilliantly employed to explain ‘what happens after’ death in Brihad Aranyak 3/9/28, and in Chandogya 6/11/1-3.]

7. Depending upon the deeds done by a man during the present life and their attendant consequences, as well as the level of spiritual awareness and understanding of what the ‘truth’ is that he has developed as a result of knowledge acquired by him by studying and hearing of the scriptures, he leaves the present body at the time of their death) to be rewarded with a destiny in accordance with these two premises.

Thus, so many of them enter different types of wombs to acquire a new life in a new body which has mobility (i.e. they become one or the other living organism in this creation belonging to the zoological kingdom), while there are so many still others who acquire a body which is immobile (such as numerous shrubs, herbs, plants and trees etc. belonging to the botanical kingdom) (7).

[Note—Some creatures take a lowly birth as animals, worms, birds and insects or other numerous organisms further down in the zoological kingdom such as bacteria, amoeba etc. Some take a new birth in the higher rung of the evolutionary ladder as higher animals such as monkeys and humans. Even amongst humans, there are numerous categories of people—some of high pedigree and noble birth, some of low birth, some having a low birth but achieve great heights in life, and some doing just the reverse.

On the other hand, some enter their new life as members of the botanical kingdom—as uncountable varieties of plants, trees, herbs, grass, algae, fungus etc. This verse shows that even in ancient times the sages were aware that plants have life.

The type of destination that a man reaches depends upon a combination of what type of deeds he had done in his previous life or what type of knowledge he had

acquired. The deeds decide the rewards or punishment due to him, while the knowledge helps him to decide what best to select from the available options.

For example, suppose a man has done immense good deeds during his lifetime, so he is destined an honourable place after death. But suppose his knowledge and definition of what is considered as a 'good reward' is limited to the enjoyment of worldly materialistic life and its attendant material comforts and sensual pleasures, then he would yearn to become some rich man or king to live it out fully in the next life. On the contrary, a man who is wise and erudite would use this golden opportunity to further rise higher in his spiritual stature and seek the community of learned people so that in the final analysis he can achieve perpetual and eternal peace and bliss for himself. So the latter man would become some great ascetic or sage or philosopher who would spread the good news and then wind up his play once and for all.]

8. The supreme transcendental Authority known as the Purush (i.e. the supreme Brahm) keeps awake even while the rest of the creation sleeps¹. He constantly keeps on updating the record of the consequences that each individual creature must face as a result of the deeds done by him. That is, the supreme Lord keeps on arranging for the rewards or punishments for the deeds done by the creature though the latter might think that once the deeds are done and he has gone to sleep after finishing them off, they are forgotten and buried. He is sadly mistaken as this is not the case. He is bound to suffer from or enjoy the rewards of each deed done by him.

This principle authority is known as the supreme Brahm. It is immaculately pure and as potent as the 'Shukra' (sperm). [The sperm is marked with the vital characteristics of life. It bears the genes of life; it is the carrier of life. Without sperms no new life can come into being. In this sense, the sperm is a metaphor for Brahm.]

This Brahm is eternal and imperishable; it is a fount of bliss and happiness just like Amrit which is the divine elixir of eternity and imperishability as well as of bliss and happiness.

No one can cross the boundaries set by Brahm. That is, no one can violate the laws of Nature and creation laid down by him. [It also means that since Brahm is all-encompassing and all-inclusive, there is nothing that exists outside of Brahm, and therefore there is no question of one superseding Brahm.]

The entire creation is founded upon and supported by Brahm. Verily, this principle Authority of creation described here is indeed Brahm² (8).

[Note—¹There is another way of interpreting this idea. When a man sleeps, his body is apparently as good as dead. All his external organs cease to function. He begins to dream, and in his dream he constructs such majestic and fascinating worlds which the living body can never hope to ever acquire and even imagine. So obviously there must be some different entity or 'self' which creates this fascinating world and then lives in it, complete with an active body and its agile organs. Now, this mysterious entity 'lives' even when the gross body virtually 'dies' when the man is asleep. When he wakes up, this is like a new birth for him because the present world is completely different from the world of his dreams.

²'This' unique, unexplainable and most esoteric entity is known as Brahm. Brahm is the only worthwhile entity in this creation much like the Atma is in the gross body of the creature—refer verse no. 1-3 above. Since life and consciousness are synonyms, it follows that Brahm and Atma too are synonyms. Just like an individual creature cannot survive without the presence of the Atma in its body, the creation cannot survive without the presence of Brahm that pervades uniformly in it.

Why is this creation 'hollow' without Brahm? Well, the world that the man creates while he is asleep has no actual existence, it has no substance or pith in it; it is simply an imagination of the mind. That is why it is hollow, and when this logic is

extended to the entire creation at the macro level with Brahm as the one who creates it, then it also becomes hollow. That is, even as the world of dreams has no real existence, the huge world created by Brahm is also similarly hollow. But this is difficult to believe because we see the world and witness it first hand. Well, it is not so hollow after all because Brahm has subtly entered it as its conscious Atma and got dissolved uniformly in it much like a piece of salt in water, to completely permeate it.

Therefore, with the truthful and pure consciousness or Atma representing Brahm pervading throughout the creation uniformly, this creation is indeed not so hollow after all! This is the great mystery of creation; it is the text book instance of a typical paradox—neither of the given two instances is true, but they are not untrue also.

When Brahm has pervaded the entire creation and controls it from within, it obviously follows that nothing can exist outside its periphery and can violate its orders. For example, no water in which salt is dissolved can call its self non-salty.]

9. Even as the same fire element which is universally present in the entire creation (as its energy, heat, light, vigour and vitality factor) assumes as many diverse forms as the need arises¹, the pure conscious self called the Atma of all the creatures, which is fundamentally immutable, indivisible, constant, uniform, non-dual and one single whole, has similarly assumed as many forms as there are numbers and types of creatures². This Atma is inside the individual creature as well as outside of it in the form of the Atma of the other creature at the micro level and of the entire creation at the macro level (9).

[Note—¹The *fire element* is the cosmic principal manifestation of the dynamic powers of Brahm that provide this creation with its energy, vitality, heat, illumination etc. The main operating virtue is ‘energy’ and it is well known that energy can not be destroyed but it only changes its form and shape as the need arises. For example, when something needs to be burnt and destroyed, it becomes ‘fire’; when illumination is needed it transforms into ‘light’ energy; when something is to be warmed, it converts its self into ‘heat’ energy etc. This fire element is latently present in a very subtle and secret form even in the water element which outwardly shows properties quite the opposite of the fire element. This becomes evident when we consider how large underground hot water springs are found on earth, how aquatic life survives below frozen lakes in the arctic regions, and the fact that hot water can scald a man with the same ferocity as direct contact with fire.

²The body is like the mould in which the pure molten gold is put to make a piece of jewelry. The *Atma* is like the uncorrupt pure metal gold, while the body is like the mould in which this Atma is ‘cast’. When the Atma has to assume a new body as described in verse no. 7 above, it does not alter the basic nature and fundamental truth of the Atma as the truthful and pure consciousness. The only thing that changes is the outwardly appearance and characteristics of the Atma in this new role. It is like the case of a theatre artist changing attires to suit different roles.

Even as a wise jeweler sees the value of the ornament in its ‘gold’ content, a wise man sees the ‘Atma’ as the only worthy entity in the entire setup.]

10. Even as the wind or air element which is universally present throughout the creation, pervading in it uniformly, is one, immutable and indivisible, but it appears to have different names, shows different virtues and characteristics which give it different dimensions depending upon the needs and forms it takes¹, the supreme transcendental Being known as Brahm similarly appears to be of so many myriad forms having uncountable characteristics depending upon the form it assumes in this creation. That is, the same Brahm in the form of the Atma, the pure conscious ‘self’, is known by different names and shows different characteristic features depending upon the gross body that the creature takes in each of his births although Brahm and

its synonym Atma are basically one, immutable, indivisible and non-dual pure consciousness that powers everything that exists in this creation.

Verily, this Brahm is the Atma which is present inside the creature as its pure consciousness as well as outside of it as the macrocosmic Consciousness of the entire creation (10).

[Note—¹The *wind* has so many names, such as typhoon, hurricane, storm, cyclone, tornado, twister, gale, breeze, whirlwind, current of air and stream of air etc. but it does not change the basic fact that all these are names given to the same dynamic force of Nature known as the wind element. It is air which fills the entire void of the space of the sky and is called as ether at the cosmic plane and atmosphere in the context of the earth and other planets.

Wind or air represents the grand virtue of Brahm to show ‘movement’ and ‘life-injecting’ capabilities. When the process of creation was set in motion, the elements that successively came into being were sky, air, fire, water and earth. We notice that the order starts with the element that was the subtlest, i.e. sky, and reached the element that is the grossest, i.e. earth. The rest occupy a space in between in decreasing order of subtlety. If the creation was to maintain its self then it must have ‘mobility’, and since the sky does not move, Brahm decided to create the air element took care of this aspect. There was another bonus—this air virtually moved from one place to another to spread the ‘good news’ that the supreme Lord has decided to renew vibrant forms of life from the dismal dark that prevailed after the last doomsday deluge. Like the herald of the King, the air element went to all the corners of the cosmos to spread the good news about the arrival of Brahm. This is a metaphoric way of saying that consciousness would now spread throughout the length and breadth of the cosmos like ink gradually spreading in a tumbler of water to colour the whole water in its likeness! By and by, it would be impossible to distinguish this colour from the water. Similarly, it became impossible to separate the consciousness from this creation. In other words, the Brahm became universally present in the entire creation as the air element that is also universally present in all the corners of the world.

The same wind or air element has been assigned different names when it resides inside the body of a creature and helps it to carry on its functions. The Subalopanishad, Canto 9, verse no. 1-14 of the Shukla Yajur Veda tradition asserts that there are *twelve vital winds* present in the body. It lists their functions as follows—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaan—this controls the tongue and the faculty of taste (verse 4); (5) Samaana—this controls the skin and the faculty of touch (verse 5); (6) Vairambha—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antar-yaam—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the ‘Chitta’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

According to the Trishiki Brahmin Upanishad, 1/5 and 2/77-87, as well as Paingalo-panishad, Cantos 2, verse nos.3 of the Shukla Yajur Veda tradition, this vital wind is of *ten types* depending upon the function that the wind element performs in the body of a creature. Amongst them, there are five winds which are considered more important than the rest. As such, these five are called the main ‘Pran’, or ‘Panch Prans’, and they are the following :--(1) Pran, the wind element, as breath, that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without

life no other wind would be of any significance to the creature; (2) *Apaan*, the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys); (3) *Samaan*, the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood; (4) *Udaan*, the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough; and (5) *Vyan*, the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

Besides the above, there are five subsidiary winds which act more like assistants to the chief *Prans*. They are-- (1) *Naag*—this junior wind which helps in exhaling breath and belching; (2) *Kurma*—this subsidiary wind helps the eyelids to open and shut; (3) *Krikar*—this creates the sensation of hunger; (4) *Devdutta*—this creates sleep; and (5) *Dhananjay*—it prevents decay and deformation of the body immediately after death for some time.

So the basic idea is that inspite of the fact that the wind or air is the same element everywhere, it is given different names and assumes different functions depending upon the given circumstance. Similarly, the same consciousness is given different names according to the body that it assumes and the functions that it performs in the scheme of things of creation. But when one peers deep and understands the fundamental principle, he realises that what is seen externally is very misleading and illusive. The hidden fact is quite the contrary, and it is that the same *Brahm* present in myriad of forms in this creation.]

11. Though the Sun is like the eye of the world (because it provides light without which the entire world would be in dark and nothing would be visible) but it never gets tarnished or affected by the various faults and blemishes of the world unlike the case of the eye of the creature's body which is the organ that is not only affected by this deluding artificial world but is also one of the main causes for the creature's downfall and his getting tarnished by the corruptions of the world. The eye is instrumental in getting the creature trapped in endless horrors of the world and shackled to it by strong fetters till an unknown time¹.

Similarly, the universal Consciousness that lives in all living beings as their *Atma* is untainted by anything related to the external world. It is not at all affected by the numerous miseries and troubles that the creature is subjected to in this world as all of them relate to his gross body which is completely different from this pure and immaculate *Atma*² (11).

[Note—¹Unlike the gross organ called the *eye* which has a tendency to see only things that are appealing to it and not at things that it does not like, the *Sun* is unbiased and it 'sees' everything in equal measure. The sunlight uniformly provides light to the entire world, without any kind of discrimination. Again, the numerous faults of this artificial world of sense objects have a tainting affect on the creature because he sees them and gets influenced by them. The eye becomes an important instrument in this delusion and demotion of the creature because the eye is the first organ by which a man sees the enticing charms of this artificial world and is convinced of their existence because he 'sees' them first hand.

This is how the 'mirage of the desert' works. It is the eye that first sees it and forces the mind to believe what it sees, though all men who go to a desert are warned about this phenomenon and are told to be wary of it. But does he do it?

The eye makes the man aware of the charms and attractions of this deluding world of material objects. Once the man sees these enticing offers, his mind gets biased and then the chain reaction is set in motion whereby the man is trapped in this net of delusions and hallucinations.

The role of the eye in trapping the creature in the snares of this world can be visualized by taking the example of the bird caught in a bird catcher's snare or the fish caught in the net of the fisherman. The eye of the bird is the only instrument that makes the bird—which is otherwise a free air-borne creature—to see the bait and then the mind creates a desire to go and eat it. The result is that the bird gets caught. Similarly, the fish is caught by the fisherman because the poor creature sees the bait at the end of the fishing line and goes to bite it. Had the fish no eyes, it would not see this bait and would have remained free for ever. The eyes of the bird and the fish have landed both of them in a horrible condition, resulting in their death. These two examples would help to illustrate how the 'eye' plays havoc to the freedom of the Spirit of the creature.

The Sun is not affected by the filth and dirt of the earth that is illuminated by its light. It is not concerned about the huge cosmic debris floating in the cosmos, nor bothered by the innumerable despicable things its light brings to the fore on this earth. It continues to illuminate the realm nevertheless, remaining unconcerned or unaffected by anything in the least. It is compared to the eye because it enables the creature to see the world by allowing various images of the external world to enter the body and perceived as sight by the brain when they are illuminated by the light of the Sun. That is why, one cannot see in the dark. That is, the Sun and the eye have a direct relation. Even at the time of creation, the Sun God took up his symbolic residence in the eye of the creature's body. It was a clever mechanism by which the supreme creator ensured that the creature would be able to see this world. The world is 'illuminated' for the creature by this symbolic Sun present in the eye. No other organ can do it. Without the eye, the world would be a dark and foreboding terrain instead of the fascinating and charming place it is. This is at the micro level of creation, but at the macro level it is the Sun which lights the world for the entire creation to see it.

²The metaphor of the Sun remaining uncorrupted and untainted inspite of illuminating this corrupt and tainted world is used to emphasis the point that the pure consciousness known as the *Atma* that enables the eye to see things in this world is itself uncorrupt and untainted. This *Atma* is equally radiant, splendidous and illuminated from within like the celestial Sun, and it illuminates the inner realm of the creature by way of light of wisdom and enlightenment just as the Sun illuminates the vast external world by its sunlight. Even as the Sun is not affected by the despicable and deplorable nature of things which it lights, the *Atma* is also not tarnished by any of the things that the creature's eyes sees and enjoys in this world. It retains its immaculacy and pristine nature as well as its eternal poise and calm, its perpetual state of blissfulness and tranquility inspite of all the worldly upheavals in the form of numerous miseries and torments that the creature is subjected to.

The pure consciousness known as the *Atma* is the pure 'self' of the creature and is like the inner eye of wisdom and enlightenment inherent to all the living beings. It is not affected or moved or tarnished by any of the worldly miseries and torments that afflict these creatures in less or more degree. In other words, it remains indifferent and dispassionate about all worldly matters, neither involved nor concerned by them or their consequences as though it was a neutral external observer and not one who lives inside the body and part of it. This happens because the *Atma* is not a participant in what the body does. Therefore it is also not affected by the consequences of these actions taken or deeds done by the body.

The link between the *Atma* and the outside world is the physical body, and once a wise and self-realised man establishes this relationship and understands the fact that his 'true self' is not the body but the *Atma*, he would no longer be affected by whatever happens to an entity that is not 'him', i.e. the body which is extraneous to his 'true self'. What worse can happen if the body suffers irreparable damage because of certain circumstances in which it finds in this world which might result in its death? Well, an enlightened man is not the least perturbed, rather he is comforted,

because then his 'self', the Atma, would be liberated from this body-like prison and set free like the bird escaping from the cage. So, there is no wonder that the wise, erudite and enlightened man gives a damn to how miserable and troubled the body feels while it lives and interacts with this world.]

12. That supreme transcendental Being who is non-dual, only one and immutable, who keeps every one under his command and control (being the almighty Lord of creation), and who has revealed himself as the pure conscious Atma residing in the bosom of all living beings—he is so mysterious, magical, mystical and enigmatic that though he is one, immutable and indivisible he still transforms himself into all the numerous forms that exist in this animate as well the inanimate world.

A wise, erudite, sagacious and enlightened man who has the wisdom and erudition, the intelligence and the insight to see or perceive or witness the presence of that enigmatic and fascinating supreme Being in his own bosom as the pure conscious Atma which is eternally enlightened and self-illuminated as well as eternally blissful and happy—he is the only person who experiences eternal state of blissfulness and happiness. No other person can enjoy this privilege (12).

[Note—The concept of 'seeing' the Atma is like an image seen in the mirror. The principal of whom this image is formed is the supreme transcendental Brahm. The image has the radiance and splendour which is equivalent to that of the principal of which it is merely a reflection. But to form any image some kind of reflective surface is needed and this surface is the mirror. In the case of the Atma, the 'surface' from which the illumination is reflected is the intellect and wisdom. The cleaner and polished the mirror is, the clearer will be the image; so the more uncorrupt and untainted the mind-intellect of the creature is the better would it perceive the Truth known as Brahm or Atma.]

13. That supreme transcendental Principal (i.e. Brahm in the form of the Atma) is the only eternal and imperishable entity amongst everything that has come into existence because all of them are mortal and perishable. Even amongst the divine Gods who occupy exalted position in the hierarchy of creation, this Principal is the supreme Divinity and the most exalted cosmic Consciousness in creation.

This supreme entity known as the Atma single handedly fulfills all the desires and aspirations of the creature. [This is because the Atma is like the dynamo that drives the creature. Without the consciousness being present in the body, the latter would not be able to do anything. This is a metaphoric way of saying that the Atma is the central hub around which the wheel of desires and their fulfillment revolves. A body without consciousness would not live and be aware—or be 'conscious'—of the world to desire anything and then strive to fulfill this desire. The body is driven by the consciousness present inside it to do deeds and take actions. Therefore it is said that the Atma helps to satisfy desires.]

A wise, erudite, sagacious and enlightened man who has the wisdom and erudition, the intelligence and the insight to see or perceive the presence of that enigmatic and fascinating Supreme Being in his own bosom as the pure conscious Atma, which is eternally enlightened and self-illuminated as well as eternally peaceful and calm, is the person who experiences eternal state of blissfulness, peacefulness and tranquility. This privilege is not available to anyone else (13).

14. Wise and erudite men regard this eclectic source of eternal and infinite beatitude and felicity which cannot be described in words as the knowledge that enlightens one

of the ‘pure conscious self’. Indeed, it is the knowledge of the supreme transcendental Brahm; it is the knowledge of the pure conscious Atma.

Say, how can one get to know of and be acquainted with this Brahm; how can it be known to us? Is it manifested in some known way so that one can know about it, can witness it and can verify its presence? Or else, is it so mysterious and enigmatic that it is not possible to perceive its presence in physical terms like other things in this world, but is rather the subject matter of subtle experience and subtle perception that comes within the jurisdiction of the wisened and enlightened mind and intellect? (14).

15. That mysterious, enigmatic, esoteric and subtle abode of Brahm has no physical sun, moon, stars or lightening in clouds, then there is no question of the physical fire being present there. [That is, Brahm does not reside in any physical place having physical features such as the sun etc. present in the heaven. This implies that Brahm has no physical abode known as a heaven! It is an all-pervading and all-incorporating divine entity that has a diffused existence which is not physically discernible by the gross organs of the body like seeing some high palace on a mountain top where some high priest or some emperor lives. In fact, Brahm resides in the person’s own heart as his own conscious self. So where is the question of Brahm residing in some distant heaven with the sun, moon, stars and electric to accompany him?]

Everything is illuminated by its light, everything is seen and observed in its light, and everything is witnessed and experienced by its light. There would be no knowledge and no awareness in its absence. It is the universal and all-pervading cosmic Consciousness personified. It is this ‘consciousness’ that lights up the world and gives it its vital spark of life (as the sperm, as the sun, the moon and the stars, as the air, the fire and the water elements, as the earth to rest upon, and as the sky to find sufficient space to live and grow) (15).

[Note—Brahm is consciousness personified as the Atma of the living world. ‘Light’ is a metaphor of consciousness and of knowledge, wisdom and erudition. The term ‘light’ here does not refer to any physical source of illumination as we usually understand ‘light’ to mean, but the illumination that comes with wisdom, erudition, sagacity and enlightenment about the Truth.

All illuminated entities in this creation such as the sun, moon, stars, lightening and fire derive their natural light that shines for eternity as well as the energy to keep being perpetually lighted from some divine, supernatural and inexhaustible source, and ‘Brahm’ is that source. In other words, Brahm is the dynamic principal in creation that is latently present in all things which shine and give out light. It is like the case of the atom which is behind the infinite source of atomic energy which man has harnessed to light up his huge cities.

Therefore, since knowledge is also a form of light that illuminates the dark mind and removes its darkness of ignorance, it is synonymous with Brahm who personifies the best of the illuminated and glorious virtues present in creation.

Brahm is self-illuminated because only an entity that has its own light can illuminate others. For example, the celestial sun has its own light and therefore it can illuminate the moon, but the moon cannot illuminate either the sun or the stars on its own account because it has no light of its own.]

Canto 2, Valli 3

1. [The analogy of a vast tree is used in this Valli to conceptualize the essential form and nature of Brahm. This manifest world has been envisioned as a huge tree,

complete with all its external features such as the leaves, flowers, fruits, branches, stem etc. If there is a tree then there must be a root. This root from which this tree grew and from which it draws its nourishment, but which remains hidden from view and is present even when the tree is cut down, is symbolic of Brahm. Refer also to *Brihad Aranyaka Upanishad* of the Shukla Yajur Veda tradition, in its Canto 3, Brahman 9, verse no. 28 compares the living being with a tree and describes the difference between the inanimate world and the animate world, i.e. the world which does not have an Atma and the world which has an Atma. The *Rudra Hridaya Upanishad* of Krishna Yajur Veda which, in its verse no. 41, describes that the body of the creature is like a tree where two birds live, one bird representing the Jiva (the living creature who thinks that the body is its true self) and the other is Ishwar (the conscience that inherently lives in each individual). The latter represents the voice of Brahm.]

The huge creation, which is like an inverted holy Fig tree, has its roots at the top¹ and the branches at the lower end². It has been here since time immemorial.

This tree is a metaphor for the supreme, transcendental and divine Brahm which is the principal entity in creation. This Brahm is marked by unique virtues of being the only eternal and imperishable entity in this creation.

The entire creation is founded upon this single principal entity; it finds its support, its solace and its succour in this principal entity. The entire creation is dependant upon it, based upon it, and relies upon it. [Refer also to 2/2/8-9.]

No one can supersede it and undermine its authority, supremacy and sway over the whole creation (1).

[Note--¹The *root* of this mysterious tree representing this huge creation is the source from which this tree has derived its energy and nourishment to grow into such a colossus structure. This root provides the necessary sustenance to enable it to have such a long life. Even as any tree is anchored to the ground by the root and draws its nourishment through the root, this creation relies upon the supreme Authority known as Brahm to base its self, draw its nourishment and get its sustenance. It is Brahm that supports the huge edifice of this creation and protects it as well. Without Brahm this tree-like creation would have no existence. It would topple over and perish. But even as the root remains hidden from view and what we see is the stem, branches, leaves and flowers, this Brahm remains hidden from view and what we see it the multi-coloured canvas known as the world of immense diversity.

The root of any tree will be present where it can anchor the tree firmly and from where it can draw nourishment to sustain the huge life form manifested as the external structure of the tree. Since in the case of the world-like tree Brahm is not only the anchor but also the primary source of life as its creator, as well as is the sustainer and protector of this world, the root of this tree is symbolically depicted to be present 'high up in the heaven' where this supreme transcendental Brahm is symbolically said to reside. This location is a metaphor for something that is most exalted, lofty, glorious, dignified, high-ranking, supreme and authoritative. This high position is occupied by someone who is the Emperor of creation, and this Emperor is Brahm. Hence, this world-like tree is regarded as having its roots in the heaven. Since the root is invisible, this symbolism is most appropriate because Brahm is also invisible. And since without the root the tree cannot be in existence, the very existence of the visible world is an ample proof of the existence of Brahm at its root.

The world-like tree grew from this single root and then developed numerous branches and shoots, having uncountable number of leaves, flowers and fruits of different colours, fragrances, sizes and shapes etc.

This 'root' representing Brahm is like a fount of Amrit which is the elixir of eternal life and which enables this tree seemingly sustain itself for eternity.

The great sage Adi Shankaryacharya describes this symbolism of the tree succinctly in a very charming way. "This tree's *root* is the supreme transcendental Brahm as determined by the Vedas. Its *seed*, i.e. the basic reason why the tree came into being, is the notion of Avidya or ignorance of the reality which leads to the generation of various worldly desires, yearnings, aspirations, hopes and expectations. These in turn start the chain of deeds to accomplish success in fulfilling them, and the consequences or results of these deeds. Its first *sprout* is known as the invisible Hiranyagarbha which is the macrocosmic subtle body of creation. The *trunk* of this tree represents the gross body of all the creatures in this creation. It has *grown and developed* when watered by various unending worldly desires and yearnings known as 'Trishna'. Its *new shoots* are represented by the creature's mind-intellect complex, the different organs of the body, and the material objects of this world that attract them. Its *leaves* are symbolic of the various scriptures, schools of thought and philosophies along with their different branches. {It is to be noted here that the green leaves carry on photosynthesis by which the tree is able to synthesise certain elements on its own that it cannot absorb from the soil. In other words, the study of the scriptures helps the man to imbibe new information and acquire new knowledge with which he was not born, and he would suffer from this metaphoric deficiency if he does not study the scriptures.} Its beautiful and attractive *flowers* represent the good deeds done by the creature, such as religious sacrifices, charity, austerity, penance, sufferance for noble cause, and other noble deeds. Its sap or *juice* is symbolic of the various emotions and sentiments that the creatures have in this world, such as the emotions of happiness and joy or sorrows and miseries. Its *fruits* represent the numerous means of livelihood, diligent endeavours and sincere efforts made by all the creatures to sustain themselves and live out their dreams, and the consonant rewards of these enterprises. It is founded upon the *ground* of having desires, passions and aspirations for enjoying the rewards of one's industry, enterprise and diligent efforts. Brahma the creator, and other Gods and divine beings are like the different *birds* who have built nests on this cosmic representing the seven Lokas or abodes.

These seven divine abodes are the following—According to Brahmaand Puran (BP) and Vaaman Puran (VP) there are the following lokas-- 'Bhu' or earth [BP-3,4,2-18]; 'Bhuvaha' or the space between the earth and the heaven [BP-3,4,2-19]; 'Swaha' or the heavens known as Brahma's abode; the space beyond the earth's atmosphere; cosmic wind represented by the solar wind blows here [BP-3,4,2-20]; 'Maha' or the world created by Brahma pronouncing the divine word Maha meaning the great heaven or the outer space; it is believed that great sages and seers stay here; it is 1000 Yojans or appx. 8000 miles away from the Swaha Loka [BP-3,4,2-21; VP-52,21-22]; 'Janaha', so called because it was to be inhabited by the humans and the cows [BP-3,4,2-22; VP-52, 22]; 'Tapaha' or the Loka where great amount of austerity and penances are done; it is said to be 60 million Yojans or appx. 60 x 8 million miles away from the Janaha Loka [BP-3,4,2-24; VP-52, 23]; and 'Satyam' or the truthful heaven where the supreme Lord has his abode; it is 300 million Yojans or appx. 300 x 8 million miles beyond the Tapaha Loka [BP-3,4,2-25; VP-52, 24].

The seven Bhuvans or Lokas according to the Vedantic view are the following:-- the seven organs of perception situated in the region of the head—viz. the two eyes + two ears + two nostrils + one tongue/mouth = seven.

This symbolic world-like tree is buffeted by gusts of wind and it sways in the breeze, its leaves shivering and shaking to create a subtle rustling *sound* which appears to indicate that the tree is either groaning under its agonies or exulting in its majestic glories. Other sounds include the chirping of birds perched on its branches, squeaking of frolicking monkeys, pecking of the woodpecker quietly gnawing away at the wood, the bees humming around flowers, the squirrels and such other life forms

hopping and jumping on its branches, etc. These sounds around this tree are symbolic of the numerous sounds that are heard in this vast world. We find the paradoxical situation where one creature is exulting in happiness and joy while his compatriot is wailing in sorrows and rolling in miseries that fill this world. Other sounds include the sonorous recitation of hymns of the scriptures and chanting of Mantras during religious ceremonies—indicating the rustling of leaves. All these sounds are indicative of the cacophonous life that exists in this world. They also stand for the variety and diversity of creation as indicated by the numerous emotions and sentiments that are expressed by the creatures in this world. In short, the life surrounding the tree is a microcosmic depiction of the life in this vast creation.

²This tree has its *trunk and branches* pointing downwards because they represent various forms of life in different planes of development in the manifested world. Some of these forms are very low while some are of a higher level. There are numerous levels of existence indicated by the diversity seen in this world. For example, there is the heaven, the hell, the world of spirits, the earth and the sky, the world of the botanical kingdom and that of the animal kingdom stretching from single cell organisms to complex structures as huge trees and human beings respectively. All these life forms are lower than the stature occupied by the supreme Brahm. This fact is symbolised by the tree having its branches pointing downwards instead of upwards from where Brahm is located.

The ‘root’ of this symbolic tree is called ‘Brahm’ because it is the grandest and the most important of all the parts of this cosmic tree. Since this Brahm is the ‘truthful’ creator, sustainer and nourisher of this tree-like world, it is called *Amrit* which is the ambrosia that sustains eternal life. Since this tree has its origin in a hoary past about which nothing is definitely known and would continue to grow till the time about which nothing can be said with certainty, it is akin to having an eternal life as long as the its root is alive. Therefore, the tree is nourished by the Amrit (the ambrosia of eternity) that it draws through its roots in Brahm because the latter is the eternal wellspring of this Amrit.

Something that is ‘truthful’ has to be eternal and imperishable because ‘truth’ is always constant and steady, and therefore the root of this tree representing Brahm is eternal and imperishable because Brahm has these eclectic virtues.

Since this creation is ‘created’ by Brahm and is ‘not’ Brahm himself, it is separate from it, and therefore it is non-eternal and perishable unlike Brahm. This world is like the presence of water in a mirage formed in a desert, or the magical world of illusions created by a magician, and therefore it does not have any pith like the stem of the banana tree. Even as a mud pot of any shape or size would break to become mud and nothing else, when the outer facade of tree-like world collapses then all that remains is its root in the form of Brahm.]

2. This entire creation has its origin in that Brahm which is like its *Pran*¹ or ‘vital life’. This creation is inspired by Brahm to do what it does. This Brahm is like a stern Lord with a raised baton². Those who recognise Brahm as such obtain eternity and fearlessness from death³ (2).

[Note—¹The word *Pran* has two connotations—one is ‘life’ itself, and the other refers to the ‘vital wind’ that infuses and then sustains life in the body of the creature. Both these meanings are applicable to Brahm, for the latter is the spirit which forms the essence of life in this world, and it the vital force that drives the entire creation with its powerful dynamic energy and forceful inspiration. The living world moves about because of the wind or air element in it, as the latter is the one element amongst the five primary ones (the others being sky, fire, water and earth) that has the inherent virtue of self-movement. The ability to air to cause movement is proved by the movement of leaves in a fig tree at the slightest breeze, or the air-filled balloon which remains very restless.

²Brahm is a benevolent and magnanimous Lord, then how can he be so *stern* as to inspire fear in his subjects by holding a baton to bash someone? The symbolism of a harsh taskmaster is used for Brahm to emphasis the point that his orders, his rules and regulations, his divine presence and supreme authority is so awesome and inviolable that no one dares to supersede him. This fear factor is needed to regulate this creation, otherwise all the creatures would recklessly do whatever they think fit, creating chaos and anarchy in this creation. See verse no. 3 below.

³A person who is well acquainted with the Emperor of the realm has no fear from any quarter. Likewise, a wise, erudite, enlightened and self-realised man who has recognised that supreme authority as his own Atma has nothing to fear from. Since the Atma representing Brahm is eternal and it is the person's true and pure 'self', the question of dying does not also arise, and with it the fear of death vanishes. Consequentially, this realisation of the Atma and of Brahm makes the person feel that he is eternal and imperishable. The basic premise of this thinking is that this person knows that his body which dies and perishes is not his true 'self' which is the pure conscious Atma.]

3. [It is out of the fear* of this supreme transcendental almighty Authority (i.e. Brahm), it is to honour its dignity and pay respect to its high exalted stature, it is to maintain the decorum of his high office and the supreme state of being the divine creator of all that exists and therefore superior and senior to everything else in existence, it is to uphold and respect the sanctity of its sacrosanct and inviolable commands and observe the rules and regulations framed by it in order to keep the creation regulated and working systematically and orderly, that everything and everyone in existence, from the miniscule to the grandest, is compelled and obliged to obey its commands and pay tributes to it.]

It is out of respect of that divine and exalted almighty Authority (known as Brahm) and out of fear of punishment by violating its sacrosanct commands that the Fire burns¹.

Similarly, the Sun rises and shines to give its light, heat and energy to the world (because this is the duty assigned to the Sun by the same supreme Authority).

It is out of the fear and respect of this Authority (or under the sacrosanct and inviolable command of that Authority) that Indra (the king of Gods)², the Wind God (representing the vital air element)³, and the fifth divine entity known as the Death God⁴ (i.e. the Yam God) move actively and diligently to perform their respective duties with agility and eagerness, without resting even for a while and showing no callousness and lethargy (3).

[Note—¹The *fire* exhibits its special qualities of producing heat and light to keep the creation warm and illuminate the realm for the creature to see. The fire burns things which come in its contact which is a metaphoric way of saying that it either punishes them for their misdeeds and sinful acts by reducing them to ashes, or purifies them by burning all the impurities that taint them. The fire actually carries out the mandate given to it by the supreme Authority known as Brahm.

²*Indra* is the God who controls the clouds and rains. So this verse implies that the Emperor Brahm uses his knight Indra to ensure that all the corners of his kingdom get rainfall which is a metaphor for showering the blessing of life on this earth. Further, Indra is also the chief God who rules over all the other Gods representing the various 'Indris' or organs of the body, implying that the Supreme Being known as Brahm uses his assistant known as Indra to exercise control over all the organs of the body at the micro level, and over all the units of the creation at the macro level.

³The *wind* element is at the very foundation of life because besides moving the clouds in the sky to the places where rain is needed, it also sustains life in the entire creation in the form of the vital airs called 'Pran'. These airs present inside the body

of the creature help it to perform all its functions, including moving about. This factor of 'movement' is a vital sign of life. In fact, if the air does not show its inherent virtue of movement then life would suffocate to death. That is why of all the internal functions of the body, only 'breathing' shows movement in the way of expansion and retraction of the chest area.

But it must be observed that sometimes this air becomes absolutely calm for a short while before resuming its movement, thereby indicating that left to its own accord it would like to rest like all other elements in creation, but is compelled to move under the 'fear' of being punished by the overbearing authority of the tough taskmaster known as Brahm. It is not that Brahm is cruel and without compassion, but he has to bear a tough stance and a rigid outer face if he has to keep the state machinery of his creation moving and performing in a well-oiled and synchronized manner in order to serve the larger interest of creation by regulating the population by his stern demeanours. It is a common observance that if the chief administrator shows outwardly affection and sweetness of demeanours, his subordinates would gradually become less vigilant and alert because there is no element of fear left in them.

⁴It ought to be remembered that this discourse is being given by the God of death himself, i.e. by the *Yam* God. So one might ask why this God continuously kills the creation which Brahm has so assiduously sustained, nourished and developed. Yam explains this here—he is doing it on Brahm's express commands; he is merely carrying out the mandate given to him by the Emperor of creation, and this brief is to keep the population under check by bringing about death. Yam is also the god of Dharma, hence he is also responsible to judge the creature according to the life he has led before death. Like any wise King having a hangman in his duty just to punish criminals in order to maintain law and order in his kingdom, Brahm has employed the services of Yam to exercise his control over this creation.

Now, why would Brahm want his own creation be killed by Yam? It is because an ecological, evolutionary and developmental balance has to be maintained. If no one dies, the creation would have no place for new species, and there would be no space and food to sustain those who are already born. Beside this, the fear of death and punishment for evil deeds done in one's present life keep the world on its toes and ensures that for the most part righteousness and nobility holds the upper hand. But when things get out of hand, Brahm reserves the right to conclude this creation, and Yam is again assigned this formidable task.

*This concept has also been described in Taittiriyo-panishad, Brahmanand Valli (i.e. Valli no. 2), Anuvak 8, verse no. 1, which is Chapter no. 2 of this volume.]

4. If one is wise, clever and judicious enough to have acquired the eclectic and sublime knowledge¹ pertaining to this supreme transcendental Truth known as Brahm while he is alive in this world then he is able to free himself from the fetters of birth and death. [That is, if he is able to acquaint himself about his own 'true self' as the pure conscious Atma which is imperishable and eternal, he does not perish with the body when the latter dies. In other words, such a man has attained what is known as 'Jivan Mukti'—liberation and deliverance while one is alive.]

If not, then certainly he has to acquire a new body and remain wandering in numerous wombs (i.e. taking newer births every time his old body becomes old and dies) [This happens because he has regarded the body as the 'self' instead of the Atma, and therefore is liable for the deeds done by this body. This forces him to take a new birth to complete the unfinished agenda of the body, and also to either suffer from or enjoy the consequences of deeds done by this body.] (4).

[Note—¹The *knowledge* referred to here is the knowledge of the truthful and pure ethereal Spirit or soul or Atma which is eternal and imperishable, and which is the

‘true self’ of the creature. Once one realises that he is not the perishable body but the imperishable Atma, that this Atma has nothing to do with this world and its attractive charms which are all deluding and illusionary like the water seen in a desert mirage because the Atma cannot be subject to delusions and illusions as it is eternally enlightened and wise, and that this Atma neither suffers from any punishments or enjoys the rewards for the deeds done by the body which is however a distinct and separate entity from the Atma, the person is deemed to be liberated from the bondages of the body and its accompanying horrors.

When the wise person realises that his Atma does not enjoy anything of this sensual material world, and that this Atma is ‘he’ in his truthful form, that wise person would lose interest in taking birth again with a new body because he would have realised that if he wants true freedom for ‘his self’—i.e. for his Atma—from the horrors of the world, he would have to cast aside the very cause of the entire problem, and this ‘cause’ is the body. So why would and why should he be so stupid enough to commit an error when he knows that he has nothing to gain from it, but only to lose his independence and the only chance to break free from the vice-like grip of this world and its accompanying agonies?]

5. Even as one can see a sharp and clear image of an object in a clean mirror, one can also observe the divine glow of the pure conscious Atma in the mirror of one’s intellect and mind which is uncorrupted and untarnished by any worldly taints and blemishes, or which is not veiled by the smoke of any delusions and ignorance.

In the abode of the Spirits called Pitriloka (i.e. the abode where a man’s Spirit or soul goes after death), this view of the Supreme Being is not clear¹. Similarly, in the higher world of Gandharvas (celestial dancers and singers), the view of the Supreme Being is like an image seen in water².

It is in the third type of abode called the Brahma Loka (the superior heaven where enlightened souls go, and where Lord Brahma the creator is said to reside) that a clear view of the Supreme Being is possible. There, one can clearly discern the difference between the Atma (the individual soul of the creature) and the Parmatma (the supreme Soul of all the creatures) much like one observes the shadow and the sunlight respectively³ (5).

[Note--¹This is because these *spirits living in the Pitriloka* have a lingering memory of their past lives and the creatures that they knew as their kith and kin. This is evident from the fact that offerings are made to dead ancestors by members of their families and by no one else. Say, who is a relative after death? This conception of having a ‘relation’ on earth who would pay homage and give oblation to the dead Spirit of the dead man shows that the link has not been completely broken, that in spite of death the erstwhile living man has still been veiled by ignorance and delusions and that he maintains his symbolic link with this material world. There is no wonder then that he has to take a birth again. Since this is the opposite of having real wisdom and enlightenment, it is not expected that such dead ancestors who live in Spirit form can have any chance of witnessing the Supreme Being or Brahm or their ‘true self’ while in that form. It is much like a state of *dreams* wherein a man dreams of this world and maintains his imaginary relationship with it, ‘dreaming’ or imagining of things in this world which he is not able to acquire with his physical body while he was in the waking state of consciousness, but for which he has an yearning and fulfills this yearning in his dreams.

²The image formed in water is not stable but keeps on changing every other moment with each ripple or any kind of movement on the surface of the water. This image appears to be distorted and fractured because of the movement in the water which makes it look unsteady, shaky, simmering and wavy. It is hard to get a clear view of the principal object based on its reflection formed in water. The view of

Brahm in the abode of *Gandharvas* is compared to this view because the Gandharvas are said to be experts in creating a dream-like world of fascinating charm much like the stage of a theatre company or the sets in a film studio. They are dazzling and simmering in their brilliance on the face value, but basically illusionary and are dismantled once the show is over. They have no permanency. Likewise, the vision of Brahm that is available to those who reside in this abode is equally temporary and illusive as well as distorted and ever-changing.

The allusion to the fascinating and charming abode of Gandharvas is to highlight the fact that those people who are enchanted and taken for a ride by the magnificent charms of this world, ignorant of the fact that it is not going to last long like the magical world created by the Gandharvas while they perform in the heaven, are not able to have a truthful vision of the Supreme Being residing in their own heart as their Atma. They are blinded by worldly dazzle and brilliance of illusionary charms of this materialistic world. They remain engrossed in enjoying this materialistic enchanting world and its fascinating charms, and have no inclination or temperament or mental tuning to receive the frequency of this transmitter known as Brahm. They virtually remain ignorant of its transmissions although these ethereal waves are present all around them, as if it were a failed or wrongly tuned radio receiver!

³Here, the Atma is like the shadow or image of the principal Parmatma, while the latter's brilliant light forms the contrasting sharp background against which this Atma is seen as distinctly as one sees a shadow against the background of the bright sunlight.

The implied meaning here, according to the reverend sage Adi Shankaracharya, is that it is easier for a man to realise Brahm while he is alive in this world, because after death it would be very difficult for him to determine which abode he would be allocated as this allocation is the exclusive prerogative of the Yam God, the god of death and adjudicating authority for the destiny of the dead creature depending upon the deeds done by him while he was alive and on which decision the creature has no control. It is almost a Herculean task to reach the *Brahma Loka*. So if one is sincerely interested in getting to know the Supreme Being then why should he not make efforts in this direction while the going is easy for him as a living being and while there is still time to rectify his thinking and modify his approach to life?]

6. These sense organs of the body of all the numerous living organisms have the basic characteristic that they are impermanent. They take birth along with the body and die along with it. These organs have different inherent tendencies and habits, different inclinations and temperaments in different creatures spread over a wide swathe of creation with uncountable number of species, genres, families, lineage and habitats.

A wise man who understands this basic fact about these sense organs (and their principal abode which is the body) does not have any regrets for them or feels sorry for them, and neither does he grieves for them (that they are suffering in this world or would die one day) (6).

[Note—In other words, a wise and erudite man realises that these organs are subject to constant decay and ruin; this is their fundamental nature and characteristic feature. So there is no point in grieving over the death of the body, because this body is nothing else but a cluster of these organs. Further, he realises the fact that his Atma is *not* one of these organs because it does not decay and die like these organs.]

7. The mind is superior to these sense organs. The intellect is superior to the mind. The majestic entity known as Mahaa-tattwa which is the great and the grand Principle of creation represented by the pure conscious Atma is superior to the intellect.

The entity that is called 'Avyakta' (something that is invisible, intangible, unmanifest and without attributes) is superior to the Atma (7).

[Note—This is because the subtler the thing is the finer is its texture, and therefore it is placed higher up in the ladder of metaphysical world. For example, the air is invisible, lighter and more diffused in this creation than the fire element, and that is why it is more subtle than the fire. In the present case though the Atma is not visible *par se*, but its manifested form as the living being is very much in gross entity and physically seen as compared to some entity defined as ‘Avyakta’—i.e. that which is not visible at all. This latter entity is the ‘Prakriti’ or Nature. It is from this Nature that the rest of creation has got its characteristic qualities. Nature decides the personality of a creature and his mental setup and temperaments. While the Atma is limited by the body in which it lives, the Nature is a cosmic phenomenon which has no boundaries and limits. Nature encompasses the entire gamut of visible and invisible creation.

The meaning of this verse is similar to Canto 1, Valli 3, verse no. 10. It is repeated here to emphasis its importance and significance once again.]

8. The Viraat Purush, who is the manifest cosmic form of Brahm, is superior to the indescribable and intangible divine entity known as Avyakta (Nature or Prakriti)¹. This Viraat Purush has a cosmic all-pervading form which has no physical features of its own but assumes the features of the body of the creature in which he lives as its Atma².

A man finds eternal peace and beatitude by getting acquainted with this knowledge. He is freed from the fetters that shackle him to ignorance and delusions about his own true self as well as about the ultimate Truth in this creation. He consequentially finds eternity and felicity because he discovers the nature of his ‘true self’ as the abode of the imperishable and eternal Brahm who has revealed himself both as the Atma and the Parmatma (the supreme Atma) (8).

[Note--¹This *Avyakta Prakriti* or un-manifest sublime Nature represents the subtle but dynamic cosmic powers, forces and energy of the supreme transcendental Brahm which were employed to bring about existence of this creation with all its profundity and variability. It is the subtle Shakti or invisible dynamic powers and potentials of Brahm that are not physically visible or verifiable but remain hidden in this creation in a latent form but nevertheless controls each and every of its actions and functions.

The invisible Nature called Avyakta Prakriti is the active and dynamic half of Brahm instead of the passive Principal that is represented by the Viraat Purush. This fact is depicted iconographically when it is shown that Vishnu is reclining peacefully with closed eyes in a state of sleep as if meditating while lying on the bedstead made up of the ocean serpent called Sheshnath who floats on the surface of the celestial ocean of milk called ‘Kshir Sagar’.

Brahm likes to work quietly without any pretentious behaviour and showmanship. That is why he has revealed his stupendous powers in a quiet manner, i.e. as ‘Avyakta’— as something that is not apparent.

²The *Viraat Purush*, according to metaphysics, is the gross body of creation and it is this body which is the source from which the rest of the cosmos was moulded or created or manifested. That is, the entire creation, both visible and invisible, is a manifested or revealed form of this Viraat Purush.

Purush has been defined in Brihad Aranyak Upanishad, Canto 2, Brahman 5, verse no. 18 explicitly as the cosmic all-pervading form of the Supreme Being who had entered each and every body of all the creatures that came into being in this creation, and took up his residence there as the pure conscious Atma.

According to reverend Adi Sankracharya’s commentary on Katho-panishad, Canto 1, Valli 3, verse no. 11 and Canto 2, Valli 1, verse no. 12, the word ‘Purush’ refers to that supreme entity which uniformly pervades in and completely fills everything that exists. It also refers to one who resides inside any place and completely owns that place. Therefore, this word Purush refers to the supreme

transcendental Brahm who has taken up residence in the gross body of the creature at the micro level and in the Viraat Purush at the macro level. This Brahm pervades throughout them in a uniform way even as the sky and the wind element occupy all available space in the creation. That is also why sky is considered as a nearest analogy of Brahm because even the other all-pervading element, the wind/air, is present in it and not outside of it.

According to Vedanta therefore, the word Purush refers to the primary and supreme creator of creation known as the Viraat Purush who represents the macrocosmic gross Male body or aspect of the cosmos and is the first macrocosmic gross revelation of Brahm. Ultimately, this Brahm is the Supreme Being who has revealed himself as the Viraat Purush. The creation unfolded from this Purush when he metamorphosed as the gross body of the entire creation, visible and invisible. Therefore, he is the sum-total of all the gross bodies of all the creatures taken together in this creation at the macrocosmic level, and it is from his macrocosmic body that the entire creation was moulded. In other words, the Viraat Purush represents the entire spread of the cosmos. At the micro level of the world, the individual creature is the counter part of Viraat Purush. In other words, the individual gross body of the creature is the microcosmic form of that Viraat, because the entire creation is a manifestation of the same Viraat; it is an image of Viraat.

In the Purans, he is also known by other names, such as Vishnu, the sustainer. Since the Viraat is the male aspect of creation and the primary source of life, Vishnu is also regarded as the creator as well as the sustainer of the creation. But since Vishnu, as Viraat Purush, is the macrocosmic gross body of Brahm, the supreme transcendental Being, he is also regarded as being synonymous with Brahm. The entire universe has been created by Vishnu's passive powers using Shakti as its active power and partner.

The word 'Viraat' refers to something that is vast, colossus, immeasurable, fathomless, and infinite and beyond all terrestrial yardsticks. The supreme Lord encloses the entire creation from all sides like an envelop, and at the same time he remains uniformly and inseparably present throughout the creation like salt which has been dissolved in water. At the time of creation, the Trinity Gods, i.e. Brahma the creator, Shiva the concluder, and Vishnu the sustainer, had all emerged from the Viraat Purush. According to Purans, this Viraat and Lord Vishnu are the same divine factors of creation. The subtler form is known as Viraat, while its grosser form is Vishnu—though the terms 'subtle and gross' are only relative and for the purpose of understanding, because both are the same indivisible Brahm who is non-dual and immutable.]

9. [This verse defines what the Atma representing the supreme Brahm is like.]

It is not possible to physically see the form of the supreme Brahm represented by the pure conscious Atma or the soul of a creature. It cannot be seen by the physical gross organ of sight in the body known as the eye. It can only be perceived by constant meditation and contemplation which envisages a diligent and sincere coordination between the discerning, wise and intelligent mind that has been trained to be under control, and the heart that has unflinching faith and steadiness of conviction about that Brahm firmly engrained in it.

Those who have witnessed and experienced the supreme Brahm in the form of the pure consciousness called the Atma are able to obtain eternity as well as everlasting beatitude and felicity (9).

10. [This verse defines the state of ultimate realisation or the attainment of the Absolute which is akin to the state of existence known as Samadhi which is a perpetual state of meditation wherein the man remains in a state of constant bliss and peace.]

That state when all the five organs of perception (eye, ear, nose, tongue and skin) withdraw themselves and forsake their natural propensity to be extrovert and perceive external stimuli, and join the mind and intellect to turn inwards (i.e. when they become calm and focused on doing introspection and meditation), it is only then that the ultimate stable state is reached. This state is called the 'Param Gati' or the ultimate state of exalted existence for the creature. This is the Absolute state of existence when no ifs and buts remain. [During this state, all external world along with its entire gamut of delusions and miseries cease to exist. The only thing that does is the conscious presence of the 'self' or the sublime Atma.] (10).

11. [This verse defines Yoga or a state of deep meditation.]

That state when the organs, including the mind-intellect, become calm and steady as well as focused on the Atma (i.e. when it is in a perpetual state of contemplation and meditation), is called Yoga. [This word Yoga means a union or coordination between any two entities. Here, coordination has been established between the creature's physical existence and his ethereal existence.]

In this exalted and sublime state, the man is free from all delusions and ignorance pertaining to this gross world, because Yoga symbolises the coordination of the stupendous and eclectic powers associated with creation and destruction¹.

Yoga has the potential to bring about the dissolution of this world, as well as to create this world² (11).

[Note--¹In other words, the process of *Yoga* bestows to the creature the astounding powers that the supreme Brahm possesses. It is true because Yoga establishes coordination between the energetic behaviour of the sense organs, the magnificent powers of the mind and intellect to think and analyse and determine the truth, and the inner intuition represented by the glow of insight effusing from the conscious Atma. This magnificent synchronization helps to harness the cosmic forces of Nature represented by each of these units which were hitherto working against each other and getting dissipated. Now they can be focused on one point much like focusing the sun's rays at one point by using a magnifying glass. This creates a situation when the stupendous dynamic forces of creation reveal their potentials and enables a man to do even the impossible tasks. This fact has been repeatedly emphasized in Yoga Upanishads.

²When the sense organs are restrained and the mind controlled as a result of Yoga, this world ceases to exist, which is another way of saying that its dissolution has been brought about. But once Yoga empowers the practitioner with astounding mystical powers, he can create anything he wishes much like the Supreme Being.

We can interpret it in another way. The harnessed energy of the mind can be used for constructive purposes as well as for destructive purposes even as mankind can use the astounding power of the atom for beneficial or destructive purposes. Therefore, Yoga can be employed as a tool for self and Brahm realisation, or to acquire mystical supernatural powers to obtain worldly fame, wealth and influence.]

12. That transcendental consciousness known as the Atma (called the 'self' representing the Supreme Being or Brahm) cannot be explained or defined or understood using the faculty of speech. Similarly, the mind cannot grasp it as it is beyond its comprehension and reach, and the gross organ of the eye cannot ever hope to see it in physical terms as it sees other gross objects of the world.

Except those who convincingly affirm that 'it is', i.e. who are very assertive and positive about the truthfulness of the axiomatic maxim proclaimed by the scriptures that the 'Atma does have an incontrovertible existence', no one else can ever hope to get acquainted with this Atma, no non-believer can have access to this

divine Principal of this creation as it is very sublime, subtle, ethereal and invisible. [That is, only those who are enlightened and self-realised can have personal experience of the Atma and bear witness to its presence. When they assert that 'It is' they are being truthful and honest about something they have had a firsthand experience of. No other person can have access to this most esoteric, enigmatic and mysterious entity of this creation.] (12).

[Note—The world has a physical existence that is very much in evidence and cannot be denied. Its numerous units take birth and then die only to be reborn again. Since anything that has a verifiable existence must have some root or origin from which or from where it has come into being, it follows that there must be something unknown to us which is the cause that gave rise to this world. Nothing can happen without a cause; nothing can come into existence from the void of nothing. That is, there must be something, no matter how inexplicable, indefinable, mysterious and secretive, from which this creation has come into being and into which it would collapse and disappear after death or end of creation before reemerging from it again in the next phase of creation. This mysterious entity is the cosmic Brahm, the cosmic Consciousness at the macro level which has transformed itself as the Atma at the micro level of creation. This Atma assumed a body which it sheds at the time of death to assume another body for a new birth.

At the time of the final annihilation, all the individual Atmas collectively collapse and merge with the cosmic Atma known as Brahm just like all the rivers fall in the fathomless ocean to become indistinguishable and inseparable from it. Even as the water of this ocean is evaporated and transformed into rain-bearing clouds pouring this water on vast stretches of land much far away from the ocean to replenish underground water sources and irrigate the land mass, but in the final analysis come back to their point of origin in the ocean, the Atma of all the individual creatures originate from the single cosmic Atma, spread in all the directions of the creation as all forms of life, only to finally collapse and come back to their original parent cosmic Atma known as Brahm and merge with it.

In more mundane terms, we can take our own example. The fact that we are here implies that we had some ancestor from whom we descended, and there would be someone to live long after we are dead and gone. We have not seen that ancestor and we would not see our distant descendent. But because we have not seen that ancestor or we would not see that descendent does not mean that they did not exist in the past or would not exist in the future? It's highly preposterous to even suggest this. Likewise, even though we have not seen the supreme Brahm, the very fact that the world exists—a fact that no one can deny—and that it would die to be reborn again proves beyond doubt the existence of Brahm.]

13. One should be first convinced about the truthfulness of the principal entity in creation known as the Atma, one should properly research, analyse and then determine the truthfulness of the Atma, and then be very affirmative and assertive when one makes the statement 'It is'. That is, when a man makes a choice between two situations—whether the Atma exists or not—his assertion that the 'Atma does indeed exist' must be faithful, truthful and honest; it must not lack conviction. The statement that the Atma 'is' must be based on sound principles and intelligent thinking, and not merely impulsive. It must be founded upon personal experience and not heresy. [This is because personal experience of anything makes one believe about it more convincingly than when one merely has a second hand knowledge about it. Once the basic fact is determined, one can find out more about it by other means, but no matter what others tell him his conviction would never be swayed and he would never have any doubts because he has witnessed and experienced a particular thing himself.]

A person who has succeeded in knowing and being convinced of this eclectic universal truth about the Atma is blessed by the benevolence and benediction that accompanies such realisation. [That is, he derives the maximum benefits that come with self-realisation as well as Brahm-realisation. He is filled with overwhelming bliss and happiness at having discovered the grand truth of creation along with realising who he actually is. This realisation in turn opens the gate for his liberation and deliverance from this deluding world of ignorance-ridden miseries. He finds his peace and tranquility even while he is alive and carries on with his worldly responsibilities.] (13).

14. When all desires of a creature are dispelled or eliminated from his heart and mind, it is then that the mortal creature becomes immortal and attains the supreme state of Brahm-realisation while he is still alive and has a gross physical body¹ (14).

[Note—¹This concept is very easy to understand. A creature has so many inherent Vasanas (worldly passions, yearnings and desires) as well as Vrittis (natural inclinations, temperaments and tendencies) that determine his behaviour, outlook and thinking in this world. They are so immense and illusive that it is impossible to fulfill all of them in one life, and even if it is possible to fulfill the old ones, newer ones keep on sprouting continuously. When the time of death arrives, it is natural that some unfulfilled desires are still left over, and so the creature takes another birth in order to fulfill them in his new birth.

On the contrary, if there are no desires, there would be no cause for remaining attached with the world. This is because the desires can be fulfilled only when the creature makes efforts to fulfill them, and it is the body that is a prerequisite for this to happen. Further, since desires having their origin in various Vasanas and Vrittis always pertain to the world, when they are dispensed with the need to interact or deal with the world is also simultaneously dispensed away with.

So when the desires are eliminated, the creature is deemed to have found immense peace and tranquility, virtues which are the hallmarks of that state known as Brahm-realisation. And since such a creature has no left-over desires at the time of death, there is no cause for him to seek a new body or life to fulfill the unfulfilled desires.

The concept of obtaining Jivan Mukti or liberation and deliverance from this world while the creature is still alive has been elaborately described in a number of Upanishads. The concept of Jivan Mukti has also been elaborately explained in other Upanishads, notably The concept of Jivan Mukti has also been elaborately explained in other Upanishads, (i) Krishna Yajur Veda tradition—*Yog Kundali Upanishad*, Canto 3;; *Akchu-panishad*, verse no. 32-39; as an answer given by sage Ribhu to sage Nidagh in *Tejobindu Upanishad*, Canto 4, verse nos. 1-32; as an answer given by Lord Shiva to Ganesh in Canto 4, verse nos. 18-33 of *Varaaha Upanishad*. (ii) Atharva Veda tradition—*Annapurna Upanishad*, canto 2. (iii) Shukla Yajur Veda tradition—*Adhyatma Upanishad*, verse nos. 12, 43-47; *Mandal Brahmin Upanishad*, Brahman 2, Section 3, verse nos. 6-7; *Muktiko-panishad*, Canto 2 as an answer given to Hanuman by Lord Ram when the former requested the Lord to explain the concept to him.]

15. [This verse summarises the teachings of the Upanishads.]

When the mortal man is able to untie all the numerous ‘Granthis’¹ or knots of his heart that shackle him down, it is only then that he is able to attain eternity; it is only then that he finds liberation and deliverance.

Verily, this is the essence of the teaching of all the Upanishads (15).

[Note—The *Granthis* are like a warts on the person’s Atma. They tend to rob him of his Atma’s original pristine beauty and divine charm. The word Granthi is

metaphorically used to mean the various knots that tie the man to this materialistic world of delusions and artificiality from which he finds difficult to liberate himself. It is like the case of a prisoner tied in shackles, and he must first free himself from them before he can find real peace and happiness in his life. The Granthis symbolise the various Vasanas and Virittis (worldly desires, passions and attractions, as well as natural temperaments and inclinations that are inherent to a creature) that hem the man in, and keep him in perpetual fetters. All the numerous delusions and ignorance-based corrupting influences of the world are like the so many knots that tie him down to this world full of miseries and sorrows. They are like ugly warts on his 'true self' which is pure consciousness that is otherwise immaculate, divine, holy and eternally beautiful. It is only when a man is able to break free from the binding affects of these Granthis that he can ever hope to find true emancipation and salvation for his soul.

It ought to be noted here that the heart is the emotive center of the man, while his mind-intellect is the center of his wisdom, erudition, knowledge, intelligent analysis and discriminatory faculty that makes him conscientious about what is right and auspicious and what is not. By saying that the knots of the heart are to be broken and not mentioning the mind-intellect as being tied in these knots, this verse implies that it is the wise and intelligent mind-intellect that would help a man to untie or break open these knots present in his heart.

Another reason for the heart being single out for having these Granthis is the fact that the Atma is living in the subtle space of the heart instead of the mind-intellect. This Atma is virtually held captive by these Granthis, and as soon as the man is able to knock these Granthis open, the ethereal Spirit known as the soul of the man is set free.]

16. The heart has one hundred one Naadis (tubular ducts in the body such as the nerves and veins; in the present context however they would mean the 'nerves'). Out of them, one goes right up to the top of the skull and opens out by the hair-like slit there¹. The seeker of who wishes to have access to Amrit (the elixir of eternity and bliss representing Brahm and the soul's final emancipation and salvation) allows his Pran (literally vital winds; here implying the various vital dynamic forces present inside the body that keep it alive, including the consciousness that pervades throughout the body) to go up through this Naadi and rise high up to reach for the citadel where the pitcher of Amrit is located in the top of the head². [That is, proper wisdom, erudition and enlightenment ensure that the man can attain eternal bliss and a sense of spiritual ecstasy even while having a gross body. It also implies that this eternal bliss and spiritual high is obtainable only through the medium of the body and not otherwise. In other words, Jivan Mukti is more enjoyable than Videha Mukti—this is because in Jivan Mukti the man is able to actually enjoy the spiritual ecstasy and elation that he would not be able to enjoy without the body in his Spirit form upon obtaining Videha Mukti. This reaching out for the high citadel located in the top of the head is symbolic of reaching out to attain an exalted stature Brahm realisation because the supreme transcendental Brahm is said to reside in the highest point in the creation, which in this case of the body is the cranium. This state is akin to accessing the ambrosia of eternity and everlasting beatitude and felicity.]

All the other Naadis move downwards in the body, symbolising that the Pran is moving downwards towards this world instead of moving upwards. [This is comparable to the case of the inverted Fig tree mentioned in verse no. 1 of this Valli. This tree has its spreading branches pointing downwards symbolising the colossus visible world with its myriad variations, and the root at the top symbolising Brahm. In the case of the body, the Brahm Randhra at the top of the skull is the symbolic root

which draws the eternal elixir of life in the form of bliss and ecstasy that comes with enlightenment and self-realisation.]

In other words, if the Pran keeps on moving in all the rest of the Naadis that branch out to other lower parts of the body in different directions, it symbolises the fact that such a person takes different births depending upon the various desires and hopes that his heart and mind harbour and nourish during his lifetime. He would remain trapped perpetually in the lower lives if he does not endeavour to rise high from his existing state. He would remain perpetually trapped in the whirlpool of birth and death in this ocean-like world (16).

[Note—¹This spot is called the *Brahm Randhra*, and it is like a hair-like slit through which an ascetic allows his vital wind and other dynamic forces of life called the Pran to escape. At the time of creation, the supreme Brahm had entered the body through this slit and had taken up residence in the head in the form of wisdom, erudition, enlightenment and knowledge that are the virtues possessed by the mind-intellect in order to control the creature from that exalted high place which is like a symbolic citadel of the city represented by the man's body. Verse no. 1, Valli 2, Canto 2 also describes this body as a city. All the Upanishads dealing with the concept of meditation or Yoga describe how this is done in detail.

The Naadi that goes up to the top of the head and through which the Pran escapes along with the Atma to provide liberation and deliverance to the creature is called Sushuma.

²This is a metaphoric way of saying that he aims for the final emancipation and salvation of his Atma by allowing it to move upwards and reach for the citadel where Brahm resides by acquiring wisdom and enlightenment. Since the mind-intellect is located in the head, and since Brahm is synonymous with these virtues of wisdom and enlightenment, it is said that Brahm resides in the top of the head in a symbolic manner. Further, the Upanishads that describe the philosophy of Yoga narrate in detail how final liberation and deliverance of the creature is obtained by breaking through the Granthis and allowing the Pran and the Atma to reach the Brahm Randhra which is the opening of the Sushumna Naadi in the top of the head mentioned in this verse.

This going up of the Pran and escaping through this opening in the cranium is like a prisoner escaping from the prison and finding his freedom. The Atma, which is an ethereal Spirit trapped in the gross body of the creature, first finds freedom from its inner cell in the heart by opening of the locks of the gate symbolised by breaking of the Granthis as mentioned in verse no. 15 above. Then this Atma has to find a way out of the prison representing the gross body. If it escapes surreptitiously then there are more chances of it being caught and punished, which would be the case if the Atma leaves the body without proper planning. But if it moves out in a well planned and dignified manner by realising the mistakes it had made in the past that had resulted in its captivity in the first place, then it would ensure that it would not do anything similar again so that it can remain permanently free once it goes out of this prison.

So, when the man becomes wise and enlightened about the true form of liberation and deliverance that is described by the Upanishads, then he would coordinate all the vital energies and dynamic forces of his body to break open the Granthis and remove all other hurdles that come in the way of his Atma from finding permanent liberation and deliverance. He would also have realised that the Atma's real and truthful freedom is when it becomes aware of its true ethereal form as the cosmic Consciousness known as Brahm which is the universal and all-pervading absolute Truth. In order to attain this high citadel of Brahm, the Atma emerges through the head and escapes into the outer cosmos to become one with it.]

17. The divine supreme Purush (i.e. the Supreme Being known as Brahm) that resides in as the sublime ‘true self’ of the man in his subtle heart, i.e. the Atma or pure consciousness, symbolically measures the size of a thumb.

Even as the stalk, when removed from the long reed called Munjaa, can be seen and held separately, one should endeavour to distinguish the subtle and sublime Atma from the gross and inane body, and observe their difference. [This reed is used to make long ropes after removing its central stalk. Similarly, one should remove the Atma and see it as an independent entity from the body.]

One should understand that this Atma is ‘Shukra’ or literally ‘white’, implying that it is divine consciousness, most immaculate and pristine pure. It is an embodiment of Amrit which is the elixir that provides eternity, bliss and ecstasy unbound. [That is, a wise man must understand that the Atma is not like the body. Whereas the body is mortal and full of shortcomings, the Atma is eternal and immaculate.] (17).

18. When Nachiketa was thus taught by Yam, the God of Death, he became enlightened about the divine, eclectic and sublime knowledge as described in this Upanishad. He learnt about the fundamental philosophy of Yoga by which one finds liberation from both the artificial materialistic world and the gross inane body, and instead finds eternal bliss and peace for himself. Nachiketa obtained the sublime state of Brahm realisation and self realisation. He freed himself from the fetters of all ignorance and their accompanying delusions, becoming absolutely untainted by their corrupting influences.

Thus, he became liberated from the fetters that shackle an ordinary creature to the cycle of birth and death, and obtained deliverance from it. In other words, he obtained ‘Jivan Mukti’, i.e. he obtained de facto freedom from the shackle represented by this gross body and found emancipation and salvation even while he still had a body and lived in this world. [That is, he did not die to find this final emancipation and salvation, but on the contrary continued to live in this world like a liberated man who is free from any kind of bondage. This ‘bondage’ is caused by ignorance of the truth and reality, and it is akin to the darkness of the night. But once wisdom, erudition and enlightenment dawns upon the man’s mental horizon, its light removes all the delusions to which he was subjected to in the darkness of ignorance. He can see the pristine ‘truth’ and feel liberated from illusions. He becomes aware about his own self and about the ultimate Truth and the absolute Reality of creation. In other words, by becoming ‘Jivan Mukta’, he not only freed from all fetters which tie an ordinary man to this world and the body, but also became eligible to enjoy the spiritual ecstasy and highest degree of beatitude and felicity that comes with Brahm realisation.]

Verily, all others who would become enlightened about the divine, sublime and eclectic spiritual knowledge that was obtained by Nachiketa would also attain the same supreme and exalted state of eternal spiritual blessedness, of eternal beatitude and felicity that was attained by him.

Indeed, all such people (who would become enlightened about the profound spiritual tenets that were taught by the Yam God through this Upanishad to Nachiketa) would become Brahm-realised, Viraj (neutral and indifferent to either the notion of something being good or bad) and free from the fetters or fears of death (because he would realise that his true self is the Atma which never dies, that what dies is the gross body which is however not his ‘true self’, and hence all causes for fear of death would vanish).

Indeed, they would become one like Nachiketa himself (18).

[Note—So what is the conclusion of the teaching of Yam? It is that the Atma, which is pure consciousness and representative of the supreme transcendental Brahm residing in the very own bosom of all the creatures, is the true self of every living being, and that it is inherently blissful, immaculate, imperishable and eternal besides being distinct from the gross inane body and its accompanying problems vis-à-vis the external world of sense objects that is hallmarked by artificiality and delusions.

So the wise, self-realised and enlightened creature who has obtained awareness of who he actually is becomes eternal and fearless because he would no longer have to die or suffer from the horrors of this world. This is because these are the properties of the gross body and not of the ethereal Spirit known as the pure conscious Atma.

On the contrary, if under deluding effects of ignorance the creature thinks that his body is his self then of course he is trapped in the quagmire of horrible delusions pertaining to this material world and its numerous problems that bind the creature down in their vice-like grip. Such a deluded and ignorant creature takes repeated births and dies instead of finding eternal emancipation and salvation.

In short, the answer to the eternal question of ‘what happens after death’ depends upon the mental outlook and level of spiritual enlightenment of the living being himself and not on anyone else. The same creature might find eternity if he wise enough to see the ultimate Truth, and he might be submerged in delusions and trapped in this cycle of birth and death if unaware of this Truth.]

----- Shanti Paath -----

Chapter 2

Taittiriya Upanishad

Taittiriyo-panishad forms a part of the Taittiriya Aranyak of the Taittiriya branch of the Krishna Yajur Veda. This Aranyak has ten chapters, out of which the seventh, eighth and ninth chapters have been recognised as Upanishads, hence the prefix ‘Taittiriya’.

The Upanishad has three Cantos called ‘Vallis’, each having a number of sub-cantos called ‘Anuvak’.

The first Valli is called ‘Shiksha Valli’ and it has twelve Anuvaks. The second Valli is called ‘Brahmanand Valli’ and it has nine Anuvaks. The last Valli is called ‘Brighu Valli’ and it has ten Anuvaks.

Briefly, the Shiksha Valli, as the word ‘Shiksha’ indicates, is a collection of devotional hymns for the purpose of teaching and imparting eclectic knowledge about the Divine, along with the codes and rules to be strictly observed in pursuance of this knowledge. It briefly narrates the guidelines that a disciple, who has joined a hermitage for his formal education, should follow and practice in his daily life and conduct, and in the process outlines the major milestones that are to be covered during the tenure of his studentship in the course of acquiring formal education of the scriptures, and in getting acquainted with the great Truth about one’s own self as well as that Truth which forms the basis of all scriptural teachings. It is like a preliminary or preparatory class which prepares the student for the next stage of his spiritual education which would follow in the next Valli.

The five great Sanhitas which are collections of hymns describing various codes pertaining to the Adhi Loka, Adhi Jyotish, Adhi Vidya, Adhi Praj and Adhyatma, the different Vyahritis (i.e. the primary sounds created at the beginning of creation and which form the basis of the rest of creation) such as OM, Bhu, Bhuvaha, Swaha, etc. along with their importance have been described briefly in this Valli. Finally, the teacher outlines the great tenets that the disciple should use as a ready reference to guide him in his life to make it worthwhile and auspicious.

The Brahmanand Valli, as the name suggest, deals with the eternal beatitude and felicity obtained by Brahm realisation. It emphasises the importance of recognition of the Supreme Being residing secretly as the Atma in the cave-like heart of the creature, along with description of the five Koshas or sheaths that surround the Atma.

The Bhrigu Valli describes how sage Varun, the father of sage Bhrigu, had satisfied his son's eagerness to learn about the eclectic virtues and divine qualities of Brahm, the Supreme Being. Varun emphasised that the majestic presence and glory of Brahm is to be experienced by the aspirant himself and it is not a subject that can be taught like other topics of the material sciences. Each unit of creation, such as Anna (food), Pran (vital wind), Mana (mind and heart), Vigyan (knowledge and intellect), and Anand (pure bliss and happiness) which form the basis of the five Koshas mentioned in Brahmanand Valli, are to be perceived as a manifestation of the divine Being, thereby ensuring that the entire being of the creature becomes one whole and composite entity completely infused and soaked in the divinity of Brahm-realisation and its accompanying eternal bliss and an ecstasy of spiritual dimensions. Finally, the characteristics of such attained and self-realised persons are narrated.

Valli 1—Shiksha Valli

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।_
-----ॐ_शान्तिः_।_शान्तिः_!!शान्तिः_!!!_

The meaning of this Shanti Paath is given in appendix no. 1.

Valli 1, Anuvak 1

[This Anuvak no. 1 contains the prayer said during the initiation ceremony when a new disciple is inducted into the religious fold by a teacher. In earlier times, great sages had hermitages where students came from far and wide to study the scriptures. A mass or individual ceremony was organised for the investiture and the prayer of this Anuvak was said on the occasion. It is to be noted that the same prayer was repeated when the formal education was completed, i.e. during the valedictory function, and the disciple was formally bid farewell by the teacher. This happens in Anuvak 12 which is the last section of this Valli or Canto.]

1. OM salutations! Let the God known as Mitra¹ be benevolent and munificent upon us. Let him bestow us with great auspiciousness and welfare.

Let Varun God² be benevolent and a provider of happiness and peace to us.

Let Aryama God³ be benevolent and a provider of happiness and peace to us.

Let Indra⁴ be benevolent and a provider of happiness and peace to us.

Let Brihaspati⁵ be benevolent and a provider of happiness and peace to us.

Let Vishnu whose steps are very huge and measureless⁶ be benevolent and a provider of happiness and peace to us.

We salute and pay our obeisance to the supreme transcendental Brahm.

Oh Vayu⁷, the Wind God! We salute and pay our obeisance to you as you are a manifestation of the supreme Brahm. It is indeed you who is known as Brahm; you personify the glories and the grand virtues of Brahm.

You are also called Rit and Satya. [The word 'Rit' means righteousness, while 'Satya' means truth. Hence, Brahm is an embodiment of righteousness and truth.]

Let that sublime and supreme Brahm (who is personified by the above divine entities) protect me.

Let that sublime and supreme Brahm protect my teacher.

Let that Brahm protect both of us.

OM salutations! Let all our (i.e. the disciple's and the teacher's) torments⁸ be calmed down and be dispelled. Let all our torments be calmed down and be dispelled. Let all our torments be calmed down and be dispelled (1).

[Note—¹The word *Mitra* literally means a friend. The word refers to the Sun God because it is the Sun that supports and fosters life on this earth and is a partner in its wellbeing and development. It is the Sun that provides all energy, heat and light to the world. Pran is also the best friend of a creature because it is the breath that not only injects life into the body but also supports it. The Mitra God is one of the twelve Adityas, the Sun Gods who are born from the mother of Gods known as Aditi. He is regarded as the patron God of peace, friendship and tranquility. He is equivalent to Savita (Rig Veda, 5/82/9). He is the patron God of the day (Atharva Veda, 9/3/18). He is said to support the three worlds, viz. the terrestrial, the sky above the earth, and the heavens (Kath Sanhita, 23/12). The newly born fire is regarded as the Varun God while its lighted form is Mitra (Rig Veda, 5/3/1). Mitra God protects his devotees from the fear of old age, death and sins (Rig Veda, 3/59/2). Mitra is usually worshipped in the form of the Sun God. He is one of the principal deities of the Rig Veda. In association with the Varun God (Water God and patron deity of the clouds) he gives rain. This is obvious because without the heat of the sun, evaporation of water from the oceans would not take place and therefore the clouds would not form. The cycle of season is also governed by the Sun God.

The Mitra God resides in the heavens (sky) and impels the people of the world towards constructive activities.

In the Vedas, he appears in Rig Veda—1/151/1, 3/59; Atharva Veda—3/8, 19/19/1 amongst other places.

Mitra God is usually shown in the company of the Varun God, and the duo is known as *Mitra-Varun*. The Mitra-Varun God represents the twin factors of creation that are opposite to each other and help to maintain a cosmic equilibrium, such as the appearance of day (Mitra) and night (Varun) together. It is obvious that the day and night cohabit and it is impossible to imagine life without any one of them. Similarly, it is impossible to imagine life without either fire or sun represented by the Mitra God, and water or moon represented by the Varun God. Mitra-Varun are depicted as eternally youthful (Rig Veda, 3/54/10). They appear together in Rig Veda—1/37, 1/152, 3/62/16-18, 7/501, 7/61, 10/132/2-7; in Atharva Veda—5/24/5; in Yajur Veda—7/9, 21/8.

²*Varun* is the Water God, the patron God of the water element and its many manifestations such as the cloud, river and ocean (Gopath Brahmin, 1/1/7). He is regarded as the king amongst the Gods (Taiteya Sanhita, 3/1/2/7). He is regarded as the patron God of the night (Atharva Veda, 9/3/18). The Duloka (the heavens) and the

Prithivi (earth) are under his control and command (Rig Veda, 6/70/1). He determines the path taken by the Sun God during his journey across the sky (Kapisthal Kath Sanhita, 3/4). Varun God is so-called because he surrounds or engulfs or encompasses the whole world and everything where he is present as is the case of the dark rain-bearing clouds that covers the sky (Nirukta, 10/3), and as the dark veil of night (Atharva Veda, Saayan Bhasya, 1/3/3). He is usually depicted in the company of the Mitra God, and as such the duo is called as 'Mitra-Varun', with Mitra being regarded as the senior amongst the two. While Mitra is the patron deity of the day, Varun is the patron deity of the night. He is the lord of all the Bhuvans or abodes, and as such is regarded as the king of creation (Rig Veda, 5/85/3). He has thousands of eyes, and his knowledge and powers are unlimited. He is regarded as the keeper of moral law like the Yam God. In association with the Wind God known as Vayu, he sustains life by giving rain and protecting crops.

He is the presiding deity of the western direction and of water in all its forms including all aquatic life forms.

Iconographically, he is shown as riding on a crocodile. He has four arms—one holds a serpent, the other holds a snare or noose. Sometimes he is depicted as riding a chariot of Swans, and holds a lotus in his right front hand, a noose or snare in the front back arm, a vessel of gems in the left front arm, and a conch in the left back arm. There is a ceremonial umbrella over his head.

This Varun God is offered prayers and honoured in the Vedas in numerous places, such as the following—Rig Veda—1/25; 2/28; 5/85; 7/86-89; 8/41; 10/124/5, 7, 8; Sam Veda—589; Yajur Veda—4/31; 10/7; Atharva Veda—5/1-2; 20/92.

³*Arayama God* is the patron God of the faculty of sight and of the sun which provides light to the world so that the eyes can see everything in it.

⁴*Indra* is the king of Gods who symbolises strength and valour. He is the chief God who exercises control over the various organs of the body. *Indra* is the king of Gods who can fulfill all the desires of the aspirant like any king when he is pleased by the person who prays to him for his gracious intervention. Indra represents the chief forces of life that controls the functioning of Nature. He derives his name from 'Indri' meaning the sense organs of the body—five organs of perception and five organs of action. The vital functions and the virtues of each of these organs are personified as a God, and the authority who controls them is their Lord called Indra. Indra is a metaphor for, or a personification of the combined virtues and characteristics that define all these organs and their functioning. Being at the helm of affairs, Indra is like the King or Emperor of all the other personified forces and powers of creation.

At the macro level of creation he is like the supreme Brahman who is the Lord of all that exists, while at the micro level of the individual creature he is like the Atma (pure consciousness) and the Pran (the vital winds that sustain life inside the body).

The various functions that the organs perform inside the body of the creature are represented by their own set of patron Gods who personify these functions and the various qualities of these individual organs. Since *Pran*, the vital winds present in the body that govern its functioning, is at the core of life in a creature's body, it is like Indra at the micro level.

Since the heart is at the core of life of a man, the central authority that regulates all these Gods is also said to have its seat in the heart. That authority is the emperor of the body and its organs, and it is known as the Atma. Therefore, this *Atma* is also like Indra as far as the individual creature is concerned.

According to Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition, canto 2, Brahmin 1, verse no. 6, this Indra is a synonym for *Brahman* both at the macro level because Brahman is the supreme Lord of the entire creation represented by the innumerable forces of Nature called the various Gods at the macro level (and that is why we have so many Gods), as well as at the micro level of the individual creature because the Pran is the vital life supporting entity present in the body without which

none of the organs would have their relevance, as well as the Atma or pure consciousness without which even this Pran would lose its relevance.

The king is offered the best of foods and drinks that are available in his kingdom. So this Indra God is also offered the best food and drink in the form of the ambrosia called 'Som'. It is an invigorating drink that is extracted from a creeper by the same name. It is used during sacrificial rituals, and it is offered to Gods that is supposed to bestow them with an eternal life of bliss. It is said to be stored in the heavenly pitcher of the moon. From the metaphysical point of view, since Indra represents the superior authority that controls all the other Gods representing the various sense organs, it follows that whatever the organs acquire are first offered to Indra before the other Gods representing these organs partake of it. Amongst the organs, it is the hand that helps the body to acquire things from the outside world. Since the organs have an intrinsic tendency to move towards pleasing things in this world and move away from unpleasant things, it is deemed that their messenger, the hand, brings to them only selected and best of things available, which is like bringing Amrit or Som for them so that they can offer it to their king Indra.

Indra is both the 'Atma' of the living being because the latter is the undisputed emperor of the body as its consciousness, as well as the 'Pran' or the various vital winds present in the body that control all its vital functions and sustain life.

Indra is also the Lord of rains and clouds, and since rain is a metaphor for life and fertility, and the clouds are the carriers of such life-bearing seeds, Indra too is regarded as the Lord of life and its protector, sustainer and developer.

According to the Rig Veda, 1/ 4-5; 51-57, Indra represents the combined forces of Nature represented by the different Gods. He loves to drink Som, the elixir of bliss and eternity (Rig Veda, 3/ 36/ 8). He has the Wind God called Marut as his chief assistant.

Indra appears in the Vedas as follows-- Rig Veda—1/4-5, 51-57; 5/29; 7/19-32; 8/15-17; 10/111-113; Sam Veda—52/115-148 etc.; Yajur Veda—3/34; 7/5; 7/39; Atharva Veda—8/8; 20/1.

⁵*Brihaspati* is the patron God of wisdom and intelligence as well as of knowledge and erudition; the moral preceptor of the Gods and represented by the planet Jupiter. He is the preceptor of the Gods; regarded as the wisest God. He is the patron God of wisdom, sagacity and erudition as well as of speech (Shathpath Brahmin, 14/4/1/22). He is first mentioned in the Rig Veda, 1/139/10; 1/190.

⁶*Vishnu* is also known as the Viraat Purush who is the all-pervading and all-encompassing macrocosmic form of the supreme Brahm and the Lord of creation. He had measured the entire world in his three steps during his incarnation as Vaaman, the dwarf mendicant. Vishnu is regarded as the sustainer, protector and nourisher of creation.

⁷*Vayu God* appears in the Vedas as follows—Rig Veda—1/2/1-3; 1/134; 4/46/1; 7/90/1-4; 8/26/20-25; Sam Veda—600; Yajur Veda—7/7; 14/12; Atharva Veda—6/10/2. He is the vital wind forces of Nature personified and exhibits the dynamism and powers that the wind possesses. All the work that a man does by his body, all the functions of the body, and all that he is able to say through his faculty of speech are made possible because of the presence of the various *vital winds* in his body. When a man does anything himself, and what he speaks himself about anything, he is sure about them and needs no other proof of their authenticity and veracity. For him at least, the things that he does and the things about which he speaks are true and real in this world. He is convinced about their existence and substance. Since he is a personal witness of what he does and experiences the pleasure or pain of what he does, he needs no other proof of their truthfulness. Similarly, when he speaks about anything, he is certain of that thing. There is nothing more convincing and truthful for him than what he does himself with his body and speaks himself about.

⁸There are three types of torments that a creature faces in this world. They are (a) Adhi Bhautik—i.e. those problems that pertain to this world, such as enemies,

animals, thieves, fear from cruel kings, etc., (b) Adhi Daivik—i.e. problems pertaining to malignant stars and Gods etc., and (c) Adhyatmik—i.e. problems pertaining to spiritual progress and welfare.]

Valli 1, Anuvak 2

1. OM salutations! We shall now describe the basic steps that form the basis for education. [In ancient times, learning and studying of the scriptures in a comprehensive manner was regarded as education because they contained all information that one needed to lead a fruitful and productive life. These scriptures also helped a person to gain access to great truths of creation which were not available to those who had no access to them. Even in today's modern world, the importance of education in general empowerment and wellbeing can never be denied.]

The entire process of formal education (in the scriptures) consists of some fundamental steps or units. One must be fully conversant with each of them in order to be called an educated man. These units or branches of formal education are the following—Varna (a letter of the Sanskrit language; a class of such letters), Swar (the vowels; the tone, note, sound and tune of voice and speech), Matra (the signs of the vowels that are added to the consonants to form sounds from them and which determine the length of time needed to pronounce them; the time required to pronounce the short vowel), Bal (the strength, vitality, stamina and energy needed to say the word, for incantation and chanting the sacred hymns of the Vedas), Sam (the proper and sweet way of speaking and a melodious chanting of the hymns which require proper training, acquisition of skills and gaining expertise), and Santaan (literally meaning an 'offspring' but here referring to the aim or object of reading the scriptures as well as the rewards derived from them)

These are the fundamental requirements for studying the scriptures and becoming educated in them¹ (1).

[Note—¹In order to study any scripture one has to be well versed in the grammar and intricacies of the language. In earlier times, the main use of the Vedas and other ancient scriptural texts was during fire sacrifices, so proper education meant being experts in performing such elaborate exercises and chanting of relevant Mantras by heart. This Anuvak also emphasizes the importance of being formally educated in order to gain respect in society and its attendant material benefits. Obviously an educated man is always highly respected no matter where he goes and whatever class in which he is born. The last step of education is 'Santaan' literally meaning a son or an offspring, but this is a metaphoric way of saying that education is considered fruitful and complete only when it gives the learner some benefit or reward that he desires. After all, if one does not gain anything from his education then the entire effort expended on gaining such education goes in vain. From the metaphysical perspective, the real benefit of education is not only gaining material benefits and fame but also gaining insight into the reality of the world and understanding the true nature of one's 'self'. One should utilise the privilege of having access to knowledge and information to break free from one's bondage which in the present case would be spiritual bondage that ties a creature to ignorance and delusions. The true gain of scriptural knowledge is to obtain liberation and deliverance from the fetters that shackle a creature to this artificial world of birth and death and find the ultimate emancipation and salvation for the soul. Access to truth and knowledge, empowerment and improvement of stature, a sense of fulfillment and achievement,

and gaining freedom from bondage of ignorance are some of the main rewards and fruits of education, scriptural or otherwise.]

Valli 1, Anuvak 3

[In this Anuvak, the entire body of scriptural knowledge has been classified into five sections or divisions, each called a ‘Sanhita’—literally a collection of hymns which describe the characteristics of a particular division in a very succinct but abstract manner. These five main divisions are called Adhi Loka, Adhi Jyotish, Adhi Vidya, Adhi Praj and Adhyatma. Each of them is further sub-divided into four parts or sections called Purva, Uttar, Sandhi and Sandhaan. These four act as milestones to mark the four cardinal points of each body of knowledge.]

1. The disciple prays, ‘Let both of us, myself and my learned teacher¹, be blessed with fame, auspiciousness and good name; let us be renowned for our knowledge, skill, erudition and wisdom. Let both of us be enlightened and self-realised. Let us come to know about the eclectic and divine Brahm who is supreme and transcendental, and thereby be infused and become radiant with the divine energy and holiness that comes automatically with such knowledge’.

Now we shall describe the Upanishad (the fundamental knowledge and essence) which deals with the eclectic and esoteric knowledge pertaining to Brahm in five Adhikarans or supportive units which help in gaining this wholesome knowledge².

The five Adhikarans are—Adhi-Loka, Adhi-Jyotish, Adhi-Vidya, Adhi-Praj, and Adhyatma. Those who are experts in this field call them ‘Maha Sanhita³’ because they encapsulate a vast body of knowledge in existence.

To start with, the knowledge and philosophy pertaining to Adhi-Loka (that which pertains to this lower world of mortal creatures who take a birth and die only to take birth again) is being described first. The first aspect or the front part of this Sanhita which precedes others is the Earth. This is called its ‘Purva Roop⁴’.

Its other extreme end or the top of this Sanhita (called Adhi Loka) is the Duloka (the heaven). This other or upper end is called the ‘Uttar Roop⁵’.

The area in the middle of these two extremes is called the ‘Sandhi’—literally the area or part which lies between the two ends. [The two ends here are the earth and the heavens.] This Sandhi in the present case is the Akash—i.e. the sky that lies between the earth and the heaven (because obviously it bridges the gap between them, creating a seamless link between the earth and the heaven) (1).

[Note—¹This is because even those who are deemed to be learned and expert in the scriptures, such as the teacher in this case, are sometimes not able to interpret correctly and fathom the greatness of the meaning of the scriptures unless they are blessed with special wisdom, erudition and enlightenment that comes with divine inspiration and holy insight into metaphysical and spiritual concepts enshrined in the tenets of the scriptures. Even great scholars might not be able to decipher the esoteric and subtle essence of the words of the scriptures, because had it been so there would not have been so much debate on them as all the scriptures speak about the same Truth, and truth is always one and not two thereby precluding any chance of having any debate or doubt whatsoever as to their meaning and interpretation. That is why the disciple prays that the teacher should also be clear in his mind about what he teaches to him, for if the teacher is not clear about any idea or concept or philosophy

or school of thought, then this distorted view would gain hold in the mind of the disciple. This would have a cascading negative effect for future generations.

² The *Adhikarans* help the student of the scriptures to mentally prepare an outline of what he is expected to study under the guidance of his learned teacher. It is crucial to be acquainted with the basics in any field of knowledge because this helps the student to be prepared to face the uphill task of going deeper and comprehending the intricacies of that particular body of knowledge which he has selected to follow. It helps him to tackle the details more easily as well as judge for himself whether or not he is competent and able to enter that field of study. It also helps him to hone his skills and sharpen his knowledge of the subject under the guidance of a wise and prudent teacher.

³ The word *Sanhita* literally refers to a compilation or collection of a class of scriptural hymns which describe a set of codes dealing with a given subject. The word *Maha* means great. Hence, the composite phrase *Maha Sanhita* refers to the great compendium of hymns which describe the entire edifice of knowledge and what a student should strive to know once he has decided to read the scriptures. It is the great compilation of knowledge by collating all information on a given subject and encapsulating their fundamental principles in the form of a collection of hymns. It is like a modern day reference guide of education or a prospectus of a college outlining the subjects and stream of education one can select from. It also resembles an education councilor advising a student what he is expected to study and what options are open to him.

Technically, the word *Sanhita* means to bring about closeness between scattered units. For example, the letters of the alphabet are independent units in themselves, and taken independently mean nothing. When they are systematically collated together, they form meaningful words. Similarly, the vast body of knowledge lie scattered around and the main function of a *Sanhita* is to bring them together and make them intelligible and accessible. A *Sanhita* is like an encyclopedia of knowledge, albeit in the field of metaphysics.

In the present context, the *Maha Sanhita* refer to the hymns that narrate the esoteric knowledge of the divine and sublime aspects of creation which, when properly deciphered and understood, helps the spiritual aspirant to establish a union between his 'self' and the cosmic 'Self' or Brahman.

⁴ The word *Purva* implies something that comes first or the one which precedes others. It's like a prefix to a word or a prologue of a play. And the word *Roop* means a form or shape. Therefore, the combined phrase '*Purva Roop*' refers to that unit of knowledge pertaining to the mortal world which is its lower end or basic unit. This is because all life forms have their habitat and base on this earth. No knowledge would be relevant if there was no life on earth. All mortal creatures live on earth, and all religious deeds and fire sacrifices are done on earth. Therefore, it is like the base of all relevant knowledge that deals with life in all its myriad forms that are vibrant, exuberant and lively.

⁵ The word *Uttar* means north, higher, upper, top end etc. while *Roop* means a form or shape. The combined phrase '*Uttar Roop*' in the context of the *Adhi Loka* refers to the upper limit of the world where mortal creatures live. That is, it refers to the heaven which forms the upper limit of this visible creation where the Gods live. When one studies the sciences that deal with living creatures, he studies about life forms in this mortal world and where the creature goes after death. This world where it goes after death is the heaven. The living being's existence is limited between these two worlds—the earth and the heaven. He keeps on virtually oscillating between these two worlds as clearly laid out in *Chandogya Upanishad*, 5/3-5/10, and *Brhihad Aranyaka Upanishad*, 4/4, 5/10 and 6/2.]

2. The Vayu (wind or air element) is known as the ‘Sandhaan’¹ (because it establishes a union or helps to firmly join together the earth and the heaven by the medium of the sky). This is the basic knowledge and philosophy pertaining to the Adhi-Loka.

The next (i.e. the second unit of) knowledge and philosophy pertains to the Adhi-Jyotish².

The Purva Roop (component or part or aspect) of this knowledge is Agni (the terrestrial fire)³.

The Uttar Roop (the higher from) of light is Aditya or the Sun⁴. [The Sun is like the fire of the heavens.]

The middle part of this setup is Apaha (the water element). Therefore, water is called the Sandhi or joint⁵. [This water sort of marks the end of both the symbolic forms of fire—the terrestrial fire is doused by pouring water on it, and the celestial sun appears to set in the water of the ocean at the end of the day. This is because as far as the land mass of India is concerned, the western direction where the sun sets is marked by the Arabian Ocean.]

The electric called Vidyut present in the sky (as represented by the streak of lightening in the rain-bearing clouds) is called the Sandhan⁶. [The arrow is shot off from the bow at the target. Similarly, the lightening of the cloud is shot to strike at the target on the ground. When it does so, it reduces the target to ashes, showing the stupendous dynamic potentials of the fire element. Since lightening is always present in the clouds that have rain, it shows that it has established a union between the water and fire elements in a symbolic manner.]

This is called the eclectic and glorious knowledge and philosophy related to the Adhi-Jyotish. [That is, it pertains to the knowledge that throws light on the metaphysical philosophy of the light factor of creation.]

The next (i.e. the third unit of) knowledge and philosophy pertains to the Adhi-Vidya. [This refers to the various components or units that play an all-important role in the entire process of acquiring and dissemination of knowledge pertaining to this world.]

The Purva Roop (i.e. the first component or part) of the entire process of acquisition and dissemination of this knowledge and metaphysical philosophy is the Acharya (a learned and wise teacher)⁷. [This is obvious because no knowledge can be accessed without the help of a teacher. Had there been no one to explain the doctrines of the scriptures, they would have remained buried in their pages, rendering them useless and fruitless.] (2).

[Note—¹The word *Sandhan* literally refers to something that is employed to aim at an object—such as an arrow that is aimed at a distant object. It also refers to something used as a tool in search, enquiry and investigation. It also refers to an entity which establishes a union between these seemingly remote and independent components of this world. The Sandhan is to join or solder or bring together two ends to create a single uniform whole. It sort of glues loose ends and establishes a firm link between two independent entities. This purpose is served by the air or wind element because air touches the surface of the earth, pervades uniformly in the sky, and extends up to the farther reaches of the world in the form of ether.

²The word *Jyotish* refers to light and illumination. Therefore this knowledge deals with light and illumination both in its physical gross form as the light that illuminates the world, as well as in its glorious subtle and sublime metaphysical form as the light of knowledge, wisdom and enlightenment that illuminates the inner self of the enlightened creature.

³The terrestrial fire is the *Purva Roop* because this fire gives light, energy and heat to the living world. The fact that the fire provides light is most evident when one lights up a bonfire or a lamp during the night. This light removes darkness both in the physical plane as well as in the subtle plane by removing ignorance and delusions by

spreading the light of knowledge. This terrestrial fire harbours light in its bosom at the micro level of creation.]

⁴The Aditya or the Sun is called the *Uttar Roop* of the fire because the Sun lights up the entire world at the macro level of creation. The Sun is an embodiment of light at the cosmic level because it is like a huge ball of fire dangling in the heavens just like the terrestrial fire is at the local level when a lamp or firewood burns to give light to a limited area on the surface of the earth. The Sun is also regarded as the visible manifestation of the glorious Brahm, the Supreme Being. This means that the Sun not only spreads physical light in the realm of creation but also personifies the eternal source of spiritual light that emanates from the acquisition of knowledge and wisdom pertaining to the absolute Truth in creation. The Sun stands for the light of wisdom, erudition, sagacity, knowledge and enlightenment par-excellence.

⁵The Apaha or water is called the *Sandhi* because it is a virtual 'end or culmination' of fire. When fire needs to be doused, we pour water on it. When the sun sets, it appears to set in the vast reaches of the ocean in the western direction.

There are other interpretations of this notion of water being the Sandhi of fire element. The water unites the two types of fires—that is, the terrestrial fire and the celestial fire. This is evident when we consider how rain-bearing clouds are formed. The water of the ocean is evaporated by a combined effect of the warmth caused by the heat present in the deep bowls of the earth as well as the heat generated by the sun. This evaporated water vapour is sucked inland and made to move up into the sky and reach higher altitudes by sliding up mountain ranges due to air currents caused by differential heat factors on the surface of the earth. Higher up in the atmosphere the water vapour condenses to form clouds which pour down their contents in the form of rain which not only irrigates the land below but also offsets the affect of heat that would have otherwise scorched the earth to cinders.

Water is offered as oblation to the Sun God during the process of offering prayers to him at dawn and dusk. The Mantra used during this offering is the Gayatri Mantra. This also shows how the water links the terrestrial creature to the supreme Brahm who the Sun represents.

Water is said to a harbinger of life—and this is possible only if water has inherent warmth in it, thereby implying the presence of heat in it in a latent and imperceptible form. This is because no life is sustainable without heat and energy. Nowhere is this fact more evident than in the frigid climate of the arctic where no forests or other forms of vibrant life can be found. Even the water in the lakes whose surface have frozen under extreme cold conditions harbour aquatic life-forms just because this water is warm as compared to the frigid temperature that prevails on the surface of the lake. That is why scientists search for water, and not fire, whenever they look for any form of life anywhere.

Another instance where water and fire co-exist is observed in the bottom of the oceans where there are sub-oceanic volcanoes that often spout immense amount of heat that boils over as steam that hover over the surface of the ocean as mist and cloud. Then even on the land we have hot water springs where natural sources of water are visibly seen to boil as if put on an oven.

⁶Vidyut is the *Sandhan* or the aim of bringing together these two great forces of Nature —viz. the fire element and the water element. The aim is to forge a union between these two apparently opposing forces to create an environment conducive to creation and sustenance of life in all its vibrancy and vigorous form. This can be understood if we know how rain-bearing clouds are formed as describe above. The electric or Vidyut is formed only in clouds that have rain in them and not in fluffy white clouds that float idly across the sky. This is a clear proof of the fact that Vidyut representing the fire element in its most powerful and dynamic form is present where there is water. They virtually cohabit. In other words, the lightening seen in the sky helps to unite the two great forces of creation, viz. the water and fire.

Vidyut or the celestial fire represented by the lightening is a Sandhan also because it symbolically links the stupendous source of cosmic energy at the macrocosmic level of creation with its counterpart on the earth at the microcosmic level when the bolt of lightening strikes the earth. The dynamic force of the latent fire present in the electric is proved by the fact that this strike by lightening reduces to ashes anything upon which it lands on earth.

Since the entire area between the earth and the heaven is deemed to be the realm of this visible creation, it is also blessed with the 'fundamental spark of life' represented metaphorically by the fire element. The presence of this vital component of life even in the sky besides its presence in the earth is made evident when the lightening streaks through the dark clouds high up in the sky.

That this fire element has the inherent ability to give 'light and illumination' is proved by the fact that whenever the lightening streaks across the sky, the whole dark night is momentarily bathed in dazzling light.

The terrestrial fire needs a 'spark' to get ignited, and this spark represents the electric mentioned in this verse. That is why we use such phrases as 'the electric spark caused a huge fire that gutted the entire building'.

Further, the living world has its base or foundation upon the earth. That is why both the fire and water are an integral part of this earth. The Sun in the heaven gives heat, light and energy to the life on earth besides being responsible for creation of rain-bearing clouds as outlined above. The air element is responsible for infusing life by providing the water element with mobility as is evident in the movement of water vapour from the surface of the ocean to complete its cycle to come down on the earth as rain. It is the air that moves the clouds from one part of the earth to the other. Again, it is the air that keeps the fire burning and giving out light and heat. This is proved by the fact that without air no fire can be lit and sustained.

So we come to the conclusion that in order to have a comprehensive knowledge of the scriptures, it is imperative to have a wider world view and a broad perspective. Knowledge is not to be sequestered in water-tight compartments if it is to be made useful and constructive for the larger welfare of the aspirant.

⁷The *teacher* is the primary requirement for learning, because there must be someone to teach even the fundamental aspects of anything. The entire learning process is teacher-centric; he is the base upon which the entire edifice of education is founded. If the teacher is incompetent, un-attentive, unqualified, insincere or unwilling, the exercise of learning fails. The scriptures, or for that matter any body of knowledge, requires someone to explain them to the students. No one is born with knowledge—it has to be painstakingly acquired, and the teacher plays a pivotal role in the entire setup.]

3. The disciple or student is like the Uttar Roop or the last post or component of the process of education¹.

Vidya or the knowledge that is being imparted and for which the teacher and the disciple or student have come together is called the Sandhi².

The medium of this transfer of knowledge and information, the process of teaching or disseminating information in the form of lectures, discourses or discussions, is called Sandhan³.

This is called the basic philosophy pertaining to Adhi-Vidya.

The next (i.e. the fourth unit of) knowledge and philosophy pertains to the Adhi-Praj⁴ (knowledge that deals with reproduction and progeny).

The mother is the Purva Roop and the father is the Uttar Roop⁵ of this knowledge pertaining to creation.

The offspring or the child is called the Sandhi⁶ and the actual process of procreation or reproduction is called Sandhan⁷.

These are the basic units concerned with the knowledge of procreation, or the science of Adhi-Praj (3).

[Note—¹The student is the *Uttar Roop* because if the teacher is the base or foundation of the process of learning, the other point of this endeavour is the disciple or student. The edifice of education and dissemination of information and knowledge has two symbolic pegs—one is the teacher from where the line of education starts, and the other is the student where it ends. The process is incomplete without the presence of any one of them. Learning is complete only when the teacher is able to disseminate knowledge to willing and attentive students who must be equally competent and intelligent like the teacher in order to imbibe what is being taught.

²The word *Sandhi* means a joint, to unite, to bring together, the end of anything. The element that brings together and binds the teacher and the disciple to each other is Vidya or knowledge because it is for knowledge that the disciple comes to the teacher, it is the knowledge that the teacher has that attracts students to him from far and wide, and the teacher keeps students near him to teach them whatever he knows. It's a sort of symbiotic relationship. It is knowledge and education that binds the two together and keeps the student or disciple near the teacher and vice versa. The student needs education, cultivate special skills and acquire knowledge, and he comes near the teacher towards this 'end'. The teacher wishes that his knowledge, erudition and expertise be transmitted to the next generation and towards this 'end' he accepts the student. They are both 'united' with the same bond of education, albeit one is the giver and the other is the receiver.

³The word *Sandhaan* means to aim, like aiming an arrow at an object. The method used to transfer knowledge and educate the disciple, such as lectures, discourses, discussions and debates etc. are like the shooting of an arrow of knowledge targeted towards the education of the student and removing all his ignorance. If this does not happen for any reason whatsoever, such as an inattentive or incompetent disciple, or even non-clarity, inarticulacy or incompetence on the part of the teacher, then it is like the arrow missing the target. But if the student is bright and has the right aptitude while the teacher is competent and expert in his field and can articulately and comprehensively teach the student, then the arrow of knowledge would have hit the bull's eye and the entire exercise of education would bear fruits.

⁴The word 'Praj' refers to the subjects of a kingdom, but it is a metaphoric word referring to all the off springs that a father creates, the livestock that a householder keeps, and other members of the animal kingdom. Here it implies the entire process of creation, right from its macrocosmic connotation related to the cosmic creator Brahma to its individual application related to the individual father, mother and offspring. This offspring is the symbolic 'Praj' or subject of the parent. Therefore, the knowledge that deals with reproduction and progeny is collectively called *Adhi Praj*.

⁵The mother is the *Purva Roop* because she represents the earth element where the father plants his seed or sperm in order to bring forth the next generation. Earlier in verse no. 1 it has already been said that the earth is the *Purva Roop*, hence it is appropriate to link the mother to earth. It is also the reason why 'earth' is referred to as 'mother earth' instead of as father earth. On the other hand, the father is called the *Uttar Roop* because he is like the cosmic creator who implanted his seed in the womb of Mother Nature at the beginning of creation to initiate the process. The man is an image of this cosmic father inasmuch as that he can create an offspring in his own likeness just like the case of the supreme Lord creating the inhabitants of the world in his own likeness. This supreme Father lives high up in the symbolic heaven as indicated by the *Duloka* of verse no. 1 and the Sun of verse no. 2.

⁶The child is called the *Sandhi* because it is the desire to have a child that brings the two parents together and keeps them bound in an emotional bond. Once the child comes into being it binds them together for life. The offspring is the end or

culmination of the process of procreation. It is often observed that if the couple cannot have an offspring, their relationship sours and cools off. Therefore, the factor which brings them together or unites them or creates a union between two opposite sexes is the Praja (offspring).

⁷The sexual union of the two parents is called a *Sandhan* because it is aimed at producing the offspring who would carry forward the father's line forward. If this sexual union or process cannot create the child, then it is like an arrow missing its target.]

4. Finally, the knowledge called *Adhyatma*¹, i.e. the knowledge that is related to the Atma, the pure consciousness and the true 'self' of the spiritual aspirant, that resides in his body is being narrated now.

The lower jaw (Hanu) is called the *Purva Roop* while the upper jaw is called the *Uttar Roop* of this unit or field of knowledge².

The Vaani or the spoken words representing the stupendous and mystical ability of the Atma to speak and express itself is called the *Sandhi*³.

The tongue is the *Sandhan* in this setup⁴.

These are called the basic units of *Adhyatma*—i.e. the knowledge that pertains to the Atma and which is the subject matter that is being taught by a wise teacher of the scriptures⁵.

These five are called the 'Maha Sanhitas' or the great bodies of knowledge. A person who is learned in these five great Sanhitas is indeed a learned and wise man. Such a man is liberally blessed with an abundance of Praja (subjects in the form of wise and obedient disciples, children and followers), Pashu (livestock), Brahma Tej (divine energy of knowledge and self confidence that effuses out of a self-realised, wise and enlightened man), and Anna (food and other nourishments). Such an acclaimed man is sure to have an easy access to Swarga (heaven)⁶ (4).

[Note—¹The word *Adhyatma* relates to spiritualism. The knowledge contained in the Upanishads pertains to *Adhyatma* because they preach about the Atma and its pristine nature.

²The area between the lower lip and the chin, i.e. the lower jaw, is called the *Purva Roop*, while the area between the upper lip and the nostrils, i.e. the upper jaw, is called the *Uttar Roop* because they demarcate the area of the body from where the man speaks and preaches. All the Mantras, especially the grand Mantra OM, are pronounced through the opening of the mouth which falls between these two jaws. All teaching and discourses are done by speaking through the mouth as no other organ of the body had the power to speak. Knowledge of the scriptures is gained by reading them and thoroughly discussing them. This also necessitates the involvement of the mouth. Therefore, the mouth is both the initiator and the culmination of spiritual knowledge. Teaching and enquiry in this particular field of knowledge entails the necessary use of the faculty of speech, and hence the importance and significance of the mouth where both the jaws are located and the instrument of speech, i.e. the tongue, is also present.

³The word *Sandhi* refers to the joint which brings two elements together. Here, the spoken words are the link between the Atma or the pure 'self' of the creature and the outside world because it is through the faculty of speech that the Atma is able to express itself and make the external world aware of its presence and its wishes. The wisdom and erudition that are the hallmarks of the Atma are known when a wise and an enlightened man speaks. In the present case, the faculty of speech and the words spoken by the teacher is the link or the jointing factor between the teacher and the disciple. It sort of establishes a link between the vast treasury of knowledge that is possessed by the teacher and the empty pitcher that is sought to be filled by the disciple or student. Hence, it is called the *Sandhi*.

⁴The tongue is called the *Sandhan* because it is astride this instrument of speech that the words spoken by the teacher are aimed and shot at the target audience, which is the disciple or student in this case, much like the arrow which is shot with the help of the string pulled back to the correct tautness so that the arrow shot from the bow can reach and hit the desired target at the given distance. The spoken words of the teacher should be acceptable, sweet, articulate, clear, understandable and loud enough to be heard by all the disciples who have gathered around the teacher to hear him speak and teach them. If the purpose of dissemination of knowledge is not served, if the students cannot hear what he is teaching or cannot understand what he speaks, the tongue would have failed to serve its purpose. This would be tantamount to the arrow missing its target.

⁵The word *Adhyatma* technically means something related with the Spirit or the Atma which is the pure conscious soul of creation—both at the micro level as well as the macro level. Since the teacher of the scriptures is not teaching material sciences or other things which come within the ambit of education nowadays, but about the tenets and doctrines of the scriptures where the principles of metaphysics, theology and spiritualism are the focal points, the entire sphere of such teaching and discourse is called *Adhyatma*.

⁶A wise man is much sought after, and therefore all worldly material comforts come to him on their own symbolised by an abundant stock of *livestock* and *food* which are given to him as gifts or donation. Besides this, *students* from far and wide come to him seeking his discipleship. It is obvious that a man who has understood the essence of the scriptures would not be indulgent in these worldly things, and instead remain contented in his self and the bliss obtained by meditation and contemplation. This is akin to having the benefit of *heaven* even while living in this world, and after death such a self-realised, Brahm-realised and enlightened man attains emancipation and salvation for his soul. A divine halo exudes from the face of such holy and pious men; their mere presence is like the physical presence of Divinity on earth. This is the symbolic *Brahm Tej* that radiates out of them.]

Valli 1, Anuvak 4

[This Anuvak describes the prayers ought to be offered by those doing a fire sacrifice for obtaining success in acquiring eclectic qualities, glorious virtues and high degree of wisdom as well as material wellbeing and worldly fame.]

1. The supreme transcendental Brahm—who is the chief Lord of creation—is like the Vedas which are regarded as the best and supreme amongst all the scriptures that are deemed to be the highest citadel of knowledge and wisdom ever composed in the form of Chandas (a poetical style of composition). This Supreme Being embodies in himself the entire creation. [In other words, the entire revealed world is a manifestation of Brahm in one way or the other. Nothing exists that does not reflect Brahm in some form.]

This Chief Lord (Brahm) has emerged as the Principal Divinity that is being proclaimed and adored by these Vedas as an embodiment of the Amrit or elixir of eternal life marked by the ecstasy and exultation that attends spiritual bliss and happiness that is obtained by studying and understanding the fundamental teaching of the Vedas and their principal tenets, doctrines and philosophy.

Let that Chief Lord of the visible creation known as Indra¹ bless me with the virtue of ‘Medhaa’ (i.e. with the virtues of intelligence, wisdom, prudence, wit, understanding and comprehension).

Let me be blessed enough to be Brahm-realised and self-realised. In other words, let me be the torch bearer of the eclectic and divine knowledge that pertains to the supreme Truth about Brahm (the Supreme Being) and the Atma (the pure conscious self).

Let my body be able, agile, healthy, strong and competent for this purpose. [In other words, let me not be indulgent and lazy in my pursuit of knowledge; let me successfully complete my education and become wise and well read.]

Let my tongue speak in an endearing, sweet and pleasant manner. [In other words, let me be able to chant the hymns melodiously and in an attractive manner. Let me speak only auspicious things and the truth, that too in a wise way so that I do not cause any offense to anyone. Let me speak only words of wisdom, sagacity and learning so that they act as guide for others.]

Let me hear all that is worthy to be heard with my ears. [That is, let me be attentive and receptive to all information that comes my way. Let my ears hear only auspicious and noble things. Let my ears be a receptacle of good, noble and auspicious words just like an ocean which receives rivers from all the directions and still never overflows.]

Oh Lord (of my ears)! You are like a treasury of wisdom and enlightenment (because it is through the ears that I hear everything), but you seem to be shrouded in a veil of worldly delusions². [In other words, Brahm is not realised due to ignorance and delusions that mire the creature that lives in this world and gets confused by hearing so many different philosophies and ideas and interpretations of the scriptures. So the aspirant here prays to Indra to protect him in this regard and enable him to separate the grain from the chaff.]

Let me have a sharp memory so that what I hear remains with me. [In other words, let me be able to retain the knowledge that I gather from my teacher or by self study of the scriptures or by hearing wise advice from those who are themselves wise, erudite and learned.]' (1).

[Note—¹Indra is the king of Gods who can fulfill all the desires of the aspirant like any king when he is pleased by the person who prays to him for his gracious intervention. Indra represents the chief forces of life that controls the functioning of Nature. He derives his name from 'Indri' meaning the sense organs of the body—five organs of perception and five organs of action. The vital functions and the virtues of each of these organs are personified as a God, and the authority who controls them is their Lord called Indra. Indra is a metaphor for, or a personification of the combined virtues and characteristics that define all these organs and their functioning. Being at the helm of affairs, Indra is like the King or Emperor of all the other personified forces and powers of creation.

At the macro level of creation he is like the supreme Brahm who is the Lord of all that exists, while at the micro level of the individual creature he is like the Atma (pure consciousness) and the Pran (the vital winds that sustain life inside the body).

The various functions that the organs perform inside the body of the creature are represented by their own set of patron Gods who personify these functions and the various qualities of these individual organs. Since Pran, the vital winds present in the body that govern its functioning, is at the core of life in a creature's body, it is like Indra at the micro level.

Since the heart is at the core of life of a man, the central authority that regulates all these Gods is also said to have its seat in the heart. That authority is the emperor of the body and its organs, and it is known as the Atma. Therefore, this Atma is also like Indra as far as the individual creature is concerned.

According to Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition, canto 2, Brahmin 1, verse no. 6, this Indra is a synonym for Brahm both at the macro

level because Brahm is the supreme Lord of the entire creation represented by the innumerable forces of Nature called the various Gods at the macro level (and that is why we have so many Gods), as well as at the micro level of the individual creature because the Pran is the vital life supporting entity present in the body without which none of the organs would have their relevance, as well as the Atma or pure consciousness without which even this Pran would lose its relevance.

The king is offered the best of foods and drinks that are available in his kingdom. So this Indra God is also offered the best food and drink in the form of the ambrosia called 'Som'. It is an invigorating drink that is extracted from a creeper by the same name. It is used during sacrificial rituals, and it is offered to Gods that is supposed to bestow them with an eternal life of bliss. It is said to be stored in the heavenly pitcher of the moon. From the metaphysical point of view, since Indra represents the superior authority that controls all the other Gods representing the various sense organs, it follows that whatever the organs acquire are first offered to Indra before the other Gods representing these organs partake of it. Amongst the organs, it is the hand that helps the body to acquire things from the outside world. Since the organs have an intrinsic tendency to move towards pleasing things in this world and move away from unpleasant things, it is deemed that their messenger, the hand, brings to them only selected and best of things available, which is like bringing Amrit or Som for them so that they can offer it to their king Indra.

Indra is both the 'Atma' of the living being because the latter is the undisputed emperor of the body as its consciousness, as well as the 'Pran' or the various vital winds present in the body that control all its vital functions and sustain life.

Indra is also the Lord of rains and clouds, and since rain is a metaphor for life and fertility, and the clouds are the carriers of such life-bearing seeds, Indra too is regarded as the Lord of life and its protector, sustainer and developer.

According to the Rig Veda, 1/ 4-5; 51-57, Indra represents the combined forces of Nature represented by the different Gods. He loves to drink Som, the elixir of bliss and eternity (Rig Veda, 3/ 36/ 8). He has the Wind God called Marut as his chief assistant.

Indra appears in the Vedas as follows-- Rig Veda—1/4-5, 51-57; 5/29; 7/19-32; 8/15-17; 10/111-113; Sam Veda—52/115-148 etc.; Yajur Veda—3/34; 7/5; 7/39; Atharva Veda—8/8; 20/1.

²Indra is the chief God of all the organs, including the ears. Since a man who lives in this material world is influenced by the various delusions related with it, he is bound to hear unrighteous and inauspicious things along with the righteous and auspicious ones. But the ears have a natural affinity towards things that are worldly and pleasing for the senses instead that which is spiritually uplifting. For example, rock music would appeal more to people who have a propensity for worldly attractions instead of hearing the chanting of hymns which would make them bored. Thus, the aspirant prays to Indra, the chief God of organs, to graciously protect him from such pitfalls.

When one pays attention to only good things from out of all that he hears, it is natural that his mind would be subjected to good inputs only, and consequentially the output of the mind would also be equivalently good.]

2. [This verse describes how the teacher hopes that the good seekers of knowledge (i.e. students) would come to him from far and wide to become his disciples. He prays to the Lord that only cultured, disciplined, sincere, serious and desirable students come to live with him in his hermitage so that the discipline and sanctity of the place and the environment that is conducive to foster education and dissemination of knowledge is not vitiated by wickedness and evil behaviour. If the student is sincere, disciplined, serious and diligent besides possessing intelligence and natural aptitude for imbibing knowledge being taught, the efforts made by the teacher are not wasted.

Otherwise, even one bad, wild or mischievous student can ruin the whole flock. This would have a cascading effect as the reputation of the teacher would be adversely affected. A ruined and wayward disciple who is pervert, rebellious, errant, unruly, disobedient and misbehaved would heap ignominy upon the teacher as much as a similar son can ruin the good name of the family so assiduously, painstakingly been built over a long time by his ancestors.

The first stanza itself sets the agenda—if the disciple or student is good, the teacher gets honour and acclaim, he is rewarded with good reputation and name.]

‘Let me be blessed with the necessary skills, knowledge and wisdom as well as the accompanying fame and reputation that would enable me to acquire and increase worldly prosperity, material wellbeing and their attendant honours, acclaim, respects and comforts. Such as for instance, let me have easy access to an abundant supply of clothes and other personal accessories, cows and other livestock, food and drink, animals which have hairy skins (a reference to sheep that produce wool) etc.’ With this prayer, the aspirant should offer his first oblation to the sacred fire by pronouncing ‘Swaha’ (which is always done prior to any offering to the consecrated fire because it is considered the mouth of the Fire God by which the offering is accepted by him).

‘Let Brahmacharis¹ come to me (as my disciples) from all directions²’. With this prayer, the aspirant should offer his second oblation to the sacred fire by pronouncing ‘Swaha’.

‘Let the Brahmacharis who come to me (to become my disciples) be free from all deceit and conceit. [That is, let them be simple-hearted, straight-forward, disciplined and orderly. Let them be selfless in serving me.]³’. With this prayer, the aspirant should offer his third oblation to the sacred fire by pronouncing ‘Swaha’.

‘Let the Brahmacharis who come to me (to become my disciples) be competent, able, efficient, disciplined and intelligent enough to acquire correct knowledge (and not distorted connotations of what I teach)⁴’. With this prayer, the aspirant should offer his fourth oblation to the sacred fire by pronouncing ‘Swaha’.

‘Let the Brahmacharis who come to me (to become my disciples) observe the virtues of Dam (restraint of the sense organs)⁵’. With this prayer, the aspirant should offer his fifth oblation to the sacred fire by pronouncing ‘Swaha’.

‘Let the Brahmacharis who come to me (to become my disciples) observe the virtues of Sham (restraint of the mind and intellect)⁶’. With this prayer, the aspirant should offer his sixth oblation to the sacred fire by pronouncing ‘Swaha’ (2).

[Note—¹The word *Brahmachari* refers to one who has restraint over his sense organs and who practices continence and abstinence in a holistic manner. A student is expected to focus his entire energy to his studies, and this necessitates exemplary self control of the body and the mind.

²In other words, ‘let my fame as an excellent and wise teacher spread in all the directions so that students come to me from all the corners of the world. This would also entail that they would bring in liberal gifts and donations to me’. This is in line with the desire of a teacher who wishes to gain prosperity and material wellbeing. This in its wake brings to him honour and good name and fame which helps to establish him amongst his peers in society. When the teacher’s name and fame spreads, even rich people such as kings would send their sons to their hermitage for formal education, and such patronage ensure all the material abundance and clout that the teacher would ever hope for.

³This is to ensure that discipline and order is maintained in the hermitage. In earlier times, the students used to stay in the place of their teacher and perform all the

daily chores of the hermitage. That was only possible if the students were disciplined and orderly, and did not indulge in petty crimes and mischievous acts while in the hermitage. Even as the saying goes that one rotten egg would spoil the entire basket full of eggs, one unruly and scoundrel of a student would ruin the positive educational and spiritual atmosphere of the teacher's hermitage. He would be like a thorn in the side of the teacher and could rattle his peace of mind.

⁴If the student is in-attentive, stupid or incompetent in anyway whatsoever then he would fail to acquire the necessary level of knowledge and skills that one expects from a student who has joined a hermitage of a wise and reputed teacher. If a bad student uses the teacher's name as his credentials in later life and if he fails to deliver in life and live up to the high standards expected from a educated man who has been groomed by a wise and acclaimed teacher, it is sure to denigrate the teacher's honourable stature in the society and give him unexpected ignominy and infamy. The failure of the disciple reflects badly on the teacher because the responsibility to inculcate good values in the former is the moral duty of the teacher, and if it does not happen the teacher is to be blamed for it just like the father of a son cannot be absolved of the proper upbringing of his son.

This is also evident in the fact that any school that has a persistent good academic record is much sought after and held in high esteem, and that is also why certain high-end schools and colleges have a strict entrance requirement to ensure that only the best of students enter their portals and safeguard their reputation.

⁵Self restraint of the sense organs known as *Dam* is necessary to divert the energy of the body to the main goal for which the disciple has come to the teacher—which is education. He should conserve his energy and not be indulgent in gratification of the sense organs and the body. It would be frittering away his precious energy.

⁶Similarly, the control of the mind known as *Sham* is absolutely essential in the process of education. A wayward, fidgety, restless, unsettled and distracted mind is not conducive to learning.

These two conditions of *Dam* and *Sham* are essential to ensure that the students are able, efficient, disciplined, responsible, soft spoken, alert, attentive and diligent in their studies, and mentally and emotionally prepared to lead a rigorous life in a hermitage. This regimental life of a hermitage prepares them to lead a similar life which is equally disciplined and efficiently led when they enter the world to face its tumultuous challenges.]

3. 'Let me be renowned; let me have fame and good name'. With this prayer, the aspirant should offer his seventh oblation to the sacred fire by pronouncing 'Swaha'.

'Let me be honoured and praised a lot; let me be rich and prosperous'. With this prayer, the aspirant should offer his eighth oblation to the sacred fire by pronouncing 'Swaha'.

'Oh Lord! Let me merge myself with you to become one and inseparable from you who are an embodiment of the entire creation and its supreme Lord¹'. With this prayer, the aspirant should offer his ninth oblation to the sacred fire by pronouncing 'Swaha'.

'Oh Lord! I request you likewise to subtly enter my being and become one with me who am an image of you²'. With this prayer, the aspirant should offer his tenth oblation to the sacred fire by pronouncing 'Swaha'.

'Oh Lord with numerous forms and names! You are vast and macrocosmic in nature (much like a huge ocean or a great river that supports a civilisation). I wash my sins and misdeeds in you; I clean myself and purge all my impurities by coming in contact with you (much like people who wash themselves in the water of a holy river and its branches or tributaries to clean themselves)'. With this prayer, the aspirant should offer his eleventh oblation to the sacred fire by pronouncing 'Swaha'.

‘Oh Lord! Even as water collects from various places and go to the ocean, and days and months collect themselves to form a year, let Brahmacharis (disciples and students) come to me from all directions³’. With this prayer, the aspirant should offer his twelfth oblation to the sacred fire by pronouncing ‘Swaha’.

‘You are the one who gives refuge and protection to those who sincerely seek you and pray to you for refuge and protection. Hence, live up to your glorious reputation and make yourself available to me; make yourself benevolent and benign upon me. Let me have access to you along with your divine glories and virtues. [That is, let me be able to inculcate such noble and auspicious virtues in me.] (3).

[Note—¹This is the prayer for emancipation and salvation of the soul of the aspirant.

²This prayer requests the supreme Lord to symbolically take up residence within the heart of the aspirant and give him the privilege of being an abode of Brahm. The aspirant prays that that he becomes one with the supreme Brahm, the cosmic Consciousness that lives inside his own self as his Atma or soul. In other words, the aspirant aspires to be self-realised and enlightened about Brahm. He wishes to cultivate the erudition and wisdom which would give him the deep insight into the fundamental nature of creation and the ability to see the transcendental Divinity everywhere. He prays that his vision transcends the limited scope of ‘this and that’, and grows to become all-encompassing and all-inclusive so that he rises above the mundane and develops the eclectic philosophy of non-duality or Advaitya nature of existence.

³This stanza indicates that the teacher prays to the Lord to bless him with a good reputation and name as an excellent teacher so that his fame spreads far and wide, and students come to him from all corners of the world. Refer verse no. 2, stanza 2, and note to that verse.]

Valli 1, Anuvak 5

1. [In this verse, the different ‘Vyahritis’, which were the primary words pronounced by the creator Brahma at the time of the beginning of creation and from which the rest of the creation was revealed, are being worshipped as manifestations of the supreme transcendental Brahm and its stupendous dynamic powers encapsulated in these Vyahritis.]

Bhu, Bhuvaha and Swaha—these are the three Vyahritis¹. Besides these three, there is a fourth one known as Maha. It was first known to Mahaa-chamasya, the son of sage Mahaa-chamas. That fourth Vyahriti known as Maha² is symbolic of Brahm; it personifies the eclectic and grand qualities and virtues that are so unique and typical of the supreme transcendental Divinity known as Brahm³.

Indeed, that Brahm is the pure conscious Atma or soul of creation. All the rest of the Gods are parts or fractions of that Brahm; they are individual units of the wholesome Brahm.

The first Vyahriti ‘Bhu’ is this earth; the second Vyahriti ‘Bhuvaha’ is the sky or space above the earth; and the third Vyahriti ‘Swaha’ is the heaven⁴ (1).

[Note—¹The *Vyahritis* are the primary root words pronounced by the creator Brahma at the time of the beginning of creation, and which formed the nucleus around which the seven worlds formed. In other words, the rest of the creation was revealed from these primary sounds created by Brahma.

Initially there was nothing, there was no activity whatsoever. Everything was in eternal state of inactivity marked by calmness and quietude. This condition was symbolised by the term ‘death’ that took over after life came to an end. Then in this

cosmic state of inactivity, the first signs of next series ‘activity and life’ appeared in the form of ripple in the all-enveloping ocean of ether. This was primarily because the energy of the previous life lay in a latent form only to assert its presence when the circumstances were favourable. Thus, there was some primary cosmic nuclear explosion under the surface of ether and its energy sent shock waves causing the ripple on the surface. It was not a single wave but a series of waves having their epicenter in the so-called core of creation—which we call ‘Brahm’. There were seven such successive explosions—which we would call the seven ‘Vyahritis’. The waves of these ripples overlapped and coalesced with each other to have a multiplying and compounding effect. The latent dynamic energy present inside them thus activated heated the cosmic ether and churned it. This heating, churning and cooling that followed resulted in separation of the various fundamental elements called the Bhuts because of a number of physical factors such as their density and grossness. The earth was the heaviest and so it settled at the bottom; the sky was the lightest and the subtlest so it rose to the top and covered the upper part of the creation. The rest of the elements occupied the space in between—the water being lighter than earth but heavier than the fire settled above the earth; the fire was lighter than the water but heavier than the air so it settled above water and blow the air; while the air element occupied all the space because it was next in subtlety to the sky. These five elements thus formed the nucleus of the forthcoming creation.

The seven ‘Vyahritis’ are the words—(1) Bhu, (2) Bhuvaha, (3) Swaha, (4) Maha, (5) Janaha, (6) Tapaha, and (7) Satyam. ‘Bhu’ was the nucleus for earth, ‘Bhuvaha’ for the sky above the earth, ‘Swaha’ for the space beyond the earth’s atmosphere and is generally meant for the heavens, ‘Maha’ stands for the greater heavens beyond the solar system, called the Maha-Loka where enlightened sages and seers are supposed to dwell (as opposed to earth where ordinary creatures including subterranean creatures would finally take up residence), ‘Tapaha’ was the place where exalted ascetics would do penances and austerities, and ‘Satyam’ was the truthful and ultimate abode where the ultimate and irrefutable supreme truthful entity which is the only Authority in creation resides.

According to Sankhya Shastra and the Purans, Brahma, who is known as ‘Swayambhu’ (self created in the sense that he had no father or ancestor) created seven elements called ‘Vyahriti’, viz. Bhuh, Bhuvaha, Swaha, Mahaha, Janaha, Tapaha and Satyam respectively (भूः, भुवः, स्वः, महः, जनः, तपः, सत्यमः) which constitute the fundamental elements which formed the gross body of the creation as its core building blocks at the macro level. Encircling this core is the rounded globe called ‘earth’ which is surrounded by concentric circles constituting of ‘water’ or Apaha, ‘energy’ called ‘Tej’, ‘wind or air’ called Vayu, ‘sky or space’ called Akash, the notions that are described as ‘pride, ego, arrogance, haughtiness and vanity’ collectively called ‘Ahankar’, and the notions of ‘importance, majesty, grandeur, magnificence and lordliness’ called collectively as ‘Mahattatva’. Each of them was ten times larger than its preceding layer or circle.

²The word *Maha* literally means that which is grand, huge, vast, infinite, measureless, majestic, magnificent, stupendous, astounding, great, most excellent and illustrious. That is, that entity which was much grander than what was visible as the animate or inanimate world, that was beyond the purview of the three units of the creation where the creature and its dead ancestors live, i.e. the earth, the sky and the heavens. This unit was beyond the visible and mental spectrum of ordinary human beings, but could be known by deep meditation and insight even as the great secrets of Nature are accessible to expert scientists but not to ordinary humans.

That is why only one of the numerous sages and seers of that time could envision the existence of that divine and superior world where the supreme Authority dwelled. This ‘seer’ was one Mahachamasya, and it was to honour his discovery of this divine unit of creation that it was named ‘Maha’ after him.

³Maha stands for the supreme transcendental Authority in creation which goes beyond the three limits of creation represented by the first three Vyahritis. Maha therefore represented Brahm which was supreme and transcendental, and who incorporated everything within himself as that Brahm is all-encompassing and all-pervading.

⁴The *four Vyahritis* and the worlds they represent are the following—(a) ‘Bhu’ represents this world (earth), fire, Rig Veda and Pran (life giving breath); (b) ‘Bhuvaha’ represents the sky called Antariksha, wind or air, Sam Vedas and Apaana wind (i.e. the wind which passes down the intestines and helps its digestion and excretion); (c) ‘Swaha’ represents Dukoka (the heavens), Aditya (the celestial sun), Yajur Veda and Vyan (the wind that prevails throughout the body); and (d) ‘Maha’ represents Aditya (the Sun God), Chandrama (the Moon God), Brahm (the supreme transcendental Being who has no specific attributes) and Anna (food which sustains life in this creation).]

2. ‘Maha’ represents Aditya (the Sun God). It is by the courtesy of Aditya that the creation acquires its majestic magnificence and life, complete with its astounding glory, vitality, energy, heat, light and glory. It is due to Aditya that the world gets to develop and grow¹.

‘Bhu’ represents the fire element². ‘Bhuvaha’ represents wind or air element³. ‘Swaha’ represents the Sun⁴. And ‘Maha’ represents Chandrama or the Moon⁵. This Moon is the patron God who presides over light and illumination in a world engulfed and submerged in pitch darkness⁶.

[Now these Vyahritis are compared to the Vedas.] The ‘Bhu’ is the Rig Veda, ‘Bhuvaha’ is the Sam Veda, ‘Swaha’ is the Yajur Veda⁷ (2).

[Note—¹The *Aditya* or Sun has a great significance and importance in this creation because it is the sun that provides the world with energy, light and heat which aids in its sustenance, development and growth; it is the sun which gives the world its light by which everything is seen and known; it is the sun that helps plants to carry on with the process of ‘photosynthesis’ by which they produce food which in turn sustains the rest of the creatures in this world; it is the heat of the sun which keeps the world warm; it is the energy of the sun that is harnessed in one way or the other by the rest of the creation to enable the latter to survive, a fact borne out when we consider what would happen if there was no sunlight for a prolonged period of time—life would certainly be extinguished.

Therefore, the magnificence, grandeur and majesty of the fascinating and charming world which is witnessed all around by us owe their existence to the Sun God.

The Sun itself is a most magnificent, grand and majestic entity which is most prominent in the whole sky. It is compared to a pitcher of honey, and meditation upon the Sun done with this view is called the ‘Madhu Vidya’ which has been elaborately described in Chandogya Upanishad. The Sun is a visible symbol or manifestation of the Viraat Purush, the macrocosmic gross body and all-inclusive form of the supreme Brahm, because it personifies all the glorious virtues and qualities that characterise the Supreme Being.

Besides this, Brahm is the primary force that sustains and nourishes life in this creation, giving it its energy, vitality and strength as well as being the progenitor, sustainer and annihilator of the creation. The Sun also has these characteristics—it creates and sustains life by providing the most essential factors for life such as energy, heat and light, and it can even annihilate life when it shines ruthlessly and heats up the world to exceedingly high temperatures. Thus it is apt to say that Aditya or the Sun God personifies Maha, because the latter Vyahriti is a metaphor for all that is grand, magnificent and majestic, and these virtues characterise Brahm.

²*Bhu* represents the earth and the latter harbours fire element in its bosom. It is because of this fire element intrinsically present in a hidden form in the bowls of the earth, and that is why the latter is warm and habitable, being able to conceive and sustain life of all imaginable forms. The presence of fire in the earth is evident in the presence of molten lava which is spouted out through the crater of volcanoes. The earth is protected by a shield of magnetic field which is said to be generated by the earth's core consisting of molten iron.

³*Bhuvaha* represents the wind or air element because the entire sky is full of air or wind.

⁴*Swaha* represents the Sun because the latter is present in the heavens much above the atmosphere of the earth which is usually called the heaven in relation to the earth. The Sun is considered as a visible manifestation of the supreme Lord of the heavens known as the Viraat Purush who himself is a macrocosmic form of the supreme transcendental authority in creation known as Brahm.

⁵*Maha* represents the Moon because the latter symbolises that aspect of the supreme Brahm which prevails even after life has become extinct in this world as metaphorically depicted by the setting of the sun at dusk and the darkness of the night which descends upon the earth after that.

⁶The darkness here represents ignorance and delusions that surround the creature and prevents the light of wisdom and enlightenment from shining through. This is metaphorically depicted by saying that after the setting of the sun the entire world is enveloped in a shroud of pitch darkness, and the only source which gives light to it in the absence of the sun is the moon. The moon is the only source of light that illuminates the world in the otherwise awe-inspiring and foreboding gloom of the night. This also implies that the moon is symbolically like that source of light representing knowledge, erudition and wisdom that helps the world overcome the hurdle caused by darkness of ignorance and delusions which shrouds it like a veil.

⁷The sequence in which these primary words were pronounced and the origin of the Vedas which are repositories of all knowledge that exists in creation has been elaborately described in Chaturvedo-panishad published in this series as part of the anthology of Rig Veda Upanishads prepared by this humble author.]

3. The Vyahriti known as 'Maha' is indeed Brahm (see verse no. 1). It is because of Brahm that all the Vedas get their fame and honour (because they worship Brahm, teach about Brahm, and are the manifestation of Brahm in the form of divine and eclectic knowledge about the Absolute Truth that they contain).

'Bhu' represents Pran (which is the vital wind called breath because the latter is a metaphor for life on this earth).

'Bhuvaha' represents Apaana (which is the vital wind moving down the intestines and escaping as the flatus, indicating the exit of air from the body of the living creature into the atmosphere around the earth).

'Swaha' represents Vyan (which is the vital wind pervading in the body and maintains equilibrium)¹.

And 'Maha' represents Anna or food (because like the supreme Brahm, the food is responsible for sustaining and nourishing life in this creation). It is the Anna (food) that provides energy, strength, vitality, vigour, stamina, potentials and powers to all forms of vital winds are collectively called the various forms of Prans².

Thus there are four Vyahritis. Each of them has four sub-divisions or types or classes, bringing the total number of Vyahritis to sixteen ($4 \times 4 = 16$). Those who are wise enough to know about them are also wise enough to know about Brahm³.

All the Gods offer their tributes and pay their obeisance to that supreme transcendental Brahm⁴ (3).

[Note—¹The word Swaha refers to the heavens which in practical terms is the cosmic space that surrounds all the celestial bodies floating in the vast and fathomless bowls of the sky. This space is filled with ether which is the cosmic medium that helps to maintain the requisite pressure and balance in the cosmos and prevents the heavenly bodies from colliding with each other besides helping them to maintain their respective location, size, shape and movement across the sky.

²The importance of *food* is highlighted in Sam Veda's Chandogya Upanishad, Canto 5, Section 2, verse no. 1, and Canto 6, Section 5-7. It is obvious that without food and the nourishment that it provides to the creature, the Pran alone would not be able to sustain life. This is proved when one has not eaten for a prolonged period of time—all his vital signs begin to ebb and he becomes weak and fragile, both mentally and physically.

³This is because these Vyahritis symbolise all 'life' forms and all the glorious qualities, stupendous potentials and magnificent virtues that they represent in this creation. Brahm encompasses everything coming under the definition of life and creation. Nothing exists that is not Brahm or is beyond the purview of Brahm. Hence, these Vyahritis represent Brahm.

⁴This is because these Gods have their existence because of Brahm, they derive their importance and significance because of Brahm, they are empowered by Brahm to carry on with their respective duties like the subordinates of an Emperor are delegated specific authority by him for the smooth governance of the realm. They represent one or the other specific powers that the supreme Brahm uses to maintain law and order in his realm, and therefore these Gods are very junior and subordinate to Brahm who is their boss. These Gods represent only a fraction of the glory of Brahm as is clearly asserted in verse no. 1.]

Valli 1, Anuvak 6

[This Anuvak postulates that the subtle sky of the heart, called the 'Hridaya Akash', is the place where that supreme Brahm, who has the different worlds represented by the various Vyahritis mentioned in Anuvak 5 above as the parts of his vast, all-encompassing macrocosmic body, resides. Hence, if one wishes to worship and honour Brahm, if one wishes to witness and realise him, then it is to be done by meditating and contemplating upon that Supreme Being in the heart itself and not anywhere outside.]

1. There is a subtle sky present in the heart of the creature. That self-illuminated, radiant and glorious Supreme Being (Brahm; Viraat Purush)—who is like a fount of Amrit (the elixir of eternal beatitude and felicity) and manifested in the subtle form as the Mana (emotional heart and intellectual mind)—has his exalted and revered presence there.

The duct (called the Sushumna Naadi) by which an ascetic is able to divert his vital wind called Pran upwards to achieve the bliss of Brahm realisation, passes through the area in the throat where a lump of flesh hangs in its center (which is a reference to the Adam's apple), and then crosses the area of the head where the tuft of hairs is present (i.e. behind the cranium) to finally reach the top of the skull and pierce

through it. This is called 'Indra Yoni' or the symbolic path by which the supreme Brahm can be realised¹.

At the time of final redemption, the ascetic who is wisened to these facts and who worships and honours Brahm with this wisdom makes his exit from the body through this path and establishes himself in the Vyahriti known as 'Bhu' and its basic element the 'fire'².

Similarly, since he has been worshipping Brahm as the different Vyahritis, he establishes himself in 'Bhuvaha' (the second Vyahriti) and its basic element the 'wind or air' which prevails uniformly throughout the sky³ (1).

[Note—¹This spot is also called *Brahm Randhra* or the hair-like slit through the supreme Brahm had entered the body of the creature to take up his residence in his mind. That is why this verse describes one of the defining attributes of Brahm as Mana or mind and heart. The intelligence and emotions that any living being has are vivid evidences of the presence of Brahm in its body. This area is called *Indra Yoni* because the stage when an ascetic's Pran has reached the top of the head and then pierces it to escape from the confines of the gross body to merge with the cosmic wind air element present outside the body in the sky is possible only when the ascetic has successfully done Yoga, and the success of the latter depends primarily on the control or restraint of the sense organs. Indra represents the functioning of all the sense organs collectively because he is the king of Gods, and these Gods are nothing but the dynamic forces of creation that operate through the organs of the creature's body. This is because the individual creature represents the creation at the microcosmic level. It is only when the sense organs are fully restrained that the spiritual aspirant is able to reach the higher echelons of spiritualism. Earlier in Valli 1, Anuvak 4 Brahm and Indra are treated as being synonymous with each other. They are the same Lord representing the supreme Authority of creation.

Hence, the point where the spiritual aspirant experiences a sense of extreme bliss and ecstasy is called Indra Yoni to indicate that it is a crucible where the eclectic state of extreme bliss is nurtured and where it flourishes.

²A wise aspirant regards Brahm as *Bhu*, or thinks that the entire living world is nothing but Brahm personified. He further treats the 'fire element' inherently and inseparably present in the earth as a manifestation of the dynamic powers, the stupendous energy, the glorious potentials and the magnificent virtues of Brahm. So at the time of death, he attains oneness with Brahm whom he has been worshipping as 'Bhu' and its magnificent dynamic energy as the fire element. In other words, he lives in this world as the 'fire' personified. His presence is always felt in a subtle form as the terrestrial fire even after he has left his mortal body. Earth and fire represent the life creating and sustaining virtues of Brahm. Since the fire element has the unique ability to purify anything put in it, the spiritual aspirant is also deemed to be purged of all worldly impurities and become holy and pure like the fire itself. Besides this, like the fire element, his Spirit form has become equally dynamic, potent and powerful.

³The second Vyahriti is *Bhuvaha*, or the sky above the earth where the wind or air is the chief element. This wind or air element is called 'Pran' or the life of this creation, and the fact that it pervades throughout the length and breadth of the sky shows that Brahm, who is also synonymous with life and Pran, also pervades uniformly throughout the entire creation as its vital life giving and life sustaining entity called Pran in the form of the wind or air element. Besides this, it establishes that the dimension of Brahm is like that of the sky—measureless, vast, infinite and fathomless.]

2. Likewise, by worshipping Brahm as the Vyahriti known as 'Swaha', he becomes established in the heavens¹, and by worshipping Brahm as the Vyahriti known as 'Maha' he becomes established in the magnificence and glory of Brahm himself².

In this eclectic and holistic way, such an aspirant is able to attain freedom for himself from the fetters of this body and the world, and consequently reach that exalted and divine abode of Brahm to which his 'true self' truthfully belongs³. Indeed, he is able to reach the Lord of his Mana (the mind as well as the heart).

By being one with Brahm (i.e. by being self-realised and wise and enlightened), he indeed himself becomes the Lord of the speech, the Lord of the eyes, the Lord of the ears, and the Lord of all knowledge⁴. Not only this, he surpasses all imaginable definitions of divinity and holiness, and becomes most exalted and revered.

Like Brahm he represents the sky (i.e. he becomes as vast and fathomless and as pure and eternal as the sky); like Brahm he becomes an embodiment of Truth (as he becomes Brahm personified as the pure conscious Atma); like Brahm he symbolises the fount of and the final resting place for Pran (i.e. he becomes the source from which the rest of the creatures get their inspiration and guidance, he provides solace and succour to all the creatures in this creation, and his benevolence and kindness act as the much needed balm for the tormented world; he acquires the same glorious virtues as possessed by the vital wind that injects and supports life in creation); like Brahm he becomes an embodiment of extreme bliss and happiness, of peace, tranquility and serenity; and like Brahm he becomes a wellspring of Amrit which is the elixir of eternity and bliss as well as of beatitude and felicity.

'Oh disciple! Note that this is a comprehensive and holistic way to honour and worship that most ancient and primary Lord of creation who is worthy of such praise, adoration, honour and worship'⁵ (2).

[Note—¹By worshipping Brahm as *Swaha* he becomes as honoured, reverend and exalted as the great Gods residing in the heavens. People offer tributes to him and pay their obeisance to him as they would to the honourable Gods. He also acquires the same eclectic and divine powers and authority as possessed by the Gods.

² By worshipping Brahm as *Maha* he becomes as great and exalted as the supreme Brahm himself because this Maha refers to Brahm himself—see Valli 1, Anuvak no. 5, verse no. 1.]

³Such an aspirant is able to obtain emancipation and salvation for his soul which is his true self. This 'true self' is his pure conscious Atma which is however a manifestation of Brahm in the first place. In other words, the aspirant has truthfully achieved 'Brahm realisation' in the form of 'self-realisation'.

⁴A self-realised ascetic has gained a spiritual stature which makes him enlightened and possessed of divine eclectic powers and potentials. He is no ordinary mortal, but as glorious and divine as Brahm himself. Once this happens, all the sense organs automatically become subservient to him. In other words, such a man is able to have the glorious virtues of *Dam* and *Sham* described in Valli 1, Anuvak 4, verse no. 2 above.

⁵Brahm is not a specific God with limited powers and authority. Brahm encompasses everything in existence—both movable as well as immovable such as the animals and the plants respectively. So when Brahm is worshipped with this wisdom and in this holistic way as an all-inclusive cosmic Divine Being, as the Absolute Authority beyond which there is no authority, and the Absolute Truth beyond which there is no truth, it is then that Brahm is actually being properly worshipped and honoured. It is like honouring the combined dynamic forces of Nature in one embodiment of Brahm.]

Valli 1, Anuvak 7

[There are ‘five’ principle elements in creation, and this fundamental aspect is reflected in the appearance of five consecutive layers or rows in which all the units of creation, both at the micro level as well as the macro level, have arranged themselves. They form a series in such a way that one layer or row depends upon the other; they compliment and supplement each other. These rows or layers are called ‘Panch Pankta’—the consecutive layers or rows or strata or tier of creation each having five units in it. They together form a grid that constitutes this enigmatically mysterious but astoundingly magnificent creation. This verse endeavours to list the various units of creation and classify them into distinct layers or rows or sequences or tiers or groups to establish that there is an underlying force which unites them together into one composite mass called the ‘living world’. It is like a colourful picture made up of a mosaic of multi-coloured units put together by the supreme creator.]

1. The five units that constitute the first layer or tier or row or sequence of the visible creation consists of the Earth, the Sky, the Heavens, the Directions (north, east, south, west, zenith and nadir), and the Corners (north-east, north-west, south-east and south-west)¹. [This is the Lok Pankti—the layer or row of units that give physical shape and dimension to the known creation.]

The second layer or row or sequence of the creation consists of the following five units—Fire, Wind or Air, the Sun, the Moon and the Stars². [This is the Jyoti Pankti—the layer that constitutes the units of creation that give light and illumination.]

The third layer or row or sequence of five units of this creation consists of Water, Medicinal herbs (special plants), Vegetation (plants in general), the vast Sky (the space in which everything created finds place to exist), and the Atma (i.e. the pure consciousness that lives in this world constituting of these fundamental units)³. [This is the Adhibhautik Pankti—the layer that constitutes the units of creation that forms the gross aspects of the physical world.]

Now that aspect of the creation that enables the Atma, the pure consciousness to physically live and get the feel of the world at the personal level is being outlined. This aspect of creation is called ‘Adhyatma’—because it relates to the Atma and how it interacts with the physical world where the consciousness lives in the gross body of the creature.

The fourth layer or row or sequence of five units in this series of creation at the individual level of the creature where his Atma lives in the gross body are the different forms of the vital winds or airs. These five winds or airs are known as Pran, Vyan, Apaana, Udaana and Samana present in the body of the individual creature⁴. [This is called the Panch Pran Pankti—the row or sequence of five vital winds that sustain life in the creature’s body.]

The fifth layer or row or sequence of five fundamental units in this world constitute of the eye (which help the Atma to see), the ear (which help the Atma to hear), Mana (mind—which help the Atma to perceive this world and get attracted to it), Vak (literally meaning speech or the spoken word or voice—but here referring to the tongue through which the creature speaks) and skin (which helps the creature to feel and touch anything). [This is the Indriya Pankti—the layer that constitutes the organs of the body—called the Indriya—that helps the individual creature to conceive

and then perceive the world. This is because the world is a conception of the Mana or mind which plays an important role in the creation of the world as it is the mind which imagines the presence of the gross physical world first and then impels the creature to believe in its existence. The other sense organs listed here—viz. the eye, the ear, the tongue and the skin then play their individual role to make this imaginary world appear to be for real and concrete. Should the mind decide that it has nothing to do with the world, the latter loses all its relevance and significance.]⁵

The sixth layer or row or sequence of five units that are used in the structuring of the physical world where the Atma lives constitutes of the five gross parts that form the physical body of the creature—viz. the skin, the flesh, the veins/nerves, the bones and the marrow⁶. [This is the Dhatu Pankti—the layer of basic elements or units that constitutes the gross body of the creature where his Atma, his pure consciousness and the true ‘self’ lives. For the Atma, the body is the world inasmuch as the fact that without the body the Atma would have no place to live in this creation. The individual’s body has the same relevance to the Atma as the vast sky or the space of the cosmos has for the huge array of cosmic bodies such as the sun, the moon, the stars and other heavenly bodies that inhabit this vast, infinite and measureless creation at the macrocosmic level.]

Having enumerated these vital statistics, the sage said, ‘All these are like the consecutive rings or lines that are linked together in a grid to form a composite picture of the creation’⁷. [They are like the steps of the ladder without which the structure known as the ‘ladder’ will have no meaning. Without the ladder it is impossible to reach the top of a shelf or the high point of structure. This is a metaphoric way to enlighten the budding student to become aware of the highly structured manner in which this creation exists. This is a scientific method to explain to him the vast map or plan of things that the supreme the cosmic creator had as his master-plan when he set about on the venture of creation. On the metaphysical plane, this scheme is intended to make a wise aspirant understand that proper knowledge of all the individual units of creation are needed to complete the journey to Brahm realisation⁸.] (1).

[Note--¹This is known as the *Loka Pankti* which means the five layers of the known world where all forms of mortal beings live. The word *Pankti* literally means a line or row or sequence. The earth and the sky and their various directions are the natural habitat of all life forms in this creation, because nothing living exists beyond this periphery. The heaven is also included in it because even after reaching the heaven, the creature has to come back to the earth once the good effects of the past deeds done by it are exhausted. Going to heaven is not the final emancipation and salvation of the soul as this is only a temporary habitat to enjoy the excellent rewards of an exemplary life led by the creature in its previous life. This oscillating path has been described in Chandogya Upanishad, 5/3-5/10, and Brihad Aranyaka Upanishad, 4/4, 5/10, 6/2.]

²This is known as the *Deva Pankti* or *Jyoti Panti* series of individual units in creation. It consists of the five strata in which divine cosmic bodies representing the different forces of Nature exist. These forces are called ‘Gods’ to emphasis their divinity and the fact that they exercise control over the rest of the units or layers of creation. Since the cosmic bodies such as the sun, the moon and the stars shine and emanate light, they are referred to as ‘Jyoti’ which means light and illumination. Such entities provide light and energy to this creation. Therefore, they are categorised as belonging to the light and energy facet of creation. The Gods belong to this category because they are more spiritually empowered than ordinary creatures and a halo of divinity exudes from their being.

³This is known as the *Adhi Bhut* or *Adhi Bhautik* facet of existence. It pertains to the physical world and the body of the creature, and matters related to them. Water is the chief constituent of the body of all creatures; medicines and plants are equally necessary and vital for the existence of all the creatures that have a body. Space is an essential requirement for the development and growth of all the living creatures because they would be stifled to death if adequate space is not available for them to go grow both physically and mentally. Nothing can grow and achieve enhancement in the absence of sufficient space for this purpose. This is evident from the fact that plants, for example, that grow out in the open space of the forest or garden achieve greater degree of development as compared to those which are placed indoors. Since consciousness or Atma is the vital factor in the body of any organism, it is as integral to the living body of any creature as is water. This aspect of creation is related to the physical body of the creature that bears the Atma in it.

⁴These *vital winds or airs* enable the otherwise inane, lifeless, worthless and gross body to become alive, active and worthy to become the habitat of the immaculate and pure conscious Atma or soul, which is in turn a microcosmic form of the macrocosmic supreme transcendental Brahm who is the ultimate Lord of creation. Had there been no vital wind in the body, the latter would have shown no signs of life, and therefore Brahm could not possibly live in it, as Brahm and its microcosmic counterpart the Atma are synonymous with 'life' and 'consciousness' and not of death and gloom which a body without any movement and signs of life resembles.

This series of vital winds or airs is called the *Vayu Pankti* or the row of various winds or airs that form one of the different aspects or pillars of creation.

Now let us see what these five 'vital winds or air' are. The *Vital Winds/Pran*— Dictionary defines *Pran* as breath, inhaled and exhaled wind, the breath of life, life itself, one of the five vital winds or airs that sustain life, strength, valour, courage, energy, vitality, vigour. It is also synonymous with the fire element as well as with the supreme soul or Atma. It is the 'fire element' because both the fire as well as the Pran inject and infuse life into the otherwise lifeless and inane gross body of a creature, enabling it to get up and perform its functions and carry on with its activities. A dead body from which 'life' has exited becomes cold and lifeless, thereby indicating that the fire element that is inherently present in it has been extinguished—we then declare that the man is dead.

Though technically Atma or soul is pure consciousness while Pran is a vital wind or air element, practically they are synonymous with each other. An illustration will clear this point. Suppose a man has lost senses in his limbs—they have been paralysed, or he is lying unconsciousness due to some serious disease. We regard such a man as alive and not as dead as long as he continues to breathe, and as long as he breathes, or as long as he is technically 'alive' his Atma is deemed to be inside his body, because the true identity or the true self of a man is not his physical body but his Atma. Therefore we do not regard the 'unconscious' body as dead. But when he actually dies, that is, when he stops to breathe, we say that 'his Pran' has left the body, and that 'he' has died. Now, who has died? It is the person whose Pran has left the body; and the person is the 'self' or the Atma which has left the body when the Pran made its exit from it at the time of death. This is because Pran and Atma depend on each other so much so that as soon as the Pran leaves the body, the Atma also leaves the body and we say that the person is no more. Why do we say that the 'person is no more' when the body is actually lying in front of us? It is because the 'person' is the Atma and not the body, and this Atma has left the body with the Pran at the time of death. When the proper time comes, the Atma leaves the body astride the Pran, riding piggy back on it.

Besides the chief meaning of Pran as breath which injects the vital spark of life in a body to keep it alive and active, thereby providing it with the necessary impetus, the energy, vitality and strength to perform its designated functions and duties as a living entity, there are other vital winds or airs that are also categorised as Pran because they

work in tandem with each other to enable the main Pran, the breath, to actually carry out its function. These vital winds do not exist in separate so-called water tight compartments, as this is an incredulous proposition because air is an element that cannot be compartmentalized into separate entities having distinct existences, but they are named as separate winds just for the academic purpose of studying the way the vital wind or air functions differently in the body to enable it to carry on with its functions. So these other 'Prans' or vital winds besides the breath, both inhaled and exhaled, are the following—Apaan, Vyan, Udaan and Samaan.

However, the term 'Pran' is usually applied to breath because it is the vital wind force that injects and sustains life and vitality in a creature. It is synonymous with life, Atma and soul of a living creature. The presence of Pran determines whether a creature is dead or alive; it is a distinguishing factor between the animate and inanimate world. Pran is the essential vibrations of life; it is the rhythm of life; it is the essential characteristic that defines life.

The inherent tendency of the Pran, which is the vital wind residing in the upper part of the body between the heart-lungs and the nose, is to lift the creature to a higher state of noble, righteous, virtuous, auspicious and spiritual existence, to become wise and enlightened. On the contrary, the Apaana winds live in the intestine and pass down through the anus. It symbolises the downward drag on the creature's spiritual upliftment, pulling it down towards the grosser aspects of creation and the materialistic world which is not only gross but also filthy and worthless like the excretory matters present in the intestine. It also symbolises passions, evils, vices, perversion and attachments to the worldly things at large, and their accompanying perplexities, bewilderments and hassles leading to restlessness and moral turpitude and degradation. This oscillation between the spiritual upliftment and moving upwards towards goodness, and spiritual degradation, moving downwards towards the gross world of sensual pleasures, leads a creature to a continuous cycle of birth and death—this oscillation is like the bouncing of a ball upwards and downwards from the surface of the earth. One must remember that a lot of symbolism, metaphors and allegories have been used in the Upanishadic texts to explain things. One should be wise not to lose the spirit while getting bogged down by the literal meaning of the words; one should not lose the wood while searching for the tree. The 'Pran' wind here symbolises the upward drift which the pure consciousness is inherently inclined to, while the 'Apaan' winds pull it down towards the attractions of the world. The creature remains trapped between the two forces.

This 'vital wind' called Pran is one of the five elements of creation, called the Panch Bhuts, the others being earth, water, fire and sky.

According to various Upanishads, especially the Trishiki Brahmin Upanishad, 1/5 and 2/77-87, as well as Paingalo-panishad, cantos 2, verse nos.3 of the Shukla Yajur Veda tradition, this vital wind is of ten types depending upon the function that the wind element performs in the body of a creature. Amongst them, there are five winds which are considered more important than the rest. As such, these five are called the main 'Pran', or 'Panch Prans', and they are the following—(1) *Pran*, the wind element, as breath, that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without life no other wind would be of any significance to the creature; (2) *Apaan*, the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys); (3) *Samaan*, the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood; (4) *Udaan*, the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough; and (5) *Vyan*, the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

Besides the above, there are five subsidiary winds which act more like assistants to the chief Prans. They are—(1) Naag—this junior wind which helps in exhaling breath and belching; (2) Kurma—this subsidiary wind helps the eyelids to open and shut; (3) Krikar—this creates the sensation of hunger; (4) Devdutta—this creates sleep; and (5) Dhananjay—it prevents decay and deformation of the body immediately after death for some time.

According to Subalo Upanishad, canto 9, verse no.1-14 of the Shukla Yajur Veda tradition, these ten winds have the following functions—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaana—this controls the tongue and the faculty of taste (verse 4); (5) Samana—this controls the skin and the faculty of touch (verse 5); (6) Vairambha—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antaryaama—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the ‘Chitta’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

Location of the five chief vital winds, called the Panch Prans, in the body—(1) Pran—it is present in the mouth, nose, heart, navel, big toe of the leg; (2) Apaana—it is present in the intestines and anus, lower abdomen, thighs, knees; (3) Samana—it is uniformly present throughout the body; (4) Udaana—it is present in the hands, legs, joints of the body; and (5) Vyan—it is located in the ears, thighs, waist, heels, shoulders, throat. The subsidiary winds as listed above, i.e. Naag, Kurma, Krikar, Devdutta and Dhananjay are located in the skin, muscles and the bones.

Besides the Upanishad mentioned above, there are others that elaborately describe the vital winds, their locations, their functions and their significance, and the chief amongst them are (1) Chandogya Upanishad in its canto 3, sections 13-18, and canto 7, section 15, (2) Jabal Darshan Upanishad, canto 4, verse no.23-24 of the Sam Veda tradition, (3) Maitrayanu Upanishad, canto 2, verse no.7 of the same Veda (which describes the functions of these winds), (4) Subalo Upanishad, canto 9, verse no.1-14, and (5) Paingalo-upanishad, canto 2, verse no.3 of the Shukla Yajur Veda tradition. These vital winds have also been elucidated upon in sage Veda Vyas’ Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39.

The Brihad Aranyak Upanishad of Shukla Yajur Veda tradition, in its Canto 3, Brahmin 9, verse no. 26 clearly lays down the pyramidal structure of the five important vital winds. It says that Pran depends and rests upon the Apaana wind, the latter upon the Vyan wind, the latter upon the Udaana wind, and the latter upon the Samana wind although all the Prans are equally important, and there is no distinction between the one and the other as to their importance as well as to the extent Brahm is present in them. We cannot start the counting from any particular entity, saying for example that the Pran wind is number one and more important than the other vital winds. In the present context, this structure is only to show that even in the realm of metaphysics, a hierarchy is maintained, and at the apex of this hierarchical triangle is the supreme entity from which the various vital winds derive their authority and powers and potentials. That supreme entity at the micro level is the Atma as a representative of Brahm who is the supreme authority at the macro level.

Pran is evidently ‘air or the wind element’ because breath is air or wind, and ‘Pran’ is synonymous with breath. Stop the breath of a man, and he dies. Now as we know, a ‘fire needs air to keep burning’. If the speech is likened to the fire, it needs the Pran in the form of wind to keep it alive by being fed with its life sustaining force. The ‘wind’, which is a forceful expression of the powers of ‘air’, is strong enough to blow away trees and even topple ships on the high seas as is evident during severe storms. Hence, the wind, as Pran, empowers a man to do tremendously difficult tasks

requiring strength, stamina, vitality and power. Pran is synonymous with breath or fresh air. At the time of creation, the Wind-God took up residence in the nostril of a man. Worship of Pran is the Adhyatmic form of worship of Brahm, while that of the air or wind is the Adhidaivic form respectively—Aeitereyo-panishad, 1/2/4. The heart is divided into five hypothetical sections and said to have five valves or apertures called Sushi (सुषिः). These are regarded as the ‘holes or doorways’ through which the Pran can enter or escape the respective abodes of the Gods towards whom that particular doorways leads.

The 1st of these five is the valve opening in the ‘eastern direction’ of the heart through which the Pran enters it. The eyes are the apparatus by which the light of the world, both physical as well as metaphorical light of wisdom, enlightenment, knowledge and erudition enter the perception centers of the mind. The world, no matter how beautiful and illuminated, will be in dark if a person does not have the eye. The Sun or Aditya symbolically resides in the eye as its patron God, or as its torch, because it illuminates the realm which the eye is able to see, for the eye cannot see in darkness. The common coefficient in both the cases (i.e. the eye and the sun) is ‘light and illumination’. The sun is radiant, brilliant and splendorous with Tej (energy, radiance, splendour and glory). So this factor ‘Tej’ is the essence and life of the sun even as ‘Pran’ is the essence and life of a creature. If the sun had no ‘Tej’ in it, it would be worthless. Food obviously provides the basic nourishment and energy to the creature. What will the eyes do or what is the use of the sun if there is no food to eat, for in its absence the creature will not survive.

So, all these entities are the 1st categories of Gods who reside in the eastern side of the heart. They should be respected, adored and honoured for the good characteristics, noble virtues and sublime essence that they represent, and not just because they are some powerful Lord who will punish severely if not shown due respect.

The vital signs of life in a human body as shown by his powers to speak, see, hear and think are all different attributes of, or functions carried out by the supreme consciousness called Brahma residing disguised as his ‘Pran’ or the vital wind called breath present in his body. This ‘Pran’ is also synonymous with the Atma/soul, and therefore, Atma/soul is synonymous with Brahma. A man might not speak but he can see, hear and think, he might not see and speak (e.g. a blind and dumb man) but he can hear and think, he might not speak, see and hear (e.g. a dumb, blind and deaf man) but he can think. Finally he might not even think (e.g. when he is sleeping) when all his vital functions collapse into the Atma, but he still is alive. Overtly, for all external purposes, he appears to be dead because he exhibits none of the signs of life depicted by the body when he is awake, but he continues to breathe and therefore, is fully alive. He can never be treated as ‘dead’. So, the factor which decides whether a man is alive or dead is not his faculty of speech or sight or hearing or thinking, but the ‘Pran’ present in his body. As long as he breathes, he is deemed to be alive. That is, the Atma is the entity that truthfully represents consciousness or Brahma, and any person who recognises this fact that all the patron Gods supervising the various activities of creation ultimately find rest in the Atma or Brahma, and then re-emerge from it—as in the case when all the organs of perception and action start to function when a man wakes up from his sleep—is deemed to be an adroit, wise and enlightened person who acquires such stupendous powers that impossible things can be accomplished by him, such as for example the shifting of the mountain. The ‘shifting of the mountain’ is simply a figure of speech to emphasise an enlightened person’s potentials and prowess than the actual and physical movement of the mountain, for the mountain, obviously, doesn’t move! The word Pran broadly refers to the essential vibrations of life; the rhythm and essential functions pertaining to life.

Vyan is the vital wind that maintains equilibrium in the body. It is present everywhere in the body. The ears are the literal doors or holes through which the vital

wind called Vyan entered the body and the Moon-God took its abode there at the time of creation when the 'Viraat Purush' created man in his image and ordained that the various Gods should take up residence in the various parts of the human body which corresponded to the respective part of the 'Viraat Purush' himself from which these Gods were created. The Sun was created from the Viraat's eyes, so it took up its residence in the human eye. Similarly, the Moon was created from the Viraat's ears, so it found shelter in the human ear. And so on and so forth.

Any student of biology knows that the semi-circular canals present in the ear are responsible for maintaining balance in the body. Patients of low or high blood pressure or those suffering from misbalanced pressure of air on the ear drums (the tympanic membrane) can experience fluttering of that drum, snapping sounds when inhaling as well as the sense of dizziness. This can be rectified by deeply inhaling wind, clipping the nostrils tight shut and trying to exhale. The pressure of wind causes the tympanic membrane to inflate and open the closed eustachian tube with a snap. The patient feels relieved.

The ears are the apparatus by which we 'hear and gather' information. Hence, they are the 'ventilators' of the house through which fresh air representing new information and knowledge enters, and like the ventilators, they are placed on the top. The moon is regarded as the pitcher where the Amrit or the elixir of eternity is stored by the Gods. This moon, therefore, symbolises the essential extract (nourishing elements) present in food. Every wise, erudite and knowledgeable person gets fame, renown and a following of disciples, which in turn translates into wealth and ample food to eat, and therefore these qualities represent Yash and Sampadaa respectively.

Apaan wind is the one which goes down in the body and regulates the intake of food as well as its excretion. It is the wind which enables a person to speak because it helps to digest food which in turn provides the necessary energy to a man enabling him to gather sufficient energy to speak, for a weak and starving man can't speak much, and it is associated with the fire element because it helps the body to digest food and provide it with energy to speak. The enzymes present in the alimentary canal which digest food are all acidic or 'hot' in nature like the fire. This is why food is digested in the intestines and utilized by the body by the combined efforts of the *Apaan* wind, the *Samaan* wind and *Vyan* winds. Without the presence of 'heat and warmth' in the body, it would be dead, and there would be no question of eating, digesting etc. So the importance of 'fire' cannot be overstated.

Righteousness, auspiciousness, morality, ethic etc. as well as the study of scriptures, contemplation and meditation are the different virtues which are associated with Brahm realisation, and therefore they are manifestation of his divine characters such as divine glories and virtues. That is why they are called Brahma Tej because the elementary force operating in them is 'Brahm' as opposed to the demonic forces present in the form of worldly pursuits, thinking of worldly matters and devoting oneself to studying worldly material sciences and acquiring worldly skills which are far removed from spiritual knowledge leading to the upliftment of the soul. These features are like Christ and anti-Christ.

Since the downward peristaltic movement of the intestines helps in taking in food, digesting it and help in its excretion, the *Apaan* wind is likened to the ability of the body to absorb and assimilate nourishment from food, or be a 'consumer of food'. The energy trapped in the food is released in the body and empowers it to speak and to acquire all the glorious potentials that Brahm possesses, called Brahma Tej, such as the powers to think righteously, contemplate, meditate, procreate, sustain, protect and nourish the world as well as be auspicious, pious, wise and enlightened.

Samaan is the vital wind that regulates circulation in the body as well as proper and balanced distribution of nourishment to all the cells of the body. The word 'Samaan' means 'equanimity, equity and uniformity'. This wind distributes food and water equitably and uniformly throughout the body, hence has the name of *Samaan*. The mind is associated with this wind because any disturbance in the distribution of

food and water in the body will cause unrest in the mind. Also, when the mind is disturbed, it affects the whole body, thereby disturbing the equilibrium of nourishment in the cells of the body because this wind gets disturbed. Varun and water (cloud) were created by the 'Viraat Purush' from his 'Mana' (mind). Hence, the water element in the form of the cloud is also a form of Samaan wind. More practically, we see that the proper distribution of food in the body depends upon the blood which is a vehicle for such transport of the nutrients present in the food to all the parts of the body. Blood is a fluid, and fluidity depends upon the water element. Without water, the whole process of digestion and absorption will come to standstill. The mind is the epicenter of wisdom and knowledge; it is the regulatory authority of the various functions and actions of the body. A good, healthy, wise and intelligent mind will obviously lead to fame and glory. The proper maintenance of the level of fluids in the body keeps the body healthy and in prime shape with a glowing skin and a complexion full of luster.

Udaan wind rises from the bottom of the body and goes up to the head. It symbolises 'elevation and levitation, upliftment and up gradation'. The word 'Udaan' itself means 'to fly, to go up'. It signifies the inclination of the man to do noble deeds and use his legs to walk higher and climb higher in the spiritual realm. It literally 'helps the soul to fly off into the sky like the bird'; hence it has the name 'Udaan'. Like the hot air balloon, any wind that helps lift a heavier-than-wind object into the air is called 'Udaan Vayu'.

Since air fills the whole sky, there is no segregation between them. It is not possible to separate the sky from the wind or air element simply because the wind or the air element has the tendency to occupy all the space that is available to it. Anything that can 'lift' a heavy body from the ground must be stronger and more powerful than the body which it lifts as well as the forces which try to pull the body down. Hence, this 'Udaan' wind is synonymous with the quality of Aj or Oj (अज—strength, valour, power, potentials and prowess present in a creature). Its glory and importance in upliftment of the man, i.e. in inspiring him towards nobler pursuits and goals in life, and assiduously endeavour for realisation of Brahm makes it Maha (महः), that is important and significant, marked by greatness, grandeur, potent and majesty.

⁵These five organs collectively form the *Indriya Pankti* or the row or series of units that form the sense organs of the body of the individual creature. These five units control what the creature sees, hears, thinks, speaks and feels, and hence are the 'cause' of all its reactions and responses, its behaviours and thought processes as well as its personality, character traits and characteristic inclinations, habits and temperaments. Together they determine how and in what intensity the creature would respond to a given stimuli or set of circumstances. This in turn decides the personality and behaviour of the individual creature, how he interacts with the outside world, and what he makes of this life and its numerous opportunities. In the final analysis, these five sense organs are the means by which the Atma becomes aware of anything related to the external gross world of material objects as well as how and what the response should be. They help the Atma to interact with this world—receiving inputs and responding to them. These sense organs are the external arms of the Atma which helps the latter to relate itself with the world. They can be linked to the tentacles of the octopus or the pseudo arms of the amoeba.

⁶This is called the *Dhatu Pankti* or the series of five units that form the essential or basic infrastructure or skeleton of the gross body in which the pure conscious Atma lives. These three rows of units—viz. the five vital winds, the five sense organs, and the five gross parts that form the skeleton of the body—are called *Adhyatma Pankti* because they are directly related to the Atma. This is because the Atma lives in the gross body made up of these essential units which have been classified into three types depending upon their functions and degree of grossness.

But to make the body function normally and make it a worthy habitat of the Atma, each individual unit of this setup has equal importance and utility. For example, the body cannot do without the vital air known as the breath as much as its inability to maintain its integrity without the sense organs or the internal infrastructure such as the bone or the vein.

⁷The ladder has horizontal steps, and in order to reach the top one has to climb each step. In other words, each unit in the series mentioned in this verse has its unique importance and significance. All form an integral part of the ladder or the flight of steps which take the aspirant to the supreme Brahm much like one reaches the upper storey of a building or the citadel located at the top of the mountain by climbing the steps leading to it. Even if one step is blocked or damaged say by an avalanche, one has to wait till the path is cleared and repaired by engineers before proceeding ahead. Likewise, one has to understand where he presently stands vis-à-vis his mental bearing, intellectual level of development and spiritual stature before he can chalk out a strategy to move ahead from his present state of existence to reach the ultimate spiritual goal of self-realisation and Brahm-realisation. This is a metaphor for final liberation and deliverance of the creature from the bondage of this world of ignorance and its entrapping delusory perceptions. The ultimate goal of life is the final emancipation and salvation of the Spirit—or reaching that state from where there is no return to this cycle of transmigration. This is called the ‘Kaivalya Mukti’—i.e. the liberation and deliverance which is one of its kind.

⁸The Atma of the creature is its true identity. This Atma has to live inside the body, and not without it or outside of it. In order to achieve emancipation and obtain salvation, one has to use this body, and that too while one is alive in this world, because for a dead man either hell or heaven become irrelevant. All the various units mentioned in this verse above pertain to the ‘living world’ or the ‘conscious world’. It is in this world that the creature does good deeds and acquires truthful knowledge which ensures his gradual spiritual elevation till the time it reaches the zenith of self-realisation which is tantamount to Brahm-realisation. This exalted stature is equivalent to liberation from the fetters of ignorance and delusions, which delivers the creature from his horrifying torments and provides him with eternal peace and beatitude. When this auspicious spiritual goal is achieved, the apparently never-ending cycle of death and birth is disrupted, and the creature gets what is known as Moksha—i.e. the final emancipation and salvation of the soul.]

Valli 1, Anuvak 8

1. [This Valli is dedicated to the mystical divine word OM which is regarded as the most auspicious and holy sound in existence.]

The learned and wise teacher proclaimed—‘The word OM¹ is Brahm personified because OM represents the entire gamut of creation, both the animate as well as the inanimate, the visible as well as the invisible, and the comprehensible as well as the incomprehensible. This world is a visible manifestation and tangible evidence of OM.

OM is the solemn affirmation and a respectful assertion of these facts’.

The disciple insisted that more should be explained about this mysterious entity. He pleaded with the teacher—‘Oh revered teacher! Tell me more about OM’.

The erudite teacher said further—‘Those who sing or chant the sacred hymns of the Sam Veda use OM as a salutation and as a holy invocation at the beginning of such singing or chanting.

All the Mantras² (which are sacred mystical phrases or words or syllables having astoundingly glorious and divine esoteric powers), which are as potential and powerful as invincible weapons in the sphere of spiritualism and metaphysics, are said (or chanted or repeated for the express purpose of benefiting from their powerful dynamic powers) by invoking OM at the beginning and at the end of such incantatory chanting or rhythmic repetition of Mantras, and using it as the medium to make these Mantras effective and potent. [In other words, without OM these Mantras lose their potentials and affect; they become ineffective and impotent. OM is like their ammunition; it is also like the vital spark that ignites that ammunition; it empowers these Mantras to become effective mystical weapons to overcome all forms of hurdles faced by the creature, whether they be related to the mundane world, called the 'Adhi Bhautik' problems, whether they be related to the spiritual world, called the 'Adhyatmic' problems, or whether they be related to the unfavorable Gods and malignant stars, called the 'Adhi Daivik' problems.]

During the fire sacrifice, the priest called Adhvaryu³ invokes this divine word OM with each ritual and offering, at the beginning of it and at the conclusion.

It is by invoking OM that the head priest known as Brahma invokes and welcomes the Gods at the start of the fire sacrifice and announces the commencement of the sacrifice ritual. It is by the pronouncement of this mystical divine word that the symbolic arrival of the supreme transcendental Being known as Brahm is announced by the chief priest called Brahma. [Brahm is a disembodied Divinity that appears or reveals itself in the form of the virtues of auspiciousness, holiness and piety that descends upon the venue of the sacred fire sacrifice as a halo. The different Gods that are invited are actually manifestation of the various dynamic forces of creation that are invoked to make the endeavour of the fire sacrifice successful.]

It is this divine and auspicious word OM which is pronounced at the very beginning of each offering to the sacred fire to make each offering holy and sanctified.

Brahmins or the learned ones assert that it is the word OM that is said to salute the Supreme Being at the time of commencement of study by a disciple (in order to seek divine blessings, to become intellectually empowered, and to ensure that what is being taught and learned are clearly grasped and firmly remembered by the student). In fact, the wise and enlightened one who has embarked upon the study of the sacred scriptures pronounces OM and solemnly affirms his sincere desire to attain the supreme and auspicious Truth known as Brahm. He indeed is able to access that mystical and divine entity Brahm with the help of this most powerful, most potent and most strong medium of OM. [In brief, OM is the greatest of the Mantras prescribed in the scriptures. When added as a prefix to other Mantras, it becomes the crown jewel and indicates the supreme Authority which is to be honoured and paid tribute through the medium of the main part of the Mantra that follows the pronunciation of OM. When it is used as a suffix at the end of the Mantra, it represents the final act of reverential bowing to the supreme Authority who was honoured and worshipped by the previous part of the Mantra just said.] (1).

[Note--¹OM is a monosyllable mystical divine word first appearing in the Upanishads and is set forth an object of profound religious respect and meditation, the highest spiritual efficacy being attributed to not only to the whole word but also to its three (and on occasions to the four) basic sounds represented by the letters A, U (O) and M.

In later times, OM is the mystic name of the Hindu Trinity—viz. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder, and their one united cosmic form known as the supreme transcendental Brahm.

OM also personifies the three Vedas which are the greatest repositories of knowledge in existence.

OM is usually called Pranav which is a synonymous word for the supreme Brahm which is the ultimate Truth and Authority from where the entire known creation as well as the unknown one that is beyond comprehension of any man came into being.

The word OM stands therefore for the entire gamut of creation—right from its beginning, through its development and growth, and till its end.

OM also stands for one who is the dearest friend and helper, one who is most compassionate and kind, one who shows favour and gives protection, one who is the support, foundation and prop of the entire creation, and one who gives solace and succour to everyone without any distinction whatsoever.

In daily use, this word is used as a means of solemn affirmation and respectful assent. It is used at the beginning and end of any sacred and holy exercise such as the reading of the scriptures, chanting of the Mantras or hymns, or saying of prayers. It is invoked as an auspicious salutation to the almighty Authority or to seek intercession of the divine powers in creation for the successful completion of any endeavour or enterprise.

In metaphysics, the word *OM* is a sound symbol representing the supreme reality called Brahm. Brahm is not an object that can be perceived by sense organs, nor can it be comprehended by the mind, or a thought that can be reflected upon by the intellect using its discriminatory faculty. It is beyond human comprehension—i.e. it is unknown to humankind. To understand anything which is unknown, one has to proceed from the known factors. An unknown entity cannot be explained by using other unknown factors. Of all the factors known to man, the subtlest is sound. The realm of the 'known' world consists of five elements—earth, water, fire, air and space in progressive order of subtlety. Different permutations and combinations of these five elements constitute the entire realm of factors known to man, which is called the 'creation'.

The divine word OM has four vowel sounds represented by the letters A, O, U, M. When the composite word is pronounced it appears to have only one syllable, i.e. it appears to be a monosyllable word OM, but on analysis it has these four basic Sanskrit vowel sounds. From the perspective of metaphysical analysis, it is said to have six Sanskrit syllables or letters as follows—the first is 'A' (अ) which is the 1st letter of the Sanskrit alphabets, the second is 'Oo' (उ) which is the 5th letter of the Sanskrit alphabets, the 3rd is 'Ma' (म) which is the 38th letter, the 4th letter is the half-syllable ' ' (), the 5th is the 'Anuswar' (dot •), and the 6th is the crescent shaped 'Naad' (ँ) placed on the symbol for the word OM. The final shape of the word OM is—ॐ .

These four letters of OM, viz. A, O, U and M represent the four ethereal sounds which the composite Mantra 'OM', also known as Pranav, consists of. They are like an algebraic coefficient in mathematics, establishing a link between the various holy and divine facets each of the individual units of the composite Mantra OM as represented by each of these four letters and the cosmic sound that they represent. At the same time, they act as a constant that enhances and multiplies the value and magnitude of the whole composite Mantra. Each of these letters or syllables is assigned the same ethereal, divine and spiritual importance, significance and value as that given to a complete Mantra; they form an integral part of the whole Mantra and the Mantra cannot have any value if even one of its parts is de-linked from it. It is like a complex organic chemical formula where each component is of equal value and importance as its next companion to maintain the integrity of the entire structure.

The four components of this formula are represented by the four letters that constitute OM. The first letter 'A' represents the conception of the creation; the second letter 'O' represents the development and of the cosmos; the third letter 'U' represents the expansion; and the last letter 'M', the fourth, represents the conclusion of the creation. The vowel sound of each of these letters represents the various hues of the creation as mentioned here.

Of the five elements, Space is the subtlest, and Sound is the essence of space. Sound is created only in space (for instance, the gap between our palms helps us to clap, but in a piece of wood, there is no space, hence no sound can be created). This sound is the subtlest because it can be perceived by only one sense organ, e.g. ear. It directly impinges on the mind and intellect apparatus. It is considered as the very first manifestation of the supreme truth since the un-manifest truth lies just beyond the manifested world. This being so, sound is the best and the subtlest vehicle to transport one from the 'terrestrial world of the known' to the 'transcendental world of the unknown'.

The question is why OM is selected out of all the sounds known to mankind to represent the supreme Brahman. The reason is that this single word represents the entire phenomenon of sound. It consists of three different and distinct sounds—viz. 'A' which is a throat sound, emanating from the root of the tongue; 'U' is created by rolling forward of the muscles of the tongue between the root and the lip of the mouth; and the letter 'M' is the concluding sound produced by closing of the lips. Hence all articulate sounds are aptly represented by the three letters A, U, M of the word OM. This word is a coordination of all that is indicative of life because only a living entity can speak, and not a dead entity.

OM represents, therefore, the supreme truth/reality which pervades the three states of consciousness—the waker (Viswa), the dreamer (Taijas) and the deep sleeper (Pragna) states of consciousness of the creature in the terrestrial realm of the 'known world' of the creation called microcosm as far as the creature is concerned. The same logic when extended to the cosmos results in OM representing the cosmic waker (Viraat), the cosmic dreamer (Hiranyagarbha) and cosmic deep sleeper (Eswara) aspect of macrocosm.

The silence that follows the sounding of the word OM (i.e. after closure of the lips) is called 'Amtra-OM'. This silence represents the fourth state of consciousness called Turiya which is all blissful and a transcendental reality. Since sound emanates (A), expands/progresses (U) and collapses/merges (M) back into space—it naturally follows that space existed before the very advent of sound. Hence this fourth state of consciousness represents that 'Turiya state' or the pre-sound and post-sound state of all-pervading space. This silence is bliss, serenity, placidity and tranquility.

But the most astounding thing about the cosmic silence is that it is not inert and inane because it has the capacity to generate or create sound. And anything that 'creates' must have a life infusing capability. Taking a leaf from microbiology, a cell must have a nucleus so the space must also, logically, have a nucleus. This nucleus is the Atma or the soul of the cosmos or, in other words, the macrocosmic soul (Parmatma) of the cosmos which is the counterpart of the microcosmic soul (Atma) of the Jiva.

If there were no silence, we cannot hear the sound. It is the background of the silence which enables us to hear the sound in the first place. Therefore, the word symbol OM represents the entire gamut of manifest world of plurality as well as the un-manifest world of Reality. OM, the sound, represents the former (manifest) world while the silence represents the latter (un-manifest) world. When this all embracing, all-pervading, blissful internal cosmic silence is reached, the seeker becomes one with the Supreme Reality, a state of God or self realisation.

The principle by whose mere presence the intellect thinks, the mind feels, and the body perceives, is the 'Subject', the substratum for all the experiences of the body,

mind, and intellect. This principle that lends its light to every being is the divine principle OM, or Atman (the Self), according to Vedanta.

It would be pertinent here to quote extracts from two Upanishads that define OM very succinctly. They are (a) Ram Tapini Upanishad, canto 3, verse no.5-9, and (b) Pranava Panishad which has only 13 verses dedicated to OM.

²It is to be especially noted here that delineation has been made between the hymns of the Sam Veda chanting and other types of Mantra chanting. This does not at all mean that the hymns of the Sam Veda do not qualify as Mantras. Nothing is far from the truth—in fact every hymn of any Veda is called a Mantra. The only reason to separate the hymns of Sam Veda from those belonging to other Vedas is the fact that the former are ‘sung’ melodiously like any song, while the latter are chanted in a rhythmic manner much like the staccato sound emanating from the wheels of a speeding train.

³A fire sacrifice requires four types of priests—the Brahmins who were the senior most priests representing Brahma and they invoked the Rig Veda hymns during the fire sacrifice. It was done at the beginning and in complete silence mode. If for certain reason whatsoever, the priest spoke before the silent invocation of the deities of the Rig Vedic hymns was completed, it meant breaking of a sacrosanct rule and therefore was tantamount to defilement of the ritual. The role of the other three priests (Hota, Adhvaryu and Udgata) came afterwards. But once defiled, the cycle of ritual got disrupted, which was tantamount to defiling of the whole sacrifice itself. And this was an unpardonable, horrendous sin according to the ancient tradition. What the text says is that by speaking during the silent mode, a Brahmin priest has caused a virtual fracture in the whole setup or has disrupted its continuity, though he might resume his silent meditation mode after speaking and breaking the silence once. But the damage has already been done. The minor disruption or fracture will affect the entire structure of the fire sacrifice of invocation of the sacred hymns according to prescribed method though the other three priests have not committed any offence.

A fire sacrifice or Yagya is performed to clean the environment because the various herbs that are put in the fire as offerings produce smoke and scent which has numerous antibacterial, antifungal properties. The fumes emanating from the fire pit clears the atmosphere around the site of the fire sacrifice even as chimneys spewing toxic gases from a factory can potentially damage and pollute the atmosphere. The wind carries the fume or smoke from the fire sacrifice to every direction, thereby cleaning the atmosphere of its impurity. Hence, it is likened to the Yagya itself.

The four types of Priests who preside over an elaborate fire sacrifice are known as Ritwijs. (i) Hota—he is the priest who offers oblation to the sacred fire; he uses the hymns of the Rig Veda; (ii) Adhvaryu—this is the priest who chants the hymns of the Yajur Veda; (iii) Udgata—he is the priest who sings the hymns of the Sam Veda; and (iv) Brahma—he is the head and elder class of priest who is a representative of Brahma the creator; he uses the hymns of the Atharva Veda.

Each of these chief priests has a hierarchy of assistants or juniors who would help them in the performance of the elaborate rituals associated with a fire sacrifice. Depending upon their position in this strictly hierarchical setup, the donation received during a fire sacrifice was also divided between them.

There were four categories of priests called Ritwij who participated in a fire sacrifice. (a) The first category consists of the chief priests such as Hota, Adhvaryu, Brahma and Udgata. They were entitled to the largest portion of donation, and if the cows were to be donated, they had the largest share. (b) The second category of priests were junior to them, and they were called Prastotaa, Pratiprasthaataa, Brahmanaanchasi and Maitraa-varun. They worked under the chief priests in that order respectively. Their share of donation was half of what was given to the chief priests. (c) The third category of priests were called Achaawaak, Neshtaa, Aagnidhra and Pratihartaa respectively. They were junior to the second category and their share

of donation was one-third of what the chief priests got. (d) And finally, the fourth category, i.e. the lowest helpers or the junior most priests who were probably only apprentices were also four types who worked under the instructions of the third category. They were called respectively Graavastut, Unneta, Pota and Subrahmanya. Their share of donation was equivalent to one-fourth of what the chief priests got.

Valli 1, Anuvak 9

1. [This Valli describes the different auspicious deeds or activities—the so-called Triad of Auspicious Deeds—that forms the essential pillars of religion and spiritualism, and that support an aspirant's religious endeavours. They must be systematically, honestly and diligently adhered to. They are like the sacrosanct codes of conduct collected in a compendium of hymns called the 'Sanhita' which lay down the principal sacraments, rules and regulations as well as duties of any spiritual aspirant and act like a reference guide for such purposes.]

A spiritual aspirants should painstakingly undertake to dutifully and diligently follow the three essential tenets or Triad that form the pillars of religion—viz. 'Rit' (ascertaining of the fundamental truth as determined by the scriptures and having firm and steady conviction and faith in them), 'Swaadhyaaye' (self study of the scriptures with deep thought and paying attention to their profound meaning), and 'Pravachan' (preaching and teaching about what one has learnt himself for the benefit of others who are less privileged)¹.

Similarly, spiritual aspirants should undertake to diligently and dutifully follow the next three essential tenets or Triad that form the pillars of religion. The next tier consists of 'Satya' (or speaking the 'truth' and nothing but the truth), 'Swaadhyaaye' and 'Pravachan' respectively². [This means that one should first decide that he will seek the 'truth' and nothing but the truth. He should then endeavour to find out what that 'truth' is by studying the scriptures. Finally, having determined it, he should preach about this 'truth' or Satya.]

The third set of tenets or Triad to be strictly and dutifully adhered to by spiritual aspirants consists of the principles of 'Dam' (restraint over the sense organs), 'Swaadhyaaye' and 'Pravachan' respectively. [Like in the previous case of Satya, the aspirant should first decide that he would observe restraint, study the scriptures to find out what it consists of, and then preach the profound principles of Sham.]

The fourth set of tenets or Triad to be strictly and dutifully observed by spiritual aspirants consists of the principles of 'Sham' (restraint over the mind), 'Swaadhyaaye' and 'Pravachan' respectively³. [The same interpretation applies here as well.]

The fifth set of tenets or Triad to be strictly and dutifully followed by spiritual aspirants consists of the worshipping of the sacred 'Fire' (by means of the fire sacrifice or even in a symbolic manner by worshipping it in the elements or even in one's Pran) along with the other two principles of 'Swaadhyaaye' and 'Pravachan' as described previously⁴.

The sixth set of religious sacraments that are to be dutifully observed by an aspirant consists of the Triad of 'Agnihotra'⁵ (offering oblations to the holy fire by doing a fire sacrifice daily) as well as the other two principles of 'Swaadhyaaye' and 'Pravachan' as described previously.

The seventh set of three religious duties that form the next Triad which are ordained to be strictly and dutifully followed by spiritual aspirants consists of 'Atithi'⁶

(i.e. to respectfully welcome a guest and serve him) besides following the previously mentioned two tenets of 'Swaadhyaaye' and 'Pravachan'.

The eight set of three religious duties that form the next Triad which are ordained to be strictly and dutifully followed by spiritual aspirants consists of 'Manush'⁷ (i.e. the duties that one should do as a human being which are according to established tradition and practice) besides following the previously mentioned two tenets of 'Swaadhyaaye' and 'Pravachan'. [That is, one should first decide that he will lead a noble and righteous life, a life marked by the highest standards of morality and probity which would act as exemplary benchmark for others to emulate. Then he should study the scriptures to find out the details about it. And finally, he should preach about these profound tenets for the benefit of others.]

The ninth set of three religious duties that form the next Triad which are ordained to be strictly and dutifully followed by spiritual aspirants consists of the three aspects of procreation—viz. 'Prajaa' (i.e. the offspring and providing for their worldly comfort and wellbeing, besides being kind and magnanimous towards all others in this world and treating them as one's own children), the 'Prajanan' (the physical process of procreation) and 'Prajati' (kith and kin; grand children and their offspring) besides following the previously mentioned two tenets of 'Swaadhyaaye' and 'Pravachan'⁸. [A man should first learn how to raise a noble family and how to inculcate auspicious values in its members. This individual family symbolises the large creation in microcosm. This is possible by studying the relevant scriptures. Once the details are known, they should be painstakingly implemented in practice and taught to others.]

Sage Satyavacha (literally meaning one who speaks only the truth), the son of sage Rathithar, solemnly affirms and firmly believes that 'Satya' or Truth is the only entity which is worthy of pursuance and worship. Truth is the only eclectic and divine virtue, with all its connotations, that is to be revered and honoured.

Sage Taponitya (literally meaning one who does regular Tapa and is devoted to their principles), the son of sage Purushistha, solemnly affirms and firmly believes that 'Tapa'—i.e. observing the rigid tenets of austerity, doing penance, upholding the principles of noble and virtuous life, and suffering hardships for a noble and auspicious cause—is to be honoured and praised as the best tenet and virtue. It is to be regarded as the holy sacrament to be diligently and devotionally observed by the aspirant.

Sage Naak, the son of sage Mudgal, solemnly affirms and firmly believes that 'Swadhyaye' and 'Pravachan' are the sacrosanct duties of all spiritual aspirants. They must spend their time and energy in study of the different scriptures, distil the vast treasury of knowledge they contain, arrive at the correct deduction regarding their fundamental principles without any distortions, determine the Truth hidden in them and then put into practice what they have studied. He is of the firm conviction that study of the scriptures, delving into their truth, and then spreading the good word through the medium of discourses is the best thing to do. In his considered view, this is the real Tapa; this is indeed the Tapa according to him (1).

[Note—¹The Triad mentioned here is basically aimed at acquiring knowledge, and this knowledge is about the ultimate profound Truth in creation. This can be done either by self study or *Swaadhyaaye*, by hearing about it from those who are well versed in the subject or by hearing discourses, and this naturally involves giving religious lectures called Pravachan. The main aim of course should not simply be the acquisition of any knowledge but to have correct and truthful knowledge which is auspicious and conducive to the spiritual welfare and growth of the individual. This is called Rit—i.e. arrival at the truthful meaning of what is studied and heard, and then

benefiting from this knowledge. Incidentally, this has a far reaching implication because once a man understands the 'true' meaning of what the scriptures say then this world for which he has sacrificed his whole life becomes redundant and meaningless. What remains is the ethereal peace of the 'truthful eternal Self' sans all delusions and deceptions pertaining to this mortal existence.

A short note on *Pravachan* would not be out of place here. *Pravachan* literally refers to giving a discourse on any religious theme. But in terms of this verse, it includes preaching, teaching as well as open discussions on the subject matter. This approach is beneficial to the teacher as well as to the disciple because on the one hand when one teaches his conceptions become more clearer and well defined, and on the other hand it benefits the disciple as he can properly understand the intricacies involved in the concepts which might elude him if he tries to decipher the meaning all by himself. *Pravachan* also helps to spread the good word far and wide, benefiting even those who are not so privileged enough to study the scriptures themselves. But to make this process an effective tool for knowledge dissemination and removal of doubts and confusions, it is essential that it is a two-way process of questions and answers as well as open discussions on the subject without any prejudice of any kind.

²This is an extension of what has been said above. One should preach only what is the truth and not say anything to please the audience. Similarly, one should hear only the truth and not false doctrines. The meaning of what one studies should also be the correct and truthful meaning and not to suit one's whims and fancies.

³The principles of *Dam* and *Sham* form the basis of Yoga philosophy. It is obvious that without restraining the natural wayward tendencies of the sense organs and the mind, no one would be able to achieve any lasting success in any endeavour, whether it pertains to the mundane world or to the spiritual world. This two stanzas teach about the importance of disciplining the body by restraining its sense organs along with training the mind to learn to be focused and attentive so that the man can properly concentrate on what is being studied, remember what is learnt, intelligently apply his knowledge into practice, coherently and cogently speak when he teaches or preaches to others (because a preacher has to be very articulate and have a sharp memory), and to grasp what is being taught or preached. Thus, the utility and validity of 'Dam' and 'Sham' cannot be under estimated.

⁴The sacred *Fire* is the most holy and pure entity in creation. It is assigned the status of a God precisely for this reason—it is holy, incorruptible, auspicious and purifying. When one worships the Fire with this erudition, the worshipped deity, i.e. the Fire God blesses the worshipper with these virtues of holiness, incorruptibility, auspiciousness and purity.

⁵The offerings that are made to the holy fire during *Agnihotra* are actually meant for the Gods who symbolise all the divine and pure qualities and virtues in creation. It is done to honour such virtues and to remind the worshipper to inculcate them in his personal life to make it worthwhile and gradually enhance its positive values and slowly eliminate the negative ones. It is done daily because even as a man needs food for his sustenance on a daily basis, the exalted Gods too need these offerings to sustain them on a daily basis.

Besides this point, since it is mandatory to repeat Mantras during fire sacrifices, this edict ensures that one does not forget the learnt Mantras, as daily repetition ensures this does not happen. There is a psychological aspect also—when one does the fire sacrifice daily, one is constantly reminded that he is a religious man and should not do anything considered unholy or inauspicious that is detrimental to his religious pursuits.

⁶This stanza establishes the religiously sanctioned and ordained necessity of welcoming the *guest* warmly and serving him as if he were the Lord God himself visiting the household. This is why India is famous for its warmth of hospitality. When the other two duties are added to it, the meaning becomes great—the incoming guest is not only to be treated with food and material comfort but the opportunity

should be exploited to study the scriptures and discuss their finer points. In this regard, this visit would become a holy mission in the enhancement of knowledge.

⁷The duties that are ordained to be done by all people are determined by the Varnas (class of society to which the man belongs, as well as the Ashrams (the phase of life to which he belongs). Let us have a brief over-view of these strictures.

(a) The four *Varnas*—The Hindu society has been divided into four sections or classes by ancient sages to regulate its functioning by delegation of authority and clearly specifying the jobs each section is supposed to do to maintain order and system in the world, to prevent overlapping of functions and avoid anarchy and chaos. These four sections are— (a) Brahmins¹—the learned and teaching class; a wise one well-versed in the knowledge of the ultimate Truth about the supernatural Being called Brahm. They also presided over religious functions as priests, because these functions were central to life in the Vedic period; (b) Kshatriyas—they were the warrior, fighting, kingly class. They were assigned the job of giving protection to the society, dispensing justice and maintaining general law and order. (c) Vaishyas—they were the trading and farming class responsible for commerce and wealth generation. They provided for the necessities for a comfortable life. And finally (d) the Shudras—the service class of people whose main function was to free the other three classes from the humdrums of daily chores and concentrate their energies to the particular jobs assigned to those classes to which they belonged.

¹The salient features of Brahmins are the following—they should possess these noble qualities—(1) 'Riju'-be expert in the Rig and the Yajur Vedas, (2) 'Tapa'-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) 'Santosh'-be contented and satisfied, (4) 'Kshamaa'-to be forgiving and tolerant, (5) 'Sheel'-to have such virtues as good character, dignity, decorum and virtuousness, (6) 'Jitendriya'-to have self control over the sense organs, (7) 'Data'-to be a giver, one who sacrifices his own interests for the benefit of others, (8) 'Gyani'-one who is well learned, wise, enlightened and erudite, (9) 'Dayaalu'-to be merciful and compassionate. [Shatpath Brahmin.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject.

These four classes of the human race were created from the single father, the Viraat or Brahma. Their origins are indicative of the different jobs that they were assigned so as to enable the creator perform the task of governance just like a king assigns separate jobs to his different ministers. But it must be clearly understood here that each class of the human race was like a part of the body of the Supreme Being, and even as a man feels disfigured and handicapped as well as feels the pain equally if his leg is cut off from the rest of his body as he feels when his arm or head is severed, the Lord feels betrayed and hurt when even one of his sons is subjected to humiliation and pain. The four classes had specific jobs cut for them so that the society could function smoothly.

The Brahmins have their origin from the mouth of Brahma the creator. Since the mouth is used to give advice and teach others, the primary job of the Brahmins was to act as moral guide to their brethren. The four Vedas, which are repository of all knowledge that exist, were also created from the mouth of Brahma; hence these Brahmins were considered most wise and learned. The arms are metaphors for strength and powers; they are used to protect and help others. Hence, the Kshatriyas, who were created from the arms of Brahma, were those sons of his who would give the needed protection and security to their other brethren. In order to feed his creation, Brahma had to toil and labour to provide for the maintenance and financial and material wellbeing of the society for merely teaching and protecting would not suffice without some one to take care of the other necessities of life. So he created the Vaishyas from his thighs, symbolising labour, to pick up the mantle of mundane affairs of life. But there must be someone who would do the daily chores, such as

tilling the fields, doing the harvesting, washing and cleaning, and all other such odd jobs. This was assigned to the Shudras created from Brahma's feet symbolising service.

None of these classes were meant to be inferior or superior to one another; they were all parts of the body of the same Brahma. In fact, the leg bears the burden of the body; just imagine what would have happened if Brahma had not created anyone from his legs? How would the Brahmin walk, how would the Kshatriya fight, and how would the Vaishya do his commercial activities if he could not walk? Similar arguments can be applied to other classes. See also Brihad Aranyak Upanishad, 1/4/11-15, and Aitereyo-panishad, 1/1/4.

(b) The four *Ashrams*—The life of a Hindu man is divided into four segments or Ashrams—(a) Brahmacharya—this is the 1st phase of life in which a person studies the scriptures under the tutelage of a wise teacher. This phase of life is marked by austerities, keeping of vows, observing celibacy, abstinence and continence as well as leading a regimental life style, (b) Grihasta—when a person has studied and prepared himself to face the world, he comes back to his house and enters the 2nd phase called Grihasta Ashram which is a householder life. He marries, raises a family, produces wealth and helps to carry forward the cycle of creation. This is the most important and enjoyable phase as well as the most tough one because on the one hand there are the comforts and pleasure of the world to be enjoyed, and on the other hand there are the various tribulations and miseries of a family life and dealings with this deceptive world with all their accompanying horrifying problems, (c) Vanprastha—this is the 3rd phase when a man hands over the responsibilities of the world to his heirs and renounces his attachments to the house as well as the world, and heads for the forest, leaving the home for his next generation. It is now that he goes on pilgrimage and prepares for the final stage of his life, and (d) Sanyas—this is the 4th and last stage of life when there is complete cutting off of all the ties with the world, spending time in contemplation and meditation, living a life of total renunciation and begging for food, and single mindedly aiming for emancipation and salvation. This phase of Sanyas also has many stages depending upon the spiritual elevation and accomplishments of the aspirant, viz. Kutichak, Bahudak, Hansa, Paramhans, Turiyatit and Avadhut.

These four Ashrams, their characteristic features and virtues are described in detail in an Upanishad called 'Ashramo-panishad' belonging to the Atharva Veda tradition.

⁸The three components in the process of propagation of creation as envisioned by the supreme creator are the physical activity of procreation called *Prajanan*, the result of this activity which is the creation of children called *Praja*, and to have grand children and a large community of kith and kin called *Prajaati* symbolising the continuity of this process in the future.

The word Praja literally means the subjects of a king. Here it means that one should raise a family as one of his religiously sanctioned duty during his second phase of life as a householder, and then amply provide for it. This is considered a 'religious duty' because it is by this means one is contributing according to his ability to the divine mandate of the supreme creator Brahm who had initiated this creation and instituted this process of procreation to ensure that once he has set the ball rolling it would continue to roll in a perpetual manner all by itself. A man should not regard procreation as a sinful act or something that is to be done with a guilty conscious, but as a sacred contribution and with the same piety as one does a fire sacrifice.

As has been mentioned above in this note, the person should treat the entire creation as the subject of the supreme Lord, and himself as a representative of that Lord. So he must treat all with equal respect and with great equanimity. One should therefore inculcate the divine kingly virtues of compassion, mercy, benevolence and magnanimity.

The creator of this world, i.e. Brahma, is called 'Prajapati' or the one Lord who is responsible for the welfare of all the subjects of this vast creation without having any distinction between them. The fact that one creature suffers and the other does not is none of Brahma's faults but that of the creature itself because it goes berserk and does not follow the sanctioned paths as laid down in the different Upanishads, especially highlighted in this Valli in a very specific manner, and therefore has to undergo the consequences for its actions. The reason is that this world is characterised by the theory of action and reward, and what one does he is bound to enjoy or suffer from its results.

The notable point here as is in all the other stanzas is fact that the second component of Swaadhyaye and Pravachan are common to all of them. In the present context, it implies that even while the person is involved in this process of meeting his worldly obligations, he must not forget to continue with his spiritual aim of self study and listening to religious discourses in order to focus his mind on greater sights and remain free from delusions and ignorance-based conceptions about this world. This is to ensure that inspite of seemingly being engrossed in mundane matters of the perishable and transient world marked by falsehood and deceit, the aspirant remains clean and above its pollutions and hallucinations. Constant study of the scriptures, contemplation on what is the real truth amidst the dense forest of deceits and delusions, and meditation upon the Truth and the pure conscious Self ensures that the aspirant never loses his track and keeps the main object of life and its divine goal in sight while going about his daily chores. In fact, Swaadhyaye and Pravachan act like reins to keep the horse under control so that the chariot of life can reach its destination safely and in one piece!]

Valli 1, Anuvak 10

1. [This Valli describes the extreme exultation and profound ecstasy expressed by a self-realised man who has realised the ultimate Truth about his 'self' which is Absolute, pure Consciousness and the universal Brahm personified.]

'I am the one who (in my original and primary form as the transcendental Supreme Being) has initiated the process that resulted in the creation of this vast and colossus world resembling a huge tree¹.

My auspicious fame and divine glory is as majestic and exalted as the high summit of a huge mountain. I am like a citadel of purity and auspiciousness at its best.

Just like the Sun possessing the glorious virtue of being the cause of production of all food in this world, let me also be a fount of all divine virtues that are auspicious, pure and holy².

I possess the divine asset of self-realisation and am an embodiment of the pure conscious truthful Soul of creation in the form of my Atma.

I possess the best of intelligence and mental qualities marked by auspiciousness and truthfulness.

I am an embodiment of Amrit, i.e. the elixir that provides eternity and everlasting beatitude and felicity.

I am imperishable and immortal (being the pure conscious Atma which has these virtues as its basic and integral quality).

I am faultless and immaculate, uncorrupt and untarnished.

I am indeed completely soaked and infused in Amrit which is the divine ambrosia of eternity and bliss'.

This is what the great sage named Trishanku has firmly asserted and solemnly affirmed. His assertion and affirmation is in accordance with the teaching and proclamations of the Vedas. [In other words, what this sage said was the essence of the teaching of the scriptures and not something he cooked up himself to get himself praised) (1).

[Note—¹Refer *Kathopanishad* of Krishna Yajur Veda tradition, Canto 2, Valli 3, verse no.1, this entire creation is like a tree. *Rudra Hridaya Upanishad* of Krishna Yajur Veda in its verse no. 41 describes that the body of the creature is like a tree where two birds live, one bird representing the Jiva (the living creature who thinks that the body is its true self) and the other is Ishwar (the conscience that inherently lives in each individual). The latter represents the voice of Brahm. The *Brihad Aranyaka Upanishad* of the Shukla Yajur Veda tradition, in its Canto 3, Brahmin 9, verse no. 28 compares the living being with a tree and describes the difference between the inanimate world and the animate world, i.e. the world which does not have an Atma and the world which has an Atma.

²The *Sun* is the harbinger and sustainer of life in this world because no food production in the form of crops and vegetation is possible without the sunlight. The Sun provides the much needed light, heat and energy that literally power the engine of this creation. This virtue of the Sun to sustain and protect life forms makes it a metaphor for life itself and its majestic potentials. The Sun has been burning since the beginning of creation and it would supposedly last till the last day, making it virtually everlasting vis-à-vis the life of an individual creature. So it is a de-facto eternal and imperishable pitcher of life. The aspirant therefore prays that he should too shine like the brilliant Sun, he too shall have all the glorious virtues and divine splendour and radiance exhibited by the Sun, and he too shall be blessed with the auspicious ability of providing sustenance and giving protection to his dependants like the magnanimous and benevolent Sun.

The Sanskrit word for Sun is *Surya*. The word *Surya* has three connotations—viz. (i) *Sarta-ha*—one who moves like the wind or the cloud. This refers to the Sun because it moves constantly across the sky. It also refers to the supreme cosmic Consciousness that makes all movement possible. (ii) *Svikriti-ha*—this means one who receives and accepts. This virtue refers to the fact that all offerings offered to the fire sacrifice are done in the presence of the Sun, and since the latter is the celestial cauldron of fire all the offerings are deemed to be offered to it. In another plane, it refers to the Jiva, the living being, who receives stimuli from the world and then accepts them and deduces that the world from where they originate is real and true. (iii) *Shuvrate* and *Savita*—meaning one who shines brilliantly. This is very obvious in the case of the Sun. This virtue refers to the supreme Self or the supreme Consciousness that is self-illuminated and self-effulgent.]

Valli 1, Anuvak 11

[This Valli describes the final advice given to the disciples by the teacher during the valedictory speech when they have completed their formal education in the scriptures and are preparing to leave the hermitage and prepare to face the harsh realities and turmoil of the world.]

1. The teacher gives the following advice to the disciples at the end of their education—‘Speak the truth. Be firm and steady in following the path of righteousness and auspiciousness, the path of probity and propriety, the path of

nobility and greatness. Don't be lazy, careless, negligent and deceitful while pursuing the principles of Swadhyaye (self study of the scriptures on a continuous basis even after leaving the hermitage).

Pay your dues to your teacher (i.e. even after you have left the hermitage, you should continue visiting the teacher and feel indebted to him; you should set aside some portion of your earnings for the purpose of donating it to the hermitage of your teacher, or your Alma Mater, so that others like you, but who are less privileged, can benefit by your charity and endowments).

Do not violate the tradition of righteous and noble way of procreation. Be honest and steadfast in maintaining the sanctity and holiness of the institution of marriage and propagating creation. [That is, be honest and loyal to your wife and family, and strive to keep them happy and well provided for. Ensure that they your offspring develop noble virtues in them right from their cradle and live up to the high standards of morality and ethical ways right up to their last breath.]

One should never divert from the Truth, never be negligent or careless in pursuance of the Truth, and never be compromising on the principles of Truthfulness (i.e. one should never lie under any circumstance, never be deceitful and crafty, and never follow the path of falsehoods and delusions. This is an inviolable principle that must be strictly adhered to in life.

One should never sway away from the path of Dharma (i.e. one should be steady and unwavering in following the path of auspiciousness, righteousness, probity, propriety, nobility and truthfulness). One should not commit any mistake in this direction.

One should never be careless or negligent towards doing auspicious and righteous deeds that give one great fame and help to establish his good name. There should not be errors on this count.

One should never be careless and negligent towards Swaadhyaye (self study of the scriptures on a continuous basis) and Pravachan (giving and hearing religious discourses, lectures and the like, along with discussions and consultations to seek clarifications on each matter which comes up and which requires understanding and further clarifications) (1).

[Note—This stanza implies that one should continue to study even after leaving the hermitage of the teacher because education is a life-long process. One must continue to imbibe more knowledge and learn from even the most innocuous events and things that one comes across one's life during its progress in time. He must keep himself abreast of the latest developments in his field of expertise in order to keep himself updated. But at the same time he must selflessly share his knowledge, wisdom and experience with others so that the society as a whole benefits from them. In this endeavour, they would truly personify the sun which gives light to the whole world selflessly irrespective of the fact whether the creature offers the Sun his respects or not. The light of knowledge and wisdom which the learned man gives to the world should be equally marked by magnanimity and equanimity. This selfless attitude of his would help remove the darkness of ignorance and delusions of even those who are not directly approached by him. What more noble deed can he do; what more charity can he make?

The idea that one should not restrict himself to imbibing knowledge only when he is a student but make his entire life a learning experience and a school classroom is best exemplified by sage Dattatreya who had made twenty four Gurus or teachers. The remarkable thing is that none of these twenty four Gurus was a human being—he learnt even from animals (elephant, deer), birds (pigeon, hawk), reptiles (snake, worm), insects (moth, bee, spider), the moon and the sun, a child, a girl etc. This is a very interesting episode, and is being briefly summarized here.

The following are the twenty four teachers and what Dattatreya learnt from them.

(1) Earth—the earth sustain all sorts of life and nourishes each creature, even those who virtually eat into her bosom by mercilessly and ruthlessly exploit her and dig into the bowels for his vested self interests. (2) Air—the wind moves everywhere, visits all kinds of places but never gets attached to any place or thing. It purifies everything and gives life to all without any discrimination on the basis of gender, caste, race, creed etc. It gives life to a friend as much as it gives life to one's enemy. (3) Sky or Akash—the space of the sky accommodates everything and everyone. This taught him to accept and accommodate all in life but remain uninvolved in or unattached with them just like the sky which harbours uncountable things in its bosom but remains totally indifferent to them and unaffected by them. (4) Water—it is refreshing and cool and nourishing. No life is possible without water, and it is regarded as the only universal elixir of life. This taught him to sustain all and be soothing and refreshing for all the creatures. (5) Fire—it gives light, heat and energy. It is upwardly mobile—as is evident from the direction the flame of a raging fire takes. It is all-purifying on the one hand, and burns to ashes whatever impurity is put in it on the other hand. This taught him to welcome everything like the fire but purify them before finally accepting anything, and reduce to ashes all that is impure and tainting for the purity of the Atma. (6) Moon—it appears to wax and wane but really it remains the same. This taught him the fact that the world and the body undergo innumerable changes but the true 'self' remains uniform and immutable. (7) Sun—it is the 'eye' of the world and gives the latter light, heat and energy in a selfless and unbiased manner. The sun illuminates all but does not need anything to illuminate it and neither does it get tainted by the thing it illuminates. This taught him to illuminate the world and removes its darkness of ignorance by the light of knowledge and wisdom while remaining immune to the darkening effects of this world. (8) Pigeon—this is the typical story of a householder's life. The parent pigeons went out in search of food for their young one day when a bird-catcher spread his nets and caught the offspring. When the parents return, the mother pigeon saw the plight of the young one and jumped into the net. Then the male pigeon too jumps into the net because he cannot live without the family. The bird-catcher was overjoyed. This taught him that worldly attachments lead to ruin and downfall. (9) Python—it stays at one place and swallows any creature that happens to pass that way. He would not forage for food but wait for it to come to him. This taught him to be contented with what comes his way. (10) Ocean—it never overflows when rivers flow into it continuously. It remains contented, calm, un-wanting, fathomless, steady and endless. These are grand virtues that a wise man should inculcate. (11) Moth—it gets attracted to the fire and gets caught and burnt. This taught him not to be caught by the beauty and charm of colour and form of this artificial world. (12) Honey Bee—it collects nectar from numerous flowers and converts them into one homogenous honey. This taught him to imbibe knowledge from whatever source available. A mendicant should also collect a little bit of food from different household instead of relying on one house. (13) Elephant—it is notorious for the sense of touch. During the mating season they rub against each other. This weakness is exploited by hunters to catch them. This weakness taught the sage that he should be wary of the pleasure obtained by touching sensual things in this world. (14) Honey Gatherer—he stealthily takes away all the honey collected by the honey-bee assiduously over a long period of time involving immense labour. This taught him two things—it is useless to hoard things as one day death would snatch everything away, and second it is futile to hoard without sharing things with others because one day they are bound to be snatched from us. (15) Deer—it is by nature attracted to music, a weakness exploited by the hunter to trap it. So, one should be wary of pleasant and sweet sounds emanating from this world because poison is more often than not laced with sugar. (16) Fish—it is attracted to the hook and got caught due to its desire to eat the bait. So, the fish taught him to have control over the taste buds of his tongue. (17) Pingala—she was a prostitute.

One day the saint, during his wanderings, came to take rest under the tree on a street where she lived. He watched her eagerly waiting for a customer who never turned up. She finally gave up and went to sleep with the realisation that if she had spent so much time invoking the Lord present in her own bosom, she would not have to wait for him so long. This taught the saint that disappointments come to us when we expect something from this world and hope it to provide us with comfort and joy. The real happiness lies inside. (18) The Kurara Bird (a species of Hawk; an Osprey)—the bird had a small piece of flesh in its beak and other larger and stronger birds pounced on it. Distraught, the Kurara suddenly realised that the cause of its torments is the piece of meat, and so it dropped it from its beak. The other birds swooped on the meat and stopped pursuing the Kurara. This incident taught the saint that if one clings on to material things, no matter how desirable they are, they would never let him live in peace. It is better to drop them at the earliest; it is better to drop all worldly attachments and devote time to the Truth of life. (19) Child—a child becomes so engrossed in his playthings that he forgets hunger and other bodily needs. Children fight with each other during the course of playing, but soon forget everything. This taught him to remain engrossed in contemplation on the ‘self’ and play with it like the child, remaining immune to the world and even to one’s own bodily problems. A wise man must be innocent like a child—he might get angry at others but never takes anything to heart. The child plays with toys, but suddenly throws them away and wants something new. Likewise, the wise man enjoys the world but never gets hooked to it at the emotional and sentimental plane. (20) A Girl—some people had come to see the girl with a proposal for marriage. She went inside the house to prepare food for them. In the course of grinding spices her bangles clashed with each other and made a disturbing noise. She removed them one by one until one remained—then there was no noise. This taught him that when the mind is distracted by so many things, the man never finds peace. So the best way to concentrate the mind is to remove all extraneous distractions in the form of numerous paths and philosophies, and instead focus on one ultimate Truth preached by the Upanishads, the Truth that is absolute, uniform and immutable. (21) An Arrow-smith—he was so engrossed in his single pointed devotion to his work of preparing the arrows and giving them the right contours, aerodynamic shape and the sharpness to their tip that he was unaware that the king’s entourage was passing by. This taught the saint the importance of single-minded pursuit of one’s goal. (22) Snake—it never makes its own hole and lives in holes made by nature or other animals. A true saint should realise that the Atma has no body of its own but lives on borrowed bodies during its sojourn in this world. Again, the snake effortlessly leaves its dead cuticle to teach him that the Atma would similarly leave this body without any effort, pain or attachment to find a new abode for itself. (23) Spider—it creates a web from itself, moves around it and then swallows it, the supreme Lord has created this world, sustains it and finally retracts it into himself. Further, the spider creates the web and remains trapped in it much like the creature who creates this artificial world by his mind and then remains trapped in it for life. And finally (24) Worm—a wasp caught hold of a worm and kept it in a hole. The wasp kept humming around this worm that was so terrified of the wasp and continuously subjected to this humming that ultimately it became a wasp itself. Similarly, when a man concentrates upon something continuously, whether willingly or unwillingly, he would become one like the subject on which he contemplates. If he contemplates upon the world, he would become one like other mortal ignorant creatures, and if he contemplates upon the sublime and divine he would become sublime and divine himself.

An entire Upanishad of the Atharva Veda tradition is dedicated to sage Dattatreya. It is called ‘Dattatreya Upanishad’, and it is the 30th Upanishad of this Veda.]

2. One should never be careless and negligent in any work that relates to one's parents and to the Gods (such as serving them, obeying their orders, attending to their needs and paying due respect to them).

Always treat your mother, your father, your teacher and your guest with the same respect, reverence and honour that one gives to the Gods.

One should pursue only those paths and do only those deeds that are beyond reproach and cannot be regarded as deplorable or ignominious under any circumstances. [That is, one should be careful in what one does, and be on the guard on the probity and propriety, the righteousness and auspiciousness of each action and every deed done by him.]

You should always emulate us and inculcate in your own life those qualities which are deemed to be good in us (i.e. in your teachers and elders). [In other words, you should not pay heed to our shortcomings which are natural for us because we too are human beings and have our natural failings. We cannot be text book samples of perfect-ness and immaculacy for the simple reason that no human being is perfect and everyone has his own shortcomings and failings.] (2).

3. You should not pay heed to or emulate other characters other than the good ones that we have. [In other words, you should become one like the legendary Swan which picks up the pearl and discards the rest of the gems to indicate that it prefers to have the best. In essence, you should be selective and wise, using your own prudence and wisdom to pick up what is the best for you and leave the rest like unwanted dirt.]

If anyone who is better qualified and more enlightened than me comes to your place, you should offer him the same respect that you would show to me (your teacher), and give him a seat as a token of your honour for him. [In other words, you should welcome goodness and auspiciousness from any quarter, and imbibe good qualities whenever they come your way in life.]

One should give (donation, charity and alms etc.) with devotion and respect as well as keeping in mind the dignity and holiness of the institution of making charity and giving donation. Never should it be done otherwise. [In other words, one should never donate under compulsions and with regret. There should be an element of internal happiness and satisfaction, there should be enthusiasm and willingness as well as the notion that something good and noble is being done when one makes charity and gives donation. One should never exploit such charities for one's vested interests such as gain name and fame, or to undermine the self respect and dignity of the recipient.]

One should never give out of peer pressure or out of fear. One should give according to one's means and with the greatest of humility and submissiveness. [That is, one should not donate beyond one's financial means, and the entire process has to be done courteously and with greatest of humility. There should be no fear of being treated as stingy and miserly if one does not give and thereby face the ire or rebuke of the society. Giving under duress of any kind is counter-productive.]

One should give or contribute with the eclectic idea of universal brotherhood. [That is, one should give with the conviction that he should share what he has with his other less fortunate brothers. This is because all are children of one universal Lord, and the more privileged sibling has his moral duty as well as responsibility to support his less privileged ones along with other such kith and kin.]

In case you are in doubt on any subject or indecisive about what to do and confused about any code of conduct, i.e. when in your life you face any moral dilemma----(3).

4. ---Then in that circumstance, you should follow the advice given by any wise, erudite, diligent, dutiful, simple hearted, honest and self-motivated Brahmin (or any elder person) who is a faithful follower of the path of Dharma (auspiciousness, righteousness, probity and propriety) himself. [In other words, in the long journey of life, you would come across problems which would leave you confounded and perplexed. You might then find that you are not aware of the solution of that particular vexing problem. Under such conditions, you should seek guidance of some learned and wise man available at the place itself instead of rushing to me to seek advice.]

If you come across someone in high position whose deeds and actions, whose behaviour and words etc. put you in confusion as to what is right and what is not, then under such conditions of moral dilemma you would do good by consulting some wise man who has wisdom and erudition, who is self disciplined and righteous in his deeds and words, who has simplicity of heart and no deceit in him, and who is neutral, unbiased and selfless while giving advise to you. You should then follow his advice.

This is the final advice I am giving to you. The principles I have mentioned above in this Valli should be the guiding principles for you in life. These are the principle codes enunciated by the Vedas, and they are their principle teaching and tenets. You should follow them faithfully, and you should inculcate these values and virtues in your practical life (4).

Valli 1, Anuvak 12

[This Anuvak no. 12 is similar to Anuvak no. 1 which was an introductory prayer said at the time of investiture ceremony when the new disciple was inducted into the discipline. When he finally concludes his formal education and prepares to leave, the prayer is repeated during the valedictory function.]

1. OM salutations! Let the God known as Mitra be benevolent and munificent upon us. Let him bestow us with great auspiciousness and welfare.

Let Varun God be benevolent and a provider of happiness and peace to us.

Let Aryama God be benevolent and a provider of happiness and peace to us.

Let Indra be benevolent and a provider of happiness and peace to us.

Let Brihaspati be benevolent and a provider of happiness and peace to us.

Let Vishnu whose steps are very huge and measureless be benevolent and a provider of happiness and peace to us.

We salute and pay our obeisance to the supreme transcendental Brahm.

Oh Vayu, the Wind God! We salute and pay our obeisance to you as you are a manifestation of the supreme Brahm. It is indeed you who is known as Brahm; you personify the glories and the grand virtues of Brahm.

You are also called Rit and Satya. [The word 'Rit' means righteousness, while 'Satya' means truth. Hence, Brahm is an embodiment of righteousness and truth.]

Let that sublime and supreme Brahm (who is personified by the above divine entities) protect me.

Let that sublime and supreme Brahm protect my teacher.

Let that Brahm protect both of us.

OM salutations! Let all our (i.e. the disciple's and the teacher's) torments be calmed down and be dispelled. Let all our torments be calmed down and be dispelled. Let all our torments be calmed down and be dispelled (1).

[Note—Refer Valli 1, Anuvak 1 for details.]

Valli 2—Brahmanand Valli

[As the name suggests, this Valli is dedicated to the eternal bliss and happiness obtained by the spiritual aspirant from Brahm-realisation. It has nine Anuvaks.]

Valli 2, Anuvak 1

[This Anuvak briefly describes the eclectic spiritual rewards that come to the spiritual aspirant from Brahm realisation. It goes on to describe the genesis of creation.]

1. OM salutations! It has been declared in the scriptures that one who is well versed in the truth about the supreme transcendental Brahm is deemed to have attained a spiritual stature which is supreme and synonymous with the ultimate Absolute Truth of creation known as the Parmatma who is the supreme cosmic Soul of the entire creation. This Absolute Truth is Brahm.

That Brahm, which is the target of all spiritual endeavours and the teaching of the scriptures, is the ultimate and irrefutable Truth of creation. It is an embodiment of Gyan (eclectic, eternal and truthful knowledge), and it is known as Anant (because it is without an end).

A wise, erudite and enlightened Brahmin (i.e. any learned person who is acquainted with the knowledge pertaining to the supreme Truth and absolute Reality of creation known as Brahm) is one who understands that this esoteric, enigmatic and mysterious supreme transcendental entity known as 'Brahm' uniformly pervades and is universally present throughout the space of the sky in an invisible form. The same Brahm also lives ensconced secretly in the cave-like sequestered chambers of the heart of the spiritual aspirant¹. [That is, Brahm has a macrocosmic presence as the vast and fathomless sky, and at the same time it is present in an atomic form in the subtle space of the heart of the creature as his Atma at the microcosmic level.]

Now the sequence of creation is being narrated. Verily, it is from this conscious element known as the cosmic Atma that emerged the 'Akash' (sky or space element) in the beginning of the visible creation. [The sky is the subtlest amongst the five gross elements in creation which formed its building blocks.]

From the Akash came into being the 'Vayu' (wind or air element). From the Vayu came into being the 'Agni' (fire element and energy). From the Agni came into being the 'Apaha' (water element). From the Apaha came into being the 'Prithivi' (earth element). From the Prithivi came into being the 'Aushadhi' (the different herbs and medicinal plants). From the Aushadhi came into being the 'Anna' (food in the form of crops and flesh). And finally from the Anna came into being the 'Purush' (literally the 'man' but implying the entire living world)².

Since the body of a man has been formed or crafted from the essential juices in the form of nourishment extracted from food of all hues, it is said to be a visible

manifestation moulded out of Anna (food) and Rasa (juice or extract of herbs or plants)³.

The 'head' of the living creature (e.g. the man) is therefore the head of that divine Being, the 'right' hand or side of the creature is the right hand or side of the divine Being, and the 'left' hand or side of the creature is the left hand or side of the divine Being. The 'middle' area (i.e. the chest where the heart is located) is the symbolic abode of the Atma or soul. And the lower end or tail end or the hind part of the body represented by the 'legs' (i.e. the part of the body below the navel up to the feet) helps it to be established or stand on the ground. Hence, it is called its 'Pratistha', i.e. which aids in establishing the creature and helps him to acquire fame, glory, majesty and reputation along with the erudition and wisdom to obtain his objective in life^{4**}.

Verily, it is for this purpose that this verse has been narrated (1).

[Note--¹At the cosmic level, this 'sky' is a metaphor for the vastness and all-inclusiveness of the supreme Brahm which encompasses everything that exists in the entire creation, while at the microcosmic level of the individual creature this Brahm is located in the secret cavern-like heart in the form of the pure consciousness or Atma. This secret and most enigmatic esoteric supreme entity can be known only through the application of the subtle mind as the latter has the potentials of penetrating deep inside the surface and peeping into the realm of the sub-conscious to unravel the secret of Brahm. The gross organs of the body are totally incompetent to perceive Brahm.

When the wise and enlightened person realises, with due application of his subtle mind and intellect, that he is a microcosmic embodiment of the macrocosmic, all-pervading and all-encompassing supreme transcendental Truth and pure consciousness in creation known as Brahm, and that his true identity is not his gross body but his pure conscious Atma which is the only truth in his body and which is synonymous with Brahm, then this person begins to see the creation from a wider and broader perspective which comes with wisdom and knowledge and which is absolutely different from the selfish view that is seen with the physical organ of sight known as the eyes of the body. Such a man realises, as a result of deep study of the scriptures and self realisation, that his Atma is the same as the Atma residing in the heart of all the creatures of creation. And therefore, the pain and suffering as well as the happiness and joys of others are also his own.

To draw another parallel, the enlightened man can be compared to the Sun because even as the Sun is bright and splendorous in the sky from where it removes all darkness from all the remote corners of the world, the wisdom and erudition of an enlightened and realised man is able to dispel all the darkness of ignorance that might engulf him, thereby lighting up the eternal Truth for him. With this light of realisation of the Truth, such a man sees Brahm and the Atma, in all their glorious and splendorous radiance, everywhere and in all the creatures.

This is what is meant here when the verse says that 'he begins to enjoy everything in this world at the same time'.

²Everything that has come into existence has one or the other quality or virtue inherent in it which is characteristic of that entity. In the present case, all the five elements that came into being also have certain attributes and qualities that are specific to them and form their defining characteristic feature. The number of such qualities or attributes or virtues, called the 'Gunas', would determine the grossness or subtlety of that individual entity; the lesser number of Gunas mean the higher level of subtlety and vice versa. The first element is *Akash* or sky. This element has the basic virtue of bearing sound, and it is characterised by its ability to be able to propagate sound. Since sound is the subtlest of virtues in existence and sky is the subtlest of the

elements, the duo are the nearest analogue for Brahm or 'pure consciousness' which is the ultimate subtle entity in this creation.

Next comes the *Vayu* or wind/air element. This element has two basic virtues or qualities—viz. one that comes from its predecessor sky, i.e. the ability to bear and propagate sound, and other characteristic virtue is to make itself 'felt' by the sense of 'touch'. This is evident when we 'feel the touch' of a soft breeze blowing against our face even though we cannot see the wind or air. Similarly, sound is generated and propagated in the form of waves and it requires the medium of the air to go from one place to another. That is why we cannot 'hear' when there is no open space filled with air between the speaker and the listener. Similarly, we can hear the 'howl' of a raging wind during a severe storm. Since the air or wind element has two virtues inherent in it as compared to one virtue present in the sky, it is grosser or heavier than the latter.

The third element is *Agni* or fire which has three basic virtues or qualities or attributes (*Gunas*) as its integral feature. Like its predecessor, it also borrowed its first two characteristic virtues of sound and touch from the air element, and the third is typical to it, and this is the property of having a 'form, size, colour and contour'. This is a metaphoric way of saying that the fire is the first element that can be physically 'seen' by the naked eye. The fire has 'light' emanating from it, and this light makes it possible for us to not only see the fire burning but also the surrounding area. In other words, the fire renders everything in this world visible to the creature. Besides this, the outlines of the fire are clearly discernible, its features are clearly visible in the form of a tongue of flame, the colour of this flame, the sputtering sound that emanates from the burning fire, and the bright and crackling sparklers that fly from it in every direction to proclaim that the fire is established at a particular place away from the spot where the sparkler lands. As compared to the sky and the air which spread and cover all available space, the fire has a localized existence, thereby establishing its heavier and grosser nature because the more subtle and lighter the entity is the more difficult would it be to contain it and restrict it to a specific area. Having three attributes as enumerated here, the fire element is heavier or grosser than the sky element.

The fourth entity that came into being in terms of creation and also in terms of grossness is *Apaha* or water element. It has four qualities or virtues characteristic to it—three borrowed from its predecessor the *Agni* element, and the fourth being its own. In other words, the water element has 'juice or essence or fluidity' giving rise to the sense of 'taste' as its own specific attribute, besides exhibiting the three that it borrowed from the fire element—viz. it has 'sound' as is evident when we hear the thunderous roar of a deep waterfall or the ocean, the gurgling, gushing and rippling sound of a spring or a brook, or the swishing, splashing, bubbling, sloshing and rippling sound of a river, it has 'touch' which gives rise to the sense of it being felt cold, hot or warm, and 'form' because water can be easily seen and contained and given any shape such as having the contours of a river, an ocean or even the water in a bottle. Having four attributes as enumerated here, the water element is therefore heavier and grosser than the fire element.

Finally in this progression is the fifth element, viz. the *Prithivi* or earth element. It has five attributes or qualities typical to it. Out of these five, it has borrowed four from its predecessor the water element, while the last attribute or quality is specifically its own—and it is 'smell'. That is why all things present in the earth and having the earth element as one of its constituent emanates a smell no matter what name is given to it, such as a fragrance, perfume, scent, aroma or stink. The existence of the other four characters are easy to witness in earth—viz. it makes a 'sound' which is heard outside its atmosphere as a humming sound attributed to its magnetic field, it has 'sound' integrally present in its bosom which can be heard and measured by sonographic instruments, and the earth is full of noises and it is not as quiet a place as other deep recesses of the cosmos. The earth surely has a definable and solid

‘form’ which can be ‘seen, touched and felt’. Having five attributes as enumerated here, the earth element is therefore heavier and grosser than the water element.

Anything that has a density and shows movement which is a vital sign of life has a propensity to attract other lighter and subtler entities towards its self as is evident from the fact that the heavy earth which constantly rotates on its axis is able to not only keep the heavier elements such as the water and fire attracted to it but also manages to prevent the air element from escaping into the outer reaches of the cosmos. The only element that remains beyond its command is the ‘sky’ and its constituent the ‘sound’. This is why we have no ‘fire’ and ‘water’ outside the atmosphere of the earth but ‘wind’ in the form of cosmic storms and ‘air’ in the form of cosmic ether as well as ‘sky’ in the form of cosmic space elements exist even millions of miles away from earth.

This earth has been envisioned as the base or foundation of the living world. In the progression of creation wherein one gross element emerges from its subtle parent, the next entity is the herb or medicinal plants. Such plants are small in size and rare, and they have a natural inclination to be of benefit to others in a selfless manner—thereby making them subtler than their bigger, heavier and grosser brethren in the form of verdant forests, green crops, mosses and ferns and the numerous other varieties of plants and trees that thrive endlessly on this earth.

The seed produced from these plants are metaphors for the sperm of the Supreme Being because they help to perpetuate this creation. Thus, from the seed was produced the ‘fruit’ in the form of the ‘living creature’ who inhabit this known world.

There are many Upanishads dealing with these *elements*, notably the Brihad Aranyak Upanishad, Canto 2, Brahmin 5, and Subalo-panishad, in its verse 2 of Canto 13, as well as in Canto 14.

³We come to a very interesting point now—when we say that the body is ‘moulded or crafted from something, it is implied that there must be someone who has done this moulding or crafting. Who is he, the question arises. That ‘he’ is Brahm; Brahm is the supreme master ‘molder or crafter’ who has expertly moulded or skillfully crafted this entire creation from the very basic and primary ingredients of sky, air, fire, water and earth that came into being at the beginning.

How the different *juices of creation* help sustain life and body have been elaborately explained elsewhere in other Upanishads, notably in Chandogya Upanishad of the Sam Veda tradition, in its Canto 6, Section 5-9, and Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition in its Canto 1, Brahmin 5, verse no. 1-3

The *Genesis of Creation* has been elaborately and fascinatingly described elsewhere in other Upanishads as well. Some of them are the following-- (a) Aiteriyo-panishad of Rig Veda tradition; (b) Mudgalo-pansishad of Rig Veda tradition, in its Canto 2-4; (c) Chandogyo-pansishad of Sam Veda tradition, in its Canto 3, Section 19, Canto 4, Section 17, verse nos. 1-3, Canto 6, Section 2-10; (d) Painglo-pansishad of Shukla Yajur Veda tradition, in its Canto 1-2; (e) Subalo-pansishad of Shukla Yajur Veda tradition, in its Canto 1-15; (f) Brihad Aranyak Upanishad of Shukla Yajur Veda tradition, in its Canto 1, Brahmin 1-2, 4-5, Canto 6, Brahmin 4.

⁴A man stands on his legs, and this ‘standing’ is a figure of speech indicating that he has acquired a great name and enviable fame for himself in the entire spectrum of creation. This is because a man has intelligence and wisdom, he can think and decide for himself, he can choose and pick, he can study the scriptures and find his final emancipation and salvation which is not possible in any other life forms such as that of an animal or a plant. The human body acts as a launching pad for the Atma’s final exit from the cycle of birth and death—and therefore it likened to the Atma’s Pratistha. It is this body that gives the creature called a man its honour and dignity as well as helps to establish its superiority over the rest of the creation. The creature known as the ‘man’ is the master of all other creatures though the same Atma lives in

all of them. That is why this leg is called the Pratistha of the Atma in the body of a human being.

There is another way of looking at this. The word 'end' signifies that this human body should be treated as the 'last post' in the arduous journey that the Atma has been undertaking through numerous births and deaths. It is the 'last chance' to get liberation and deliverance. If it is lost, then everything is lost. So a wise and erudite man should endeavour to use this golden opportunity in the best possible way the scriptures have described.

Yet another interpretation may be this—the person's establishment of wisdom and intelligent behaviour depends upon his ability to interpret what he has learnt from his past experience, or from his 'hindsight' indicating the metaphoric importance of the 'hind' part of the body. What one leaves 'behind' as his legacy is more important than what he had done in his previous life before he was born with the present body.

**Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition, in its Canto 1, Brahmin 1 and 2 uses the metaphor of the horse to describe the living creation as a visible manifestation or personification of the Supreme Brahm. Similar concept has been envisioned in Chandogya Upanishad of the Sam Veda tradition in its Canto 5, Section 18, verse no. 2.]

Valli 2, Anuvak 2

[The following five Vallis, from no. 2 to no. 6, describe the origin of the five elements from the supreme Being and their transformation into the five 'Koshas' or sheaths that form the gross body of the creature and surround his 'true self' which is the pure conscious Atma.

This present Anuvak 2 describes the importance and significance of 'Anna' or food that is the main lifeline of the living world and forms the first Kosha or sheath called the 'Anna Maye Kosh' or the food sheath.]

1. It is from 'Anna', or the nourishment provided by the food eaten, that living beings are created. All the subjects (creatures) of this living kingdom, whether they be mobile or immobile (such as the man and the tree respectively), that have the earth as their base or habitat, are born¹ from the essential life-giving nourishment provided by food, are sustained by its life-sustaining properties, and merge in its primary elements at the time when the body perishes or dies². This is because Anna (food) has preceded all the creatures³. Anna is the primary element needed to sustain life and is therefore regarded as the best, the elder or the superior entity in the living world.

Anna is called 'Sarwoshadh' or literally the entity that is the remedy of all ills, implying that it is the one entity without which life is just not feasible, sustainable and imaginable. It is the one indispensable entity that is universally and unambiguously needed by all the living creatures of all shades and hues. Anna is the most important ingredient in life; it is the most essential and primary requirement for sustenance of life in any form. Hence it is deemed to be the most esteemed, the most senior and the most honourable entity vis-à-vis the rest of the elements in creation. That is why it is called 'Sarwoshadh'—one that is the most exalted and like a crown jewel in creation. It is from the Anna that living beings are born, it is the Anna that sustains them from their cradle to their graves, and it is the Anna that helps in their growth and development⁴.

Those wise, erudite and sagacious persons who are convinced that 'Anna is Brahm personified', i.e. who worship and honour 'food' as a manifestation of the

stupendous life creating and sustaining virtues and abilities of the supreme transcendental Authority in creation known as Brahm—in other words, who see food as a visible divine blessing of the supreme Lord which he has provided to his creation for its sustenance as well as to help it gather sufficient energy, stamina and strength to recreate the next generation in the form of an offspring—are sure to get all nourishment and benefit that the food has to offer⁵.

Anna is eaten by all the living beings, and the irony is that they are also eaten by this Anna. This is why it is called ‘Anna’ meaning ‘one that is eaten as well as that eats’⁶.

Now, enclosed in this outer sheath formed out of the food element and hence called the Anna Maye Kosh or the food sheath (i.e. the gross body of the creature build from the nutrients extracted from the food eaten by him) is the vital factor called ‘life or consciousness’ present in the second sheath called ‘Pran Maye Kosh’. This is the cell which harbours the Pran which are the different vital winds present in the body and which are synonymous with the actual presence of ‘life’ inside the outer sheath of the creature’s body called the Anna Maye Kosh⁷. The Anna Maye Kosh is gross and inane but it surround the subtle and life-bearing sheath called the Pran Maye Kosh and surround it from all sides to form a sack-like structure. These Prans or vital winds fill up the entire space enclosed by the food sheath which consists the outer covering of the body.

This Pran is distinctly different from the external gross body of the creature—for whereas the external body is perishable and gross, the Pran is an eternal entity and subtle. Verily, this Pran is a personification of the eternal and supreme transcendental Being called Purush who resides in the body of the individual creature as his consciousness and identity at the micro level of creation, and in the entire creation as the cosmic all-pervading universal Consciousness at the macro level.

This Pran is therefore of the same dimension and properties as the Purush whose personification it is. In other words, the vital Wind or Air called the Pran is the essential ‘life’ of a living being, and since it is a manifestation of the Supreme Being known as the Purush, it also has a body of its own, though this body is subtle and invisible unlike the gross and visible external body consisting of the food sheath.

This subtle and invisible body of the Purush in the form of the vital wind has all the subtle body parts symbolised by the different forms of this vital wind. Thus, the ‘head’ is represented by the vital wind known as Pran (breath without which the creature would suffocate to death); the ‘right’ side or flank is represented by the vital wind known as Vyan (which pervades thorough the body and maintains equilibrium); the ‘left’ side or flank is symbolised by the vital wind called Apaana (which passes down the intestines and helps in digestion and elimination of waste from the body); the Akash or sky is its Atma or ‘middle’ parts or the area of the heart (because the Atma lives in the lotus-like heart of the creature); and its tail or ‘lower’ parts of the body is represented by the Prithivi or earth (because it stands upon its legs much like the earth which supports the entire living world and upon which the rest of the creatures live and find their abode).

This Shloka (verse) is in relation to this body which has Pran residing in it to represent the Purush, who is the Supreme Being. In other words, the supreme transcendental Brahm resides in the body of the creature as its pure conscious Atma as well as the life giving vital wind called the Pran (1).

[Note—¹The essential life giving energy contained in the food eaten is converted into sperms or eggs. From them is created new life forms.

²This is because the body of all living creatures is based on organic matters, and after death the body decays and carbon products are released into the soil of the earth to be re-absorbed by the plants which are eaten by other creatures to sustain themselves. That is why the dead body is usually called 'Maati' which literally translates into 'soil or mud'. It is from this Maati or soil that the plants, which form the basic food of all living creatures, draw their nourishment. Even those who eat flesh are indirectly being nourished by these plants because the animal whose flesh is being eaten has drawn its nourishment by eating plants.

³Even as a creature is born from a parent who was present before the creature's birth and who nourishes it in its womb, after it is born and throughout its life, this Anna or food also carries the same function. Again, even as the body of the creature is moulded in the womb of the mother and replicates the body of the parent, the creature created by this food also symbolically replicates it. That is why the gross body is called *Anna Maye Kosh*, or the enclosure or cell (Kosh) made or crafted out of the food (Anna) eaten by the creature that encloses its true self (the pure conscious Atma).

⁴The inherent virtues present in food are its vital energy and basic nutrients as well as its life sustaining and creating properties. When food is eaten, its vitality, energy and other essential eclectic virtues are absorbed by the body and this extract is converted into sperm which then literally transfers the energy, vitality and the goodness of the food to the offspring. The fact that it is not possible to survive without food is succinctly brought out in an episode mentioned in Chandogya Upanishad, Canto 5, Section 7 in which sage Uddyalak had proved this point to his son Shewtketu. The astounding importance and indisputable value of Anna or food have been succinctly mentioned in many major Upanishads, such as Chandogya Canto 6, Section 5-7, and Canto 7, Section 9; Subalopanishad, Canto 14; and Brihad Aranyak Canto 1, Brahmin 5, verse no. 1-3 to mention a few. In fact, the entire process of creation hinges on the ability of the organism to eat food, digest it and utilise its glorious values while rejecting or eliminating its grosser parts. We deduce that when the Upanishad praises Anna or food, it lauds and honours its divine and sublime values which are subtle and hidden from view, and not its external attractive features or enticements in the form of its mouth watering taste, its charming colours or its enchanting overbearing aroma.

⁵Food is the very basis of life, it is the only factor without which no life can be sustained, and as is mentioned in the previous stanza, it preceded creation as well as follows it. It precedes the creature in the form of the sperm out of which the creature is conceived in the mother's womb, and it proceeds in the form of the fundamental elements into which the organic body of the creature breaks up after death and decay. That entity that lasts after the creature has died, and which pre-existed it and from which the present life was born is known as the everlasting, imperishable and infinite Brahm. Both these entities—the subtle and invisible nutrients present in the food eaten by the creature as well as the basic elements called the five Bhuts that act as fundamental building blocks of life (i.e. earth, water, fire, sky and air) create and sustain life; both precede and proceed it; both are absolutely essential; both are not visible; and both have manifested themselves in the form of the body of the creature. The gross part of the body called the Anna Maye Kosh is created by the food eaten by the creature, while the subtle and essential life-giving force of Nature revealed in the form of the vital winds called the Prans mould the *Pran Maye Kosh*. The body would need both to survive, and therefore it represents the glorious manifestation of Brahm both in its gross aspect as well as in its subtle aspect.

It would be pertinent to note here that both Anna and Brahm have two distinct forms—one is the visible form which is the gross aspect of both the food and Brahm, and the other is their subtle forms which is not visible but is nevertheless the essential part of both of them. The visible form of Anna consists of the external features of what we eat, and its subtle and invisible form is the various nutrients and fundamental

life-sustaining properties that are inherently present in the food eaten by the creature. Similarly, the visible world we see is the gross external form of Brahm while the numerous qualities and virtues as well as the different forms of subtle elements that constitute this visible world that are an integral part of this creation are Brahm's invisible form.

⁶If food is eaten in moderation it is of course beneficial for all the creatures, while if it is indulged into it proves to be as harmful as poison, leading to so many diseases and their attendant problems. This is a metaphoric way of saying that 'food eats those who eat it'!

⁷According to metaphysics, the body of the creature consists of the following *Koshas* or cells or sheaths which enclose its true self in the form of the pure conscious Atma. These sheaths are—Food Sheath (Anna Maye Kosh), Vital Air Sheath (Pran Maye Kosh), Mental Sheath (Mano Maye Kosh), Intellect Sheath (Vigyan Maye Kosh), and Bliss Sheath (Anand Maye Kosh). These different Koshas have been succinctly described in Painga Upanishad of Shukla Yajur Veda tradition, in its Canto 2, verse no. 4. Presently, this stanza is referring to the second sheath consisting of the vital winds which pervade throughout the body and keeps the food sheath maintainable in its current shape and form. To illustrate this point we can cite the example of a balloon—the external body of the balloon is the Anna Maye Kosh, while the air inside it is the Pran Maye Kosh. If the air escapes, the external sheath of the balloon would collapse.]

Valli 2, Anuvak 3

[This Anuvak expounds upon and elucidates the eclectic value of Pran, the vital life-giving winds or airs without which any form of life is unimaginable and untenable in this creation.]

1. All forms of living beings in this creation, whether they are Gods, humans or animals, rely upon the Pran to live, exhibit all signs that are the hallmarks of life, and undertake all activities that are synonymous with life in one way or the other. Hence, Pran is synonymous with life in all its numerous connotations and shades of meaning, and therefore it is also regarded as being equivalent to the 'age' of all living beings¹. That is why it is called 'Sarwaayush' or the symbol of age and life of all the creatures.

Those wise and erudite persons who worship and respect Pran as a manifestation of Brahm are blessed with a full life (i.e. they do not have to die prematurely). Since Pran is synonymous with the age of all the living beings, it is called 'Sarwaayush'.

The Anna Maye Kosh, or the gross body called the 'food sheath' (mentioned in Valli 2), surrounds this Pran, which are the different vital winds present inside the body in its second sheath called the Pran Maye Kosh or the 'vital air sheath'. This Pran Maye Kosh is enclosed by the outer shell of the gross body called the Anna Maye Kosh and forms its integral life. This is because without the vital winds the body (or the food sheath) cannot survive and live in this world; it would lose all its relevance and significance. [This is because without the presence of the Pran or vital life-bearing winds inside the body, the latter would be dead, and no one likes a dead body which has no Pran or 'life' in it.]².

This vital air sheath encloses the third layer consisting of the vital signs of consciousness in a creature. This third layer or cell is called the 'Mano Maye Kosh' or the 'mental sheath'. This mental sheath or the Mano Maye Kosh wafts and wefts

through the entire being of the living creature because it consists of the mind which controls all the functions of the creature's body as well as his interactions with the external world³.

This Mano Maye Kosh or the mental sheath is also a manifestation of the supreme transcendental Brahm known as Purush (because this mind exhibits all the subtle, sublime and grand virtues and magnificent qualities displayed by Brahm). Verily, it is Brahm personified; the mind has the same dimension, possesses the same qualities and virtues, and displays the same potential and abilities as the omnipotent, omnipresent, omniscient, almighty, all-pervading and all-encompassing Brahm who is most profound, magnificent and grand yet most enigmatic, esoteric and mysterious⁴.

In fact, both these two sheaths—the vital wind or air sheath and the mental sheath—have the same shape, form and dimension as that of Brahm. Even as the sublime and subtle Brahm has no fixed shape and size and fits into all available space, being all-pervading and diffused uniformly in the entire creation, the two entities that constitute the vital air and mental sheaths, viz. the air or wind and the mind, also follow the characteristic features of their parent Brahm⁵.

This body of Brahm (i.e. the mind) has its 'head' representing the Yajur Veda⁶; its 'right' side or flank representing the Rig Veda; its 'left' side or flank representing the Sam Veda; its Atma or consciousness residing in its bosom represented by its 'middle' part as the entity that commands it is its ability and authority to give orders and issue instructions⁷; and the sacred hymns or Mantras of the Atharva Veda envisioned by the sages Atharva and Angira form its hind part or 'legs' (on which it is established)⁸.

This verse is dedicated to that Brahm which has the mind as its personification or manifestation, whose form is revealed in the form of the mind with its astounding abilities and stupendous potentials (1).

[Note—¹When the *Pran* decides to leave the body, the latter dies. No other organ is potent and capable to make the body live once the *Pran* decides to leave it. Therefore, the 'age' of any creature is decided by the *Pran* present in its body. This unique ability of *Pran* makes it the most revered and praised entity in the living world, and therefore to be raised to the high pedestal of being treated as Brahm personified. This virtue of *Pran* that nothing can live without it, and that it is to be worshipped with the same devotion and honour reserved for the supreme transcendental Authority in creation known as Brahm have been magnificently brought out, inter alia, in Brihad Aranyak Upanishad, 4/1/3, 5/13 and 6/1; and in Chandogya Upanishad, 1/2-3, 1/11, 4/4/3 and entire Canto 5.

²As has been noted in the note of Valli 2, the *Anna Maye Kosh* has the *Pran Maye Kosh* inside it. This *Pran Maye Kosh* is called the Vital Air Sheath which lies within the food sheath and outside of the Mental Sheath called the *Mano Maye Kosh*. The vital airs that keep the body alive reside in this sheath. Once the vital airs or wind leave the body, it becomes dead in spite of the fact that all other organs are there as before.

At the time of death, they collect themselves and make a simultaneous exit from the body as described in Subalo-panishad, Canto 15.

How these vital winds control the functioning of the body has been described in Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, Canto 1, verse no. 9. Similarly, how the creature is able to interact with the world with their aid has been described in Subalo-panishad of Shukla Yajur Veda tradition, Canto 4, verse no. 2.

³According to metaphysical concepts, the body of the organism is broadly divided into three levels—viz. the *gross body* consisting of the five organs of perceptions (ears, eyes, nose, tongue and skin) and five organs of actions (hands, legs,

mouth, genitals and excretory), the *subtle body* consisting of the mind and intellect, and the *causal body* consisting of the pure consciousness called the Atma.

⁴The fact that the mind or *Mana* is a personification of the supreme Brahm, displaying the latter's stupendous glories and eclectic virtues, has been a constant refrain of all the Upanishads. Refer for example Chandogya 3/18, 4/4/3 and 7/3 as well as Brihad Aranyak 4/1/6 to name a few. The word Purush means someone who lives in a 'Pur' or a place of dwelling. Since the Supreme Being lives in the body of the creature, making the body his habitat, he is called 'Purush'. The astounding qualities and eclectic virtues as well as the magnificent abilities and stupendous potentials which the sublime mind displays are some of the immeasurable ones that are so characteristic of the enigmatic and esoteric Brahm. This is metaphorically said when mind is said to be a manifestation of Brahm.

The Mana or mind is characteristic with having doubts and confusions as opposed to the intellect which is called Buddhi. Both work in tandem to drive the body of the creature—the mind receives the inputs from the external world through the medium of the organs of perception and then 'instructs or issues commands' to the organs of action to act accordingly. Routine matters are handled in this mundane way. But the intellect, which is senior to the mind in the secretariat of the king called the Atma, is send all those files that require thought and decision. It is the intellect that comes in direct contact with the king, the Atma, and when it is unable to decide for itself, it consults the king, the Atma.

⁵At the time of creation, the human body was created as an image of the *Viraat Purush*. The gross body is therefore is the microcosmic or miniature form of the vast macrocosmic form of Brahm whose gross body is called Viraat. Now, even as water and air take the shape of the vessel in which they are kept, this vast creation which was formed from the body of the Viraat also took up the shape of the parent, i.e. of the Viraat, and then was filled with the elements which naturally would fit into the available space, which in this case was the body of the Viraat. Thus, they assumed the same outer contours and shape as that of the body of the Viraat. In other words, all the subtle entities living inside the gross body and uniformly present throughout in a diffused manner must take the shape of the external covering if they are to be honoured with the epithets of being subtle, uniformly diffused and all-pervading.

⁶Those hymns in which the number of letters has no fixed rules set for composition of a poetical verse, called the Chanda, are collectively called Yaju. Since the mind has a reckless tendency, jumping from one subject to another in quick succession and not remaining fixed for long, i.e. it has no systematic way of functioning, it is likened to *Yaju*. Such verses predate the organized pattern of hymn composition, and it is from them that the systematic pattern evolved. So they are senior to their poetical brethrens, and hence metaphorically called the 'head'.

When an idea comes to the mind at the beginning, it is usually not well organised. When that idea is expressed in words, the words also reflect this primary stage of thought. But thoughts originate in the mind; they require words to be expressed, which in turn require the letters to have a structure, the mouth to speak them (and the need of the tongue to make articulate speech that makes sense of those words, instead of just guttural sounds), the throat to create the voice to that would allow the mouth to speak, the ear to receive this sound, and finally the mind again to interpret what has been said. All these entities are located above the chest, and therefore 'Yaju' is likened to the head of Brahm who actually does the speaking.

Further, since the offering to the sacred fire is done by saying 'Swaha' which invariably need the services of the mouth and the entire apparatus concerned with speaking, besides the fact that the mind uses the head to direct the coordination of the different organs to perform the fire sacrifice, the *Yajur Veda* is regarded as a symbol of the 'head' of Brahm.

When the mind hears something, it forms its own opinion and tends to either swerve to the right or the left of the center. With the 'rightist' inclination, views, the mind is said to be represented by the *Rig Veda* which has a high level of eclectic verses. With the propensity of the mind to delve in worldly matters as symbolised by its tendency to sing and dance to the tune of this charming world and be attached to it and be fascinated by it, the 'leftist' tendencies of the mind are symbolised by the *Sam Veda* because it involves singing and drinking of Som which is an intoxicating liquid.

⁷Only a person in authority can give orders and issue instructions to others. The supreme Brahm is that authority that commands everything else in this creation, and therefore Brahm is the 'soul' or Atma which is the 'consciousness' present in the otherwise lifeless and inert piece of flesh that the mind is to drive it and enable it to display the stupendous and magnificent qualities and virtues that it actually does. Therefore, the mind has the ability to give orders and issue instructions at its core that gives it its great value and importance.

⁸The great Mantras visualised by the two sages Atharva and Angiraa are the best ones which guide the mind in its endeavours, and so they are the ones which help to give it glory and majesty. Hence, these hymns are said to be the mind's 'Pratistha' or that which helps something to get established and acquire fame and honour.]

Valli 2, Anuvak 4

[This Anuvak describes the glorious fruit of Brahm-realisation, and it goes on to describe the fourth sheath called Vigyan Maye Kosh or the intellect sheath which is separate from the Mano Maye Kosh or the mental sheath.]

1. That mystical state of divine attainment and eclectic bliss which remains beyond the reach of the combined efforts of the speech and the mind (i.e. which is indescribable by the faculty of speech and cannot be accessed by the mind and its various faculties of perception) is called 'Brahm-Anand', or the bliss of Brahm-realisation. A fortunate person who has experienced this enigmatic, nectar-like and divine state of rarefied spiritual existence has no fear from any quarters¹.

The Mano Maye Kosh or the mental sheath is like the Atma (basis, foundation and support) of its predecessor Pran Maye Kosh or the vital wind or air sheath².

Inside it is the next sheath or cell called the Vigyan Maye Kosh or the intellect sheath. This sheath or cell (i.e. the intellect) forms the core of its outer sheath (i.e. the mental), completely filling it from the inside³.

Like its predecessor, this Vigyan Maye Kosh is a revelation of the stupendous abilities, eclectic attributes, divine virtues and magnificent qualities so characteristic of Brahm. In other words, the intellect sheath is the higher level of the subtle body of the divine Being called the Purush residing in the body of the individual creature, and it controls his mind, his vital winds and his physical body along with its gross organs.

[The intellect is like the Prime Minister of the Sovereign, the pure conscious Atma which is the creature's true 'self'. The Atma controls the body as well as the world through the medium of the mind-intellect apparatus called the Mano Maye and Vigyan Maye Koshs respectively. The intellect supports the mind and forms its solid foundation; the intellect helps the activities of the mind from behind the scene, and therefore is called the de facto 'brain' or 'soul' or 'Atma' of the mind.]

This manifestation of Brahm in a subtle form or shape of the intellect sheath, or the Vigyan Maye Kosh, has the 'head' representing the grand virtue known as 'Shradha', or having devotion, conviction, belief and faith. Its right' side or flank is

representative of 'Rit' (the eternal, unequivocal and universal Truth which is sublime and subtle, invisible and intangible). Its 'left' side or flank is representative of Satya or truth (the visible aspects of that universal Truth)⁴; its 'middle' part (i.e. the heart region) is a representative of Yoga (literally that establishes a union between the unseen Truth and the seen Truth; also referring to meditation and contemplation by which this coordination is brought about); and all its glorious and divine virtues, its magnificent qualities and astounding abilities, its wisdom, erudition, sagacity, enlightenment, skills, expertise, scholarship and such other noble and auspicious virtues that help it to acquire such a matchless and unique position in the hierarchy of evolution is like the tail end or lower part or the 'legs' on which it stands⁵ (1).

[Note—¹With *Brahm-realisation*, the self-realised person realises that the body is not his true self, rather it is the pure consciousness residing in his bosom as his Atma. This Atma is immortal and fearless in the sense that it cannot be destroyed and harmed by anybody else. Besides this, the Atma is the same within his own body and that of the rest of the creatures of this creation. So even as no one fears his own self, there is no cause of having fear from others in the view of a self-realised man.

Again, when the man is intoxicated with the ethereal and supernatural feeling of ecstasy and eternal bliss, he becomes immune and indifferent to all external stimuli of either pain or joys originating from this world, which is a metaphoric way of saying that he has no fear from being disturbed by them. Thus, such a man remains in a perpetual state of bliss, peace and happiness much like a man who has drunk some ambrosia and then has nothing to do with other liquids which would give him only temporary bliss, peace and happiness.

²This is because the *mind* controls the functioning of the entire body, including the vital winds or airs that actually carry out the orders of the mind in controlling or regulating the different functional aspects of the living body such as intake of food, its digestion, its assimilation, the circulation and even distribution of blood and nutrients in the body, excretion, maintenance of equilibrium and general order inside the body, its movements and other such vital functions that distinguish a living body from a dead entity.

Without the active, alert and agile mind, the body of a *man* would no better than a *tree* which also has life forces in it but no mind, or some *lower organism* which have movement and other landmark signs of life but no mind to think and decide for its self.

³As has been explained in note to Valli no. 3, the *intellect* is the part of the brain which controls the mind. Even the animal has a mind, but what distinguishes them from humans is the presence of 'intelligence'; that is why a man is called 'an intelligent animal'.

Left to its own devices, the mind can carry out only the routine work pertaining to the functioning of the body, but it is the intellect that guides it all its constructive endeavours and progressive activities. That is why an 'intelligent' mind which has sharpness and wit, alertness and discriminatory abilities, profound wisdom and deep insight, capacity to critically analyse and rationally predict, and which is steady and even-keeled is much sought after as compared to a mind which lacks these eclectic virtues and values.

Thus we observe that all the three units of creation—the *tree* or any other member of the botanical kingdom, the animal or any other member of the zoological kingdom except the man, and the human being—have life forces in them. But the component that sets them apart from one another is the presence of the mind and intellect. The tree has life but no mind; the animal has mind but no intelligence of the same level as that present in the humans; and the man who has a highly evolved instrument of the mind-intellect combine which makes him the highest placed species in creation.

⁴The fact that truth is a manifestation of Brahm has been very magnificently brought out in Brihad Aranyak Upanishad, Canto 5, Brahmin 5 of the Shukla Yajur Veda tradition.

⁵A similar analogy is used in Brihad Aranyaka Upanishad when the Supreme Being is likened to the sacrificial horse in Canto 1, Brahmin 1. The special qualities mentioned in this stanza make a man distinguished, highly respected and acclaimed in society. This sets him apart from other men who lack these divine eclectic virtues, and act as the defining criterion to determine which man is famed for his auspicious intelligence and which man isn't. We would observe that each Valli moves one step inwards, starting from the outermost sheath called the food sheath, then moving inwards to the second sheath called the vital wind/air sheath, followed progressively by the mind sheath and then the intellect sheath.]

Valli 2, Anuvak 5

[This Anuvak elaborates upon why the intelligent mind is so valued and honoured in the entire setup.]

1. It is 'Vigyan' (referring to intelligent and deep knowledge of any subject; skills and expertise in any field of knowledge; the ability to critically analyse and make intelligent deductions from available knowledge and thereby make rational predictions and then apply them in practice) that helps not only to successfully complete the various deeds and actions, including the fire and other religious sacrifices as well as other ceremonial rituals and religious sacraments, but also to develop better ways to do them and better ways to benefit from them. That is why all the exalted Gods laud this virtue and honour and praise it as a grand personified form of the supreme transcendental Brahm¹.

Those wise ones who treat Vigyan as a personification of Brahm and a manifestation of Brahm's stupendous eclectic qualities and virtues, those who are firmly convinced of this and remain grouted in this belief without any doubt or confusion as to its veracity, are able to overcome all the evil consequences of the various inauspicious deeds done by their bodies (in the course of living a mundane life), and they become fully contented and fulfilled².

Like in the previous cases, this Vigyan Maye Kosh or the intellect sheath forms the basis and foundation on which its predecessor known as the Mano Maye Kosh or the mental sheath rests. It is the intelligence that drives the mind and lends the latter its astounding capabilities and potentials. In other words, without the intelligence, the mind would be useless much like the body without the presence of life known as Pran in it. Hence, the Vigyan or intellect is the 'soul' or 'spirit' that drives the mind and gives it its magnificent glory, potentials and fame.

Inside this intellect sheath there is the fifth sheath called the 'Anand Maye Kosh' or the 'bliss sheath'. It consists of the causal body of the creature where the Atma—which is eternally blissful and full of beatitude and felicity—resides, giving this sheath its name. The intellect sheath fully surrounds and encloses the bliss sheath. In other words, the 'consciousness' that appears in the form of the subtle body called the mind and the intellect which exhibits stupendous and astounding potentials and powers that even the gross body fails to exhibit is different from the 'consciousness' that resides in the bliss sheath of the causal body. Though primarily the 'consciousness' is one and a non-dual entity which is universal and immutable, still its

role varies from body to body. The purest and subtlest form of the universal consciousness is the one seen in the 'causal body' and surrounded by the 'bliss sheath'. As the word 'causal' indicates, this consciousness is the cause of the existence of the entire world, including the subtle and gross body in which it lives. Since it is covered by the 'bliss sheath', it remains in a perpetual state of blissfulness and contentedness. This does not apply to its other manifestations as the subtle or gross bodies—because it has now been tainted by the characteristic attributes of these bodies. So, when the consciousness is reflected through the mind-intellect complex, it exhibits the qualities characteristic of this complex. Similarly, when it is reflected through the medium of the gross body it reflects the characteristic qualities and attributes typical of the gross body.

That divine, eclectic, unique and sublime entity which is an embodiment of eternal and infinite 'Anand' (beatitude and felicity; bliss and happiness; peace and tranquility) is called the Atma, and it is a manifestation of the supreme transcendental Consciousness that resides in the body of a creature in that form. This cosmic Consciousness is the supreme Brahm personified. [Here the deity is Brahm and its form is the Atma. It is surrounded by the bliss sheath while it resides in the causal body of the creature.]³.

This sublime 'Purush' (the supreme Brahm or the cosmic Consciousness) residing in the body as the Atma or soul has the 'head' representing the divine virtue of having Prem (love and affections). Its 'right' side or flank represents the divine virtue of Moda (pleasure, delight, happiness, sweetness etc.); its 'left' side or flank represents the divine virtues of Pramod (delight, exultation, exhilaration, joy and happiness); its fundamental nature that characterizes it and which forms its central core is the eclectic and divine virtue of Anand (extreme bliss and happiness; profound beatitude and felicity); and its unique exalted stature and high position as Brahm personified is symbolically its hind part or its 'legs' which helps it to acquire this peerless and glittering status.

This verse is dedicated to this Atma or the supreme transcendental Brahm in the form of the pure consciousness residing in the body of the creature as his true 'self' (1).

[Note—¹The profound importance of *Vigyan* has been propounded in a number of Upanishads which say in one voice that 'Vigyan is Brahm's magnificent glories personified; Vigyan and Brahm are synonymous with each other'. Vigyan is the eclectic virtue possessed by the mind that establishes the latter's supremacy over elementary entities in creation. When the brain can make intelligent decisions and critically analyse anything from all possible angles, it has the ability to acquire scientific knowledge about that particular thing, which is called 'Vigyan'. It is the higher level of the brain that deals with Vigyan, as opposed to the routine matters that are dealt with its lower levels of intelligence. For example, the mind can learn even the toughest of subjects, but only a few people can have the depth of wisdom, insight and foresight that comes with high level of mental development that would set them aside from the rest of the flock. Only a few people can critically analyse and penetrate deep into the hidden implications of what has been learnt by them by studying the scriptures to make new discoveries and arrive at new deductions. That is, their brain is 'scientifically' tuned; it is analytical, critical and discerning. Only such a brain is able to see the reality and achieve a higher level of success whether it pertains to the material world or to the spiritual world. Refer Chandogya Upanishad, 6/14, and 7/7.

²A wise and self-realised man understands that all the material needs for which he has been hankering all his life, committing all sorts of evil deeds and engaging in unrighteous actions with his body are perishable and impermanent, so the comfort and happiness that they provide are proportionately transient and impermanent.

Besides this, the wise man realises that his body itself is perishable and impermanent, as opposed to his Atma which is eternal and an infinite treasure of bliss and peace. Once this wisdom dawns upon his mind, which is only possible with application of Vigyan or having a deep insight into and critical analysis of all available data and experiences, the man begins to distance himself from the body and all its deeds. Once this aloofness takes firm roots and the man dissociates himself from the body, there is no question of his being accused of any good or bad deed done by the body because 'he' remains only a mute spectator vis-à-vis the actions undertaken by the body. His 'true self', i.e. his Atma, remains neutral, uninvolved and untainted. Since the Atma is eternally a fount of beatitude and felicity, there remains nothing to be sought either from this world or from the body simply because what they have to offer is temporary and transient like a bubble of water.

³In other words, the 'soul' or Atma of the creature is a personification of Brahm with the eclectic virtue of having eternal bliss and peace. Besides this, since Brahm has other eclectic auspicious qualities and divine virtues in it, such as having all the virtues and potentials exhibited by the mind and intellect as well as by all the vital winds and the gross body with its organs of perception and action combined, Atma also displays them as its inherent characteristic qualities and virtues.]

Valli 2, Anuvak 6

[This Anuvak describes the bliss sheath and the eclectic state of Brahm-realisation that leads to the Truth.]

1. Verily, those who do not believe in the truth of the existence of Brahm or deny that Brahm exists become false themselves, whereas those who accept the truth that Brahm exists themselves become an embodiment of the eternal Truth¹. Such latter types of people are regarded by wise ones as true saints and holy souls.

That which is the Atma or soul or spirit of the Vigyan Maye Kosh (the intellect sheath) is the same entity which is the Atma or soul or spirit of the Anand Maye Kosh (the bliss sheath). [In other words, the essential entity or factor that drives the intellect and lends it its stupendous qualities and virtues as well as its magnificent powers and potentials is the same entity that resides in the heart of the creature and enables it to derive pleasure and happiness, joys and bliss from any perception received by the creature from any source.]

Now, after the wise teacher has taught these profound truths to his disciple, the following questions arise—Is it possible for an ignorant person (who is unaware of the truth about Brahm as evidenced by the fact that a doubt about Brahm's existence arises in his mind) to attain Brahm (i.e. is it possible for him to achieve the exalted stature of emancipation and salvation which is tantamount to realising the supreme Truth) after death? Does a wise and realised person (who has no doubt about the truth of Brahm) indeed attain Brahm after death?²

To answer this question, the wise teacher said—'That supreme transcendental One decided to replicate himself into numerous forms. So he did Tapa (i.e. he did severe penance and made sincere and diligent effort in this direction). It is by doing Tapa that he created all that which is here in creation. Having done so, he entered what he created in an imperceptible manner as the Atma of the creation³.

Thus, the supreme One (Brahm), who is an embodiment of the eternal Truth, manifested himself in a visible form as the gross body of creation, and at the same time remained in an invisible form as the subtle body and the pure conscious Atma of

creation. That supreme One assumed a form which could be easily described and discerned while retaining his primary enigmatic and esoteric form which is indescribable and indiscernible. One of his forms (the visible, physical and mundane world) needed some or the other kind of physical support to survive, while his other form was so mystical and ethereal that it did not need anything to support it (as it itself was the support of everything else in existence). One aspect of his form was the conscious animate world while the other was the inanimate world. Similarly, everything in the behavioural world, whether it was falsehood or truthfulness, was a manifestation of that single, immutable, irrefutable and unequivocal Truth that is both what is apparent as well as what is not apparent. [See note no. 4 below.]

Verily, whatever there is, whatever is experienced and witnessed here, is regarded by those who are well-versed in the primary knowledge of Brahm as a revelation of the eternal, universal and infinite Truth.

This verse is about ‘that’ Truth in the form of ‘this’ truth⁴ (1).

[Note—¹This is a natural corollary of what has already been said in the previous Vallis. In brief, since everything, from the miniscule to the grandest, is suffused and soaked in Brahm, the latter being all-pervading, all-encompassing and omnipresent, and the fact that everything in existence is nothing but one or the other manifestation of this majestic, mystical and most fascinating entity known as Brahm, it follows that nothing in existence is outside the purview of Brahm and that nothing falls beyond the outer perimeter of Brahm. Therefore, the very person who makes the statement that ‘Brahm is not there’ is speaking an evident lie as all that is very much visible, verifiable and tangible around us in this world simply cannot be denied and wished away. Denying Brahm is like denying the existence of the true self and the actual, physical and tangible presence of the world which is an incredulous proposition.

²The question whether a person’s Atma lives after *death* or not has been asked by Nachiketa and answered in great detail by the God of death himself in Kathopanishad, which is chapter no. 1 of this volume. Other Upanishads that answer this eternal question about death are, inter alia, the following—Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/36, 4/4/1-25, 5/10-5/11, 6/2/2, 14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; and Kaushitaki Brahmin Upanishad, Canto 1.

The metaphor of the *tree* has been brilliantly employed to explain ‘what happens after’ death in Brihad Aranyak 3/9/28, and in Chandogya 6/11/1-3.

³This fact has been described in all the Upanishads dealing with the genesis of creation. For example, the following Upanishads have this idea explicitly mentioned-- (a) Aiteriyo-panishad of Rig Veda tradition; (b) Mudgalo-panishad of Rig Veda tradition, in its Canto 2-4; (c) Chandogyo-panishad of Sam Veda tradition, in its Canto 3, Section 19, Canto 4, Section 17, verse nos. 1-3, Canto 6, Section 2-10; (d) Painglo-panishad of Shukla Yajur Veda tradition, in its Canto 1-2; (e) Subalo-panishad of Shukla Yajur Veda tradition, in its Canto 1-15; (f) Brihad Aranyak Upanishad of Shukla Yajur Veda tradition, in its Canto 1, Brahmin 1-2, 4-5, Canto 2, Brahmin 5, verse no. 18, Canto 6, Brahmin 4; and (g) the present Taittiriyo-panishad in its Valli (Canto) 2, Anuvak (sub-canto) 2.

The very fact that the supreme One ‘desired’ or ‘decided’ to replicate himself and ‘procreated’ shows that he had consciousness and the ability to do so, a virtue that establishes its primary abilities to ‘exist and create’ even when nothing else existed in the beginning. Therefore he predated this creation and existed after the end of the last creation. In other words, it is beyond the reach of death, and is therefore eternal and imperishable. It is possible to replicate oneself by the asexual means as is shown by the invertebrates of the animal kingdom. Besides, the man’s sub-conscious mind also exhibits astounding powers to create a vast array of colourful scenes in the world of dreams.

⁴The word *that* indicates the mystical Truth which is beyond comprehension and imagination. 'That' Truth is not 'this' Truth—i.e. the eternal immortal Truth which is beyond comprehension and reach of the mind and intellect is not this mortal world, but at the same time since everything that exists is a manifestation of the 'one' Truth that is immutable and indivisible, this world is also 'true' and a reflection of that truth. A reflection or image is not 'true' in the technical sense because it cannot be touched and felt like the original, but it nevertheless does have an existence because any real object will produce a reflection in a mirror. This is proved by the fact that reflection is not formed of ghosts and phantoms.

Further, Brahm is 'truth personified', and this world is a manifestation of Brahm and hence of this 'truth'. Therefore, the world has to be 'true' albeit in a reflective mode. This is also because truth cannot produce non-truth or falsehood. This is the great paradox about Brahm vis-à-vis this world and the body of the creature as laid out in this verse. That is also why the scriptures call Brahm as an entity that is best described by the words 'Neti Neti' meaning 'not this not this', or 'neither this nor that'.

This verse essentially asserts that the supreme Brahm has taken up his residence in the creation as its consciousness called the Atma. The later resides in the body and does so many things and creates a world of its own. This world is visible and for all practical purposes 'true' as it is verifiable and tangible. On the other hand it is perishable, changeable and transient which makes it 'false' because something that is true would be steady, uniform and unchangeable. In short, it presents two opposing propositions—one of falsehood and the other of truth. On the contrary, the Atma is 'only true', without any trace of falsehood, because it is eternal, steady, universal, unchanging and imperishable—which are the characteristic features of 'truth'. So Brahm appears to be both 'true' as well as 'false' for a person who is not fully aware of the fundamental truth of Brahm, creating a doubt in his mind about Brahm's very existence.

As to the answer to the twin questions asked in this verse, the position is that since everything in existence is Brahm personified, those who are ignorant about the reality as well as those who are well-versed about it attain two destinations—the former take rebirth in 'this' world which is 'true' for them, while the latter attain emancipation and salvation by attaining 'that' world which is 'true' for them. 'That' world is not somewhere far off but 'here' in the Atma itself, and the Atma lives in 'this' world inside the gross body. So it is the degree of intellectual development and self-realisation that decides for a creature how it sees and observes the presence and truthfulness of Brahm.

The basic concept is that the creature attains that place which he desires for at the time of *death*—refer Brihad Aranyak Upanishad, Canto 4, Brahmin 3, verse no. 12 which is very explicit on this point. Further, it also depends upon the creature's mental awareness and conception of what constitutes the 'Truth'. Refer Brihad Aranyak Canto 6, Brahmin 1, verse no. 1-6.]

Valli 2, Anuvak 7

1. Before the coming into being of this manifest (visible) world, everything was in a 'formless' form which had no attributes and qualities, no names and contours, and therefore appears to be a 'non-truthful existence' because that which cannot be visualised and imagined, that which cannot be defined and known, that which has no form and name appears to be the 'non-truth'. That is, there was an all-pervading, all-

prevailing and all-permeating sense of unqualified neutrality which was neither true nor false!

Out of it emerged what is the known and verifiable, the tangible and 'truthful' world. This qualified creation had discernible attributes, qualities, virtues and specific characteristics¹.

[Then what happened? The answer is--] That formless, attributeless and unqualified entity metamorphosed its self into an entity that had a form, was with attributes and was qualified. That is why it is called 'Su-krit' or the 'one who is self created'.

That famous Sukrit is the entity which is indeed and without doubt the 'Rasa', which literally means the essence or juice at the core of the entire visible creation. [In other words, even as the fruit is valued by the body for its juice and not for the pulp, this world is valued for the presence of this eclectic entity known as conscious Brahm in the form of the Atma and not for the gross matter of which it is constituted.]

Indeed, when this juice or essence is accessed or drunk by a wise and self-realised person, it gives him eternal ecstasy and a sense of fulfillment.

Had there been no such 'living' entity known as the pure consciousness present in the subtle space of the heart (called the Hridaya Akash), who would have done the 'Aapaan Kriya' (which is the process of imbibing food, digesting it, extracting nutrition from it, and eliminating waste from the body) or the 'Pran Kriya' (which is the process of breathing and stoking the fire of life inside the otherwise dead and inert body). In fact, this mystical and enigmatic entity, i.e. the subtle Atma which is the 'pure consciousness' present in the otherwise 'unconscious' gross body, is the one who not only enables and empowers the body to do what it does, but also enjoys them and lets the creature's body enjoy them as well.

At the time when an aspirant is able to realise (through the medium of Yoga which helps to establish a coordination between all units of consciousness in a harmonious way) that this eclectic entity known as Brahm—an entity that is invisible, has no specific body or form or shape or odour or colour, is indefinable and beyond the scope of the faculty of speech, and which needs no support or prop for its existence because it is the support and prop of others—resides in his own heart and he remains firmly established in or grouted to this divine supreme Truth, it is only then that he is able to reach the state of fearlessness².

On the contrary, if the aspirant treats himself as separate and different from that Truth, or in other words when unfortunately he dissociates himself from the eternal Truth residing in his own self as his pure consciousness, and instead begins to treat this gross body and the material world as the 'truth' about himself, he is subjected to all kinds of fears and their attendant sorrows and miseries so typical of this mundane existence.

So it happens that the same Brahm can be a source of fearlessness for a wise man as well as of all the fears for an unwise one³ (1).

[Note—¹This concept has been described else where also in the process of Genesis of Creation, especially in Subalo-panishad, 4/4; Chandogya Upanishad, 6/12/1; and Brihad Aranyak 1/4/7.

²*Fearlessness* from many aspects of life—such as fearlessness from death because Brahm in the form of his Atma is eternal; fearlessness from enemies because he begins to treat all with a profound degree of love, compassion, equanimity and fortitude as he treats all living beings alike, being an image of the same Brahm or Atma that resides in his own heart; fearlessness from wants and shortages because the Atma is ever contented and fulfilled, never in dearth of anything.

How different degrees of erudition and knowledge of the same entity effects the creature has been described by the God of Death, Yam, himself in Katho-panishad, Canto 1, Valli 2, verse no. 4 onwards, especially Canto 2, Valli 2, verse no. 7. This Upanishad is chapter no. 1 of this volume.

³It is very easy to understand this phenomenon. Brahm pervades uniformly throughout the known as well as the unknown world, the visible as well as the invisible world, the animate as well as the inanimate world, the microcosmic as well as the macrocosmic world. So, when the wise and self-realised man sees Brahm in its purified form as the 'essence and juice' of creation residing in his own Atma as well as outside of him as the consciousness prevailing throughout the world, he exults in its glory and basks in its brilliant sun-shine of divinity and holiness. On the contrary, if he sees Brahm with the eyes of materialism, he would also enjoy that ambrosia of happiness and joy that are an integral part of Brahm, because the matter which is so adored by him is also a form of Brahm, but such happiness and bliss would be short-lived as the material world is perishable and transient, and anything that is not eternal but temporary cannot be the 'truth'. Pursuing falsehood instead of truthfulness can never give permanent peace and tranquility to anyone, whether wise or not.]

Valli 2, Anuvak 8

[This Valli describes the stupendous and magnificent divine glories and majestic powers and authority of the almighty Supreme Being who is the Lord of the entire creation. It also describes the level of profound Anand or bliss and ecstasy that are an integral part of Brahm-realisation.]

1. It is out of the fear of this supreme transcendental almighty Authority (i.e. Brahm), it is to honour its dignity and pay respect to its high exalted stature, it is to maintain the decorum of his high office and supreme state of being the divine creator of all that exists and therefore superior and senior to everything else in existence, it is to uphold and respect the sanctity of its sacrosanct and inviolable commands and observe the rules and regulations framed by it in order to keep the creation regulated and working systematically and orderly, that everything and everyone in existence, from the miniscule to the grandest, is compelled and obliged to obey its commands and pay tributes to it.

In other words, it is out of respect of that divine and exalted almighty Authority and out of fear of violating its sacrosanct commands that the Wind or Air moves¹ (i.e. the wind or air element shows its inherent virtue of movement and keep the tide of life flowing perpetually under the instructions of the supreme Authority), the Sun rises and shines to give its light, heat and energy to the world (because this is the duty assigned to the Sun by the supreme Authority), and the Fire burns (i.e. the fire exhibits its special qualities of producing heat and burning things which come in its contact, either to punish them by reducing them to ashes or purifying them of their impurities by burning these denigrating ingredients, because this is the duty assigned to it by that supreme Authority).

It is out of the fear and respect of this Authority or under the sacrosanct and inviolable command of that Authority that Indra (the king of Gods)², and the fifth entity Yam³ (i.e. the God of death) move—i.e. they perform their respective duties with agility and diligence, without resting even for a while or showing any

callousness and lethargy out of fear of violating the inviolable orders of the supreme Lord.

[Now the following stanzas expound on the extent of qualitative and quantitative bliss and happiness that is present in Brahm by using the scale of happiness and joy derived by a man of high acclaim as described herein below. Starting with this basic scale, the verse goes progressively upwards to weigh the happiness and joy at different levels of existence in a pyramidal style to finally give an idea of the extent of it at the top of the stack or pyramid. This is a symbolic depiction of the stupendous beatitude and felicity that is accessed by those who have attained Brahm. It is for the purpose of measuring that glorious virtue which is actually beyond comprehension and any kind of measurement.]

The term ‘Anand’ meaning happiness, joys, exhilaration, exultation, bliss and ecstasy has many connotations, degrees and dimensions. The Anand of an exalted and acclaimed man who is young and of a pious temperament, who has studied the Vedas (i.e. is learned and scholarly), who is most optimistic and has a positive attitude towards everything, who is very strong and powerful as well as able and competent in his field, who is well-mannered, courteous and cultured, and who has lordship over vast tracts of fertile land (e.g. if he is a king or a big land holder), having all worldly comforts and material well beings at his disposal—the happiness and joys enjoyed by such a lucky man, is one unit of Anand. This is called ‘Manush Anand’, or the unit measurement of happiness and joy that a man can have at the most. [That is, it is the maximum happiness and joy that a mortal man can derive from this world at its height. In other words, on the scale where happiness and joy is measured or weighed, the one enjoyed by a most successful and prosperous man is considered as a standard unit of ‘one’. The happiness and joy that other forms of life enjoy are then compared to and measured with reference to this unit.]

A hundred units of such Manush Anands form the next single unit of Anand (1).

[Note—¹The *wind* element is at the very foundation of life because besides moving the clouds in the sky to the places where rain is needed, it also sustains life in the entire creation in the form of the vital airs. These airs present inside the body of the creature help it to perform all its functions, including moving about. This factor of ‘movement’ is a vital sign of life. In fact, if the air does not show its inherent virtue of movement then life would suffocate to death. But it must be observed that sometimes this air becomes absolutely calm for a short while before resuming its movement, thereby indicating that left to its own accord it would like to rest like all other elements in creation, but is compelled to move under the ‘fear’ of being punished by the overbearing authority of the tough task master known as Brahm. It is not that the latter is cruel and without compassion, but he has to bear a tough outer face if he has to keep the state machinery of his creation moving and performing in a well oiled and synchronized manner in order to serve the large population of subjects that inhabit his kingdom!]

²One might ask why this God continuously kills the creation which Brahm has so assiduously sustained, nourished and developed. Yam explains this here—he is doing it on his express commands. Now, why would Brahm want his own creation be killed? It is because an ecological, evolutionary and developmental balance has to be maintained. If no one dies, the creation would have no place for new species, and there would be no space and food to sustain those who are already born.

³*Indra* is the God who controls the clouds and rains. So this verse implies that the Emperor Brahm uses his knight *Indra* to ensure that all the corners of his kingdom get

rainfall which is a metaphor for life on this earth. Further, Indra is also the chief God of all the 'Indris' or organs of the body, implying that the Supreme Being known as Brahm uses his assistance known as Indra to exercise control over all the organs of the body at the micro level and over all the units of the creation at the macro level.]

2. One hundred units of such Anand of humans (as described above) is one unit of Anand enjoyed by the 'Manush-Gandharvas', i.e. by those who spend their time in singing and dancing, remaining ever cheerful and indifferent to the pains and miseries of this mundane life. This Anand is similar to the one enjoyed by those who have no desires whatsoever.

The Anand of such people when multiplied a hundred times is one unit of Anand of the celestial 'Dev-Gandharvas'—i.e. the celestial beings who have attained the stature of semi-Gods who remain ever cheerful, merrily dancing and singing in the heavens.

Hundred times of the Anand of Dev-Gandharvas forms one unit of Anand that is available to those Spirits which have attained an abode in the Pitri-Loka (the abode of dead ancestors where the Spirit goes after death, pending its promotion to the next higher heaven where Gods live; this existence is better than that of the Gandharvas). Such Anand is also available to those exalted persons who have no desires whatsoever.

Hundred units of the Anand that is enjoyed by the spirits of dead ancestors who have a long life in their ethereal form, forms one unit of Anand that is enjoyed by the exalted Gods known as 'Aajaanaj Devas'—literally those Gods who have a life span many times greater than that of the Spirits living in the Pitri-Loka, and hence called 'Aajaanaj' (2).

3. The Anand enjoyed by the Aajaanaj-Devas (Gods) is also available to those exalted persons who have no desires whatsoever.

Hundred units of the Anand enjoyed by the Aajaanaj Gods forms one unit of the Anand enjoyed by the 'Karma-Gods' (i.e. those noble spirits which have attained the high state of Godhood by diligently doing various religious sacrifices, observing different sacraments and generally doing noble deeds and observing the tenets of righteous living). This Anand is also available to those exalted persons who have no desires whatsoever.

One hundred units of the Anand of the Karma-Gods is one unit of Anand of the senior Gods who are the true, principal and full-fledged Gods. [Such as for example, the Fire God, Wind God, Water God. These are the primary Gods in creation, while the rest came into being as the creation evolved.] This Anand is also available to those exalted persons who have no desires whatsoever.

One hundred units of the Anand enjoyed by the full-fledged and principal Gods is one unit of Anand that is enjoyed by Indra, their king (3).

4. This Anand enjoyed by the Gods is also available to those exalted persons who have no desires whatsoever.

One hundred units of the Anand enjoyed by Indra forms one unit of Anand that is enjoyed by Brihaspati, the moral preceptor of the Gods. This Anand is also available to those exalted persons who have no desires whatsoever.

Similarly, one hundred units of the Anand enjoyed by Brihaspati forms one unit of Anand that is enjoyed by Prajapati, the forefather from whom the creatures

who inhabited and populated this earth were born. This Anand is also available to those exalted persons who have no desires whatsoever.

And finally, one hundred units of the Anand enjoyed by Prajapati forms one unit of Anand that is enjoyed by Brahma, the grand patriarch of the entire creation, from the most miniscule to the grandest. This Anand is also available to those exalted persons who have no desires whatsoever (4).

5. That Purush (supreme transcendental Being or Brahm) who resides in the creature (as his pure consciousness) is the same that lives in the Aditya (the heavenly Sun)¹.

A person who has the high level of erudition and sagacity, who has reached the exalted state of wisdom and enlightenment to enable him to understand the secret of what has been said in this Valli (regarding what is real happiness, joy and bliss) would voluntarily disassociate himself from this mundane delusory world of falsehoods and illusive charms of the sense objects, and instead attain the eternal bliss and felicity that comes with realising the true nature of his self, which is inherently and naturally contented, fulfilled, blissful, cheerful and happy.

Since the Atma is at the core of all the different levels of existence as described in earlier Anuvaks of this Valli, such as the Anna Maye Kosh (the food sheath) etc., the self-realised wise person sees the same Atma as operating at different levels in these sheaths or Koshas which together make up the body in which he lives in this world to enjoy it. He is deemed to have realised that this Atma is his 'true self', and that the Atma is an embodiment of the virtues of eternal bliss, happiness, joy, peace and contentedness. Therefore, such a man would automatically exhibit these eclectic virtues of the Atma as opposed to the gross qualities shown by the physical body—for he would have realised that the body is not his true self. Since the Atma is the cosmic Consciousness or the ethereal Spirit, no matter in which form or body it lives—whether as a human, an animal, a bird, an insect, a Gandharva, a God etc. or even as Indra, the king of Gods—it would exhibit the same set of eclectic divine virtues so typical of it. Blissfulness, cheerfulness, happiness and contentedness are some of these virtues.

Hence, a self-realised man would show these glorious attributes even without making any conscious effort in this direction while he lives in the gross body that has all these Koshas or sheaths and seems to be a treasury of grossness, miseries and falsehoods.

Thus, he sees the same blissful Atma as operating through the different Koshas or sheaths—such as the Anna Maye Kosh (the food sheath), the Pran Maye Kosh (the vital air sheath), the Mano Maye Kosh (the mental sheath), the Vigyan Maye Kosh (the intellect sheath), as well as the Anand Maye Kosh (the bliss sheath).

Naturally therefore, such a man would be eternally blissful and contented. This verse is dedicated to this idea of blissfulness so characteristic of the Atma² (5).

[Note—¹In other words, that mysterious and divine entity which lights up the inner self of the creature as its *Atma*, which lives in the gross body as its consciousness and gives it the energy and vitality to live and perform its duties, is the same enigmatic and ethereal entity that lights up the *Sun* and enables it to light the world and sustain life in it by its sunlight, energy and heat. This supreme, majestic, ethereal, mystical and divine entity is known as *Brahm*. This eclectic and divine idea is elaborately explained in Chandogya Upanishad which explains the nectar-like values of Brahm by treating the Sun as a pitcher of honey and then meditating upon it to imbibe the glory of Brahm. Refer Chandogya, Canto 3. This Upanishad is of the Sam Veda tradition and included as Chapter no. 2 of the volume dealing with such Upanishads in this series. Further, this idea is also explained in Shukla Yajur Veda tradition's

Brihad Aranyak Upanishad 1/5/12; 2/1/2, 13; 2/3/1-6; 2/5/5,12-15; 3/7/9,15-16; 4/1/1-7; 4/2/2; 4/4/5; and 5/13/1-4.

Meanwhile, it is pertinent to note here that the meaning of the word Surya, which is the Sanskrit word for Sun, fits in perfectly with the concept of the Atma. The word Surya has three connotations—viz. (i) Sarta-ha—one who moves like the wind or the cloud. This refers to the Sun because it moves constantly across the sky. It also refers to the supreme cosmic Consciousness that makes all movement possible. (ii) Svikriti-ha—this means one who receives and accepts. This virtue refers to the fact that all offerings offered to the fire sacrifice are done in the presence of the Sun, and since the latter is the celestial cauldron of fire all the offerings are deemed to be offered to it. In another plane, it refers to the Jiva, the living being, who receives stimuli from the world and then accepts them and deduces that the world from where they originate is real and true. (iii) Shuvrate and Savita—meaning one who shines brilliantly. This is very obvious in the case of the Sun. This virtue refers to the supreme Self or the supreme Consciousness that is self-illuminated and self-effulgent.

²In short, this entire Valli is named ‘Brahmaa-nand’ to highlight the eclectic and ethereal beatitude and felicity that one obtains when one understands that all that exists, from the individual creature’s gross body to the highest of heavens and levels of existence, is a manifestation of one single immutable divine entity known as Brahm. And this Brahm is characterised by such virtues, inter alia, as being eternal, blissful, cheerful, happy, peaceful, contented, truthful, omniscient, omnipresent, and omnipotent.

With the realisation that this astounding Authority resides in the bosom of the person himself as much as it resides outside, and to seek the eternal bliss associated with accessing Brahm one need not search outside, rather it is to be sought inside one’s own bosom, the wise person feels fulfilled and contented. He has indeed found the everlasting fountain of bliss and happiness.]

Valli 2, Anuvak 9

1. That sublime, ethereal, eclectic and holy Divinity known as Brahm, which provides the extreme sense of beatitude and felicity known as Brahmanand that is beyond the reach of both the mind and the faculty of speech (i.e. the magnitude and dimension of which cannot either be fathomed by the so-powerful and so-potent mind, and which is so profound and glorious that the speech is unable to describe it in words), a wise and realised person who has an experience of and has witnessed ‘it’ and its natural ‘Anand’ (the bliss and happiness, the ecstasy and exhilaration of Brahm-realisation) becomes fearless from all quarters¹.

In other words, when a person has achieved the exalted stature of Brahm-realisation, nothing else matters for him. He is not worried about whether or not he has done anything good and auspicious (because such distinctions matter to men of the gross world), or why he has done anything sinful and unrighteous².

An enlightened and realised person who is wisened to the fact that such worries (about not doing good deeds or doing bad deeds) only create more worries in their wake and snatch the peace and bliss that he has been enjoying hitherto by remaining concentrated on the pure and unadulterated Truth represented by the ‘self’ in the form of the conscious Atma and its parent body, the Brahm, both of which are beyond reproach and not involved in doing any deed of any kind whatsoever, is able to strengthen and validate the immaculacy and supremacy of his Atma. He is able to

assert that his Atma is beyond such mundane worries, and remains absolutely untainted by what the body does.

For him equanimity and equality is the overriding principle. Therefore, he sees and treats both the kinds of deeds with this attitude of the mind, remaining dissociated from them and their results, both good and bad. [Fundamentally this is because a wise man remains dissociated from the body which actually does any deed, and instead he remains engrossed and submerged in contemplation and meditation. Such a man remains oblivious of what his body is doing, and this oblivion is not a crafty method to cheat the world, but most sincere and honest.]

This Upanishad is meant for such persons who understand these facts as mentioned in this Valli. It is intended for such enlightened persons who wish to attain the glorious state of remaining perpetually in a state of bliss and happiness by knowing the universal Truth that is Absolute (1).

[Note—¹This idea has been expressed in Valli 2, Anuvak 7 also and explained there. Basically this is because a Brahm-realised person would see Brahm in the entire creation, even in his enemy, would have no wants and desires related to this deluding and perishable world, being in a state of perpetual contentedness of self fulfillment, and being in a state of perpetual bliss and ecstasy, he would have no time or inclination and neither the need for having any fear from any quarter. He would not even fear death—simply because he knows that what dies is the body and not the Atma which is imperishable and eternal, and that body is not his true self; so the cause of all fears vanish. He need not fear the Gods also because he has direct contact with the greatest God of them all, i.e. Brahm.

Since for a self-realised man the whole world is a manifestation of Brahm and is inhabited by the conscious Atma which is the same as the one residing in his own bosom, because Atma is one whole indivisible non-dual entity, he has no reason to fear others because no one fears his 'own self'. It is only when he sees 'duality' in creation—i.e. when he thinks that the other person is his competitor or rival, or is his companion or enemy, that all senses of fear, jealousy, ill will and hatred on the one hand, and affection, belonging, attachment and love on the other hand come into play.

²A man is usually worried about his deeds not being good and being sinful because he fears punishment here in this world or going to hell after death. For a wise man the Atma is always free from doing any deeds because the deeds are done by the body and not the Atma. Since the Atma merges with Brahm upon leaving the gross body just like water present in a earthen pot becomes one with the water of the river or ocean once the pot is broken, or the air trapped in the balloon becomes one with the air present in the atmosphere when the balloon is punctured, there is no cause of regret for any deeds done or deeds left undone as far as a wise man is concerned.]

Valli 3, Anuvak 1

[This Valli narrates the grand metaphysical tenets pertaining to the supreme transcendental Brahm which were preached by Varun, the God of water, for the benefit of his son sage Bhrigu when the latter approached his father to enlighten him about Brahm. Varun's reply forms the outline of the grand and magnificent glory and eclectic virtues that are so unique to the Divine Being who is all-pervading, all-encompassing and all-inclusive by nature and is known as the Absolute Truth of creation and the cosmic Consciousness called Brahm. This concept has also been the guiding principal of all the Upanishads, which invariably emphasize that whatever is

visible in this creation as well as even that which is not so apparent are all one or the other versions of Brahm, and nothing but Brahm.

Anuvak no. 10, verse no. 1 states the tenet about honouring one's guest as one would honour Brahm, establishing a tradition of warm hospitality so typical of India.

Presently, this current Anuvak no. 1 visualises Brahm in all the vital faculties of the individual creature's body and their functioning, as well as those entities that help to sustain, nourish and develop this body and aid in its perpetuation by the way of re-birth or procreation.]

1. The famous son of Varun (the Water God), named Bhrigu Vaaruni¹, went to his father and said, 'Oh Lord! Please enlighten me about Brahm'. [That is, Bhrigu requested his father Varun to preach him about that divine entity which is regarded as the supreme transcendental Authority in creation and the universal cosmic Consciousness which is the principal origin, the principal cause and the principal defining factor of this creation..

Varun replied, 'Anna (food)², Pran (the vital winds present in the body)³, Netra (the faculty of sight represented by the eyes)⁴, Srotra (the faculty of hearing represented by the ears)⁵, Mana (the mind and heart; the emotions and thoughts)⁶, and Vak (the faculty of speech represented by the tongue and mouth)⁷—all of them are the means by which Brahm can be attained.

That from which all these Bhuts (the primary elements such as earth, water, fire, air and sky as well as their manifestations in the form of all living beings in this creation) have come into being, that upon which they rely for their existence, support, foundation, succour, sustenance, empowerment and authority, that in which everything that has come into being finally collapses and merges or dissolves without leaving a trace⁸—verily, that is essentially the entity known as Brahm. You must strive to be acquainted with this unique, mysterious, enigmatic, eclectic, divine and supreme entity which is known as Brahm. Indeed, it is Brahm'.

When he was advised to know Brahm with these magnificent qualities, sage Bhrigu began doing severe Tapa to realise this mysterious, most enigmatic, astounding and divine entity known as Brahm (1).

[Note—¹Sage *Bhrigu*—He is a well known sage and seer who appears in a number of Vedic and Purnaic works. His name 'Bhrigu' is derived from the root word 'Bhrij' or 'Bhraaj' which literally means to roast or burn, and therefore it could mean the sage who was a fire sacrifice priest who had some mystical powers which allowed him to kindle the altar fire. According to mythological history, the patron God of lightening, Lord Maatarishwan, brought the celestial lightening down to earth and taught three priests the art of kindling the sacred altar fire using the Aranis ('the fire sticks' used to kindle fire by vigorous rubbing together). These three priest were the Bhrigu, the Angiras, and the Atharvan.

Sage Bhrigu has been described as the 'Manas Purta' (the one born with mental determination and not any physical process) of Brahma the creator. He is also stated elsewhere as being the son of Indra (the king of Gods) as well as of Varun (the Water God). This is why he is called 'Bhrigu Vaaruni' here in this verse. He was the father of Laxmi, the divine consort of Vishnu the sustainer and protector of creation. That is why Laxmi, the goddess of wealth and prosperity, is also known as Bhargavi, the daughter of Bhargava, or Bhrigu. In other births he is regarded as the father of Shukracharya, the moral preceptor of the Demons. He is also said to be the father of sages like Chavanya.

He was one of the ancient sages after whom a lineage was established—and his descendents assumed his name as their surname or title. It is 'Bhargava' or 'Bhrigu'.

Some well known names of sages who followed him in this lineage are sages Jamdagni and Parashuram.

He once tested the Trinity Gods (Brahma, Vishnu and Shiva) and determined that Vishnu is the best amongst them and alone deserves worship. He is one of the four sages (the others being Marichi, Atri and Kashyap) who had elaborately described the Vakhaanas Agam followed by some Vaishnav sects (followers of Vishnu worship).

He performed severe austerity and penance at a place called Bhṛigu Kaccha located on the banks of river Narmada where it merges with the Arabian Sea. It is situated in the Broach area of Gujrat state of western India.

He is credited with composing the tome of astrology and horoscopes known as 'Bhṛigu Sanhita'. It is said to contain a data base of all possible horoscopes that can be created by considering all possible permutations and combinations of the nine planets and twelve zodiac signs.

²Food or *Anna* provides the much needed energy and nutrition that gives the required sustenance and energy to the body. A weak body is unable to concentrate upon anything. This irrefutable fact is beautifully brought out in Chandogya Upanishad, Canto 6, Section 7. Food was one of the primary and first creations of the supreme creator, and the rest of the creation is the fruit of this food element. This is wonderfully explained in Brihad Aranyak Upanishad, Canto 1, Brahmin 2. Refer also to Valli 2, Anuvak 2 and Valli 3, Anuvak 2 of this present Taittiriya Upanishad.

The entire living world—from the microcosm to the vast macrocosm—is a manifestation of Brahm (Chandogya, 5/18/2). Brahm is therefore a synonym of life symbolising the light of wisdom and knowledge as opposed to death which symbolises darkness of delusions and ignorance. No one praises the latter, but everyone worships the former. Food is the basic requirement and fundamental building block of life. The tree absorbs food from the earth, grows by using its energy and vital nutrients, and then produces fruits which represent the essence of what the tree has 'eaten'. This fruit produces the seed which helps in the divine mandate of carrying forward the process of creation and perpetuating it further. When the tree and its part die, they fall to the ground and form soil and organic matter which help to replenish the stock of food on earth. Thus, at the time of death, the organic tree symbolically reverts back into its origin in organic food.

The same analogy applies to the man. He eats food and derives energy and vitality from it. This provides him with the strength, stamina, vigour and drive to grow and perform all his functions and duties. What he extracts from the food is converted into his own fruit in the shape of his semen, and the essence of this semen is its life-bearing abilities present in its core, the sperm. This semen and sperm help in the divine mandate to carry forward the process of creation in a perpetual manner. When any creature dies, its body disintegrates into the elements. The waste product of what a creature eats is converted into manure; the body dies and decays into organic matter. Thus, the creature's gross aspects having their origin in organic food eaten revert back into their original form of soil and organic matter.

In other words, food displays all the unique virtues and qualities of Brahm—it creates life, it sustains life, it develops life, and in it the living creation collapses.

Amongst the larger Upanishads, those describing the importance of Anna or food in great detail are, inter alia, Chandogya, 1/10/1-7, 1/11/9, 1/12-13, 5/2, 5/17/2, 5/18/1, 6/5/1, 6/6/2, 6/7, 7/9 etc., and Brihad Aranyak, 1/2/2-13, 1/5/1-13, 5/12 etc.

³*Pran* is a synonym of life and vital winds which sustain and maintain life. No life is tenable without oxygen or other forms of the air element; life would suffocate to death had there been no Pran in the body. Further, the word Pran is also meant to indicate something that is very dear and loving. Life is dear to everyone, everyone loves life dearly, and hence Pran is dear to all. In terms of metaphysics, the thing that is to be loved and adored is Truth; the entity without which life is simply not feasible and which is the only irrefutable and immutable Truth in creation is known as Brahm. Therefore, Brahm is the Pran of the entire creation.

Meditation technique called Pranayam essentially involves control of the breath or Pran, and this result in astounding spiritual and mystical achievements for the practitioner. It is possible to attain eternal good health and happiness by meditation. The different vital winds present in the body control all its functions, right from the inhalation of breath, to the intake of food, digestion, assimilation, distribution, circulation and excretion, the maintenance of equilibrium inside the body, its movement, speech, awareness, feelings et al. The importance of Pran cannot be ever over-emphasised vis-à-vis the living creature. So, Pran is the synonym of Brahm as well as the medium of realising Brahm because once we get acquainted with Pran, we easily get the hang of what Brahm is.

The importance of Pran as the most important element in creation in as much as without it life is unthinkable, and it is therefore a manifestation of Brahm has been elaborately dealt with in Chandogya, 1/2/7-14, 1/11/5, 2/7, 3/5/3-4, 3/18/4, 5/1/6-15, 5/2/1-3, 5/19, 7/15 etc. Similarly, it has been lauded in Brihad Aranyak, 1/1/1, 1/3/17-28, 3/2/2, 3/7/16, 4/1/3, 5/13, 6/1 etc. Refer also to Valli 2, Anuvak 3 of this present Taaittiriya Upanishad.

In Chandogya Upanishad, Pran is likened to the brilliant Sun, complete with its magnificent life-sustaining capabilities and its ability to light even the remotest corners of the world—refer Chandogya, 1/2/7.

⁴The eyes or *Netra* help the man to see the world. In other words, the eyes make the man aware of existence of life in this creation in all its majestic finery, glorious splendour, brilliant magnificence and multifarious variety. The eye sees only as long as there is light in the external world. This 'light' is a synonym of knowledge; one comes to get knowledge of the various shapes and colours in which Brahm has revealed its self because one can actually see for himself these shapes and colours; he needs no other proof of the existence of Brahm because he sees the latter revealed in the form of this colourful world first hand himself.

The eye is a gross organ and there is certainly some mysterious and superior power which enables the otherwise inert and inane organ of the eye to carry on with the magical function of 'seeing'. This function of 'seeing' is a conscious and lively function because only living entities see. Dead people don't see though the dead body has the same eye as the living body.

Besides this point, the 'ability to see' also imply the ability of having a deep insight into those aspects of creation which are not so apparent, vivid and clear on the surface. This is intelligent sight and analytical interpretation of available information to arrive at deductions which are 'hidden truths'. Meditation is concentration of mind and research into the 'truthful reality' after removing the surface scum to unearth the 'secret truths' that can be known only by seeing and experiencing them personally as no one else can show them to others. 'Seeing to believe' is a personal phenomenon; one can enjoy the exhilaration that comes with personally seeing something pleasant and enchanting.

This logic can be extended to all other sense perceptions. All have to be witnessed and experienced first hand, and the rest would be like hearsay.

This is the 'mysterious Truth' known as Brahm—i.e. the Truth known as Brahm has to be witnessed and experienced first hand by the spiritual aspirant, whether it is by the means of sight, hearing, tasting, smelling or touching and feeling. Any other method would not be convincing and a confirmation of the presence of Brahm. Since the eye helps one to 'see' this Truth, it is therefore an instrument of Brahm-realisation (Brihad Aranyak, 3/9/15 and 4/1/4).

Truth is a manifestation of Brahm is a constant refrain in all the Upanishads. (Refer for example the Brihad Aranyak, Canto 5, Brahmin 5.)

The Sun, which is the visible manifestation of the dazzling brilliance and radiant splendour of Brahm, is said to reside in a symbolic way in the eye because it is the eye that lights up the world for the Brahm residing in the dark recesses of the gross

body of the creature as his pure conscious Atma. (Brihad Aranyak, 3/9/20 and 4/3/2; Chandogya 4/15).

The importance and significance of eyes have been elaborately described in Chandogya 1/2/4, 1/7/2, 3/18/5, 4/15, 8/7/4 etc., and Brihad Aranyak 1/6/2, 2/3/4-6, 3/2/5, 3/7/18, 3/9/15, 3/9/20, 4/1/4, 4/2/2-3, 4/3/2, 5/5/4 etc.

⁵Next come the ear or *Srotra* and the faculty of hearing. The knowledge that a man acquires relies heavily on what he 'hears', because the ears are the medium by which the words are heard. It may be argued that knowledge can be acquired by reading also, but doubts and confusions are removed by discussions and consultations with wise ones. This necessitates the involvement of the ear. Therefore, the ear is the medium of Brahm-realisation. Besides this point, Brahm is a vast and macrocosmic entity, evenly distributed and dispersed throughout the length and breadth of creation. In other words, Brahm is present in the form of the 'directions' from where all information comes; the directions are the macrocosmic body of Brahm and the ear is the instrument which helps one to learn about this form of Brahm (refer Brihad Aranyak, 2/1/11, 2/5/6 and 3/9/13).

Besides this, sound is the first and most subtle manifestation of Brahm. This sound at the cosmic level is called Naad and it is represented by the ethereal word OM which happens to be the grand instrument of metaphysical research and attainment. Katho-panishad, 1/2/15-17 and this present Taittiriyo-panishad, 1/9 emphasis that this OM is Brahm personified. Since sound can be heard only by the means of the ears and no other organ of the body, it follows that ears are the most important instrument by which a creature can be aware of Brahm.

Brahm living in the ear of a man as the glorious faculty of hearing makes him aware of the external world (Brihad Aranyak, 3/7/19). The importance of ears lie in the fact that a man can come to learn about things even without personally going to the place of any happening or seeing and witnessing any event first hand just by relying on what he has heard about it through his ears. Thus, the ear is medium by which Brahm's existence in the form of sound emanating from various directions can be ascertained. In fact, Brahm has revealed its glorious self in the body of the creature in its faculty of hearing (Refer Brihad Aranyak, 4/1/5.).

The importance and significance of ears have been elaborately described in Chandogya 1/2/5, 1/7/3-5, 3/18/6 etc, and Brihad Aranyak 2/1/11, 2/5/6, 3/2/6, 3/17/19, 3/18/6, 3/9/13, 4/1/5 etc.

⁶*Mana* or the mind and the heart are obvious abodes of Brahm. The emotions and thoughts that are so typical signs of life are metaphors and analogues for Brahm, and the seat of these qualities is the heart and the mind respectively. That is why one has to turn inwards to witness and experience the existence of Brahm because the latter resides in one's own bosom. For meditation purposes and intelligent interpretation of what one hears, sees, learns, experiences and witnesses, the mind is an indispensable instrument.

A man is said to dwell at a place where his mind and heart is as much as where his physical body is. So if he is able to control his Mana and remain steady in it, then he has caught hold of Brahm in a symbolic manner. A happy and contented mind and heart are symbols of blissfulness that comes with Brahm-realisation. Brahm embodies the virtues of Mana and the latter personifies the former with all its magnificent glories, stupendous potentials and astounding virtues. Entire sections of many Upanishads are dedicated to this theme. A brief reference may be had from Chandogya 3/5/3, 3/18, 6/1/13, 6/8/1-2, 7/3; and Brihad Aranyak, 3/7/20, 4/1/6 etc. Refer also to Valli 2, Anuvak 3-4 of this present Taittiriya Upanishad.

⁷The faculty of speech known as *Vak* is the instrument by which Brahm makes itself known to the external world because Brahm embodies knowledge and wisdom, and these eclectic virtues in a man are revealed to the outside world when he speaks aloud about his thoughts. When a man is gravely sick, people look for signs of life in him, but the best sign is when he starts speaking in the way he used to do before he

went into a coma. Since speaking requires a coordination of many functions of the body—such as the breath called Pran because one needs breath to speak, the mind and intellect because one needs them to speak intelligently and coherently, all the while referring to the information stored in his memory even as the talk is continuing, and to speak in a wise, articulate, coherent and cogent manner, the tongue and mouth because these are the instruments of speech. The very fact that a man is able to speak shows that some powerful authority is sitting inside his body to make this happen.

The importance of Vak or the spoken word having its origin in Pran is beyond doubt as no one can speak if there was no life in the body. The significance of the faculty of speech has been highlighted in Chandogya Upanishad because the melodious singing or chanting of the hymns of the Vedas during fire sacrifices is not possible without it, and therefore it is called the ‘Madhu’ or honey or the best faculty of all the living creatures. No wonder then that a person who speaks sweetly and pleasantly, a person who is soft spoken and articulate is most welcome in society even as good orators, singers, teachers, preachers and all those who have the gift of a divine voice are honoured and much sought after.

Vak is also said to be the abode of the Fire God—Brihad Aranyak Upanishad, 3/9/24. It is said that at the time of creation, the Fire God took up his residence in the mouth and throat of the living being, and one of his revelations is ‘speech’. That is why we use such phrases as ‘a fiery speech’.

The importance and significance of Vak have been elaborately described in Chandogya 1/2/3, 1/2/11, 1/3/4, 1/7/1, 1/12-13, 1/8, 3/18/3, 7/2 etc., and Brihad Aranyak 1/5/3-8,11 and 18, 1/6/1, 3/2/3, 3/7/17, 4/1/2, 5/8 etc.

⁸The idea that everything merges back into Brahm, or into their primary source from where they had come into being, has been beautifully explained by citing the example of the river in Chandogya Upanishad, 6/10/1-2. It states that rivers have their origin in the ocean and then flow back into the ocean, their primary source. Similarly, in Brihad Aranyak 2/4/12, the analogy of salt dissolving and imperceptibly merging with water is cited. Salt has its origin in the ocean which is the greatest reservoir of water, and when it is dissolved in water, it finds its original parent body, so it cheerfully hides itself in the parent’s bosom to take rest. This analogy applies to the creature’s Atma as well. It has its origin in the cosmic Consciousness or Brahm which is the Atma of the entire creation. At the time of final rest, the individual Atma would merge with the cosmic Atma known as Brahm.]

Valli 3, Anuvak 2

[This Anuvak asserts that Anna or food is Brahm manifested. Refer also Valli 2, Anuvak 2. It will be noted in this Valli that Varun has advised Bhirgu that the means to understand how Brahm has revealed itself in this creation in its various units or facets is to do Tapa. This medium is a universal instrument in metaphysical field that helps generate sufficient energy which enables the seeker to understand the transcendental phenomena known as Brahm-realisation that ignites spiritual energy and kindles the light of enlightenment in him. It prepares the aspirant to receive the cosmic vibrations of spiritual energy emanating from cosmic Consciousness by fine-tuning his bodily apparatus, specially his mind and intellect.]

1. After doing Tapa, Bhriгу came to the realisation that Anna or food is indeed Brahm personified¹. He determined that it is the truth that all creatures have their origin in food (i.e. they need food to take birth because the embryo grows by absorbing

nourishment in the womb of the mother or from the contents of the egg); after birth also they depend upon food for their sustenance, growth and development; and at the time of death they vanish by merging themselves into their primary form as food².

Once he (Bhrihu) has learnt this, he once went to his father Varun and said, 'Oh Lord! Please preach me about Brahm'.

Varun replied, 'Try to understand Brahm by the medium of Tapa. Tapa is Brahm personified; Brahm can be realised by doing Tapa³'

When his father had advised him thus, Bhrihu did severe Tapa once again to realise Brahm (1).

[Note—¹As has been noted in note to Anuvak 1, Brahm has revealed himself in the form of the inherent life infusing and life sustaining virtues present in *food* eaten by the living organism. No one can survive without food. The gross body of the creature is called the Anna Maye Kosh or the 'food sheath' because it has its origin, its form and shape as well as its strength and vitality in the nutrition extracted from the food eaten by the creature. This gross body of the individual creature is a revelation of the macrocosmic gross body of Brahm known as the Viraat Purush, and within it resides the sublime and subtle entity known as the Atma which is the cosmic Consciousness known as Brahm in a miniscule form. Food in the form of the gross body is the habitat of this Atma, and food supplies the necessary energy, strength, stamina, vigour and vitality needed by this Atma to survive in the body. For, if there was no food, the body would become weak and die, thereby forcing the Atma to leave the body along with the Pran. This fact has been very magnificently explained in Chandogya Upanishad, 6/6-7 where Uddalak had demonstrated to his son Shwetketu the importance of food by asking him to fast for fifteen days. As a result, Shwetketu was so weakened that he couldn't even remember what he had learnt earlier. When he ate again, all his faculties began to function properly once again, thereby establishing how the body is heavily dependent upon food for survival.

²All living creatures have organic bodies because it is made of carbon and its products. So when the creature *dies* and its body is buried or cremated, the organic matter present in the gross body disintegrates into its primary ingredients, such as nitrogen, hydrogen, oxygen etc. on the one hand, and metals and trace elements such as phosphorous, magnesium, potassium, calcium, selenium, copper, sulphur etc. on the other hand.

Further, after absorbing vital nutrients, the creature eliminates fiber and other gross matter in food as excreta which form manure that sustain the production of food, and which is reabsorbed as food by the creature.

³The word *Tapa* literally means doing severe penance and austerity as well as sufferance of hardship for a noble cause, thereby burning one's natural impurities and blemishes that have been inherited by the creature as a result of his past deeds and their consequences. In the context of Brahm realisation, Tapa refers to meditation and contemplation because the mystical Brahm can be realised only by turning inwards as opposed to attempting to find and search it out externally in this world. This means that an attempt should be made by the spiritual aspirant to know the nature of the 'true self', instead of the 'illusionary self', as this search would lead to realisation of the Truth. Concentration of the mind and focusing of its intellectual and discriminatory faculties on searching out the 'truth' from the stack of falsehoods appears to be a Herculean task, but with painstaking diligence and accompanying sincerity, with commitment and ardent devotion, the task is not difficult even as searching a piece of Gold in a hay stack seem very daunting on the face of it but once the Gold is retrieved, the entire effort is amply rewarded. While we are at this analogy of the hay stack and the Gold, the easiest and quickest way to retrieve the priceless necklace of gold is to burn the stack of worthless hay. Likewise, the easiest way to realise the Truth is to burn the surrounding shell of worldly delusions and falsehoods. Once the muck and filth is washed off from the mind and heart, their brilliant shine

breaks through, and this light of enlightenment show where the 'gold', or Brahm, is hidden. Verily, that Brahm is not outside but inside one's own bosom. Brahm realisation is marked by the extreme exhilaration and ecstasy that comes to someone who has found his golden necklace amidst the stack of hay!

Even the Viraat Purush had done Tapa when he had decided to initiate the process of creation. The mystical powers of Tapa can be gauged from the fact that he was able to create the dazzlingly magnificent creation literally from nothing, as if by magic! Basically Tapa involves coordination of the energies of the mind and body, and focusing the combined force to achieve astounding results much like the use of razor-sharp laser rays to achieve penetrating powers and obtain very precise results.

What happens to a wise, self-enlightened and Brahm-realised person has been succinctly described in Brihad Aranyak Upanishad, Canto 4, Brahmin 4, verse no. 13-14. Briefly, they become fulfilled even while living in this world and going about their normal duties.

Tapa is the most potent weapon in the field of spiritualism, and Bhrigu decided to employ it to verify the truth of what his father had taught him.]

Valli 3, Anuvak 3

[This Anuvak highlights the importance and significance of Pran as a manifestation of Brahm. Refer also to Valli 2, Anuvak 3.]

1. Upon doing severe Tapa, Bhrigu understood the truth of the statement that Pran is Brahm personified¹. Verily, all the forms of life and living creatures have their origin in Pran; upon birth they depend upon Pran for their survival; and upon death they become one with Pran².

After that, he once approached his father Varun, seeking more knowledge about Brahm. 'Oh father! Please preach me more about Brahm'.

Varun advised him—'You should try to realise and understand Brahm by the medium of Tapa. Tapa is Brahm personified; Brahm is known by doing Tapa' (1).

[Note—¹*Pran* is a synonym of life forces present in this creation, especially in relation to the body of the creature. It also supports life in the form of the vital winds which are also called Pran. Since Brahm has these virtues, and since Pran is wind in its basic form, it is an apt personification of Brahm. Nothing can survive in a vacuum if there is no air to breathe life into it, so Pran is Brahm as Brahm fills up all available space in creation even as the air element fills up the entire length and width of the space of the sky in creation. The importance of Pran vis-à-vis Brahm has been explained in note to Anuvak no. 1 above.

²Obviously, the word Pran here refers to the *vital wind* or air which is breath and other vital winds in the body, such as Apaana, Udaana, Vyan and Samaana etc. which sustain life in the otherwise lifeless and inane gross body and helps it to carry on with its functions. When the creature dies, its vital winds leave the body and merge with the air element present outside the body just like the air present inside the balloon merges with the atmospheric air when the balloon is punctured.]

Valli 3, Anuvak 4

[This Anuvak explains the importance and significance of Mana as a manifestation of Brahm. Refer also to Valli 2, Anuvak 4.]

1. After doing severe Tapa once again, Bhrigu realised and understood the truthfulness of the statement that Mana is Brahm personified¹. Indeed, all creatures are born out of Mana; they live relying upon this Mana; and they perish and merge into Mana at the time of death².

With this realisation, Bhrigu once again approached his learned father Varun and requested, ‘Oh Lord! Please preach me about Brahm’.

Varun replies as earlier, saying, ‘You should try to realise and understand Brahm by the medium of doing Tapa. Tapa is Brahm personified.’ (1).

[Note—¹*Mana* technically refers to the mind, but it also involves the heart because the mind and heart work in close coordination with each other. The mind exhibits tremendously astonishing qualities that are characteristic and typical of it, and it is aided in its endeavours by the heart. To remain focused, the mind needs the support of the heart, otherwise it would face distraction and would digress from its chosen path. That is why it is said that one ‘learns by heart’ and not by one’s mind. A person is said to dwell where his heart dwells and not where his mind is, because the heart is the abode of the almighty Atma, which is the pure consciousness that forms the true identity of the creature and is the manifestation of Brahm himself inside the body of the creature.

Brahm reveals itself with two attributes—‘emotions’ that form the jurisdiction of the heart, and ‘thoughts’ that form the jurisdiction of the mind. Obviously they must work in tandem to make a man stable and capable. When Brahm reveals itself as the creature, it sits in the heart and controls the mind and vice versa. The characteristic virtues exhibited by these two entities are actually revelation of the virtues of Brahm. In fact, they are like the two faces of the same coin. If everything in existence is a manifestation of Brahm, i.e. if everything that has a verifiable existence is a revelation of the ultimate Truth in creation known as Brahm, then it is natural that Mana is no exception.

The importance of Mana has been explained in note to Anuvak no. 1 of this Valli.

²Since *Mana* relates to the mind and the heart, it is directly concerned with the process of life. How? Well, the entire process of procreation depends upon conjugal relationship between a man and a woman, and obviously the heart and mind have an all-important role to play in the entire process. This fact is so obvious that it needs no elaboration. After birth, it is the man’s mental setup and the emotional quotient of his heart that shape his entire personality and behavioural pattern. Suppose a man is very depressed or distressed, he would not eat properly, and this would have an adverse impact on his physical wellbeing. Similarly, he might even die if overcome with grief and struck with sudden misfortunes.

At the time of his death, he takes a new birth depending upon where his mind and heart were rooted at the time of death—a fact endorsed by Katho-panishad, Canto 2, Valli 2, verse no. 7 which is Chapter no. 1 of this volume.]

Valli 3, Anuvak 5

[This Anuvak highlights the importance and significance of Vigyan (analytical and critical intelligence and knowledge) as a manifestation of Brahm. Refer also to Valli 2, Anuvak 5.]

1. When Bhrigu had done severe Tapa, he realised and understood the truth about Vigyan. He learnt that all the creatures are born out of Vigyan (i.e. special knowledge and skills are needed to set in motion the process of creation); they are sustained by

Vigyan (i.e. special knowledge and skills are needed to provide for all the material needs of this living world and take care of its general welfare); and they conclude in Vigyan (i.e. special knowledge and skills are needed even to dispose of the body properly by way of performance of elaborate cremation rites and other rituals, or embalm it before burying).

In short, from conception right up to its conclusion the creation needs Vigyan at each step of its existence¹. At the time of death, a wise man benefits from his lifetime of experiences and learning, and detaches himself from this delusory and illusionary world of material objects which are non-eternal and the cause of all miseries and torments because they tend to tie and bog the Atma down to this lowly world of transmigration and prevent its final liberation and attainment of salvation.

Bhrigu went to his father Varun once again and requested, 'Oh father! Please preach me about Brahm'.

Varun replied—'You should try to understand and realise Brahm through the medium of doing Tapa, for Tapa is Brahm personified; it is the means to get acquainted with Brahm'.

At this advice of his father, Bhrigu once did Tapa (1).

[Note—¹This Anuvak about *Vigyan* emphasises that it is the progenitor, sustainer and concluder of the entire creation. It is obvious deduction because creation is such a complicated process that it requires exceptional intelligence and skills as well as critical ability to use available information to start, sustain and conclude the tremendous explosive potentials of the forces and energy of Nature for constructive purposes, and to keep a strict tab on it so that it does not digress from its mandate and prove counter-productive.

Even during the life of a creature, it needs the help from all fields of knowledge in order to meet its daily needs and provide for its material and bodily comforts and wellbeing.

When *Gyan* is put to test and a rational knowledge is arrived at, when it is witnessed or experienced in practical terms, it is known as 'Vigyan'; it is logical derivation, confirmation and affirmation of certain things known in theory and now ratified as the unequivocal truth and the irrefutable fact, reasoned acknowledgement, or actual witness of facts so that there is no doubt or confusion as to their authenticity, veracity and truth. In other words, Vigyan is experimental Gyan, or Gyan put to practice by following the guidelines of Vedant. [See Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39.]

Therefore, Vigyan literally means application of mind, intelligence and rational logic, having in-depth knowledge, intelligent and rational learning or science of anything which can be verified, any knowledge which is empirical, rational, logical, scientific and applicable in practice. Vigyan is analytical and critical intelligence and knowledge obtained as its result. [The concept of Vigyan has been elaborately described in Chandogya Upanishad, canto 7, section 7.] Vigyan is the wisdom and intellect that is inherent in a man. It is the rational mind that decides what is to be remembered, what is to be thought, what needs attention and concentration of mind, and what is worthy of paying any attention and thought at all in the first place. This selective aspect of the discriminatory intellect is called Vigyan.

Any body of knowledge is called Vigyan because it is verifiable and derived at by application of intellect and mind free from any pre-conceived notions and belief. Consciousness is called Vigyan because it is self-sustained, self-enlightened, self-illuminated, radiant and glorious; it is a fount of knowledge and awareness, of wisdom and enlightenment. All other entities in this creation have whatever they have because of the potentials and powers bestowed to them by this consciousness. Their very relevance and importance and significance are there because the consciousness has given them this privilege. These entities are nothing else but a marvelous display

of the magnificent majesty and potentials of the consciousness. This realisation is called Vigyan because it is based on intelligent application of knowledge and wisdom. It is Vigyan because it is empirical and thoughtful; it is rational and logical; it is truthful and real. Vigyan refers to a superior body knowledge that is not based on hearsay or conjectures. It has a solid foundation and steady relevance.

Information and knowledge that stand the test of logic and rationale is called Vigyan; it is this Vigyan that takes a man forward. With knowledge come joy and happiness, satisfaction and a sense of achievement, elation and a sense of fulfillment. In the spiritual realm, this leads to bliss and self-realisation. This realisation pertains to the awareness of the irrefutable and immutable Atma or soul which is consciousness. The macrocosmic counterpart of this individual Atma is known as Brahm. Hence, self-realisation is equivalent to Brahm-realisation.

Consciousness itself refers to the truthful knowledge of anything that is real and true, and not that is hypothetical and imaginary. That is why the Atma or soul is called consciousness and a personification of Vigyan.

Relationship between ‘Gyan’ and ‘Vigyan’—The difference between ‘Gyan’ and ‘Vigyan’ can be succinctly summed up in the statement—‘Brahm is’ or ‘Lord is’. This awareness and firm conviction of its truth is Gyan, while to say truthfully that ‘Brahm is I’ or ‘Lord is I’ is called Vigyan.

‘Gyan’ and ‘Vigyan’ are closely related to each other. The realisation or awareness that Atma is, inter alia, different from the body, and is the true identity of a creature, is called ‘Gyan’. This Atma is a very unique entity and is called the ‘true self’ of the creature. Gyan refers to self realisation and attainment of enlightenment about the absolute Truth and Reality in this creation. It encompasses a broad swathe of philosophy which is taught by the Upanishads, called Vedanta. When Gyan is put to test and a rational knowledge is arrived at, when it is witnessed or experienced in practical terms, it is known as ‘Vigyan’; it is logical derivation, confirmation and affirmation of certain things known in theory and now ratified as the unequivocal truth and the irrefutable fact, reasoned acknowledgement, or actual witness of facts so that there is no doubt or confusion as to their authenticity, veracity and truth. In other words, Vigyan is experimental Gyan, or Gyan put to practice by following the guidelines of Vedant.

Therefore, ‘Vigyan’ literally means intelligent application of mind; intelligence and rational logic; having in-depth knowledge; intelligent and rational learning or science of anything which can be verified; any knowledge which is empirical; rational, logical, scientific and applicable in practice.

The concept of Vigyan has been elaborately described in Chandogya Upanishad of the Sam Veda tradition—7/7, and in Brihad Aranyak Upanishad of Shukla Yajur Veda tradition—3/7/22.]

Valli 3, Anuvak 6

[This Anuvak asserts that Anand or the sense of eternal and unbound happiness and joy, beatitude and felicity, bliss and peace, are synonyms for Brahm realisation. Anand is a manifestation of Brahm. In fact, the entire Valli 2 of this Upanishad is so-called precisely for this reason.]

1. Bhrgu realised and understood upon doing severe Tapa that Anand (the sense of eternal and unbound happiness and joy, beatitude and felicity, bliss and peace) is indeed a manifestation and synonym of Brahm. Verily, it is due to Anand that all the creatures have come into being (i.e. their origin lies in the sense of happiness and joy

that the parents have in conjugal relationship and the prospect of it producing an offspring), it is because of Anand that they live (i.e. every living being wishes to live because he finds happiness and joy in this life and enjoy the world), it is in Anand that they finally find their rest upon death (i.e. with death the living being is got rid of all the miseries and agonies he was subjected to while alive), and it is to obtain Anand that a creature does anything at all (i.e. all the activities of all living beings are aimed at providing him with happiness and joy, with pleasures and comforts, for no one would do anything if it harms him or gives him pain)¹.

With this realisation and achievement of eternal 'Anand', sage Bhrigu was fulfilled and contented; he had indeed realised and understood the essential meaning of Brahm and Brahm-realisation. [That is, he understands that obtaining eternal peace, tranquility, bliss and happiness is the aim and culmination of all spiritual practice, and that obtaining these eclectic virtues is tantamount to Brahm-realisation. In other words, if Anand is not achieved, Brahm-realisation has not been achieved.]

This knowledge pertaining to the supreme transcendental Brahm as preached by Varun (the Water God) to his son sage Bhrigu is so eclectic and sublime, so ethereal and subtle, so profound and all-inclusive that it is compared to the vast, infinite, fathomless and measureless sky element called the 'Param Vyom'. In other words, this knowledge is so profound and majestic, so magnificent and eclectic, so important and significant, and so vast and all-inclusive that it resembles the Sky in its reach and dimensions². This is because the sky is famous for its unique qualities of being astoundingly vast, measureless and fathomless, being mystically all-pervading, all-encompassing, all-inclusive and omnipresent, being neutral and indifferent to all the uncountable objects with numerous taints that are present in it simply because it is the habitat of the entire creation, and the irrefutable fact that it is pristine pure, absolutely incorruptible, extremely subtle and most sublime.

A person who is wisened to this eclectic and divine knowledge pertaining to Brahm becomes established in Brahm. [That is, once he has found the eternal fount of everlasting peace and happiness, no wise man would abandon it in exchange of sorrows and miseries so typical of the mundane and perishable world.]

A wise, learned and enlightened man is never in shortage of anything—such as food and livelihood as well as worldly prosperity and wellbeing in the form of livestock and offspring. He is great and acclaimed, he is famous and honoured, and he is praised, revered and lauded by all in this world (1).

[Note—¹The sexual process by which any creature is conceived is *Anand* personified because the activity gives extreme satisfaction and pleasure to both the parents. No one would enjoy sex if there was pain in it! A creature enjoys this world because there is Anand in it. No one likes to enjoy pain and miseries. So if one realises that Anand is a personification of Brahm then he would see Brahm in everything that gives him happiness, joy and bliss. In other words, if this world gives him Anand, he surely must be seeing Brahm in it. When one comes to understand the profound import of this observation then the same world which was entrapping for him hitherto proves to be liberating for his soul. This is because true Anand and Brahm are synonymous with each other, and Brahm can never be the cause of any bondage or serfdom; Brahm can never give miseries and torments.

Since 'life' in any form is Viraat Purush personified, Anand is the supreme Brahm who created this Viraat in order to enjoy its own maverick tricks. Why did Brahm create this illusionary creation? Well, he did it for the sake of his own pleasure much like a magician creates a magical world just for pleasure, knowing fully well that it has no substance in it. This fact that Brahm created this world for his own Anand has been elaborately described in Brihad Aranyak Upanishad in its Canto 1 in the process of genesis of creation.

Throughout one's life, a man seeks happiness and joy of one kind or another. No one seeks pain and sorrows, and if they come un-invited the man tries his best to throw them away. If the life is spent happily and joyously, it does not seem a burden; on the other hand a life of miseries and pains is horribly difficult to pass.

Finally, at the time of death, every man finds peace. This is because no matter how hard he tries, real Anand is a very illusive object; it is rarest of the rare thing that is available to any man. If he is financially well off, then he has bodily ailments afflicting him; if he is healthy then he might be living hands to mouth—and so on and so forth. The fact that death gives Anand is proved when someone says 'I will find peace only in my grave', or when we make the general statement 'his body was laid to rest' or 'let his soul rest in peace'. Why is it so if Anand was available in this life and not after death?

²The sky is the most subtle element amongst the five primary ones created at the time of creation—viz. sky, air, fire, water and earth. Sky is regarded as a synonym of and the nearest analogue to Brahm because of its unique qualities which depict the uniqueness of Brahm. Sky and Brahm are both famous for their unique qualities of being astoundingly vast, measureless and fathomless, being mystically all-pervading, all-encompassing, all-inclusive and omnipresent, being neutral and indifferent to all objects with numerous taints that are present in them because they are the habitat of the entire creation, and the irrefutable fact that they are pristine pure, absolutely incorruptible, extremely subtle and most sublime.

The blemishes, faults, vices, evils, sins, corruptions, misdemeanors and all sorts of digressions present in the world are like suspended dust particles, smoke, moisture, clouds, the numerous other things such as the various birds and the celestial bodies high up in the sky which create an illusion of a sky that is spotted or dotted or polluted or coloured or overcast with these uncountable objects that are extraneous to the sky, that are not integral to it but nevertheless appear to be a part of the sky. The sky has nothing to do with them; it remains absolutely unconcerned with and untainted by them, for once they are removed from the scene the sky is uniform and spotless from one end of the horizon to the other. This example is very practical and can be observed by anyone. That is why 'sky' is used as a metaphor to describe anything that remains free from the influences of those things that appear to be an integral part of it but are in actual fact not related with it by even any remote chance.

The sky has the opposite types of characteristics present in it. For example, the space of the vast cosmos has no form but the space inside a bottle or a pot takes the shape of the bottle or the pot respectively. Similarly, the vast sky in its basic and truthful form is spotless and without any colours, but it appears to be spotted with so many stars and specs of clouds and smoke of different colours as well as with birds of different forms, colours and shapes flying here and there. The colour of the sky during the evening or morning hours present a canvas of so many colours which appear to be real, but they are obviously a reflection of the colours of the light of the sun as reflected from the various impurities present in the otherwise spotless sky.

This is what is meant here—though the Atma or Brahma are inherently and basically pristine pure and clean, but when they come in contact with this world, the different flaws and faults of the latter cast their shadow and make them appear to have some or the other kind of spots in them.

The sky has such grand and majestic attributes as being vast, measureless, uniform, immutable, spotless, clean, colourless, calm, all-pervading, all-encompassing etc. The sky is the measurement of Brahm in the sense that if it was ever possible to measure the length, breadth and depth of the sky, it would then have been possible to measure Brahm. But that is not at all the case. The calmness of the higher reaches of the sky is experienced by Para gliders and can even be witnessed on top of mountains which are high above the ground and located somewhere in the space around the earth, symbolised by the sky, where there is an eerie silence. The

sky has no colours of its own; whatever colours that we see are actually the scattered sunlight.

Everything that exists does so in any one of these spaces. Every nook and corner where there is no solid or liquid is filled with space or 'Akash', which is a synonym of sky. It is omnipresent, all-pervading and all-encompassing. That is, these three forms of the skies, viz. the outer, the inner and that which is present inside the heart, are all the same; there is no distinction or demarcation or boundary or fundamental difference between any two skies. The apparent boundary or limitation imposed on the sky by the physical body or the membrane of the heart is only deceptive in nature. Once a person dies, for example, his body perishes, and the space present inside the heart merges indistinguishably with the space present inside the body when the body is cremated or decays when buried, and they together merge with the vast space present outside the body.

The 'sky', which was originally conceived as something that was 'void' or 'nothing', gets filled with 'air', simply because void can't exist, and the creation which came into being in this void needed some base for its origin and coming into being. The molecules or atoms of air are in a state of continuous agitation and flux; they collide with each other, they form a chain of molecules which give rise to different layers or strata of air which extend from the surface of this earth to the stratosphere. This continuous turmoil produces 'sound'. Various physical and chemical processes come into play, producing gases of varying density and characteristic features. Air has particles of dust and different gases, which produce the perception of touch. Friction of the various molecules present in the air produces static electricity which is observed as a scintillating display of atmospheric discharge of electrically charged particles in the sky often observed at the poles. This sparkle of static electric discharge is synonymous with 'fire'. Perhaps the Upanishadic sage got this brilliant idea when he observed a meteor shower during the night. The two elementary gases hydrogen and oxygen combine to form the molecule H_2O commonly known as 'water'.

With all these essential ingredients in place, the solidifying and cooling down process of nature starts its effect and produces soil and rocks which are symbolised by the 'earth' element. Then gravity and magnetic forces come into play, giving density, gravity and grossness, indicative of the grossness or heaviness of not only the earth but also of the air around it. Previously, before gravity and other forces of nature came into play, this air was subtle and very light; it spread universally and uniformly to all the corners of the cosmos. But with the gradual formation of different celestial bodies from the primordial cosmic gases, each having its own gravity and other natural physical and chemical forces, the air was pulled or sucked in, leaving the rest of the space beyond the reach of these celestial bodies into a big void.

Besides this point, the sky has many names and connotations depending upon the attributes exhibited by it. This implies that if Brahman has manifested itself as the sky element, then all these individual classifications of the sky pertaining to different existential forms are also evidence of the presence of Brahman in all these forms.

According to one interpretation, there are *five subtle skies* representing the space surrounding the five sheaths or 'Koshas' present in the body of a creature.. They are the sheaths that surround the Atma and are called 'Panch Akash'. These are the following—(1) the Food Sheath called Anna Maye Kosh; (2) the Vital Air Sheath called Pran Maye Kosh; (3) the Mental Sheath called Manomaye Kosh; (4) the Intellectual Sheath called Vigyan Maye Kosh; and (5) the Bliss Sheath called Anand Maye Kosh. Ref.-- Mudgal Upanishad, 4/5 of the Rig Veda.

According to another concept, there are ten subtle skies. They are the following:-- (1) Ghatakash—the space inside a hollow pot; (2) Mathakash—the space inside a holy building, such as a holy shrine, a monastery, an abbey etc.; (3) Hridayakash—the subtle space inside the heart; (4) Akash—the vacant space above the earth; (5) Suryakash—the space of the solar system; the space around the sun, or the solar

system illuminated by the light of the sun; (6) Paraakash— the space above or beyond the solar system, it is said to burn with the celestial fire; (7) Mahakash— the great sky that is aglow with divine illumination, the heaven; that space which is radiant with a divine glow; (8) Paramakash— the supreme sky beyond the Mahakash, it is said to be very magnificent and encloses everything that exists, including all the other skies; that space which is illuminated, all pervading, all encompassing and full of bliss and felicity; (9) Tattwakash— the elementary space that is at the core of the concept of space, or the space that surrounds the basic elements of creation; by natural corollary it refers to the subtle, sublime, ethereal and supreme space where the eternal, transcendental Brahm has his abode because Brahm is the cause of all the basic elements of creation; there is complete beatitude and felicity there; that space which surrounds the essential truth known as Brahm; and (10) Anatariksha—the physical space where stars are present in deep space; the inter-galactic space. Besides these, there is one more space called ‘Swarga’ which means heaven or the Duloka.

These skies have been ascribed different names just to facilitate understanding, and not because any one form of sky is fundamentally different from the other. For example, the space present inside the mud-pot, called the Ghata-kash, is the same as the space present outside the body of the pot. When the pot is broken, the demarcation wall of the body of the pot is removed, and both the space inside and outside of the erstwhile pot become indistinguishably and inseparably the same. Therefore, the various names are artificial and misnomers.

Paingalo-panishad of the Shukla Yajur Veda tradition, canto 4, verse nos.19-20 states that Brahm is like ‘Akash’ and how the realised ascetic becomes one with the supreme Soul upon his death by citing the instance of the ‘Ghata-kash’. It says—“ A truly realised and enlightened person called a Gyani dissolves himself and merges with the supreme transcendental entity (Brahm) wherever and however he dies because that supreme entity is all-pervading, omnipresent and immanent like the sky” (verse no. 19). This is because for a true Gyani his body is not his true self but it is his Atma or pure consciousness which is another form of the supreme entity and has the same set of characteristics that that entity, known as Brahm, possesses. When such a man dies, he, as his Atma, rides upon the Pran or the vital winds present inside his body and simply leave the latter and makes its exit from it just like a serpent leaving its old cuticle and effortlessly coming out of it.

Another interpretation is this—When such a wise man dies, then he simply discards his gross physical body. The sky or space present inside the body and the one outside it is one uniform and inseparable element; it is the artificial boundary of the sac-like body that has created an artificial division between the two. So when this artificial demarcation is removed, it is but natural that the two skies become one. Further, a wise man is expected to know that Brahm and sky are synonymously treated because the former has all the attributes of the latter—it is immutable, immanent, omnipresent, all-pervading, pure and untainted, vast and fathomless, infinite and eternal. The air fills the sky and the second element after the sky that is nearest analogue for Brahm, for it is the air the sound called the cosmic Naad or the divine ethereal sound of cosmic music of creation that made its presence felt before the visible creation came into being. Pran or the ‘vital spark of life’ is a name given to the air element present inside the creature that gives the body its much needed life and vitality.

Therefore, when he dies, his Pran simply coalesces with the air present outside his body, and his Atma present in the subtle sky of the heart, known as the Hridya-akash, simply merges with the supreme all-pervading Atma present in the sky outside the body because the limiting and segregating boundary of the body has now been removed.

“Even as the limited space present inside the mud pot is called ‘Ghata-kash’ just to identify it for hypothetical purposes and it becomes one with the space outside when the pot is broken, because it is essentially no different from the vast and

fathomless sky present outside the pot, the wise Yogi (ascetic or hermit) who has become truly enlightened and acquires the truthful knowledge of the reality, is able to access that supreme, immutable and infinite state of existence characterised by being without any form or shape, and which has or does not need any support for itself. This state is called 'Gyan Loka' or the abode marked by the state of existence where there is truthful awareness of reality, where there is truthful knowledge, where there is erudition and wisdom, where there is the light of self-realisation, and which is infinite, formless and all-pervading as the sky. Such an abode symbolises a treasury of Gyan, and hence it is called a Gyan Loka, and its inhabitant is Brahm who is Gyan personified" (verse no. 20).

According to another interpretation in the Upanishads, there are five subtle divisions of the sky as follows—The sky is the subtlest of the five elements (the others being air/wind, fire/energy, water and earth) in creation. Basically sky is indivisible and uniform, but for the purpose of study it has been hypothetically divided into five components or sections. These divisions of the physical sky are based upon the different forms it appears in with respect to an observer on earth. These divisions are then used to draw parallel with various metaphysical concepts in order to bring out the subtle differences between these concepts clearly and make them comprehensible. These hypothetical divisions are therefore used as metaphors for the purpose of study and comprehension, and not to suggest that the sky can be actually divided.

Now, technically the *Akash* is the first form of the sky just above the surface of the earth, the sky which is infinite, fathomless, measureless and eternal, the sky which appears bright during the day time as if it has its own illumination radiating from it, the sky which is dotted by so many things that are extraneous to it but appear to be an integral part of it, the sky which is there but cannot be touched, felt, smelled and tasted but only witnessed, but technically not 'seen' because something that is vacant cannot be seen had it not been for the impurities present in it, the sky which appears to have a wide variety of colours like a multi-coloured canvas but is fundamentally colourless, and the sky which is fundamentally pure and uncorrupt and untainted by any of these things. Therefore, this word 'Akash' is a hypothetical division of the immutable sky which is used as a metaphor to describe some aspect of metaphysics.

The second division of the sky is the *Paramakash* which is the sky seen during the night time. This portion of the sky is dotted by stars and is not totally dark because of the light reflected from the twinkling of the stars as well as the presence of the moon, the reflected light from the earth's lighted side and other celestial bodies that reflect sun's light.

The third division of the sky is the *Mahakash* which is the greater sky just like we have a city and its outer suburban out lying areas called the greater city area. This sky is the vast space beyond the solar system, and stretches into the deep recesses of the cosmos, and it includes the inter-galactic space. Obviously this is like hell where there is no trace of life and if any one goes there, even hypothetically, then he just gets lost to humanity. It sure is burning with hellish fire of cosmic explosions where new stars are continuously being born and destroyed, where new galaxies are formed and old ones get annihilated, where suns explode into black holes and supernovas create immense cauldrons of unimaginable heat and energy.

The fourth division of the sky is the *Tattwakash* which refers, as the name suggests, to the essential form of the sky element which is the subtlest form of the five elements created in creation and has, inter alia, such virtues as being infinite, eternal, immutable, immaculate, omnipresent, all pervading, all encompassing, fathomless, measureless etc.

Lastly, the fifth division of the sky is called the *Suryakash* or that portion of the sky that surrounds the celestial Sun. It is therefore as radiant and splendorous as the sun itself, and it is almost impossible to see it with naked eyes. The brightest object in the heavens, the Sun, is present here, and as is well known this Sun is a metaphor for

a number of things, such as life as well as the light of knowledge, wisdom, enlightenment and erudition, and therefore for the supreme transcendental Brahm. In fact this Brahm possesses all the virtues displayed by the sky, and therefore the latter is usually used as a metaphor for Brahm, though this Brahm's virtues are not limited to the ones displayed by the sky which forms only a fraction of all the virtues possessed by Brahm.

In this context, there are a number of Upanishads in the Shukla Yajur Veda tradition that describes these skies.

For instance, Mandal Brahmin Upanishad, Brahmin 4, canto 1, verse no.1-4, says that these five subtle skies are the following—(1) Akash—the vacant space above the earth that has no light of its own, and it is dark and neutral from within and without; (2) Parakash—the space that burns with a fire like that of hell from within and without; (3) Mahakash—that space which is radiant with a divine glow that effuses from within it and permeates everywhere within its jurisdiction; (4) Suryakash—the space of the solar system; it is aglow with the splendour and radiance of the sun; and (5) Paramakash—that space which is brilliantly illuminated, all pervading, all encompassing and full of bliss and felicity.

According to Advai Tarak Upanishad, verse no. 7 of Shukla Yajur Veda tradition, there are five divisions of the sky are they are the following— (1) the sky at the time of sun rise—viz, the sun with a rounded, brilliantly splendid disc, having the fierceness and radiance like that of the fiercely burning fire, is able to achieve a similarly exalted stature. He becomes an image of that 'Akash' or the sky itself where the sun is seen. (2) The next sky that is described now is the dark sky before the sun rises, the pre-dawn sky. It is filled with twinkling stars that give it its soft light. This sky is called the 'Paramakash'. (3) The third subtle sky is called 'Mahakash' and it is dazzling like the fire of Kaal or the fire of dooms day. (4) The fourth sky is called 'Tattwakash' or the sky that surrounds the essential and ultimate Truth. This sky is considered as the best subtle space and is endowed with a brilliant light. This sky forms the outer periphery of the next sky. (5) Finally, the fifth subtle sky is called the 'Suryakash' and it is brilliant and splendid as if there were millions of suns in it.

When these hypothetical divisions are used as metaphors to describe Brahm, they acquire a mystical interpretation. For example, with relevance the five forms of skies as described in Advai Tarak Upanishad, the interpretation is as follows-- A person who has wisdom and erudition to perceive Brahm as having the stupendous glory, radiance, splendour and energy as that possessed by the sun, the potentials and powers of fire, the life creating, sustaining and annihilating powers possessed both by the sun and the fire, and having the attributes of the sky—such as being fathomless, measureless, vast, subtlest of the five elements of creation, incorruptible, inherently spotless in spite of the presence of so many impurities, omnipresent, all-pervading, all-encompassing, eternal and infinite etc.—becomes enlightened and exalted in his mental stature. Such a man stands out amongst his compatriots and peers, and is honoured and lauded for his wisdom and enlightenment. This is a metaphoric way of saying that he becomes one like the sky element called *Akash*, and he remains firm in his convictions about Brahm and steadfastly established with the attributes of the sky. He is deemed to be as exalted and honourable as Brahm having the attributes of the sky element.

There is another interpretation to this verse. By realising Brahm, the ascetic acquires a divine halo around him which resembles the bright disc of the sun as it is seen during the day in the sky. His enlightenment and wisdom glow and emanate light which is enjoyed by others; they benefit from his presence amongst them.

Though the *Paramakash* representing the night sky appears to be dark and blank, it is actually not completely dark as the stars lend their light to it. The ascetic who is enlightened and realised represents the *Paramakash* because he seems to be bland, blank and disinterested in anything, but this is only a superficial view because darkness of the sky here does not mean ignorance or delusion but of remaining

oblivious to all the corrupting influences of the world that might taint an ascetic's mind and heart. His apparently bland and blank heart and mind are twinkling with numerous gems of wisdom which are highlighted only when the dazzle of the sun symbolising the various charms of the world are eliminated. This metaphor of the stars in the background of the dark sky is a brilliant depiction of the vast possibilities and potentials that unfold themselves before a Brahm realised person. This person has a clean slate like the canopy of the dark sky, but the vast treasury of wisdom and enlightenment that he has is likened to the uncountable stars in the dark canopy of the night sky.

The ascetic acquires such mystical powers as represented by the *Mahakash*, and he can even cause destruction and death if he so wishes.

This *Tattwakash* is the sky that surrounds the transcendental and supreme Truth in creation, which is Brahm, and forms the peripheral sky around the central core. The self-illuminated Brahm is the source of all light in creation just like the celestial sun which is self-illuminated and which lights up the length and breadth of the sky of the solar system. If an ordinary sun has this potential and power, then one can imagine and expect innumerable times more from that authority that has created this sun in the first place and has given it its powers and potentials. After all, even modern science has established that our sun is not the only sun in the universe, and there is uncountable number of suns scattered in the bowl of the cosmos, some still in the nascent stage while others on the verge of extinction. So it is easy to visualise that Brahm which is at the core of this stupendous cosmic cauldron if we were to take only a physical stand on Brahm. From the metaphysical view point, this Brahm is the supreme authority in creation and the Soul of it. It is Brahm that drives this dynamo known as the creation. Therefore the sky or space where it is located is also glowing with the light that emanates from it much like the sky around the celestial sun. When the ascetic has realised Brahm, his inner self also glows with the divine light of self enlightenment, and it becomes as radiant and glorious as the sky around Brahm, because this Brahm is present in his very own self. The whole body of such a realised ascetic becomes radiant and glorious like this sky.

Finally we have the *Suryakash* or that sky that is in the immediate vicinity and in the presence of that stupendous fount of divine energy known as Brahm. This sky forms the inner ring or layer that immediately surrounds Brahm, and therefore it is natural that it is more dazzlingly bright than the other skies that are not so close, and it has a brightness that resembles the blinding light of millions of suns just like the immediate space around the celestial sun. This immediate sky of the sun just cannot be seen by a naked eye, it is impossible to do so, because it would burn the eyes, whereas it is possible to see the sky at a distance from the sun. Similarly, the ascetic's inner core is dazzlingly bright with the light of self-realisation and enlightenment. All other lights, or all other knowledge and all other ways of attaining Brahm pale into insignificance when this light is witnessed by the ascetic in his own bosom.

The skies have also been described in Trishiki Brahmin Upanishad, 1/5-8 of the Shukla Yajur Veda tradition.

According to Brihad Aranyak Upanishad, Canto 4, Brahmin 1, verse no. 1-6, the Akash or the sky/space element is the Pratistha or established fame and glory of Brahm. It is a well established tenet of Vedanta that Brahm is synonymous with the Akash and is uniformly diffused throughout the sky so much so that it is impossible to segregate them much like it is impossible to separate salt after it is dissolved in water. The unique qualities of Brahm and Akash are similar as follows—they are infinite, eternal, uncorrupt, pristine pure, all-pervading, all-encompassing, omnipresent etc. The sky element is the nearest analogue to Brahm because it is the subtlest of the five elements in creation. Everything in creation came into being in the bowl of the sky, lives in this bowl and would perish in it, but this sky would be there even after that. All these unique attributes of the sky are like the grand attributes of Brahm on display, making the Akash the Pratistha of Brahm.

Please also refer to 1/5/12; 2/1/5; 2/3/2-5; 2/5/10; 3/7/8.12; 3/8/3-11; 3/9/13 of Brihad Aranyak Upanishad.

The concept of the Sky has also been elaborately described in Chandogya Upanishad, canto 7, section 12 of the Sam Veda.]

Valli 3, Anuvak 7

[This Anuvak outlines the edict that one should not insult or criticise or contemptibly treat Anna or food. Food is to be shown great respect because without it no life is sustainable; it forms the basis of life. In fact, food is the basic ‘Pran’ or life bearing Principal in the body of all living beings—for no one can hope to survive without food.]

1. One should make a vow not to criticise or contemptibly treat Anna or food¹. Pran is Anna, and the body is the consumer of this form of food². Both are dependant upon each other³.

Since the gross body called the ‘Anna Maye Kosh’—or the food sheath as it is formed from what the creature eats—in which the pure self of the creature called its Atma lives, and since Pran also lives in it in the form of its ‘vital life’ and the various ‘vital winds’ which enables the body to survive, perform its different functions, and live a fruitful life, it can be safely said that ‘Pran lives inside Pran’⁴.

A wise aspirant who is erudite and sagacious enough to understand this unique concept is firmly convinced of its veracity, and therefore he respects food and its eclectic divine virtues of life-creation and life-sustenance which are the unique powers exclusively possessed by Brahm. Consequently, he is able to acquire the ability to digest food⁵, and become prosperous and famed. He is well off with abundant livestock and offspring, and gets a good name and respect in the world (1).

[Note—¹This tenet of *respecting food* for its life sustaining properties is very relevant today also as it was many centuries ago when the Upanishads were composed as the world now faces an acute and unprecedented food crisis. As with other edicts of the Upanishads, directions given by erudite seers and sages ages ago are timeless ones, and they are evergreen principles no matter which time zone or geographical area they are applied to. Food is not to be wasted, and it ought to be shared with everyone even as the Atma and Pran are no single person’s fiefdom. This is borne out by the next observation in this verse that Anna is Pran. Pran is another word for ‘wind or air’ element, and wind or air cannot be restricted in the barn of the rich hoarder.

²Pran is a synonym of ‘life’ and of the ‘vital winds’ that sustain life in the *body* of a living creature. A body consumes fresh air in the form of breath rich in oxygen ; it inhales fresh air and expels impurities laden air rich in carbon dioxide and other gases much like a chimney in a factory. At the same time, it also uses the other forms of the same air element present inside it to keep going normally. This is a metaphoric way of saying that the body ‘consumes’ Pran.

The various vital winds called Pran present in the body are the following--(1) Pran, the wind element, as breath, that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without life no other wind would be of any significance to the creature; (2) Apan, the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys); (3) Saman, the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood;

(4) Udaan, the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough; and (5) Vyan, the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

Besides the above, there are five subsidiary winds which act more like assistants to the chief Prans. They are--(1) Naag—this junior wind which helps in exhaling breath and belching; (2) Kurma—this subsidiary wind helps the eyelids to open and shut; (3) Krikar—this creates the sensation of hunger; (4) Devdutta—this creates sleep; and (5) Dhananjay—it prevents decay and deformation of the body immediately after death for some time.

According to Subalo Upanishad, canto 9, verse no.1-14 of the Shukla Yajur Veda tradition, these ten winds have the following functions—(1) Pran—this controls eyes and the faculty of sight (verse 1); (2) Apaana—this controls ears and the faculty of hearing (verse 2); (3) Vyan—this controls nose and the faculty of smell (verse 3); (4) Udaan—this controls the tongue and the faculty of taste (verse 4); (5) Saman—this controls the skin and the faculty of touch (verse 5); (6) Vairambh—this controls speech (verse 6); (7) Mukhya—this controls the hands (verse 7); (8) Antarayaam—this controls the legs (verse 8); (9) Prabhanjan—this controls the anus (verse 9); (10) Kurma—this controls the genitals (verse 10); (11) Shyen—this controls the Mana or the thoughts and emotions (verse 11); (12) Krishna—this controls the discrimination, intellect and wisdom (verse 12); (13) Shwet—this controls Ahankar or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) Naag—this controls the ‘Chitta’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

³The *body cannot survive without Pran* because Pran means breath as well as the other vital winds that sustain the body from the inside and help it to carry on with its functions. If one stops breathing for instance, one would immediately suffocate to death. The *Pran needs the body* to dwell and have its importance displayed because it is the ability of the ordinary air element to keep the otherwise dead and inane body alive and active that it is so lauded and revered in this world. Had the wind or air element failed to do so, who would have bothered to honour them, for no one pays heed to things which are not of direct utility to him. Air is universally present everywhere, but one honours it in the ‘form of Pran’ and not in any other form as far as life on this earth is concerned. And this honour is available to Pran as long as there are creatures with a body, for otherwise it won’t be respected by dead bodies, or by a machine that does not need Pran and therefore it would not need to pay its tribute to it.

In brief, the honour and respect available to Pran and its utility is only till the time there are living creatures having a body that needs to breathe and that depends upon the vital airs to function. This is a symbiotic relationship between the Pran and the body of the creature.

⁴There is another way of looking at this concept of *Pran living in Pran*. Food has an inherent virtue of sustaining life, and life is the basic factor that lends value to food. Both are inter-dependent. Thus we can say that ‘life (Pran) lives in life (its life sustaining properties), and vice versa (i.e. life sustaining properties are inherent and integral to Pran)’.

⁵When one begins to treat Anna or food as a divine blessing for the living world and a personification of Brahm in the form of the essential nutrients that manifest themselves as the life-giving vitality, stamina, vigour and energy present in food, called the ‘Pran of Anna’, he begins to pay great respect to Pran and Anna that is usually reserved for some revered deity. So he stops indulging in overeating as well as gobbling up junk food for the purposes of satisfying his taste buds, and instead eats with care and wisdom only those things which are nutritious for the body, which are auspiciously acquired and which are sanctioned by the scriptures.

Food is to be eaten with the holy and eclectic view that it is like an offering to the sacred fire burning inside the body so that the different Gods who have taken up

residence inside the body in a symbolic manner are given their due nutrition and paid tributes for sustaining the body and keeping it fit enough so that the supreme Atma representing Brahm can live comfortably in it. The fact that food is not a medium to satisfy the desires of the sense organs for indulgence but a means of sustaining the abode of the Atma (i.e. the body) has been explained in Chandogya, 3/17/1-2. It says explicitly that those who treat food with the respect due to some holy entity go to an exalted higher abode, while those who treat it as a means of enjoyment of the senses go to a lowly world. Therefore, food is to be worshipped as a symbol of the supreme Brahm's astounding virtues of sustaining and nourishing this world.]

Valli 3, Anuvak 8

[This Anuvak lauds the importance of 'water' and its life giving and sustaining properties which are no less important than that of food. In this respect, water is Brahm personified.]

1. One should never show disrespect to Anna (food)—this is the great doctrine pertaining to food. Verily, 'Apaha' or water is Anna¹. 'Jyoti' (the self-illuminated consciousness present in the body as its vital life force) is the entity which enjoys the food, and it is for it that the food is meant and eaten².

Jyoti (light in the form of heat and energy as well as signs of life) is intrinsically present in water, and vice versa³. Hence, both are inter-dependent—life and heat depends upon water, and water depends upon them at the same time⁴.

A wise aspirant who is erudite and sagacious enough to understand this unique concept is firmly convinced of its veracity, and therefore he respects food and water equally and honours them for their eclectic divine virtues. Consequently, he is able to acquire the ability to digest food with the aid of water, and become prosperous and famed. He is well off with abundant livestock and offspring, and gets a good name and respect in the world⁵ (1).

[Note—¹This observation is very easy to understand. *Water* is the essential ingredient and component in the entire process by which food is made available in the first place, and then used by the body of the creature. It must be noted here that food needs water to grow, to be cooked, to be eaten, to be digested by the body with the help of digestive enzymes, to be circulated in liquid form as blood and then absorbed in the body through this fluid medium, and finally the toxic matters are eliminated in the form of urine and semi-fluid excreta. Even mucous and flesh that act as buffers and cushioning matters in the body are made of water as their chief ingredients. In fact, the major part of the body's weight consists of water.

Water is synonym with life as is evident from the fact that rains and monsoons are welcomed with cheers and festivities in all parts of the world, because without rains there would be drought and no crop to provide with food, and this would result in famine. When scientists search for signs of life in the universe, they search for traces of water molecules as these are sure shot signs of life no matter how distant in time it might be.

The importance of *Apaha* or water is emphasised in many other Upanishads, such as Chandogya of Sam Veda tradition—2/4, 5/16, 6/5/2, 6/6/3, 6/8/6, 7/10 etc., and in Brihad Aranyak of Shukla Yajur Veda tradition—2/1/8, 2/5/2, 3/7/4, 3/9/16 etc.

That is why water is regarded a 'God' known as Apaha. There are many connotations to this word. Let us see briefly what Apaha refers to.

(a) *Aapo* or *Apaha* refers to the water as flowing in a river, as clouds and as any fluid. It has been deified in the Rig Veda, 1/23/16-22. He is the patron God of 'water

on the move' or flowing water, such as rivers, rain, clouds etc. There are four Sukts devoted to him in Rig Veda—7/47; 7/49; 10/9; and 10/14. 'Aapo' is synonymous with Pran or life giving vitality; the essential vibrations of life; the rhythm and essential functions pertaining to life (Shathpath Brahmin, 3/8/2/4).

Apaha, the water element personified as a God, appears in the Vedas as follows—Rig Veda—1/23/16-22; 4/58; 7/47, 49; 10/9; Yajur Veda—2/34; 4/12; Atharva Veda—1/4-6; 18/3/56.

(b) *Parjanya*—This is the water element in the form of life-sustaining rain which falls down upon the earth from the sky in a symbolic way to seed life and then support it on earth. It appears in the Rig Veda, 1/164/51. This God is responsible for rains and life on the earth; he is regarded as one of the forms of the Wind God (Atharva Veda, 4/15/1).

(c) *Varun* is the Water God—he appears first in the Rig Veda, 1/25; 2/28. He is the patron God of water (Gopath Brahmin, 1/1/7). He is regarded as the king amongst the Gods (Taittiriya Sanhita, 3/1/2/7). He is the lord of all the Bhuvans or abodes (Rig Veda, 5/85/3). He is regarded as the patron God of the night (Atharva Veda, 9/3/18). Broadly speaking, this Varun is offered prayers and honoured in the Vedas as follows-- Rig Veda—1/25; 2/28; 5/85; 7/86-89; 8/41; 10/124/5, 7, 8; Sam Veda—589; Yajur Veda—4/31; 10/7; Atharva Veda—5/1-2; 20/92.

²The food that the creature eats is meant to keep the fire of life burning inside the body. Fire gives light, and this light is a metaphor for the divine effulgence emanating from the pure consciousness in the form of the Atma or soul residing inside the body of the creature in whose service the body and all other components of it are employed.

³Even in mythological lore, Lord Vishnu, the Viraat Purush in his cosmic gross form, reclines on surface of the Kshir-sagar, which is the celestial ocean of milk, on a bed made of the coiled body of the Shesh Nath, the legendary serpent.

The fact that water has inherent abilities to foster life shows that it must have some inborn 'heat and energy' called *Tej* in it, without which no life can be either conceived or sustained. It is indeed possible to have *Tej* in water as is proved by the fact that water of hot water springs is boiling hot while in the deep recesses of the ocean and the seas it is warm. This explains the concept of 'water having *Tej* in it'.

Now, we come to the next proposition—'water is present in *Tej*'. This can be understood when we see the functioning of the body of any warm-blooded creature. Water forms the major part of the weight of the body of such creature, and water has the natural tendency to extinguish fire and is inherently cold to touch. So apparently these two things—warmth which comes with the presence of the fire element on the one hand, and coldness which implies that this fire is not there—cannot co-exist. But the fact that they do in the warm body proves the point that 'water and *Tej* can co-exist' to sustain life.

This applies also to food. Water is needed to cook food, it is needed to eat it, digest it, absorb it and eliminate it, but it does not rob the inherent energy and warmth present in the food nor does it hinder the food from delivering its energy and heat to the creature in order to sustain its body.

⁴This concept of 'life and heat that depends upon water, and water depending upon them at the same time' is very much similar to the case of Pran as explained in Anuvak 7. If there was no water, no food would be useful for the man because of obvious reasons—right from its growth as crop to its cooking, eating, digestion and elimination from the body. At each step water is needed. *Tej* in its metaphor of Fire would scorch the earth and snuff out all forms of life if there was no water to counter its ferocity.

⁵This verse highlights the importance of conserving water. It is to be shown the same respect that one shows for food. In fact, food and water can be regarded as the twin legs on which the entire edifice representing the living creatures in this creation stands.]

Valli 3, Anuvak 9

[This Anuvak narrates the importance of Prithivi or earth and Akash or sky as sustainers of life in this visible creation.]

1. One should increase or enhance the production of Anna or food by understanding its importance vis-à-vis life in this creation¹. This is an important edict. Prithivi (earth) is a treasury of Anna (because the earth never exhausts of producing food), while the Akash (sky) is the one which consumes it (because the food grows in the space above the surface of the earth and the other elements present in the sky, such as the fire, wind and air help the food to be cooked, eaten and consumed by the body of the creature, leaving behind only residual matter which cannot be regarded as 'food' in its existing form)².

Verily, the earth has the sky element present in it as its integral part, and the sky also encloses the earth from all the sides³.

In a symbolic way, the Anna (represented by the gross body of the creature consisting chiefly of the earth element) is established in Anna (the physical earth upon which the whole living world lives and finds its abode)⁴.

A wise aspirant who is erudite and sagacious enough to understand this unique concept is firmly convinced of its veracity, and therefore he respects food as a manifestation of the supreme transcendental life-giving and life-sustaining Authority known as Brahm, complete with its unique and eclectic divine virtues. Consequently, he is able to acquire sufficient food, the ability to digest that food, and become prosperous and famed. He is well off with abundant livestock and offspring, and gets a good name and respect in the world (as an erudite, sagacious, learned, wise and enlightened man) (1).

[Note—¹Inhancement of the importance of food implies increase in its production and judicious use. It also means spreading awareness about food and employing better techniques for its production and harvesting, its proper cooking and nutritious value etc.

²The earth element is the one which forms the major component of the gross body of the living organism. This gross body is called the Anna Maye Kosh or the food sheath which encloses the Akash or the subtle sky representing the space inside the body in which the vital airs that are present in the body live. It is in one of such subtle spaces, called the Hridaya Akash that the pure consciousness known as the Atma lives. Pran or breath also lives in the space inside the body, e.g. in the lungs and its tubes. All other forms of vital winds in the body, such as Apaana, Samaana, Udaana, Vyan etc. live in the subtle space present in the body between the cells and tissues. Therefore, both the earth element represented by the gross body and its organs and tissues as well as the sky element represented by the different subtle spaces present inside the body co-exist. They have a defacto symbiotic relationship. The body would collapse and lose its texture and shape had it not been for the subtle sky inside it that is filled with air and acts as a buffer or cushion or bolster preventing it from doing so.

Even as an iron smith's bellow consumes air, this body consumes Pran representing 'age and life' of a creature. As time passes, the body representing earth element goes on getting progressively weaker and older, and finally dies. An ironsmith's bellows and the breath of the creature's body both need air to keep the fire burning—the former keeps the furnace fire burning while the latter keeps the fire of life burning inside the body of the creature. This 'air' is used as a symbol of the

sky element because the entire space of the sky is infused and filled with the air element. So we can say that symbolically the sky (as air) consumes earth (as the body) because the air stokes the latent fire in the body which would, in due course of time, consume the same body for which it was kept ignited. That is why the body gets aged and decrepit as time progresses.

Besides the points noted above, earth is a symbol of life because all forms of life live on earth. All the creatures draw their nourishment from earth and exploit it to meet their needs. In this way they symbolically consume the earth. The creature lives because it has Pran in its body; hence it is the sky harbouring this Pran in the form of the air element that is symbolically consuming the earth.

³The statement that the *earth and sky both enclose each other* is true when we consider the fact that the earth is not a solid piece of impregnable rock but porous and has deep as well as wide chasms, gulfs, gorges, crevices and holes in which air and space can easily be imagined to reside. Similarly, it is very obvious that the earth is surrounded by the sky because the earth dangles in the open space of the cosmos.

This fact has been very beautifully explained in the Brihad Aranyak Upanishad, 3/8/4, 7-8 in which sage Yagyavalkya answers hermitress named Gargi and satisfies her.

⁴This stanza might also mean that the *earth is established in the sky* as the latter harbours the former. Or, that the *sky is established in the earth* as is evident in the presence of air and space in the numerous crevices and countless holes present in the porous structure of the earth's soil.]

Valli 3, Anuvak 10

[This Anuvak stresses the importance of welcoming a guest and offering him food as a means of worshipping Brahm, and the rewards of such noble deeds. It is to be noted here that warm hospitality is a long tradition in India since the days of the Upanishads, and for which the country is world renowned. This Anuvak has six verses.]

1. One should never refuse shelter to anyone who has come seeking it. The guest should always be welcome with open heart and arms (with great humility and simplicity of heart, and without having conceit or any vested interest in doing so). This is an edict of the scriptures. In order to serve the guest and feed him, the person should endeavour to acquire as much food as possible from all available source (but guarding against obtaining food by employing any unrighteous and inauspicious means—because that would be a sinful deed).

If the guest is served properly cooked food by the host in a cheerful, affectionate and respectful manner, with great honour as reserved for God (i.e. if the service to the guest is not done as a burden, with fretting and fuming at having to serve him), then the host is blessed with the same opportunity of being served properly cooked food with due honour, cheer and affection when the time comes. [That is, if one serves the guest as he would serve his God then this noble gesture would stand him in good stead, and this blessing would ensure that wherever he goes he would be welcomed, properly looked after, and fed.]

If the guest is served food by the host but with a lesser degree of cheerfulness, affection and respect, then the host is also served in the same manner in some future date (by his own kinsmen when he sits down to eat with them or he happens to be visiting them in future). [That is, if a man serves his guest with less respect than what

he should have shown to him then one day the curse would boomerang upon on him and he would be shown the same degree of disrespect by others.]

On the contrary, if the guest is served food with disdain and disrespect, then the same fate awaits the host (1).

2. A wise person who understands this gives due respect to his guest.

The supreme Brahm is to be revered and honoured with firmness of faith and conviction as having the following eclectic attributes.

That Supreme Being is present in Vani or the faculty of speech and the spoken word in the form of its ability to give protection; in the Pran (breath) and Apaana (the wind that moves down the intestine and helps in digestion and elimination of waste from the body) in their abilities to give life and protection respectively; in the form of the abilities of the hand to do deeds and perform so many tasks that it does; in the form of the ability of the legs to move swiftly from place to place; and the ability of the excretory organs to eliminate waste from the body. This is the worship of the Supreme Being vis-à-vis a human being.

Now the symbolic form of worship of that Supreme Being in the various divine forces of Nature which are responsible for running the wheel of creation smoothly is being described. He is present as the element of satisfaction and fulfillment in the ability of rain to quench thirst and provide solace and succour to the parched creature; in the form of stupendous strength and majestic punch as well as the great powers and potentials that are characteristically present in electric; (2).

3. In the form of worldly prosperity and fame associated with the possession of animals (livestock, cattle, horses, elephants etc., because in earlier times the possession of a huge animal yard was a measure of a man's financial standing as a large brood of animals implied his financial ability to maintain them); in the form of the light present in the stars; in the form of sons and other kinsmen (as this established his authority and a large follower-ship); in the form of virility and intense hidden pleasure (of sexual union) residing in the genitals; and in the form of the eclectic divine virtues that are unique to the sky and form its integral character.

'This Brahm or the Supreme Being is the foundation and support of all that exists; he is the cause and revelation of everything that exists; he is the one who supports and protects everything in existence'—one should worship and honour Brahm with this firm conviction. This helps the worshipper to get established himself. In other words, the worshipper gets blessed and a divine flow of holiness overflows him to completely soak him with its divinity and holiness.

'This Supreme Being known as Brahm is 'Maha' (i.e. he is great, magnificent, majestic, exalted and supreme)'—the aspirant should worship Brahm with this firm conviction. This divine belief results in his being rewarded with the blessing of 'Maha' himself, i.e. he too becomes great, magnificent, exalted, majestic and high amongst his peers.

'This Supreme Being known as Brahm has revealed himself as the 'Mana' (i.e. he has revealed himself as the mind and the heart with their unique, astounding and stupendous powers and potentials)'—the aspirant should worship Brahm with this firm conviction. This divine belief results in his being rewarded with the blessing of having a wise and under-control mind and heart (3).

4. 'This Supreme Being known as Brahm has revealed himself in the eclectic and sublime quality of humility and simplicity, known as 'Namha'. At the same time, he

is worthy of being paid respects and revered by bowing most respectfully before him'. One should worship and respect Brahm in this auspicious way. The result is that the aspirant is himself shown great respect by others and they bow before him. All desires and aspirations bow before him, i.e. he is able to successfully accomplish his wishes and fulfill his desires.

'This eclectic, divine, holy, sublime, magnificent, astounding, enigmatic and mystical almighty Authority is Brahm and no one else'—one should worship it with this conviction and firm faith. This helps him to become firmer in his conviction and beliefs, as well as get established as a Brahm-realised wise and enlightened man.

'This is the Authority known as 'Parimar' (literally one who eats everything in creation, even such powerful five entities in Nature as electric, rain, moon, sun and fire which finally collapse into it at the time of their own end when the visible world comes to an end at the time of conclusion of one cycle of creation and destruction)'—one should worship and honour Brahm in this form with a firm conviction. This results in the death of all his enemies, including his nephews (i.e. his own family members) who might have malice and ill-will against him, who might keep enmity with him, who might be ill-disposed and jealous towards him, and might be conspiring for his harm and creating unnecessary problems for him.

Verily, he who is present in this Purush (the individual creature) is the one who is also present in Aditya, the celestial Sun¹ (4).

[Note—¹The fact that the *Sun* is a visible, the most glorious and splendid manifestation of Brahm is repeatedly endorsed by the Upanishads. When the persistent disciple might have asked the teacher that he must show him one example of the glorious and magnificent powers and form of Brahm because he is finding it too difficult to believe something which is so abstract as Brahm, the teacher thought out a way and must have told him to look up and see the Sun as Brahm personified. At this, the disciple exclaimed—'Ah! I just cannot see Brahm. It is very bright, dazzling, splendid and blinding. It is impossible to see the Sun and not become blind.' The teacher then explained—'Look, dear! Just because you can't see the sun in spite of its obvious presence, you can't deny it. Even if you are bold enough to gaze at it, you would become blind and then you wouldn't be able to see the Sun the second time. So don't deny the obvious just for the sake of argument. Even as you cannot see the Sun with your physical eyes though you are fully aware of its presence and can't deny it because the daylight that surrounds and drenches you is an indirect proof of the presence of Sun in the sky, likewise you cannot deny the presence of Brahm when you see the latter revealed in the form of the astounding variety of life and its huge kaleidoscopic canvas of colours visible all around you. In fact, you are yourself a living example of Brahm in all his majestic virtues and attributes.'

The Sun is the most clear, most powerful and the greatest evidence of the presence of Brahm in all its brilliant splendour and radiance. The fact that the Sun is a manifestation of Brahm has been asserted in Chandogya—1/6/3,5-6, 1/10/7, 2/9, 2/14, 2/24/12-14, 3/1-11 (Madhu Vidya), 3/18, 5/13, 6/4/2 etc., and in Brihad Aranyak—2/1/2, 2/5/5 (Madhu Vidya), 3/7/9, 3/9/5, 5/15 etc.]

5. A wise, erudite, self-realised and enlightened aspirant who has understood the essence of what is Brahm is filled with an overwhelming surge of ecstasy and exultation which is not definable; it is to be experienced and witnessed not cannot be described in words.

Such a person sees Brahm in the form of pure consciousness called the living Atma in all the different aspects of creation individually—right from the external gross body called the Anna Maye Kosh or the food sheath, he gradually progresses inwards to see the Atma as the overriding factor of life called the 'pure consciousness'

which is present in the Pran Maye Kosh or the vital air sheath, the Mano Maye Kosh or the mental sheath, and the Vigyan Maye Kosh or the intellect sheath. Finally, he reaches the fount of eternal beatitude and felicity known as Anand Maye Kosh or the bliss sheath within which this Brahm stays enshrined as the person's own Atma which is his true 'self' and pure cosmic Consciousness personified.

This transition from the grossest to the subtlest forms of existence fills him with unbound happiness and bliss; it makes him fulfilled. Naturally therefore he is exhilarated and ecstatic because he would have found a treasury of eternal spiritual richness which is rare and not available to ordinary and less fortunate people.

He acquires mystical authority, powers and potentials. He becomes as divine as his pure 'self', i.e. he becomes one like his Atma or Brahm. Hence, he becomes as blissful, as contented, as happy, as powerful, as potent and as revered as the Atma or Brahm.

Endowed with these mystical powers, he can fulfill all his desires and assume any form he wishes¹.

Then he is so much astonished at his discovery that he loses all inhibitions and merrily roams about, singing like a lark; he sings cheerfully in ecstasy and merriment as if he was singing the melodious hymns of the Sam Veda known as 'Sam'. Even his seemingly meaningless soulful moaning would be Sam (just like the instance of dogs howling but actually singing the hymns in their own way as mentioned in Chandogya Upanishad, 1/10-11).

Thus, he exclaims with overwhelming ecstasy—'Ha 3 Vu Ha 3 Vu Ha 3 Vu'² (5).

[Note—¹By saying 'he can fulfill all his desires' it is meant that now he need not search for happiness and bliss in worldly things, for he has laid his hands on a treasury of such virtues. Similarly, by saying 'he assumes any form he wants' it is meant that now he need not stick to his formal restrictions of being a householder or Brahmachari or a Sanyasi etc. and observe strict codes of conduct vis-à-vis the world. He need not even observe codes of dressing for the formal world. In other words, he would be so submerged in his blissful existence that such mundane matters do not bother him the least. He might even go naked without any qualms; he might act as if he was a king now and a beggar the next moment—so lost he is in his state of self-realisation and its consequential state of eclectic blissfulness.

²These are meaningless words, but they imply that he need not sing the glory of the supreme Lord in well defined articulate words having definitive meaning like expert Brahmins well versed in the Vedas. His spiritual ecstasy and outburst of spontaneous exultation itself is a prayer as much as is his moaning which also resembles the singing of the Sam Veda as done during formal singing by priests at a fire sacrifice just like the case in which the soulful howl of the dogs was deemed to be a prayer as described in Chandogya Upanishad, 1/10-11. The numeral '3' indicates the different meters or notes of music by which he sings; it might also mean that he repeats these letters or syllables as many times. This last observation is endorsed by the next verse where the ecstatic person repeats each fact that he has realised and understood three times to affirm the fact that what he says is indeed the truth. The words 'Vu Ha' are equivalent to saying 'Eureka! I've found; I've discovered! Hurray! Oh yes, oh yes! Hurray!!']

6. The realised person exclaims in exultation, 'I am Anna (or food); I am indeed Anna; I am Anna¹. I am Annaad (the one who eats and enjoys the food); I am indeed Annaad; I am Annaad². I am Shlok-Krit (one who brings about coordination between the food and the one who eats it); I am indeed Shlok-Krit; I am Shlok-Krit³.

I am the one who is the Truth (the eternal Brahm) that was present even before the first born Hiranyagarbha⁴ came into being at the very beginning of the start of this visible gross creation. I am the Viraa⁵ who preceded the other Gods in creation. I am the center from where the fount of Amrit or the ambrosia of eternity and bliss springs forth (i.e. I am the Consciousness, the Atma of the world)⁶.

He who gives me to those who lack access to me is actually protecting me⁷. On the contrary, those who are indulgent in food, I devour them in the form of food itself⁸.

I conquer the entire world⁹. My eternal light (i.e. the Atma's pure consciousness and its enlightenment; the light of wisdom, truthful knowledge, erudition, enlightenment and awareness of the eternal and universal Truth) is as glorious and splendorous as the brilliant and dazzling light of the Sun.

Verily, this is the Upanishad (i.e. these are the great spiritual and metaphysical tenets and doctrines enunciated and elucidated in this Upanishad; this is the 'truth' proclaimed and affirmed by this Upanishad).

A person who understands what has been taught here acquires the same stature and abilities as declared herein; he attains the supreme stature of Brahm realisation (6).

[Note—¹The word *Anna* literally means food, but here it implies the essential life bearing sublime and subtle virtues and qualities present in the gross form of the physical food that are being lauded, because the gross aspects of food is useless for the creature and is eliminated by way of excreta and urine from the body after its 'life' in the form of vital nutrients have been extracted by the body for its use.

Therefore, the wise and self-realised man is suddenly aware of the fact that he is not the perishable gross body which he had hitherto been regarding as his self, but the Atma which is pure consciousness and the worthy essence of his gross body. So, he virtually extracts this essence called the Atma and discards the gross body.

There is another interpretation of this stanza. It means that the person realises that he is simply a toy that is being enjoyed by the supreme Brahm as part of his playful creation.

²At the same time, the man realises that he is also the one who is enjoying this world much in the same manner as Brahm does. Why is it so? Because he realises that he is a personification of Brahm. As such, he is the one who enjoys all that exists in this creation. In fact, all of it is meant for his enjoyment. But does it mean he is given a blank cheque or license to do what he pleases, even commit adultery for instance. No, not at all, for such pervert and sinful deeds do not even cross his mind and it is incredulous to even imagine them from a man of his high spiritual stature.

The main idea in this verse is to stress the level of spiritual exultation when one realises the Truth of his own self.

³This third observation emphasises that the person living in this world is the one who produces food, is the one who cooks food, is the one for whom food is meant, is the one who eats food, is the one who benefits and enjoys food, is the one who excretes food (as waste which is converted into manure and other organic forms of food), and is the one who gets converted into food when the body dies (by decaying and breaking up into the primary ingredients from which this body was constructed in the beginning). It's such a unique phenomenon that the self-realised man is awe struck and astonished by its magnificent cosmic scale.

His astonishment is revealed in his repeating each statement three times.

The word *Sholka* also means the sacred verses of the scriptures. So this observation that 'I am Shloka' also implies that the enlightened man understands that he personifies and exemplifies the grand tenets and doctrines of the scriptures. So he must be most fortunate one in creation, and that he must use this golden opportunity to attain his final emancipation and salvation in this body of a human being. Besides

this, he must ensure that he leads a life which is exemplary and conforms to the tenets and doctrines of the scriptures. This would automatically ensure that his life becomes auspicious, righteous and noble of the highest order.

⁴*Hiranyagarbha* is the macrocosmic subtle body of creation. It is from Hiranyagarbha that the subtle body of the creatures came into being.

⁵The *Viraat* is the macrocosmic gross body of creation. It is from Viraat that the gross body of the creatures came into being.

⁶The *Amrit* refers to the Atma present in the gross body.

⁷In other words, when the ‘truth’ about the Atma, referred to as *me* here because it is the ‘true self’ of the creature, is preached to others who are unaware of it so that they too become enlightened, it is like preserving its divine and holy value for posterity. It is like keeping the lamp of knowledge burning, or the torch carried forward on its onward journey to the next generation.

⁸In other words, those who do not understand the subtle and sublime meaning of the esoteric statements ‘I am Anna’ etc. as made in this verse, and start recklessly enjoying the sensual pleasures and indulgence in food and appeasing the senses, verily I would kill them. Such men get so many diseases pertaining to wrong eating habits and wrong food that it is tantamount to food killing them. Here, ‘the food doing the killing’ means that truthful wisdom which is the characteristic hallmark of the enlightened Atma abandons them, and they become ignorant fools who are stupid enough to do the most hateful of things and indulge in the most despicable of deeds, thereby leading to their natural destruction. Refer Chandogya Upanishad, 3/17/1-2.

This stanza also means that one should first feed others, such as his guests and those who are starving, before eating himself. This noble way of eating has its auspicious affects on the Spirit.

⁹This statement refers to the universal truth that everything that exists would ultimately end and collapse into the entity that would last after its cessation, i.e. in the Supreme Being known as Brahm.]

-----Shanti Paath-----

-----*****-----

Chapter 3

Brahm Upanishad/Brahmo-panishad

Dedicated exclusively to the exposition of the divine and eclectic form and virtues of the supreme transcendental Being known as Brahm—the almighty, majestic, omnipotent, omniscient, omnipresent, all-pervading and all-encompassing Authority in creation who is both the origin as well as the end of what exists, who is the cause and the effect of everything in existence, and who is so enigmatic and esoteric that the even Vedas, the eternal repositories of divine and truthful knowledge, had to yield while trying to describe Brahm by saying ‘Neti Neti’ or ‘not this, not this’ or ‘not this not that’—this Upanishad of the Krishna Yajur Veda tradition also goes on to describe the paths by which such a stupendous and astounding Brahm can be realised by a sincere seeker.

There are a total of twenty three verses in this Upanishad. It describes, inter alia, the four legs of Brahm, the latter’s eternity and imperishability, the true meaning

of emancipation and salvation, Brahm's three symbolic forms represented by the three intertwined strands of the sacred Yagyopavit—the thread worn by Hindus across their chest—along with its great metaphysical and spiritual value and significance, and the symbolism of the tuft of hair on the head. This Upanishad goes on to describe the importance and significance of Tapa (austerity, penance and sufferance of hardships) and Satya (steadfastness in 'truth') in the path of Brahm realisation.

It also succinctly outlines the four states of consciousness and the presence of the Atma in each of them.

Finally, it concludes that Atma, the pure consciousness, and Brahm, the supreme transcendental Divinity are synonymous with each other. Brahm remains dissolved in this creation just like butter being integrally present in fat-rich curd, oil in the sesame seed, and the fire being latently but inseparably present in the firewood.

-----Shanti Paath-----

ॐ सह नावतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजसि नावधीतमस्तु । मा विद्विषावहै ।
-----ॐ शान्तिः । शान्तिः । शान्तिः ।!!!

The meaning of this Shanti Paath is given in appendix no. 1.

1. There are four place in the body of the Purush (literally a 'man' who is a visible manifestation of Brahm, the divine, supreme and transcendental Being whose macrocosmic gross body is known as the Viraat Purush, and the latter has revealed himself as the individual living being, the man, also known as 'Purush' after his parent, the Viraat) where the pure consciousness representing the divine Being lives. These four places are the navel, the heart, the throat and the Brahm-Randhra¹.

At all these four places, the supreme Brahm, with its glorious divine virtues symbolically represented by its four legs, is present². That is, these are the four sites where the divine Being, in all his cosmic divine splendour, radiance, grandeur and majesty, lives in the body of the individual creature and displays his astounding powers as the pure consciousness, which is also known as the Atma³.

In the same vein, Brahm as the Atma has also been envisioned to exist in the four states in which consciousness lives--viz. the Jagrat state called the 'waking state of consciousness', the Swapna state called the 'dreaming state of consciousness', the Shushupta state called the 'deep sleep state of consciousness', and the Turiya state called the 'blissful state of consciousness'⁴.

Each of these of four states of existence of the creature (i.e. of the consciousness residing in the creature as it's pure and true 'self' known as its Atma) are symbolic revelations of one of the four divine aspects or 'legs' of Brahm. This is the micro level revelation of Brahm in the form of the individual creature.

The same Brahm also shines and makes its self-illuminated presence felt at the cosmic level as Brahma the creator, as Vishnu the sustainer, caretaker and protector, as Shiva the concluder, and as Akshar literally meaning the imperishable Lord of creation (known as 'Ishawar'). These four revelations of the Supreme Being (Brahm) stands for the four states in which Consciousness exists—viz. Brahma represents the waking state called the Jagrat state of consciousness, Vishnu represents the dreaming state called the Swapna state of consciousness, Shiva represents the Shushupta state of

consciousness, and Akshar (pronounced as ‘Akchar’) represents the Turiya state of consciousness. [This fourth state is called ‘Akchar’ because it represents the cosmic Atma or Brahm that is inherently imperishable, infinite and eternal, and hence called ‘Akchar Brahm’. The word Akchar also means a letter, and therefore it refers to the divine ethereal word OM which is used as a synonym for Brahm.]⁵

The glorious Aditya or the Sun shining brilliantly in the sky is a visible manifestation of Vishnu (who is none but the Viraat Purush—the cosmic gross body of Brahm and from whom the rest of the creation, including the creator Brahma and the concluder Shiva, have come into being)⁶.

The supreme Lord or Ishwar (Brahm) has no physical body with either the subtle organs such as the Mana (thinking mind and emotional heart), or the gross physical organs such as the ears, the legs and the hands (because Brahm has no physical attributes and physical forms). Brahm is a divine entity that is an embodiment of light and illumination emanating from cosmic Consciousness, also known as the Atma⁷ (1).

[Note—¹These are the *four sites* where the four important *Chakras*, or the whirling circles of cosmic energy inside the body of the creature, are located. It is believed that these Chakras have trapped divine mystical energy which can be unleashed by means of Yoga, and once released they enable the aspirant acquire mystical powers that are rare and very potential. These four Chakras are called respectively the Nabhi Chakra, the Hridaya Chakra, the Kanth Chakra and the Brahm Randhra Chakra.

Meanwhile, the *Brahm Randhra* is the hair-like slit present at the top of the skull from where Brahm entered the body of the individual man at the time of creation, and then took up its residence in the man’s mind-intellect complex from where Brahm controlled the entire chariot represented by the body of the individual man as well as the all other creatures in a similar way, thereby exercising an overall control over the entire creation which ran the risk of going off track and meeting an accident if there was no authority to control and regulate it. It is believed that at the time of death, the Pran or life sustaining vital winds in the body of a realised and attained ascetic leaves the body through this slit to merge with the ‘elements’ outside.

²The *four legs or pedestals of Brahm* have been elaborately described in Chandogya Upanishad of Sam Veda tradition in its Canto 3, Section 18, and Canto 4, Section 5-8. It would be pertinent here to recapitulate these sections very briefly to see which are those four symbolic legs or pedestals on which Brahm and his magnificence rests.

Canto 3, Section 18 of Chandogya Upanishad describes the so-called symbolic *four legs or pedestals of Brahm* as follows:--

“Verse no. 2 states that Brahm, when investigated according to the ‘Adhyatmic’ philosophy of Vedanta, is said to have four pedestals or feet, such as the faculty of speech, the Pran or the vital wind force that sustains life in the creature’s body (as the breath and other vital winds), the faculty of sight located in the eyes, and as faculty of hearing located in the ears. Similarly, Brahm according to the ‘Adhidaivic’ school of thought has four pedestals or feet such as Fire (Agni), Wind (Vayu), Sun (Aditya) and the different directions (Disha). So, these are the two views of Brahm based on these two schools of thought or philosophy.

Verse no. 3 says that speech or voice is the 4th leg of Brahm who is revealed in the form of the ‘Mana’, or mind and heart of the creature. This speech or voice is glorious and radiant with the scintillating light or brilliant illumination effusing from the ‘fire’ element. An aspirant who knows or realises this fact becomes blessed with good fame and glory, magnificence, splendour and radiance that is associated with Brahm and known as his ‘Tej’.

Verse no. 4 says that the ‘Pran’ is Brahm’s 4th leg or pedestal. It is energised or infused with the light and vitality of life by the mind as well as by the ‘air or wind’

element which is Brahm's 4th leg according to 'Adhidaivic' philosophy. A person who knows or realises this fact is blessed with good fame and name, glory and magnificence, radiance and splendour laced with the stupendous powers of the mind and the vitality and agility of air which are manifestations of Brahm.

Verse no. 5 says that the 'eyes' are the symbolic 4th leg or pedestal of Brahm (who is invisibly, subtly, unperceivable present in the eyes in the form of the innate ability of the eyes to 'see'). It is glorious, illuminated and radiant with the splendourous glow and brilliance emanating from 'Aditya' (Sun) which has its symbolic presence in the eyes and which represents Brahm according to the Adhidaivic School of philosophy. An aspirant who knows and realises this fact is blessed with good fame, name, majesty, splendour, radiance and stupendous glory which resembles that of the Sun and which is associated with Brahm.

Verse no. 6 says that the 'ears' are the 4th leg or pedestal of Brahm who is in the form of the mind and heart or 'Mana' of a man. It is activated by the inputs from the various directions which are Brahm's 4th pedestal at the Adhidaivic level. A person, who knows and realises this fact become endowed with good fame, glory, majesty, powers and wisdom associated with Brahm.

It is to be noted here that all these aspects of the divinity of Brahm have been called 'the 4th leg' of Brahm, implying that all of them are equally important and significant, and the counting can be done from any of these four legs to see how Brahm has been established in this world and to get an idea of his greatness and magnificence.

Similarly, Canto 4, Section 5-8 of Chandogya also describes the symbolic four legs or pedestals of Brahm, albeit with a different language. Let us now see what it says:--

The 1st leg of Brahm (canto 4, section 5, verse no. 2)-- The four directions of the compass —east, west, north and south (the four cardinal points) —represent one leg of Brahm who is known and defined by the name of 'light', and who is 'self illuminated'.

The 2nd leg of Brahm (canto 4, section 6, verse no. 3)--The second leg of Brahm has the following connotations—the 1st aspect is earth, the 2nd is Antariksha (the sky or space above the earth), the 3rd is Duloka (heavens), and the 4th is the ocean (here referring to the vast inter galactic space or the space beyond the limits of the known universe as well as the ocean on earth which covers 3/4th of the surface of earth, and represents that celestial ocean).

The 3rd leg of Brahm (canto 4, section 7, verse no. 3)--The four aspects of the 3rd leg or pedestal of Brahm are the following —the fire, the sun, the moon and the electric.

The 4th leg of Brahm (canto 4, section 8, verse no. 3)—'The Pran (vital wind which sustains life; breath), eyes, ears and Mana (heart, mind and intellect complex)—these are the four aspects or divisions or forms or manifestations of the 4th leg of Brahm.

There is another way of interpreting this stanza. The Viraat Purush is represented by the sacrificial horse (Brihad Aranyak Upanishad, Canto 1, Brahmin 1). A horse has four legs. Here the term 'leg' is a metaphor for the four pedestals upon which the entire edifice of creation rests. These four legs represent the four aspects of the divine cosmic glory of the Supreme Being. It is on these four legs that the magnificent sacrificial horse stands in the mid of the sacrificial venue for the rest of the assembly to see and pay its obeisance to it—thereby symbolising the fact that in order to appreciate the glories and magnificence of the supreme transcendental Brahm one has to have a holistic view of the Divinity.

The four vital places in the body cited in this Upanishad, viz. the navel, the heart, the throat and the Brahm Randhra, mark the four places where Brahm has planted one of its four symbolic legs to establish itself in the body of the creature. These four sites are the locations of the four vital Chakras or the whirling dynamic cosmic energy

centers located inside the body. They are the Nabhi Chakra, the Hridaya Chakra, the Kantha Chakra, and the Vyom Chakra. The Upanishads dealing with Yoga assert that the subtle energy that is trapped in these Chakras has to be unleashed by a spiritual aspirant in order to realise Brahm, or know Brahm or become Brahm-realised. Unlocking of the trapped energy of these four great centers of the body would unleash the dynamic spiritual energy that is equivalent to making the aspirant similarly empowered as Brahm.

Even from the practical standpoint, these four sites have biological importance. The Naadis or ducts that represent the nerves present in the body are said to have their origin in the central cluster of Naadis present in the region of the navel (Yogchudamani Upanishad, verse no. 14-15). The Naadis that represent the veins or arteries in the body have their nodal point in the heart because the heart is the pumping center of the body's blood and controls circulation (Yogshikha Upanishad, Canto 6, verse no. 4). The throat control breath, and is therefore the site of Pran without which no life is ever feasible. Finally, the brain which is the site of the mind and intellect is located in the head where the Brahm Randhra resides, and it is more than evident that without brain the body would be no better than a vegetable or any other member of the plant kingdom. Thus we deduce that this statement that Brahm is present in the body with its four legs located at these four sites is a metaphoric way of acknowledging the inviolable and undeniable importance of these four locations in the creature's body. These four places mark the four symbolic legs by which the 'consciousness' present inside the otherwise gross and inane body makes itself felt as 'conscious life' in this world. These four sites are indispensable for the Atma to live in the world and interact with it. These are therefore the symbols of the presence of Brahm inside the body of the creature.

³It would be noted here that the mystical *Brahm*, who has been described here to have the four legs representing the entire creation with all its diverse virtues and unique qualities, resides in the creature's own self. In other words, Brahm is to be found internally and not externally, and therefore there is a need for self-realisation if one really wishes to come face-to-face with the supreme Lord of creation. Brahm is no 'ordinary Being', but one who is an all-inclusive and all-incorporating divine entity having four types of subtle and sublime forms that are symbolically called his 'four legs' because they establish his divinity and holiness as well as his supremacy and unquestioned authority in the entire creation, right from its conception till its conclusion. Wonder of wonders is that such an astounding and stupendous found or spring of divinity, holiness and spiritual powers lives in the individual's own body but still the person seems to be drowned in sorrows and miseries associated with this body as well as the world in which he lives. It is such an ironic situation that whilst the diamond is in one's own closed palms, he goes on begging for alms (i.e. seeking happiness, contentedness, peace and bliss) from door to door!

⁴These four states of existence of consciousness are briefly the following: the *waking state* is one in which the creature is awake in this world and interacts with it, his sense organs of perception remaining active and his brain receiving stimuli through them originating from the external world. In the *dreaming state*, the mind remains active while the body sleeps and inactive externally. During this state the mind has a free run of its imagination and lives in a world of dreams, doing things that it would like to do while awake but unable to do so for a variety of reasons. The *deep sleep state* is the state when even the mind rests, and there is complete calmness. This is a transient state because the mind reverts back to its old world and relives its old life within a short span of time. On the contrary, the Turiya state is a perpetual state of blissfulness when the mind remains oblivious of the external world even though the person seems to be wide awake and going about his duties in a normal way. This is a state attained by ascetics and sages who practice regular meditation and contemplation, and it results in their permanent peace and blissful demeanors.

⁵These four concepts are easy to follow. *Brahma* the creator is synonymous with all the activities associated with the creation of this world—all the hustle and bustle of daily life pertaining to creation and their accompanying successes and failures, their joys and sorrows, the physical activity necessitated for creating new wealth and propagating creation by creating offspring etc. are all signs of the creative activity of Brahma. Since any physical production, its enhancement and its destruction that pertains to this visible gross world of material objects needs the involvement of the body, the *Jagrat state* or the waking state is associated with Brahma. In other words, the *Jagrat state* is a state in which the supreme Brahm assumes the role assigned to Brahma in order to carry forward the process of creation according to the laws and rules of Nature laid down by him at the beginning of creation. This is also why Brahma is also considered to be the forefather of the entire visible world which the person can see and observe while awake.

Next comes the *Swapna state* or the dreaming state which stands for the supreme Brahm's manifestation as *Vishnu* the sustainer and protector. The fact that during the dreaming state a man can sometimes imagine of things that portend what holds in the future and it is often found that problems that seem insurmountable while awake are solved during dreams are evident proof that the consciousness works during this phase to protect the creature from future dangers and provide an answer to many of the questions that have been vexing it. Many great discoveries have been made while the discoverer was sleeping and 'dreamt' of certain things that was simply beyond conception at that time. Brahma could create, but development and up gradation of what was created was the job of Vishnu. That is why it is said that 'the way to great achievement is to dream big and then implement those dreams into practice'. Besides this point, the body needs complete physical rest to recuperate its lost energy and it is not possible to dream while one is actively involved in this world, so the importance of sleep when one can dream is a metaphoric way of saying that Brahm, in his revelation as Vishnu, 'protects' the creation when the creature sleeps and dreams. That is why dream is regarded as a sign of sleep when the body is completely at rest as opposed to a sleep when one is in physical discomfort and tosses and turns about the whole night. This is also why the Purans have depicted Vishnu as perpetually reclining in a state of sleep on the surface of the celestial ocean of milk called the *Kshirsagar*.

The third state of *Shushupta* or deep sleep is when the mind is also asleep. This state is like meditation of the Atma while the body is sleeping, and it similar to the meditation practiced when the body is awake. Since deep meditation makes both the body and the mind calm and rested, this state of consciousness is especially invigorating for the spirit. Even as the person remains oblivious of all kinds of external impressions and even of severe physical pain during meditation, this *Shushupta* state produces absolute calm and tranquility which is like the one obtained when one dies. All his worldly worries are exhausted and shut off; he remains in a blissful state of meditation during sleep. These two reasons—one, his blissfulness and remaining completely calm as obtained during sessions of deep meditation and contemplation, and second, this state resembling the calmness and peace obtained at the time of death—makes it a revelation of Brahm's form as *Shiva or Rudra* because this God is a synonym of perpetual meditation and blissfulness as well as the one who concludes this creation. This is why Shiva has been traditionally depicted by the scriptures (Purans) in a perpetual trance-like state of *Samadhi*, doing meditation on a constant basis, and in a perpetual blissful state, remaining naked like an ascetic and with no care in the world. He is also regarded as the 'concluder' symbolised by the fact that during this state of *Shushupta*, the creature has exhausted all its desires and aspirations as well as all its pleasures and miseries—i.e. every cause of worldly turmoil has been 'concluded'.

Finally, we come to the fourth state called *Turiya* or the state of perpetual bliss. This is the state that goes beyond the above three states, and it is achievable when the

consciousness does not revert back to the earlier states. Then, obviously only one state remains, and the creature does not have to oscillate between these three states every now and then. Since this state gives permanence and stability to blissfulness and peacefulness, it is called *Akchar*—something which is imperishable and eternal.

⁶The fact that the *Sun* is a manifestation of the Viraat Purush and the eye of the creation has been repeatedly stressed in almost all the Upanishads. For example, Chandogya 1/6/3,5,6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; and Brihad Aranyak 2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15 etc.

At the time of creation, the Sun God had taken up his residence in the eye of the creature to illuminate the world for him at his individual level just like the celestial Sun lights up the world at the macro level of creation. The Sun is like the bulb of the headlight, represented by the eye, of a car which is represented by the body. The headlamp would be useless if the bulb did not have its presence there. It is the bulb that illuminates the dark world outside for the car to move on. This bulb of the car's headlamp is like the celestial Sun for the world at large. The former is at a micro level while the latter is at the macro level. This metaphor would explain the importance of the saying that the *Sun resides in the eye*. At the time of creation, the Sun-God was ordered by Viraat Purush to be established in the eye of a man. So, whereas the worship of Brahm in the eye is his Adhyatmic form of worship, worshipping him in the Sun is the Adhidaivic form—Aeitero-panishad, 1/2/4.

'Aditya' or the Sun God appears in the Vedas as follows—Rig Veda-- 1/41/4-6; 2/27; 8/47/14-18; 10/185; Sam Veda—395; 397; Yajur Veda—23/5; 34/54; Atharva Veda—5/3/9-10; 16/3.]

2. [The realisation that the supreme transcendental Brahm that exists throughout this creation in an invisible form and in an universal manner, being dissolved and dispersed in it uniformly and having no special attributes of its own but acquires those of the form in which it exists, and that whatever that exists in this visible or invisible world as well as the animate or inanimate world is nothing else but one or the other manifestation of the same universal Brahm, makes a wise man realise the truth of the statement that--]

This *Loka* or world should not be viewed in the shape and form it apparently appears to be in, but as a vivid manifestation of the supreme transcendental Brahm or the cosmic Consciousness in that form. The truthful form and nature of this world is not what it appears to be from its exterior, but the consciousness known as its Atma or 'essence' that pervades and pulsates throughout its texture in a uniform and universal manner¹. Similarly, it is Brahm that exists in the form of numerous *Devas* or Gods in this creation, having countless numbers and diverse forms, having numerous attributes, qualities, authority and powers, performing so many varied activities, and controlling different functions of the world. But it must be remembered that all these Gods derive their authority, strength, abilities and power from Brahm, for they have no existence sans Brahm. Therefore, these Gods should not be viewed independently as some superior authority of creation but merely as personifications of Brahm revealed in their specific forms to carry out specific functions of creation (which is like delegation of powers and authority in modern management)².

Likewise, Brahm has revealed itself in the form of the eternal body of knowledge known as the *Vedas*. That is, the Vedas are manifestations of the supreme Brahm inasmuch as they embody the eclectic virtue of knowledge, wisdom and erudition that are an integral part of the divine Consciousness and its distinguishing component. The creation is driven by knowledge which is synonymous with light and

illumination as well as intelligent life, for the opposite of it is ignorance symbolising darkness that represents death³.

The *Yagya* or fire sacrifices do not remain as mere rituals and obligations ordained by religion, but as personifications of the mystical divinity known as Brahm. The sacred fire to which the offerings are made is a representative of the cosmic fire element that represents the stupendous and astounding powers and potentials of Brahm. The fire is the dynamic energy of Brahm revealed. The offerings are meant for the Gods, and it has been already pointed out earlier that every God is nothing but a manifestation of Brahm. So in effect, the offerings are being made to Brahm in all its myriad forms⁴.

In the same vein, a mother and father do not remain merely bodies which have produced the offspring as a result of their union, but as *Shakti* (cosmic Mother Nature) and *Purush* (the Viraat Purush; Brahm in its creative mode) respectively personified⁵.

All other humans and relationships that exist in this world—such as a *Snusha* (i.e. the daughter-in-law), a *Chandal* (a low caste man), and a *Paulkas* (or a Bhil who is a tribal) etc.—do not remain as such but become Brahm personified⁶.

A *Sraman* or a *Sanyasi* (i.e. a monk, a mendicant or reclusive hermit, a friar who has renounced this world and roams around in search of the ultimate Truth, subsisting upon begged food while remaining totally detached from this world and its attractions and material objects) as well as a *Tapaswi* (one who does severe Tapa or penances and keeps stern vows of austerities, one who endures sufferance and hardship for some noble and auspicious aim) do not remain simply as *Sraman* or *Tapaswi*, but they become embodiments of Brahm⁷.

There is no dichotomy or any kind of confusion in what has been asserted here because Brahm is always one and non-dual.

Brahm is an embodiment of *Nirvana*—i.e. the final emancipation and salvation of the creature and his soul. Brahm is a fount of light, and is self-illuminated (i.e. it is a fount of Truth and knowledge) (2).

[Note--¹That is, when one has realised or understood that the same truthful, indivisible, immutable, universal entity known as Brahm—which is only one and not two—exists in myriad of ways, having countless number of variations and diverse forms in which this visible as well as invisible world makes its appearance, one concludes that what is seen or perceived by him as the world is actually Brahm in all these forms and not anything else. In other words, when everything boils down to its fundamental form in this world, only the non-duality known as Brahm or the conscious Atma remains and not the colourful world of astounding diversity and variations with its myriad charms and magnificent contours that is erroneously regarded as Brahm.

²This is because all these Gods are one or the other manifestations of the same truthful, indivisible, immutable, universal entity known as Brahm—which is only one and not two—which has taken up so many forms and names that the Gods have just to carry out the myriad activities of this creation. Essentially, all the Gods are revelations of one non-dual Brahm; these Gods are the same Brahm functioning in their myriad forms, and all of them reveal one or the other aspects of the supreme divinity known as Brahm.

³That is, the Vedas do not appear simply to be books or holy scriptures but as personifications of Divinity and Universal Spirit known as Brahm which is the wellspring of all the eclectic and auspicious knowledge that has come into being in this creation. There are four Vedas—viz. the Rig, the Sam, the Yajur and the Atharva—symbolising the four legs of Brahm as described in verse no. 1 above. Since any creature needs all its four legs to stand and walk properly, all these four Vedas should be thoroughly understood to decipher the secrets of Brahm. Merely

reading or studying one of them is insufficient in revealing the esoteric nature of Brahm much like it is impossible to know about the horse by learning to describe one of its legs. In fact, even if one is able to know all the four Vedas one would not be able to know Brahm in its entirety because these Vedas are the external manifestations of Brahm in the form of words, and to know the reality of Brahm one must understand the secret message of the Vedas even as one must know the meaning of any word to understand its importance and usage, and merely memorizing the word and its spelling or full sentences where it is often used to assert that one is acquainted with the particular word is a highly hilarious and stupid act.

⁴That is, the holy fire and the process of offering oblations to it at a Yagya assumes a completely different connotation when one understands that the 'fire' is one of the most potent and obvious revelations of the stupendous powers possessed by Brahm; it is in fact a manifestation of the supreme transcendental Authority of creation, displaying Brahm's greatness and all-consuming cosmic form. That is why the Sun, the celestial cauldron of fire, is deemed as the vivid revelation of Brahm. When offerings are made to this fire, it is deemed that the creature is offering itself at the feet of its parent Brahm and burning its own impurities to attain the shine emanating from the same Brahm residing in its own bosom.

⁵With this view, one begins to show the level of respect and honour to one's parents that one usually reserves for one's holy deity. The physical *father* is a personification of the supreme Father in heaven, while the physical *mother* is a personification of the divine Shakti without whose help Brahm would not have created this world. In other words, the creature's father and mother represent the cosmic Purush and Shakti respectively.

⁶This is because the Atma that resides in all these bodies is the same consciousness that personifies Brahm. Therefore, when the external façade is removed, what remains is Atma or Brahm. Since the Atma of a Daughter-in-law, a Chandal or a Bhil is one and the same, there is no fundamental difference between them.

⁷A Sraman or a Sanyasi is an embodiment of Brahm because, inter alia, he has overcome all his attachments with this perishable world, realised its falsehoods, remains submerged in self contemplation and meditating upon the supreme Truth embodied in his Atma, regards the body as a temporary dwelling for his 'true self' (i.e. his Atma) before it finally finds its emancipation and salvation, and sees the same universal Spirit all around him, remaining in a state of perpetual peace and bliss which are hallmarks of the eclectic state of Brahm-realisation. Similarly, a Tapaswi is a personification of Brahm because Tapa itself personifies Brahm—refer Taittiriyo-panishad, 3/4/5-8. Therefore, a person who practices Tapa is deemed to be soaked in divinity typical of Brahm.]

3. Even the most exalted and powerful Gods, the mystics and other holy sages and pious saints called 'Rishis', as well as the ethereal and powerful Spirit of dead ancestors called 'Pittars', are unable to exercise their sway or influence over that Authority that is superior to them in all respects. That imperishable and eternal Brahm can be known and realised only by the medium of truthful knowledge, because Brahm is a personification of the best of knowledge in existence, and knowledge can only be accessed by relevant knowledge only (3).

[Note—This concept can be understood when we take a more practical example. Suppose a student takes history as a subject at graduation level, then it is practical and prudent on his part to pursue post graduation in history only and complete his doctorate in history as well rather than any other subject—for switching subjects at random would be disastrous and a most impractical approach for his career, even if at all it is theoretically possible. Similarly, one has to reach the pinnacle of spiritual attainment and Brahm realisation by following the correct path as laid down in the

guide-books on this field, i.e. the scriptures. One cannot hope to study physics by reading history books or joining an arts college instead of a science college for example.]

4. It is in the heart that all the Gods have their symbolic residence, it is in the heart that the *Pran* lives (as the heart's rhythmic beating signifies the presence of 'life' in it), and it is in the heart that the glorious self-illuminated fount of light known as 'consciousness' resides as the *Atma*. All these three forms are subtle and sublime revelations of Brahman. That is, Brahman resides in the heart of the individual creature in these three eclectic divine forms.

This fact is symbolised by the three strands of thread used to make the 'Trivisutra' or the sacred thread¹ worn by learned people. This sacred thread made up of three intertwined strands of thread is a symbol of the fact that though these above mentioned units of Brahman's revelations appear to be independent of one another, but they are so inexplicably and inseparably linked or intertwined with each other that if one were to say that Brahman resides in the heart of the creature, the rest of the manifestations of Brahman are deemed to be included in this single statement. This is the considered view of those who are learned and wise about Brahman.

Indeed, this Brahman lives in the form of consciousness in the heart of the individual creature as his *Atma* (4).

[Note—¹The *sacred thread* worn by Hindus diagonally across the chest consists of three intertwined strands of the sacred thread, each strand signifying one aspect of divinity described in this verse—i.e. the *Gods* symbolising the eclectic virtues and divine forces of Nature that control the functioning of all the organs of the body, the *Pran* symbolising something that is holy and worthy of worship because it is a synonym of life, and the light emanating from the self-illuminated *Atma* which is pure consciousness. These three units form the basis of 'life' in the body of the creature.

There is another way of looking at this concept. The *Gods* represent the supreme Brahman's cosmic powers that regulate and control this creation, and since the creature is a visible and gross manifestation of the same Brahman, the statement that the Gods reside in the heart implies that Brahman has revealed itself in the form of the individual creature, complete with all its glorious potentials and divine powers for which Brahman is so famous and unique. Similarly, the vital winds of various names that reside inside the body are collectively called *Pran*. They collectively help the body, representing the macrocosmic Brahman in a microcosmic form, to carry on with all its designated functions at the micro level of existence so that these bits and pieces of the cosmic mosaic complete the whole picture that the supreme creator had envisioned. And finally, the *Atma* is the pure consciousness itself without which the entire setup would lose its meaning. The *Atma* is the Emperor at the helm of affairs. All these three individual entities combine to form this creation; none is separable from the other if the creation has to exist in the way it does. The sacred thread also has three strands and all of them are equally important if the thread is to be called 'sacred'. Therefore, this sacred thread is used to constantly remind the wearer of the grand metaphysical truth about his own 'truthful self' as well as about the rest of creation. If he does not pay heed to it, then it is to his own peril. Knowledge has to be voluntarily obtained and used; it cannot be forced down anybody's gullet like medicine.

This sacred thread is called *Trivisutra* because it consists of three strands of thread as much as because of the fact that it is a symbol of these three sublime and subtle forms of Brahman as described in this verse—i.e. of the Gods, *Pran* and *Atma*. The sacred thread is also called *Yagyopavit* (see verse no. 5 below) meaning that which purifies during the performance of a Yagya (fire sacrifice), or something that is purified during a Yagya. The sacred thread is given to an initiated person during a fire

sacrifice, with the sacred fire as a witness and to symbolise that the person who wears this thread is deemed to be purified by the blessing of Brahm which constantly resides in his heart. The thread no longer remains a thread but becomes ‘sacred’; it is ‘purified and sanctified’ during a Yagya—and hence it is called a ‘Yagyo (fire sacrifice) + Pavit (purified; purifying)’.

The sacred thread is also known by the name of *Brahm Sutra* (refer verse no. 6-11 below) signifying that it is the esoteric ‘sutra’ or formulae to understand the secrets of Brahm; it is the ‘thread’ that binds the individual creature to the wholesome divinity of creation known as Brahm as well as to the grand and majestic Truth of creation of which that individual is only a miniscule part.]

5. The sacred thread known as Yagyopavit made its appearance along with the emergence of Prajatpati, the creator of all mortal creatures (along with the other parts of his body). This Yagyopavit blesses one with a long life. Oh people! Being aware of this fact, you should wear the Yagyopavit. Let this Yagyopavit provide you with immense spiritual strength and energy (5).

[Note—The strength and energy mentioned here pertain to that of the ‘spirit’, because a person is said to be in ‘high spirits’ when he has attained success in any endeavour. Further, it is said that one should not ‘lose one’s spirit’ (and not ‘one’s bodily strength or energy’) when faced with adversities. In other words, it is the strength and energy of the ‘spirit’ that is the driving force of all successes in this world; even the body is under the control of the powers of the ‘spirit’. So in brief, the *Yagyopavit* provides the wearer the natural blessing that comes with being nearer to the source of all energies and strengths in this creation, i.e. being near to Brahm. This simple and humble three-piece thread becomes a ‘garland of victory’ around the neck of the wearer, as it were. It acts as a shield against all inauspicious and evil spirits from attacking the wearer; it is like keeping the dynamo of the body charged with the energy effusing from the reassuring knowledge that the supreme Authority of creation and its Lord known as Brahm is protecting the wearer of this sacred thread by remaining constantly with him.]

6. Those who have attained a certain level of spiritual elevation and enlightenment based on realisation of the ‘true self’ and of Brahm should shave off their head along with the tuft of hair usually worn on the top of the head as well as this sacred thread (at the time of taking the vows of *Sanyas* which is the last stage in the life of a wise man when he renounces all worldly formalities and is deemed to be sufficiently spiritually enlightened that he need not bear external signs such as the tuft of hair or even the sacred thread to remind him of the presence of Brahm in him or his spiritually evolved stature)¹.

At the time when sincere realisation of the irrefutable metaphysical truth that this sacred thread does indeed represent Brahm, the Supreme Being in all his magnificence and glory, and that this Brahm resides in the heart of the aspirant himself (as explicitly declared in verse no. 4 of this Upanishad), the latter finds no need of it (the sacred thread) anymore as he now sees Brahm as being firmly ensconced and honorably enshrined in his own (temple-like) heart, and he is so steadily focused and firmly rooted in this conviction that he has no need for any external signs to remind him of this fact.

So he discards the external sign of Brahm represented by the sacred thread which he has been hitherto wearing on his body ‘over’ his heart, and instead places this thread representing Brahm nearer to his heart by symbolically enshrining it ‘inside’ the heart itself. [That is, Brahm has come closer to him, so to say, with the rise in the degree of his enlightenment when he begins to see the futility of external

formalities, and instead peeps inside the secret chambers of his own self to see the radiant light emanating from Brahm present inside his own self.] (6).

[Note—¹*Sanyas*: There are many stages in the life of a person who becomes a mendicant, or friar, or monk or a renunciate hermit. In the preliminary stages of Sanyas it is alright to wear the tuft of hair and the sacred thread, but as the aspirant progresses in his spiritual pursuit he should discard external signs of divinity and holiness as being superfluous and non-essential because he is deemed to have reached a level of erudition and enlightenment that he ought to see Brahm even without some external prop or medium such as this sacred thread. In those Upanishads which deal with this theme, it has been explicitly stated that in the higher states of Sanyas, there is no need of any formalities to be observed by the aspirant, and this includes the wearing of the *tuft of hair* and the *sacred thread*. The *shearing of the head* is of course obligatory even at the beginning of Sanyas, or at the time of taking the vows of Sanyas, and the head is kept clean of hairs at all stages of Sanyas because a Sanyasi is not supposed to accept anything that he has once discarded. The same thing applies to the sacred thread.]

7. This sacred thread is like a key or formulae to the secret of Brahm; it helps to solve the mystery of Brahm (and where this eclectic divinity resides). That is why it is called a ‘Sutra’, meaning a formulae or key or maxim (much like the ones we have in mathematics or physics that help one solve complex mathematical equations or problems in physics).

This Sutra points to the supreme stature of spiritual enlightenment that the person should aspire to attain. A Brahmin (i.e. a learned and wise person) who has understood this Sutra is able to understand the meaning of the Vedas (just like a student who has mastered the formulas is able to solve the most complex of problems in mathematics or physics). In other words, such a man is called truly wise, learned, sagacious, erudite and skilled in the knowledge contained in the scriptures (such as the Vedas) which teach about only one Truth and one supreme entity known as Brahm, albeit in different languages and employing different terminology, metaphors and analogues (7).

8. Even as the beads of a garland or a rosary are threaded together by the means of the thread which helps to keep these independent and scattered units (beads) together into one composite entity known as the garland or rosary which has its own independent identity much different from its individual units, this entire world consisting of an infinite and uncountable number of independent units, having myriad characteristics, attributes, qualities and virtues, are united and held together into one single whole known as the ‘world or creation’ because they are unified and kept in place by this one universally unifying factor known as Brahm.

That is why Brahm is called a ‘Sutra’, i.e. the ‘thread’ which keeps the creation in place in one piece, unifies its scattered pieces and binds them together into one whole, giving it its unique identity and character but mysteriously remaining hidden from view like the thread of the garland or the rosary that is not visible as it remains hidden from view behind the beads. The Brahm is also called the Sutra because it is the ‘formulae or key’ to understand the mystery of what this creation is all about; it is the ‘maxim’ stressed by the Vedas; it is the ‘code’ to unravel the secrets of creation and the ‘truth’ behind it.

Therefore, those who are expert in the great fundamental tenets of the Vedas as well as those who are firm in the path of Yoga (meditation and contemplation) should enshrine this Brahm—representing the key to spiritual enlightenment and

realisation of the ultimate Truth—carefully in the heart (much like a rich man keeps the key to his treasury safely in his breast pocket, or a worshipper keeps the deity enshrined in the inner chambers of his worship room) (8).

9. A wise and erudite man who is enlightened enough to realise that the main function of the sacred thread is to bring about a union between the individual creature and the supreme Brahm, to make a man realise the grand truth about his own self and the rest of creation, to establish truth over falsehoods, and to establish a uniformity between formal knowledge of Brahm gained by studying the scriptures and its practical experiment by self awakening or self realisation when the eternal radiance of Brahm-realisation shines and illuminates the inner self of the wise man—when this is brought about, then at that time he should discard the sacred thread because it becomes redundant.

In fact, understanding what is Brahm, realising Brahm's truthful form and nature is tantamount to understanding the true meaning of the 'Sutra' (the sacred thread). That is why it is also called 'Brahm Sutra'.

That is also why a person who symbolically wears this divine and holy form of Brahm as the Sutra (sacred thread), called the 'Brahm Sutra', is said to be truly Brahm-realised and vested with the divine radiance, splendour, magnificence and glory of Brahm. He effuses a divine glow and radiates the light of pure consciousness all around him because Brahm is pure consciousness and brilliantly and radiantly splendorous (just like the Sun in the sky). Indeed, this realisation makes the man immune to all forms of decay and degradation while protecting him from all types of impurities and taints so prevalent in this perishable and impure world. [This is because pure consciousness can neither be made impure nor be demoted in any way.] (9).

10. Those who have sincerely accepted the divine, eclectic and truthful knowledge pertaining to this symbolic sacred thread called the Sutra or Yagyopavit as representing the key to the great tenets of Brahm realisation are deemed to have enshrined the supreme transcendental Brahm in their own hearts.

Such persons who have understood the symbolism and the hidden meaning behind this sacred thread and why it should be worn are the ones who have actually comprehended its true importance and significance. Such persons are the ones who have truthfully and intelligently worn the sacred thread; such persons are the ones who really benefit from wearing the sacred thread. [For the rest of the people, it is merely a worldly religious formality which would lead them spiritually nowhere. It is like the case of a student mugging up answers in mathematics or the sciences to pass exams, but his mark-sheet would no way reveal his ignorance of the subject. Such a student might land a plump job initially, but he is destined to miserably fail in life because his basics are absolutely weak and ramshackle.] (10).

11. Those wise and exalted persons who accept and acknowledge that acquisition of Gyan (truthful knowledge and awareness of reality) is like the symbolic wearing of the 'Shikha' (tuft of hair) on the head worn by learned Brahmins, those who have firm faith and unwavering conviction in the strength and potential of Gyan (to provide spiritual attainment as well as emancipation and salvation to the creature), and treat Gyan as being equivalent to the Yagyopavit (the sacred thread)—such persons are made pure and holy by Gyan (11).

[Note—This is because acquisition of *Gyan* implies that such persons have understood the formula that unravels the secrets leading to the realisation of the supreme Truth known as Brahman. After all, the wearing of the Shikha and the Yagyopavit are also intended for this very purpose, and if the aim of realising the Truth is not achieved then the very purpose of wearing them is defeated. They simply become superfluous symbols for misleading the world into believing that the man who sports them is learned and wise. Such persons are imposters who are cheating the world as much as they are cheating themselves.]

12. For those wise and enlightened persons who treat the radiant light emanating from Gyan (truthful knowledge and awareness of reality) as being equivalent to the erect flame of the burning fire or like the erect flame surrounding the wick of a burning candle, there is no other entity known as ‘Shikha’¹.

Indeed, such wise, erudite, learned and enlightened persons who have the Shikha of Gyan with them (i.e. who have the flame of knowledge burning brightly within them) are deemed to be the ones who are wearing the tuft of hair also called the ‘Shikha’. [This is because they have understood the true meaning and significance of having that tuft on the head—for this tuft is a symbol of Brahman-realisation, a sign of their high level of wisdom and erudition which marks their exalted place in society.]

Such persons are recognised as truly wise, learned and enlightened. They are not imposters who have sported this Shikha to fool the world to meet their narrow vested interests for obtaining material gain and false honour. [The knowledge of imposters is just perfunctory and superfluous, and they are hollow from the inside.]

On the contrary, those persons who keep the external tuft of hair known as the ‘Shikha’ but are lacking in actual knowledge called ‘Gyan’ cannot be called wearing this sacred symbol (the Shikha) in the true sense of the word² (12).

[Note—¹Here there is a playing on the word *Shikha*, because it means both the tuft of hair worn on the head by a religious Hindu as well as the erect flame of a burning candle. The light of knowledge or Gyan is compared to the flame because not only does it remove the darkness of ignorance that might be shrouding the person but also burns all the impurities that may be present in any form that might tarnish the purity of his ‘self’ and his Atma. The Shikha is always erect, signifying its noble stature and high credentials which at once places the wearer on a high moral and spiritual ground. Similarly, the person who has Gyan is always shown the greatest of respect by the world wherever he goes. Gyan heralds and ensures his high standing in the realm of wise and enlightened men.

²It should be noted that the Upanishads forbid deceit, conceit and pretensions of all kinds, and lay great stress on truthfulness and honesty. They emphasize that one should honestly acquire knowledge that is truthful and devoid of all fallacious conceptions and deceit more than anything else. In this context one would realise that the ritualistic wearing of the Shikha or the Yagyopavit are futile exercises if the real meaning in their wearing is not fully understood and put into practice.]

13. Brahmins and others who are eligible to participate in formal religious sacrifices are ordained to wear this sacred thread called the Brahman Sutra because it is a necessary formal accoutrement for such religious ceremonies (13).

[Note—These symbols identify the priests and other special persons who are playing an active role in a fire sacrifice like the case where volunteers wear special badges during state functions to help others to identify them in the crowd. It is also like the doctor wearing his apron and the lawyer his coat and tie to help them be easily located and be distinguished in the crowded hospital or court. The fire sacrifice and the external symbol of the Shikha are needed in the earlier stages of spiritual life of

an aspirant, but as he progresses ahead and reaches a certain degree of maturity in his spiritual attainment they are to be dispensed with as being superfluous and unnecessary.]

14. For those wise and learned persons who wear both the Shikha (tuft of hair) and the Upavit (the sacred thread; the Brahm Sutra; the Yagyopavit) as a symbol of their high degree of metaphysical learning, spiritual standing and level of Brahm-awareness (instead of just a ritualistic wearing because of their chance birth as a upper class Brahmin, though they have no in-depth knowledge of the esoteric and mystical secrets pertaining to the supreme Truth known as Brahm as well as its stupendous and magnificent importance and significance) are the ones who are worthy wearers of these twin symbols of Brahm. Such persons are deemed to be the truthfully learned ones who have acquired the grand and eclectic knowledge pertaining to Brahm and to the pure conscious Atma representing that Brahm.

This fact is asserted and repeatedly reiterated by those who are expert in this field (14).

[Note—This verse essentially says that true Brahmins are those who are well-versed in the knowledge that centers around the profound doctrines of metaphysics and spiritualism not only because they are assigned the job of being moral guides and preceptors for the rest of the society since ancient times and should be themselves competent enough in this field to act as teachers for others but also for their own auspicious life which should be exemplary and like a beacon for the rest to emulate. Pretension is tantamount to cheating and deceit which are not expected from people who are torch-bearers of high standards of morality and ethics in the society. That is why real ‘Brahmins’ are the ones who know about ‘Brahm’ from whom they have derived their name in the first place; if they do not know about their own origin, their parent and their root, if they are callous and ignorant of the basic ground which has given them their respectable position in society, then they should not be looked upon as worthy men deserving honour and respect.

Compared to them, those people who are not fortunate enough to be born as a Brahmin but are truly learned about the mysteries of Brahm are to be actually lauded and revered as true representatives of Brahm. In other words, it is the knowledge and awareness of Brahm and the high degree of such enlightenment that makes a man a Brahmin. Simply being born as a Brahmin would not entitle him for this honour.]

15. This Yagyopavit is most holy and auspicious, and a provider of holiness and auspiciousness. That is why only those who are holy and auspicious, those who have an element of divinity and spiritualism flowing in them, those who are learned and wise are the ones who are deemed to eligible wearers of this Yagyopavit¹. Such persons are embodiments of Yagya (the holy and auspicious fire sacrifice) itself. [That is, such persons are as holy, purified and auspicious as the sacred fire lit in the fire sacrifice.] Such persons are called ‘Yajjya’ or the ones who perform a fire sacrifice. [That is, such people are regarded as religious persons who adhere to the religious tenets and lead a pious and auspicious life. As part of this life they perform sacred fire sacrifices to honour the Gods collectively as representatives of the supreme Brahm.] (15).

[Note—¹Just like no impurity can come near the fire, no unholy man or those who have corrupt mind and body can wear this symbol of the fire sacrifice. It is precisely for this reason the ‘sacred thread’ is so called because it is as sacred as the ‘sacred’ fire. It is also precisely for this reason it is called a ‘Yagyopavit’—one that is as pure and purifying as the fire sacrifice. It is not that this thread would burn any one; it is just to stress the point so repeatedly emphasised in this Upanishad that this

Yagyopavit is a symbol of the holiest of the holy and the most powerful of entities in creation, so how can lowly and fallen men go near such an exalted entity that is a brand ambassador of Brahm, the supreme Emperor of creation? Is it possible for men to play with fire?]

16. There is only one universal supreme Lord who is secretly present or enshrined in all the living beings, called the Bhuts, in this creation. He is all-pervading and omnipresent, diffused uniformly throughout this creation. He is the pure conscious Atma present in all the creatures. He is the one who controls everything that anyone does. He is the final destiny and abode for all the creatures as well as the very foundation and basis upon which all them rest. He is the universal witness of everything and for everyone. He is an embodiment of pure consciousness. He is most holy, immaculate and pristine pure. And he has no attributes or qualities that can confine him within certain definitions and parameters; he cannot be defined and even be imagined as he is beyond such considerations and beyond definable attributes (16).

17. That Supreme Being is unique, non-dual and only one. He is the controller and regulator of all that exists in this creation. [Or, everything and everyone in this creation are under his control and command as he is the supreme Authority in this creation.] He is the Atma or soul of all living beings, and has revealed his own self in as many forms as there are creatures in this creation. Those wise, learned and self-realised persons who perceive this eclectic divine essence of creation within themselves, those who are wise and enlightened enough to understand that the supreme transcendental Authority and power of creation known as Brahm resides in their own self as their pure conscious Atma, find eternal and truthful peace, tranquility, beatitude and felicity. No other person can have access to it (17).

18. The invisible and virtually imperceptible supreme transcendental Brahm present inside one's own self should be realised, experienced and witnessed by means of meditation and contemplation. It is like kindling the fire that is universally present everywhere in a dormant and hidden form but needs vigorous rubbing of the 'Arani' (the two-piece wooden drill used to light the sacrificial fire in the pit of the fire-sacrifice) to make its presence spontaneously felt during the fire sacrifice.

For this symbolic rubbing to kindle the glorious fire of Brahm-realisation, an aspirant should use the Atma (the pure consciousness present inside the bosom of the aspirant; here referring to the vital winds that are present inside the body) as the lower end of the drill, and Pranav (or OM, the ethereal form of Brahm represented by this monosyllable divine word) as the upper end of the drill. The symbolic 'rubbing' involves the practice of meditation and contemplation using the concentration power of the mind and the dynamic but subtle energy of the body harnessed by controlling the vital winds. For this purpose, the ethereal word OM is employed as a Mantra or a mystical formula to do meditation with, and the focus of this spiritual enterprise is the pure conscious Atma. The result is that the hitherto secret and esoteric Atma that was imperceptible and unknown till now begins to make its presence felt as a divine glow of spiritual energy emanating from the cosmic Consciousness present in the subtle space of the aspirant's heart. He is able to experience it first hand in the state of Dhyan or intense concentration which is also called the state of Samadhi. [Since this Atma is Brahm personified, the spiritual aspirant is able to experience Brahm during the state of Dhyan or Samadhi.] (18).

[Note—During the fire sacrifice, the sacred fire is lit by rubbing two pieces of wood, called *Arani*, to generate sufficient heat which sets the firewood alight. To help light

this fire, air is blown towards the point where the Arani touches the firewood. This analogy is used to indicate that Brahm-realisation is like a holy fire sacrifice, and as potent and effective. For this purpose, various methods used in meditation are the symbolic vigorous rubbing, the air needed to kindle the fire of self-realisation is OM because this word is symbolic of the air element universally present as ether in the universe, and the blowing is done by concentrating or focusing the energy of the vital winds called Pran present inside the body. Intense concentration of mind is needed for success in any enterprise, especially those that require special mental skills and intelligent application of knowledge. It would be noted here that one such method of meditation for self-realisation is Pranayam or breath control by which ascetics endeavour to kindle the energy trapped in the Kundalini which is a coiled spiral of dynamic cosmic energy located at the base of the spine, and once its energy is unleashed the aspirant can easily experience the same mystical powers and potentials that are usually understood as being synonymous with Brahm-realisation.]

19. Even as oil is inherently present in the sesame seed as its integral part, fat or butter is intrinsically present as an integral part of curd, water is an indistinguishable and inseparable component of a spring or a fountain, and the fire is latently but integrally present in the firewood, the pure consciousness is also present inside the bosom of all living beings as their Atma. [In other words, though the Atma is not physically seen and easily perceptible, it is undeniably present in each single living creature just like the instances cited above.]

This truthful Atma can only be perceived and experienced only by the means of 'Satya', or truthfulness and sincerity (just like a mirror is needed to reflect a truthful image of anything)¹, and 'Tapa', or diligent practice of penance, austerity, rigorous discipline and self control (because great effort is needed to reach great goals) (19).

[Note—¹To conceptualize how the Atma needs the instrument of 'truth' or *Satya* to be witnessed, one can use this example of the mirror. When anyone wishes to see how he looks, no amount of descriptive words, even the whole dictionary spelt out to him by an expert in the language would enable him to understand this fundamental question in his mind—i.e. how do I look? A humble and simple mirror would do the trick that thousand words couldn't do. This is exactly what is meant here. Since the Atma is the eclectic, divine, holy and supreme Truth personified, the only way to understand what it is, is to see it in the light of truthful knowledge that comes with diligently and intelligently studying the scriptures, interpreting them correctly, practicing their instructions, and refining and fine-tuning each effort to focus it to the ultimate target of Truth-realisation. It is a very difficult job, and that is why it is like doing severe *Tapa*. Even a serious student knows how much effort goes in excelling in exams and getting to reach one's cherished dream in life. But once it is achieved, there is exultation coming naturally with achievement of one's goal and success in an enterprise that unleashes a fount of unbound happiness.

Refer Shwetashwatar Upanishad, Chapter no. 5 of this volume, in its Canto 1, verse no. 15.]

20. Just like a spider weaves a web and then gobbles up its own creation, the living being too oscillates between the two states of consciousness called Jagrat or the waking state, and the Swapna or dreaming state (20).

[Note—The consciousness exists in this world at two planes or levels—one is called the gross level and the other is called the subtle level. These two planes of its existence are called the Jagrat or waking state of consciousness, and the Swapna or dreaming state of consciousness respectively.

During the waking state, the Atma or the 'self' lives in the gross world through the medium of the gross organs of the body consisting of the organs of perception (eye that sees, ears that hear, tongue that tastes, nose that smells and skin that feels) and the organs of action (hands that receive and does deeds, legs that move and go to places, mouth that eats and speaks, genitals that reproduce and excretory organs that eliminate). The Atma is awake from the perspective of the world because it is interactive with it, perceives its stimuli and responds to them.

The second stage is when the gross body has become defunct and non-active, and in this case the Atma lives in the world governed only by the mind-intellect complex, the heart, the numerous Naadis or ducts such as the nerves and veins etc. which are collectively called the subtle body. Here the sub-conscious mind comes into play, and it conjures up a world of its own which is a subtle world of dreams. It is called a 'dream' because it has no physical presence and no gross organs are involved. The upside of this dream world is that it is not subjected to the limitations imposed by the gross organs of the body and can be many times more fascinating, diverse and grand than the physical world where the gross organs of the body come into play. This is because the mind's reach has no end and the dreams are the creations of the sub-conscious mind.

In both the cases the mind is active, but on a different plane. In the case of the waking state it is limited by the ability and reach of the physical organs, while in the dreaming state it is left to its own accord and abilities. So the creature oscillates between these two worlds when the Atma relies upon the mind to perceive the world. He either lives in the physical gross world in his waking state or the subtle world in his dreaming state. When in the waking state, he forgets about the world of dreams, and when in the dreaming state he forgets about the world of waking state. They cannot exist simultaneously. When dreaming, he withdraws the tentacle-like organs of perception and action from the world, and when awake these organs are spread out.

From the above discussion it naturally follows that if the mind is taken out of the picture, the Atma would transit to a next higher plane of existence which transcends these two states. Hence, the third state is the deep sleep state or the Sushupta state of consciousness where the mind is completely defunct and inactive. Since the mind is absent, the world also ceases to remain in any of the two forms discussed herein above. In this third state the Atma or the consciousness exists in its pristine form in the blissful state surrounded by the Bliss Sheath. Usually for an ordinary creature, this third state is transient and soon he reverts back to the earlier two stages.

But if this third stage becomes perpetual, he is said to live in the fourth state called Turiya or the transcendental state of blissfulness. This is a very typical stage of existence inasmuch as that when a creature is able to reach it, he appears to be active in this world, he goes about his normal duties and appears to be awake as during a normal Jagrat state, but internally he is asleep to the external world in the sense that his mind does not register any incoming stimuli from the external world. Such a person would do deeds but not remember what he is doing or has done a moment ago. He would not recollect anything. Such a man is deemed to be free from deeds and their consequences though outwardly his body is involved in doing deeds. Such a man is said to be in a perpetual state of Samadhi.]

21. The Atma known by the name of Vaishwanar during the Jagrat or waking state of consciousness symbolically resides in the eye¹.

The Atma known by the name of Taijas during the Swapna or dreaming state of consciousness symbolically resides in the throat².

The Atma known by the name of Pragya (i.e. the consciousness in its primary enlightened form having awareness and knowledge, erudition and wisdom) during the Sushupta or deep sleep state of consciousness symbolically resides in the heart³.

Finally, the Atma is known by the name of Turiya when it transcends these

three states of existence and lives in the divine and eclectic spot in the body called the Brahm-Randhra⁴. (21).

[Note--¹The word *Vaishwanar* has many connotations as follows—(i) It is the fire used in sacrificial rituals. (ii) The microcosmic pure consciousness that resides inside the body of the creature, providing it with life, vitality and energy which helps it to digest food. (iii) Vedanta says that it is the pure consciousness that is a fraction of the Supreme Consciousness, and it resides in the body of the creature even as the Supreme Consciousness resides in the macrocosmic vast body of Nature or creation. It is representative of the supreme, transcendental entity that is the Lord and the primary cause and the governing authority of the whole creation. (iv) Since the creatures have myriad forms, it has as many forms as the creatures themselves, incorporating all of them in it. Hence, it is also called ‘Viraat Purush’ (which means the vast, colossus, all incorporating, all-pervading, almighty form of the microcosmic Atma of the creature as well as the macrocosmic Atma of the creation; it is measureless, infinite and eternal). This is the subtle form of ‘Vaishwanar’. (v) The gross manifestations of this ‘Vaishwanar’ is the ‘Annamaya Kosh’ or the food sheath which is one of the five sheaths enclosing the Atma of the creature. This is because, as the Vaishwanar Agni (fire), it helps in digestion of food. (vi) Its state of existence is defined as the ‘waking state of consciousness’. (vii) The word also means—relating to or belonging to all men, omnipresent, known and worshipped everywhere, universal, general, common, complete, immutable, full in number, a collective noun for all the Gods, one who is all commanding and almighty.

The word Vaishwanar refers to the universal fire element because the fire provides the light with which the creature sees the world. The fire removes darkness and illuminates the realm with its light. In this context, the Sun is the eye of Brahm in the sky because it is through this Sun and its fire that the world is lighted and energized. The faculty of sight in the eye of the creature is thus a symbolic presence of this Vaishwanar at the macro level of creation.

The Atma is called a Vaishwanar because the man becomes aware of the world when he sees it with his own eyes. This is why it is called the ‘waking’ state of consciousness. The presence of the consciousness known as the Vaishwanar in the eye is a metaphor for this waking state because when a man ‘sees’ anything only when he is awake and not while he sleeps.

²This is because the man remains mentally active while dreaming even though his physical body is inactive, and this is symbolised by saying that his consciousness resides in his throat. It has been observed that a dreaming man is sometimes so engrossed and involved in the world of his dreams, experiencing emotions and sentiments so intensely that often he might whisper or make guttural sounds during sleep. There are instances when a man even talks aloud in his dream. Snoring is another manifestation of the presence of consciousness in the throat. When a man wakes up from his dreams, the only way he can describe what he has ‘seen and witnessed’ during his dream is by the use of words, and this implies the use of voice which has its seat in the throat.

³This is because the man’s Atma has its primary divine abode in his heart. Even when the man does not dream, i.e. even when his sub-conscious mind ceases to function, his heart continues to beat uniformly and incessantly. Had it not been so, the person would have died. The proof that the Atma—which is the pure consciousness symbolising the vital spark of life present inside the otherwise lifeless gross body of the creature and the only factor that can be definitively called ‘the life-giving entity’ in the body—residing in the heart as an embodiment of such glorious virtues as enlightenment, knowledge, wisdom, awareness, erudition and such other eclectic virtues that are the hallmarks of consciousness lies in the fact that when this man wakes up, he immediately connects with the external world even in a fraction of a second, recollecting instantly what he had been doing, what he had learnt before

sleeping, and so on and so forth. If the Atma had lacked the attribute of 'Pragya' as described here, the person would not have been able to recollect what his name was, what he had been doing before going to sleep, what he had learnt earlier, etc. So it is said that the Atma exhibits all the eclectic and sublime virtues which come under the broad definition of Pragya.

⁴The Brahm-Randhra is the hair-like slit on the top of the head from where the supreme Brahm had entered the body of the man at the time of creation, and it is the spot from which the Pran or vital winds of an ascetic (a Yogi) escapes from his body at the time of his death, while he is meditating at that time, to merge with the elements in Nature and become one with them. During the life time of the ascetic, he concentrates his life-forces by the virtue of various Yoga techniques at this spot, which results in his attaining extreme sense of blissfulness and peace. A truly realised and seasoned ascetic can continue to live in this perpetual state of beatitude and felicity even while he manages to do all his routine deeds in this world.

These four states of consciousness also appear in Kaivalya Upanishad in verse no. 12-14. Elsewhere, this concept has been elaborately described in Brihad Aranyak Upanishad, 1/1/17-20, 2/1/16-20, and 4/3/9-38, and in Varaaha Upanishad, Canto 1, verse no. 11.]

22. This Atma is such an esoteric, enigmatic and mystical entity that it cannot be described in words by the faculty of speech. It cannot be reached or accessed by the ten organs of the body (five organs of perception—eyes, nose, ears, tongue and skin; and five organs of action—legs, hands, mouth, excretory and reproductive) and the Mana (mind). [That is, the Atma is impossible to describe and equally impossible to know by employing any of the organs of the body independently or jointly. It can be only experienced as self-realisation and its accompanying spurt of profound and eternal sense of bliss and peace.] (22).

23. That Atma which is universally and uniformly present in the entire creation just like butter or fat is inherently present in fat-rich curd, forming its integral part, can be known and accessed by self-realisation and doing Tapa. (Refer verse no. 19.).

Verily, this Atma is Brahm personified, and its realisation is the supreme state of existence for the creature that is enunciated and elucidated by the Upanishads.

This is what this Upanishad says about the divine Atma and the supreme transcendental Brahm (23).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 4

Kaivalya Upanishad/Kaivalyo-panishad

This Upanishad has been revealed as a conversation between sage Aashwalaayan and Brahma who is the creator and the most wise and learned patriarch in this creation. The sage approached him and enquired about that supreme spiritual stature known as 'Kaivalya' which refers to attaining the eclectic spiritual state of Brahm-realisation and experiencing the cosmic Consciousness as the divine Atma present inside one's own bosom. The word 'Kaivalya' refers to something that is unique, one of its kind, un-paralleled and non-dual, and since Brahm and Atma are characterised by these eclectic and majestic virtues their holistic realisation or their enlightened awareness

and spiritual access is known as ‘Kaivalya’, because there is nothing to match their blessedness and nothing superior to this realisation. It is complete benediction and fulfillment for the creature. The eclectic knowledge about the mysteries of Brahm is called ‘Brahm Vidya’.

Brahma explained the divine virtues that are absolutely essential to reach that auspicious and exalted state when an aspirant can positively experience and witness the indefinable majestic state of Brahm-realisation as well as self-realisation when the pure conscious Atma, which is however synonymous with Brahm, shines through his entire being just like the Sun breaking through the dense bank of clouds to illuminate the entire world. This knowledge is akin to the brilliantly burning fire which has the potential to burn all impurities present in the bosom of the creature that pertain to this deluding, perishable and artificial world, and make him enlightened about the pristine knowledge pertaining to the supreme Truth which is most majestic and magnificent.

This profound awareness creates a sense of extreme benediction and fulfillment, profound peace and tranquility, and a state of intense benediction and felicity for the aspirant. He begins to see the world with the eyes of a realised and wise man who has risen above selfishness and narrow views of the world; he begins to see the world with equanimity and compassion, and observes the same divine Being revealing himself in everything around him. At the same time, he experiences a divine halo of enlightenment emanating from his own bosom, completely drenching him and his surroundings.

This, Brahma explained in the twenty six verses that comprise this Upanishad, is truly unique, unparalleled and magnificent, and hence the knowledge that enables the aspirant to acquire this potential is called *Kaivalya*—literally one of its kind. The word also refers to the ‘uniqueness’ of the object of all forms of worship, the eclectic virtues and sublime qualities that this divine and indefinable Authority who is invisible, omnipotent, omnipresent, omniscient and almighty in creation, known with the generalized term ‘Supreme Being’, exhibits. This Supreme Being created everything and everyone, and then took up residence in each one of them, controlling the entire creation from within, and then concludes it when it finally decides to do so. This Supreme Being is all-pervading, all-encompassing, all-incorporating and all-inclusive. Such ‘uniqueness’ makes it one of its kind—i.e. it is *Kaivalya*.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
-----ॐ_शान्तिः_।_शान्तिः_!!शान्तिः_!!!_

The meaning of this Shanti Paath is given in appendix no. 1.

1. The great sage Aashwalaayan took some Samidha¹ and went to Lord Parmeshti (Brahma, the creator and the wisest patriarch in creation) with great respect. He said, ‘Oh Lord! Please preach me about Brahm-Vidya (the eclectic, divine and sublime knowledge pertaining to the supreme transcendental Being of creation who is known as Brahm, the cosmic Consciousness, and its counterpart known as the pure conscious and divine Atma). This most profound, magnificent and esoteric knowledge is always pursued and constantly studied by pious and holy sages and seers (to unravel its

astounding secrets and majestic potentials). It is most secret, mysterious, esoteric and enigmatic, being difficult to access, decipher and understand.

Nevertheless, this Brahm-Vidya has magnificent mystical powers as it can bestow the wise and enlightened ones, who are expert in it, with freedom from all their sins and their evil consequences, resulting in their ability to find access to the Supreme Being², (1).

[Note—¹*Samidha* refers to some offering meant for the fire sacrifice. It was a usual practice to approach some wise man with the purpose of enquiry and acquisition of knowledge with some gift, and this gift was not material wealth but as an offering to the fire sacrifice because of three reasons. One, a wise man was not supposed to be yearning for some sort of gold or silver gift, for had he been such he wouldn't qualify to be approached with some spiritual and metaphysical query. Second, this token gift indicated that the seeking of knowledge and imparting of such knowledge was just like the performance of some sacred religious fire sacrifice, and had the same spiritual value. So the teacher couldn't refuse to answer the query as this would amount to refusal in participating in a fire sacrifice which would be tantamount to sacrilege and unrighteous deed on the part of the teacher. This obligation ensured that the query was certain to be answered. Hence, all sincere seekers approached their teachers with this *Samidha* in hand. And finally the third reason is that it showed sincerity and eagerness on the part of the questioner and seeker of knowledge to find out the correct answer to his queries.

²This stanza shows that the supreme Lord can be accessed only by those who have purged all their sins. This cleansing is possible only ('*Kaivalya*') by pursuing the holy path of Brahm Vidya. When a person willingly steps upon any chosen path he ensures that all its principles are strictly obeyed in order to achieve complete success in it and the desired goal is reached without any hindrance. This goal here is to realise Brahm, to understand the Absolute Truth of creation. Therefore the aspirant would naturally follow the tenets of auspiciousness and righteousness to the hilt so that this objective can be realised and fulfilled. This implies that he would move away from the path of inauspiciousness and unrighteousness which is the negative path called the path of sin and evil. Instead, he would follow the path that generates positive energy and creates a divine halo of goodness around him. As time passes, all his accumulated sins and their evil consequences are washed off and he becomes pure and cleansed of spiritual scum. This helps the shine of the consciousness to come to the fore much like the case when the light of the lantern shines brightly if the glass covering the flame is cleaned. This eclectic state of spiritual awareness and enlightenment is called 'self-realisation' or 'Brahm-realisation' because the 'true self' is the pure consciousness called the *Atma*, and the latter is nothing but Brahm personified.]

2. Brahma began his discourse, saying—'Oh Aashwalaayan! You should try to understand that eclectic knowledge which is the best and extremely magnificent awareness pertaining to the divine Supreme Being by inculcating the auspicious virtues of *Shradha* (having faith, conviction, reverence and veneration), *Bhakti* (sincere devotion and submission for the object of worship), *Dhyan* (constant contemplation and remembrance; focusing of the mind on the object of pursuit), and practice of *Yoga* (meditation and contemplation; diligent effort to bring about a union between the individual soul and the universal Soul of the creation by harnessing all the hidden powers and energy of the body and mind to achieve the aim of spiritual enlightenment and attainment of mystical potentials). [In other words, Brahm-realisation is possible by employing these great and most effective instruments of spiritual enlightenment more than any other means.] (2).

3. That supreme state of Brahm-realisation (or having access to the Supreme Being) is not possible by either doing any kind of deed, or by the help of sons (or other kin and relatives), nor by using wealth and prosperity as an instrument to achieve this auspicious aim (such as giving of huge donations or making charities etc., including holding of large religious ceremonies)¹.

Wise, erudite, expert and enlightened men have accessed that fount of Amrit (the divine ambrosia of eternal beatitude and felicity) by the means of 'Tyag'—or by practicing the eclectic virtue of renunciation, detachment, dispassion and non-involvement.

That divine and sublime Brahm is established in an esoteric and mystical heaven which is beyond the physical heaven of the sky. In other words, when one talks of 'Brahm Loka' where Brahm is supposed to reside, it is not the physical heaven located in some far end of the cosmos that is being referred to. Rather, it is the symbolic ethereal self-illuminated abode located in the secret and deepest recesses of the mind and intellect where the glory of Brahm shines brilliantly. [That is, Brahm's presence can be experienced and witnessed within one's own self and not by a telescope peering into the darkest corners of the fathomless cosmos. Brahm-Loka is not somewhere 'there' in the remote sky or heaven high up in the cosmos, but 'here' in one's own bosom, in his own 'self'. This 'self' is the Atma residing in the subtle space of the person's heart. If a man fails to see Brahm-Loka within himself, he would never find it anywhere else. This fact has been expressly mentioned in Atma Bodha Upanishad or Atmabodho-panishad of Rig Veda tradition, Canto 1, verse no. 2 and the entire Canto 2.]

Only realised and acclaimed Yogis (ascetics who have mastered the art of meditation and contemplation) can have access to this divine abode of Brahm. [This idea has also been expressed in Katho-panishad, 1/2/12, 20.) (3).

[Note—¹This idea that merely doing good deeds, or spending huge amounts of money on religious functions, or thinking that the son or any other member of the extended family can help one to reach the divine and eclectic state of Brahm-realisation would not lead to attaining the supreme Lord in anyway whatsoever is a very significant observation. It has also been reiterated in a slightly different language in Katha-walli Upanishad, 1/2/10, 23 which is Chapter no. 1 of this volume.

Let us examine why these three instances cited here cannot help one to achieve success in Brahm realisation. Suppose a man is sick, then he has to take the medicine himself and it is not the son who takes the pills, he has to approach the doctor personally so that the latter can examine the patient first hand and not through a lengthy narrative described by the patient's son, and only spending money can never give him excellent health, though it provides a helping hand, if the patient himself is not diligent and careful about his own health. Food has to be eaten personally to derive energy from it, and food eaten by others is of no consequence. Similarly, one has to study himself to acquire knowledge, and anybody else cannot replace the 'personal' factor in studying and acquisition of knowledge as much as surrounding oneself with costly books that money can buy add only a cosmetic value to his study room or library without in anyway enhancing his degree of wisdom, learning and erudition.

In other words, this 'Brahm-realisation' and 'self-realisation' is a very personal affair and it cannot be done by a son on behalf of the father, and neither can money buy it. Good deeds do have their effects, but ultimately they tend to make a man depend upon them and make him attached to them. It is to be noted here that deeds are done by the external body which is gross and not the real and pure and truthful 'self' of the aspirant. His true 'self' is his Atma which is absolutely separate from the body. So, how can the deed done by a different entity (the body) benefit the 'self' (the

Atma). Then, does it mean that one should not do even good, auspicious or righteous deeds? No, not at all; this is not the intention here. Since the gross body is the habitat of the sublime and subtle Atma during its sojourn in this world, the cleaner and purer the body is, the more conducive the atmosphere it creates for the Atma of the creature to pursue its spiritual endeavours. Otherwise, the environment would be like a stinking, dirty and filthy house which would rob the incumbent Atma of all its peace.

But ultimately peace comes from within and not from outside. So the Atma has to rely upon its own self to reach the eternal fountain of bliss and tranquility known as Brahm all by its own efforts and not by efforts made by others, such as the individual's own body or by the efforts made by the son for the welfare of his living father or his dead father—such as doing rituals for the benefit of his Spirit after his physical death.

Using money as a means of reaching Brahm, such as by doing charities, holding money-intensive fire sacrifices and giving huge donations, is also not possible for another simple reason. Money and material wealth are worldly assets and not spiritual assets. One is stupid if he tries to ignite the Sun with a match-stick. Brahm-realisation is as eternally splendid and brilliant as the dazzling light of the Sun, while the glitter of gold representing world assets and material wealth is like the light of the candle in the sunlight. Besides this, material wealth of this perishable world is a synonym of Maya or delusions pertaining to this artificial world, entrapping the creature by its illusive charm, while Brahm and self realisation are divine and truthful by nature. How can darkness exist where there is light of knowledge; or how can one expect something that has its origin in the perishable and deluding world to lead him to the place that is imperishable and truthful! In other words, how can 'Maya' represented by the illusive charms of the material wealth and delusions of grandeur and achievement that it produces ever provide eternal peace and happiness in its wake? When the foundation is itself weak and rickety, how can one expect stability and permanence by relying upon it?]

4. Those wise, erudite and enlightened persons who have firmly decided to find the Absolute Truth of existence by studying about it in the Upanishads, by hearing about it and discussing about it, by contemplating upon it and experiencing it first hand to remove any trace of doubt that might arise in their mind about its authenticity—such people first clean their inner self of all worldly impurities and negativity associated with this delusory world by following the path of Brahm Vidya (as describes in earlier verses), and then they follow it up with 'Sanyas Yoga'¹ to achieve final success in their spiritual goal.

With this eclectic achievement they would have accessed the divine ambrosia or Amrit of eternal bliss, happiness and joy. Being submerged and soaked in this ambrosia, they become one like it because constant contact with it would completely mould their inherent character and nature.

By and by when the time comes they obtain final liberation and deliverance from this world by achieving emancipation and salvation for their soul. They will find the ultimate rest for themselves from where there is no return to the world of miseries and torments. That is, once they have become Brahm-realised by following the path of Brahm Vidya coupled with Sanyas Yoga, they would find final freedom from the fetters of ignorance and delusions which had trapped them in this cycle of birth and death in the first place (4).

[Note—¹The phrase *Sanyas Yoga* has two components—viz. Sanyas and Yoga. The word Sanyas essentially means to detach oneself from all worldly attachments and involvement with delusions and artificiality that trap the creature and shackle him in fetters pertaining to this delusory world. The word Yoga on the other hand means to establish a link between two entities—here referring to link between the individual

‘self’ called the Atma and the supreme ‘Self’ called Brahm. That is, Sanyas Yoga entails that the follower would first take the path of Sanyas to detach himself from all artificiality and ignorance-based delusory perceptions by first finding out what the truth is by studying the scriptures, by hearing about it and by discussing about it. Then when he is firmly convinced about the Absolute Truth he would employ the medium of Yoga to achieve self-realisation and Brahm-realisation.

Refer Katho-panishad, 2/3/9, 14-19.]

5. [This verse briefly describes how meditation should be done by a Sanyasi, i.e. a person who has taken the vows of Sanyas by renouncing all his links with this material world of artificiality so that he can concentrate his mind upon the true ‘self’ called the pure conscious Atma which is a representative of Brahm present inside his own body.]

One should clean one’s self by taking a bath etc. and then sit comfortably and peacefully in the sitting posture called ‘Sukhasan’¹ in a calm, quiet, secluded and serene place. Then the body is straightened so that the spine, the neck and the head are in a straight line. The fidgeting nature of the organs of the body is to be controlled purposefully. Then one should symbolically bow before one’s Guru or moral preceptor to pay respect to him (5).

[Note—¹Upanishads on Yoga describe this *Sukhasan* posture as the one which gives bodily comfort to the practitioner instead of sitting in some grotesque posture which would constantly divert the mind to the uneasiness faced by the body. The word ‘Sukhasan’ has two parts—viz. ‘Sukh’ meaning comfort, and ‘Asan’ meaning a sitting posture. Refer Shwetashwetar Upanishad, 2/8 which is Chapter 5 of this volume.]

6. [Verses 6 and 7 describe the deity upon whom an ascetic meditates while sitting in the Sukhasan as mentioned in verse no. 5.]

The ascetic should constantly meditate upon the divine entity that is present in his lotus-like heart as his pure conscious Atma. This divine entity has numerous eclectic virtues. For instance, it has no trace of Raja Guna or any other kind of impurity or taint in it. [The Raja Guna is the second type of Guna which creates the tendency to remain engrossed in this world and its upkeep.]

It is most pure, uncorrupt and immaculate.

It is free from all forms of sorrows, distresses, miseries, agonies and pains that are associated with the mortal creature and the deluding world in which he lives.

It is so stupendous and magnificent that it is beyond the purview of the mind and intellect to think about it and comprehend it; it is not a subject for clinical thought and analysis.

It is an un-manifest, most enigmatic and esoteric entity that is very sublime and subtle, having no definable attributes and qualifications, though it is a universal truth and absolute reality.

It is infinite, endless, measureless and fathomless in dimension and import, in importance and significance.

It is Lord Shiva personified—i.e. it personifies all the eclectic virtues that the word Shiva exemplifies. That is, it is most auspicious, beautiful, peaceful, wise, enlightened and self-realised; it is an embodiment of renunciation and detachment par-excellence; and it is a provider of well-being and benediction to all the creatures like Lord Shiva himself.

It is most calm, tranquil, serene and peaceful.

It is a personification of Amrit which is the ambrosia of eternity as well as of beatitude and felicity.

It is the cause for the entire creation coming into being, being its supreme Lord called Brahm (6).

[Note—All the major Upanishads describe this Atma in more or less the same terms.]

7. This divine eclectic entity called the Atma has no Tama Guna tainting it. [Tama Guna is the lowest of the three qualities and is marked by evil tendencies.]

It is no beginning, middle or end—i.e. it is infinite, immutable, indivisible and universal, being the same everywhere and in all dimensions of time and space.

It is one of its kind, being non-dual and unique.

It is honoured by the epithet of Vibhu—one who is almighty, omnipotent, supreme, vast and colossal.

It is a personification of Chidanand—i.e. it is eternal consciousness and bliss personified.

It is Param Adbhut—i.e. it is most strange, enigmatic, fascinating, mystical, magnificent and stupendous.

This divine Being (Shiva), who is the supreme Lord of creation, is accompanied by Uma (Goddess Parvati, the primary Mother of creation revealed as Mother Nature from whose womb the entire creation is said to have taken birth) to help him to carry on with his divine wish. He has manifested himself as the Lord who is known as Parmeshwar (the supreme Lord of all), Prabhu (Lord and Master), Trilochan (the three-eyed one), and Neelkanth (the Lord with a blue-tinged throat). This Lord has calm, serene, tranquil and peaceful demeanors.

This Lord (here referring to Shiva who is Brahm personified) is the principal from whom all the primary elements of creation as well as the creatures were born.

He is the only witness to everything that had come into being in the past, that exists in the present, and that would come into being in the future and even beyond the future.

His auspicious and self-illuminated august presence overcomes, eliminates and banishes all forms of 'Avidya' which stand for all negative traits and inauspicious notions marked by ignorance and delusions that otherwise normally taint everything that exists in this creation.

Verily, wise ascetics and enlightened sages meditate and contemplate upon this glorious divine Being who is radiant and self-illuminated (7).

8. That Supreme Being is manifested as Brahma the creator, Shiva the concluder, Indra who is the king of Gods as well as the presiding deity that symbolically controls all the organs of the individual creature as the chief patron God of these organs, and he is also the imperishable, transcendental and supreme Brahm himself. He is Vishnu the sustainer and protector of creation, he is Pran (the vital life forces in creation; the vital winds), he is the ferocious dooms-day fire called Kalagni, and he has also revealed himself as the soothing Moon¹ (8).

[Note—¹It would be noted here that every factor, every force in Nature and every unit of creation have been called a revelation of Brahm. Even the opposite factors of Nature such as the ferocious and scorching fire called the Kalagni and its opponent factor of Nature called the Moon which has a soothing effect are its manifestations. Brahm is the creator Brahma on one the hand and the destructor Shiva on the other hand. In between, it sustains and protects as Vishnu. It is at once the king of Gods at the macro level as well as the controller of all individual organs of the body at the micro level in his role as Indra. It has injected life in the body of the individual

creature as the vital wind called Pran present inside the body at the micro level of creation, and at the same time it pervades in the entire length and breadth of creation as the omnipresent and almighty wind element which is also called the cosmic Pran at the macro level of creation.

These unique abilities and virtues of Brahm which are paradoxical in nature but which enables the supreme Authority of creation to do the impossible and make each enterprise successful and wish fulfilled are the qualities that entitle Brahm to be honoured by the epithet of 'Kaivalya'—i.e. one who is one of its kind, unique and unparalleled.]

9. What has been in the past and what would be in the future—everything is a revelation of Brahm (and part of that Supreme Being's divine cosmic play). When a living being has accessed this most holy, divine and eclectic Truth that is Absolute (i.e. when he has realised the irrefutable truthfulness of the statements about Brahm as expounded in this Upanishad), he is able to overcome the hurdle of death and attains Mukti. In other words, he obtains freedom from the fear of death. He finds liberation from the endless cycle of birth and death by attaining eternal freedom for his 'self'. This is also known as emancipation and salvation of his 'self' or his Atma¹ (9).

[Note—¹A wise and enlightened man who is self-realised and Brahm-realised understands the facts mentioned in these verses. He sees Brahm in the entire creation, thereby obtaining peace and happiness at finding the ultimate and absolute 'truth' which everyone tries but fail to search out. Once the fact is known to him, he also realises that his body as well as the world and its material objects are one or the other form of the same divine Being known as Brahm. This super-natural Authority known as Brahm controls every moment and every movement of the creature as well as the world in which he lives; there is nothing that one can do or not do without the wish of this overriding supreme Authority. So one stops fretting and fuming at failures, and exulting and celebrating at success. Obviously, this approach gives a sense of profound equanimity and calmness, a sense of uniformity and universality to a person's behavioral patterns and outlook towards life and its problems. He becomes stable, steady, uniform, tranquil, calm and peaceful; he becomes at ease with himself and his surroundings.

Further, since he realises that he is actually Brahm personified as his own true 'self' called the Atma, that this Atma is uniform, immutable, indivisible, non-dual, universal, omnipotent, omniscient and omnipresent, and that the entire creation is a revelation of Brahm who is the real Lord and Master of it, he concludes that he himself is the de-facto Lord and Master of all that exists. Everything is his; they are meant for him; he enjoys everything and nothing remains that he has not obtained and enjoyed. Therefore, he is fully contented and satisfied; he feels fulfilled with no desires and wishes left to be accomplished. So when he dies, he need not take another birth in order to finish his unfilled tasks!

Again, since such a wise and self-realised man does not get involved in any of the deeds done by the body—a fact obvious when we consider that one of the very first requirements for Brahm-realisation is taking the vow of Sanyas as mentioned in verse no. 3 and 4 whereby he is expected to completely renounce everything and sever all his involvements with them—thereby ensuring that he does not have to suffer any consequences of such deeds. Therefore, the other cause of taking birth—that of having to undergo punishment for bad deeds done in the previous life or for enjoying the rewards of good deeds done in that life—do not arise.

The combined effect is final liberation and deliverance from the cycle of birth and death. Only when there is no future birth would there be no chance of having to die.]

10. A person who has become enlightened enough to see his Atma (the pure conscious soul; the spirit; the true self) as the same Atma that is present in all the creatures of this creation, and therefore perceives his own self as an image of all the creatures in this world—only such enlightened seekers are eligible and competent enough to have access to the supreme Brahm, the supreme Soul and cosmic Consciousness of creation, and thereby become ‘Brahm-realised’¹.

He cannot have access to this supreme transcendental Brahm by any other means² (10).

[Note—¹The primary requirement to become Brahm-realised is to have a holistic and all-inclusive view of creation. A wise man must understand that Truth is always one and never two. Truth is an undisputed non-dual, immutable and indivisible entity. If Brahm is that Absolute Truth as asserted by all the scriptures then it goes without saying that it possesses these eclectic virtues that distinguish Truth from non-Truth. This Brahm is also the cosmic Consciousness called the Atma. It is this Atma or consciousness that injects life in the otherwise lifeless and inert body of the creature. Therefore, everything that has come into being from this cosmic Consciousness known as Brahm must have the same universal principal of life factor in it, and this factor is called the Atma. Thus, all the creatures are basically ‘Atma’ in their true and fundamental form. It is like the case of ornaments of gold which have their intrinsic value because of the content of gold present in them more than anything. No matter what shape this gold is given, all ornaments would be called ‘golden’ and nothing else.

²This seemingly innocuous statement is remarkable indeed. It reiterates what has been said in verse no. 3 above that no wealth, no son and no deed can enable and entitle one to have access to Brahm. The supreme Truth has to be realised by one’s own self; no external factors can make this possible. And the fundamental requirement is the conviction in the tenet that whatever that exists is Brahm personified, including one’s own ‘self’ as much as the other ‘self’ represented by the numerous creatures in the creation. This is the non-dual principle of Brahm.

What more does one need to be taught in the principles of universal Brotherhood! Truly, if we were to meticulously implement the teachings of the Upanishads in our lives today, this world torn asunder by strife and jealousy would have been a true heaven upon earth as when we pray ‘Oh Lord, let thy kingdom come, let there be heaven on earth, let there be peace and happiness everywhere’. But the irony is that we pray only through the tongue and not the heart, for had it been so we would not have to go far in search of that illusive heaven, for it here and now! This is the divine message of the Upanishads—‘find the ultimate and absolute Truth in your own self instead of searching it anywhere outside in futility’.]

11. Wise men treat their Atma, i.e. their pure conscious self, as the lower end of the ‘Arani’ (the wooden drill used to kindle the sacred fire during the fire sacrifice) and Pranav (the invisible and omnipresent supreme entity of creation represented by the ethereal divine sound OM) as the upper end of this Arani to kindle the fire of Brahm-and-self realisation by vigorously practicing meditation and contemplation upon the Truth and pursuing the knowledge pertaining to it¹. This helps them to burn all worldly fetters that shackle them to this deluding and entrapping world of falsehoods along with all evil consequences of any sin they might have done inadvertently (11).

[Note—¹This concept has been explained in detail in Brahmo-panishad, verse no. 18 and the note appended to it in Chapter no. 3 of this volume.]

12. It is the same universal consciousness known as the Atma which has assumed the role of a deluded creature. In this role it becomes subservient to Maya or the power of

creating delusions that is as integral to creation as the opposite power of enlightenment that cuts through this Maya¹.

Once the Atma has assumed the role of a deluded creature overcome by ignorance, it is known as the 'Jiva-Atma'. In this role it assumes that the body—which however is gross and perishable by nature as opposed to the subtle, sublime and imperishable nature of the pure form of the Atma—is its 'real self'. This is the basic misconception and error that he makes; this is the fundamental mistake which becomes the cause of all other misconceptions and delusions.

With this fundamental erroneous premise, the Jiva-Atma begins to do all sorts of deeds and get involved in them. [This is because the deeds are done by the physical body, and when under false impressions the Atma thinks that its 'self' is the body, it is natural that it gets linked to and involved with those deeds.] It enjoys the company of a woman and eats and drinks as well during its waking state called the Jagrat state of consciousness. It gets satisfaction with such service and enjoys them (12).

[Note—¹This stanza establishes that both the good and the bad co-exist in this creation. Both the opposite qualities are necessary to maintain the balance or equilibrium in creation so that the wheel cycle of creation continues to rotate. For instance, if there was no Maya or delusions and attractions towards falsehoods and material world of sense objects then all the creatures would become wise and enlightened, resulting in their non-involvement with this world and its activities. Then what would happen—there would be no generation of wealth and there would be no material progress; there would be no discoveries because people would be self-contented and satisfied with whatever they have; there would be no desire to propagate and procreate because these activities create passions and lust; etc. On the other hand, if there was no such concept as wisdom and enlightenment, no auspiciousness and righteousness, then the world would sink into the cauldron of vices and evil which in their turn would scorch the world to ashes and the creatures would beat each other to pulp even for the most unimportant of issues.

Besides the influence of Maya upon the world and the creatures that live in it there are other factors that help to maintain this balance and aid in the continuance of the turning of the wheel of creation and destruction in a perpetual manner—such as the presence of the three Gunas which are the inherent qualities present in all the creatures in more or less quantity that determine each creature's character, temperament, behaviour, nature and personality. These three Gunas are Sata, Raja and Tama. The Sata is the best of the three qualities and creates a propensity for goodness and auspiciousness. The Raja creates a desire for the world and to remain involved in its progress, development, protection and sustenance. The Tama is the lowest of the three and creates negative tendencies such as the propensity for committing sins and misdemeanors. They also help to maintain a balance much like the presence of Maya.

From the perspective of the Atma, the Maya and the Gunas appear to affect it for the simple reason that the Atma lives in the gross body of the creature which is affected by them though the Atma itself is totally detached and independent from all them. It is like the case of the flame of a lantern that is surrounded by a tainted glass which would affect not only how the flame appears to be but also how it gives its light.

Thus, the same Atma appears to be differently hued in different creatures.]

13. During the dreaming state of consciousness called the Swapna state, the same Jiva-Atma constructs its own world of fantasy in which it lives in the same way as it had done when it was in the earlier state of Jagrat (waking). This imaginary world gives the Jiva-Atma the same sorrow and happiness that it had been experiencing

while awake. [In other words, it thinks that the world of dreams is for real. This very notion is sufficient to prove that it is hallucinating.]

In the deep sleep state of consciousness called the Sushupta state, all the delusions created by Maya¹ and its characteristic Tama Guna² are dispelled and expunged, resulting in real peace and tranquility for the Jiva-Atma³ (13).

[Note—¹Maya is a word which has two parts, Ma + Ya. The first half means a 'mother; a progenitor; something that creates', while the other half refers to the 'notion of doubt, of either this or that; the notion marked by uncertainty'. The word 'Ma' also means 'to measure, mark off, by any standard; to show, to exhibit, to display; to infer, to conclude; to be formed, built, made of'. Therefore, the composite word Maya refers to a situation which harbours or creates uncertainties, where it is uncertain whether what is said or understood or seen or witnessed or experienced is actually the truth or not. It is virtually the 'mother of all confusions, doubts and perplexities'. It therefore refers to something or some situation which creates or produces perplexities, doubts and confusions, something that is not real; that which is deluding, illusionary, deceptive, mirage-like and deceitful, and is caused by the ignorance about its truth and reality; something that has no substance or pith; displays no certainty and leads to wrong inference. The term Maya is used to define this entire complex phenomenon at once. Hence, Maya is a synonym used for all that is deceptive, faulty, false, deluding, ignorance-based, illusionary, imposturing, deceitful, invisible and super-natural in the sense that it defies all logic and understanding; all that which has no reality or substance inspite of appearing to be for real; all that is hollow and lacks gravity though appearing to be solid and dense. It creates hallucinations in a creature's mind leading him to believe that what he sees is the truth. It is the deluding and magical powers of the supreme transcendental Lord that hides the reality and creates an imaginary world of deceptions and misconceptions.

Maya is the indescribable and inconceivable cosmic dynamic power that Brahm employs to create delusions.

Maya has three basic constituent qualities. Hence it is called *Trigunmayi* (त्रिगुणमयि), i.e. one which has the three Gunas or qualities. These three Gunas or qualities are—Sata, Raja and Tama. 'Sata' is the most auspicious, virtuous and noblest quality in a man and raises him to a high moral and spiritual pedestal. It marks predominance of righteousness and the highest standards of spirituals and mental evolvement leading to high thoughts, noble actions and righteous behaviour. 'Raja' is the medium quality in a person, and it is marked by worldly passions, desires, yearnings and greed. It makes a man more worldly than spiritual. 'Tama' is the third and most lowly of the three qualities and is used as a synonym for darkness and evil. Obviously, 'Tama' means ignorance, delusions and all the forces or qualities that are evil, mean, lowly, miserly, wicked and base. They pull down a man from high pedestal and virtually dump him in the dust yard of creation to rust and decay.

These *three qualities* together, in various permutations and combinations, decide the innate nature of a man. The greater presence of 'Sata' makes a man nobler as compared to a high ratio of 'Tama' which makes him wicked, pervert and evil. Various proportions of these qualities will therefore produce innumerable varieties of creatures having different temperaments, thought processes, behaviours, demeanors and mental setup in this world.

When a man understands any 'Truth' after rigorously examining the 'truthfulness' of that truth, when he has established the veracity of facts, he believes in it more firmly and more convincingly. No matter what other people tell him about the truth being not the correct or the whole truth, he would not listen to them, simply because he has verified the facts for himself, he has witnessed the truth himself, he has logically eliminated all falsehoods to deduce that what he knows is the 'truthful Truth'. His Truth is based on rigid and solid foundation; he is unwavering and steady in it. If he is steadfast and convinced in his knowledge, no matter how much

ignorance and delusions (Maya) try to push him away from the absolute 'Truth', he will remain steadfast and unwavering in it. There will be no doubts and confusions in his mind.

The basic idea here is that Maya is like a transparent coloured sheet which covers the supreme 'truth' in the creation. Since it is transparent, it assumes the attributes of the 'truth' that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. But at the same time, being tinged by different Gunas, the view of the 'truth' as seen through the veil of Maya gets tainted or distorted consonantly. This is a simple way of understanding what is called 'illusion and Maya vis-à-vis the Truth and Reality'. Maya nevertheless hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to that Truth known as the 'Nirgun Brahm' by the Upanishads when the latter is observed through this veil, while at the same time assuming the glorious attributes of Brahm itself. So ignorant fools think that the Maya is the real thing, whereas they are actually seeing the 'veiled truth' as observed through this covering of Maya, because the actual 'truth' is hidden from view by this transparent sheet which has lent it its own colour and hue to it. As a result, that Nirgun appears to have some attributes, and it thereby becomes 'Sagun', or the one with attributes and characteristics, by the interference of Maya.

²Tama Guna—There are three basic character traits in all the creatures, and they are called Guna. The character of all the living beings in the entire creation is dependent upon three primary qualities called Sata, Raja and Tama. Sata is the best of the three and marked by a propensity for auspiciousness, probity, propriety, piety, holiness and righteousness. The second quality is Raja and it makes a man more attracted to this material world and its charms and less spiritually inclined. The third quality is the meanest of the three and leads to the inclinations for committing sins and all sorts of demeanours. The varying quantity and intensity of these three in any given individual would decide his specific character and how he is inclined to deal with the world and a given circumstance.

The three characteristic qualities inherently present in the creature, in different ratios, are the three thought textures which bombard the mind. These three thought textures are manifestations of the 'Vrittis and Vasanas' (inherent tendencies or desires) of the creature which mire its pure conscious Atma or soul as a covering or veil. These three basic qualities or *Gunas* which are inherent in all the living beings determine their nature, habits, temperaments and inclinations which in turn decide the behaviour, personality and outlook of each individual in this world.

The three Gunas that determine the individual character of the creature, that determine his 'individuality' as compared to the general character of the group to which that individual belongs, are like the *isotopes* in chemistry. The isotope refers to the phenomenon wherein one of two or more atoms of the same chemical element that contain the same number of protons but different numbers of neutrons in their nuclei and therefore have the same atomic number and chemical properties but different mass numbers and physical properties. For example, two brothers have the same genes and the same inheritance, but the presence of the three Gunas in different ratios between them changes their personality and thought processes. One may be a highly righteous man while the other might be just the opposite. Their parents are the same, their upbringing is the same, they have attended the same school and ate the same food, but there is a deep chasm when it comes to their character as individuals.

(a) *Sata Guna* is the quality which is regarded as the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. It is marked by such high standards of ethical existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in

him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them. This quality creates an inherent affinity in a creature towards things in life which are of high moral value and uplifting for the soul rather than things which are demoting and denigrating for the spirit.

The Sata Guna or quality is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

(b) *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world, and they create an inherent affinity in a creature towards the material world of sense objects and their enjoyments rather than the world of spiritualism. In other words, those creatures who have this quality as a dominant trait are more inclined towards the world as compared to those creatures who have the Sata quality in a greater density. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Rajsic quality or Guna can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality. Rajsic tendencies are the second best quality which produces worldly desires, ambitions, passions, selfishness, various obsessions, desire to sustain and expand etc.

(c) *Tama Guna* is the third quality which is the meanest and basest of the three types of qualities in a creature. It is marked by evilness, perversions and sinfulness. It is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc. This quality creates an inherent affinity in a creature towards things which are very mean and lowly, which are totally sensual and pertain to the immediate gratification of the sense urges without any thought to what would be their consequences in the long run. In brief, behaviour which is utterly immoral, denigrating and depraving for the creature, marked by grossness, crassness and recklessness of demeanors. It is the lowest and meanest of the three qualities leading to a person's downfall, ignominy and ruin.

The Tamsic quality or Guna covering the soul is like a fetus in the womb covered by the embryonic membrane—they cannot be removed easily and require diligence, effort, dedicated and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, the worst type to possess, and is marked by such negative traits as sin, evil, perversions, immorality, vices, misdemeanors, anger, inertia, delusions, deception, gloom, ignorance et al.

Since each individual is like an independent piece of mosaic that completes the entire picture in conjunction with other such pieces, this individual creature's nature and character helps to determine the overall shape of the creation. These Gunas keep the creation in a state of constant change, because numerous creatures die every moment and new ones are born. The Supreme Being has to be constantly on the alert because of this flux.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special

characters which are unique to him; they determine his temperament, behaviour, thought process et al.

³All the negativity that is associated with the Tama Guna which is synonymous with Maya are dispensed with in the third state of existence of consciousness called the Sushupta state. This is because in this state both the gross body consisting of the organs of action and perception as well as the subtle body consisting of the mind-intellect complex have become defunct. Only the pure consciousness exists in the causal body, surrounded by the bliss sheath. As the name suggests anything that gives 'bliss' must be free from agitations and negativity. Therefore, the Atma must be free from all agitations and negativity associated with either the Maya or the Gunas that are limited to the body. These two only taint the outer sheaths that surround the Atma, and not its own true nature and form much like the case of the fire which always remains immaculate and pure inspite of all sorts of impurities and rubbish being thrown into it. These impurities might affect the colour of the fire for some time, they might even produce smoke for a while and appear to affect the brightness of the fire, but as soon as these impurities are reduced to ashes the brightness and splendour of the fire reemerges with its original glory. If we cite the example of the Sun we find that there are 'spots' on the Sun's disc, but upon closer examination we find that these spots are in its atmosphere and not in its core which is a cauldron of brilliantly burning fire. Similarly, whatever spots that might appear on the Atma are all superfluous and caused by the fact that this Atma lives in a gross body having numerous taints, but they never affect its original core form as Consciousness.]

14. After sometime, the Jiva-Atma reverts back to the state of consciousness from which it had gone to this deep sleep state of being free from all delusions because it is being constantly buffeted by the hangover and the rebounding affect of the deeds done by it during its earlier state of awareness of the world when it was in the waking state of consciousness, as well as the accumulated burden of pre-conditioned erroneous notions of its self as being the body instead of the pure consciousness which it had inherited from its previous lives.

The combined effect is that the Jiva-Atma once again wakes up into this world and plunges head-on in doing deeds and getting involved in them in its attempt to find peace and happiness, forgetting in the melee that just a while ago it had indeed found that peace and happiness in its deep sleep state called the Sushupta state of existence.

In this way, the Jiva-Atma exists in three places or planes during these three states of its existence. These three places are like the three bodies in which it resides during these three phases or planes of its existence. They are called the gross body which relates to its waking state, the subtle body which relates to its dreaming state, and the causal body which relates to its deep sleep state¹.

It is because the creature's Atma erroneously and fallaciously assumes that it has three lives, and not one stable uniform existence, that he is subjected to all forms of perplexities and confusions. It is this basic fault of perception that is at the root cause of all the mysteries and strange confusions that the creature encounters.

The consciousness that is the 'cause' of all this maverick world of delusions is itself free from all delusion². It is in its self a fountain of bliss and happiness; it is wise and wholesome; it is undiluted and uniform enlightenment.

In the final analysis, when the seeker of Absolute Truth personified by Brahm realises this fact, all the three levels or bodies in which the Atma was assumed to be present collapse and merge themselves into one unit which has no fractured existence and no separate characters. That is, for a self-realised man, the only body that matters is the one that harbours the Atma and which is the causal body as it is the one which is the 'cause' of all that exists (14).

[Note—¹The three states of existence of the Atma and the three relevant bodies have been explained with the aid of diagrams at the end of this volume. Elsewhere, they have explained in Brahmo-panishad, verse no. 1, 20-21, Brihad Aranyak Upanishad, one of the largest Upanishads, in 1/1/17-20, 2/1/16-20, 4/3/9-38, etc.

The erroneous perception of the Jiva Atma that it exists in these planes instead of one non-dual state that is universal, immutable and constant is at the root of all its problems. Had the creature realised that its 'true self' is the pure consciousness and not the body it would not have been buffeted by so many notions and perceptions that add to its confusions, leading to perplexities and consternation. The realised Jiva Atma would not be tossed between happiness and joys on the one hand, and miseries and sorrows on the other hand.

²Anything that has life can act and dream, for a dead entity does neither of these two things. This fact itself proves that there must be something that is the 'cause' of creating all this illusion just like there must be a magician who creates all sorts of illusions on stage during a show. This hidden entity, like the magician, is the pure consciousness ensconced in the 'causal body' of the creature as its Atma. This is precisely why the abode of the pure consciousness is called 'casual' because it is the 'cause' of all that exists, including the magical world of delusions.]

15. It is from this (the pure conscious Atma residing in the causal body) that everything come into being. It is from it that Pran (life forces in the body), Mana (thoughts and emotions; the mind) and all the gross organs of the body along with their perceptions come into being. [This is the microcosmic form of the Atma of the creature or the Jiva Atma having a body.] It is from it that the primary elements of creation called the Bhuts such as the sky, the air/wind, the fire/energy, the water and the earth that supports and bears the entire living world are born. [This is the macrocosmic form of the Atma as Brahm.] (15).

16. That supreme transcendental absolute Brahm which is the pure conscious Atma of all the living creatures, that Brahm which is the fundamental basis of the entire world revolving around the principle theory of 'cause and affect', that Brahm which is most miniscule and atomic (i.e. which is extremely subtle and sublime, most imperceptible and most difficult to ascertain with certainty), that Brahm which is eternal, ever-present, infinite and most ancient—verily, that essential and fundamental entity in creation which is the foundation, the pillar, the support, the dwelling, the cause as well as the affect, the origin as well as the end of whatever that exists in this creation, both the visible as well as the invisible, is known as Brahm. That Brahm is you; you are it¹ (16).

[Note—¹This assertion is called the *Mahavakya* or the Great Truth proclaimed in the Upanishads. There are four Mahavakyas, or the great universal sayings, declarations, commandments, tenets, or the axioms and maxims of the Vedas which are absolute truths and sum up the essence of their teachings with the reference to the Supreme Being known as Brahm. They are as follows—(i) 'Brahm Is Consciousness' (Pragnanam Brahm) appears in Aiteriya Upanishad of the Rig Veda. It means that Atma/consciousness, which gives life to the material layers consisting of the five sheaths of the creature, is the same as the Supreme Reality/Truth behind the entire universe/creation called by the name of Brahm; (ii) 'That Thou Art' (Tat Twam Asi) is found in the Chandogya Upanishad of the Sam Veda. It means that the infinite, all-pervading, omniscient Supreme Truth/Reality is the consciousness or pure self in you. It is also called a statement of advice to the seekers in as much as it contains advice addressed to the seeker that the supreme reality is the self within him; (iii) 'This Self Is Brahm' (Ayam Atma Brahm) is found in the Mandukya Upanishad in the Atharva Veda. It means that the Atma which is self illuminated and the Supreme Reality/Truth

are one and the same (i.e. identical); (iv) I Am Brahm (Aham Brahm Asmi) is found in the Brihadaranyak Upanishad of the Yajur Veda. It proclaims that the conscious principle/element in an individual is nothing other than the total consciousness. This is the statement made by the seeker after attaining self realisation.

There are a number of other Upanishads that describe these great sayings of the Vedas. Some of them are the following:--

(a) According to Paingalo-panishad, 3/2 of the Shukla Yajur Veda, they are the following—(a) ‘Tattwamasi’—that art thou, or ‘that truthful essence is you’; (b) ‘Twam-Tadasi’—you are that; (c) ‘Twam-Brahmasi’—thou art Brahm; and (d) ‘Aham-Brahmasi’—I am Brahm.

(b) According to Mandal Brahmino-panishad, of the Shukla Yajur Veda, they are the following—(a) ‘That is me’, or ‘that is I’ is mentioned in Brahmin 2, section 2, verse no. 5; (b) ‘I am Tej or I am energy personified’, ‘I am Pragna or personified knowledge’, ‘I am one and immutable’, ‘I am pure and non-dual Brahm’—these are mentioned in Brahmin 2, section 4, verse no. 4; (c) ‘I am the eternal and immaculate Parmatma’, ‘I am that essence’, ‘you are me’, ‘I am you’ are mentioned in Brahmin 3, section 1, verse no. 6; (d) ‘I am Brahm’ appears in Brahmin 3, section 2, verse no. 1; and finally (e) ‘You are me’ appears in Brahmin 3, section 2, verse no. 2.

(c) According to Shuka Rahasayo-panishad, 21/1-4 of Krishna Yajur Veda, they are the following—(1) OM salutations! Enlightenment and knowledge is Brahm and vice versa; (2) OM salutations! I am that Brahm; (3) OM salutations! Verily, that is you; (4) OM salutations! This Atma is Brahm.

Other Upanishads that highlight the fundamental tenets of the Vedas are Atmabodho-panishad and Atmo-panishad amongst others.]

17. ‘This world reflected in the three states of existence in which the consciousness appears to exist is nothing but the same, immutable and non-dual supreme transcendental Brahm reflected in all these forms, and one of those forms is ‘me’. Since Brahm and I are one and indistinguishable, it follows that I am also Brahm personified’. This profound realisation enables the enlightened creature to find liberation and deliverance from all fetters that tie it in shackles (of ignorance and delusions) (17).

18. There is something that is more quaint and extraordinary, that is most remarkable and exceptional, that is most stupendous and astounding and very dissimilar to what exists as the ‘Bhokta’ (one who enjoys or consumes), the ‘Bhogyā’ (one that is the object of enjoyment and consumption), and ‘Bhog’ (the process of enjoying or suffering or consuming) in all these three states of existence of the deluded consciousness (i.e. the waking state, the dreaming state, and the deep sleep state). That ‘something’ which is distinct and more magnificent than the rest is known as ‘Sada-Shiva’—i.e. one that is eternally beautiful, eternally truthful, eternally wise and enlightened, and eternally peaceful and blissful. This astonishing and fascinating entity is the witness to all, i.e. it just watches the trio of Bhokta, Bhogyā and Bhog as a neutral observer, but nothing can be hidden from this observer however. This entity is Consciousness personified (18).

19. ‘I am that supreme transcendental Brahm personified. Everything that exists has its origin in me (because Brahm is the cause of the origin of everything, and I am a living embodiment of Brahm—refer verse no. 16), everything is established in me (because I am the fundamental support and foundation and basis of all that exists in my manifestation as the macrocosmic Brahm—refer verse no. 17), and it is in me that

everything collapses and vanishes at the time of its conclusion (because everything merges, at the time of conclusion, into Brahm from where they had originated at the time of creation—refer verse no. 14).

Verily, that non-dual, supreme and transcendental Brahm, the cosmic Soul and pure cosmic and universal Consciousness is none other than ‘me’ (19).

[Note—On the face of it these statements smack of arrogance, pride, haughtiness, hypocrisy and egotism. But it is not so because these are pronounced by a self-realised holy man who has distanced himself from all worldly praises and has renounced all his connections with this materialistic world. Therefore there is no question of making such haughty statement for self-praise in order to gain some material benefit. Rather, it’s a spontaneous outburst of exultation at discovery of the grand Truth, much like Archimedes, the legendary Greek inventor and mathematician, running out of his bath, half naked, shouting ‘Eureka’ when he discovered the famous laws of buoyancy named ‘the Archimedes Principle’ after him.]

20. ‘I (the Atma) am smaller than the atom (as the conscious ‘self’ of the individual creature). Similarly, I am larger than the largest entity in existence personified (i.e. I am the Viraat Purush, the macrocosmic gross body of Brahm). The entire colourful and varied world is but my form or revelation. I am the most ancient and primary Purush (i.e. I am the Prajapati Brahma, the creator, from whom the rest of the creation came into being). I am indeed Ishwar (i.e. I am the Lord of the world as well as the Gods). I am the golden hued Hiranyagarbha personified (i.e. I am the macrocosmic subtle body of Brahm from which even the first and primary gross form of the creation as the Viraat had emerged at the very initial phases of this creation). Indeed, I am an embodiment of Shiva (i.e. I am truthful, eternal, beautiful, placid, self-realised, meditative, wise and enlightened like Lord Shiva)’ (20).

21. ‘That Brahm which is constantly on the move though it has no physical limbs, that Brahm which is beyond the scope of comprehension and thought, and that Brahm which is almighty and omnipotent, being an embodiment of all forms of energy, strength, authority, potentials and powers that exist in this creation—indeed that Brahm is ‘me’. I see everything even without any physical eye, and I hear everything even without the aid of the physical ear. In spite of my being distinct from the subtle body consisting of the mind and intellect complex, I still know everything because I am by nature omniscient and all-knowing. But the astonishing irony is that no one knows about ‘me’ (i.e. my true form). Verily, I am always in my true form as the pure consciousness and the holy Atma’ (21).

22. ‘I am the one who is to be known by the study of all the scriptures, such as the Vedas and Vedanta (the Upanishads). I am the one who has created the knowledge contained in the scriptures as well as the object of their study.’ (22).

23. ‘Auspicious or inauspicious deeds, righteous or unrighteous deeds, good or bad deeds—none of them have any affect upon me, they do not taint me, for I am immune to such mundane considerations and beyond their affects. I never decay, get old and decrepit and die, and neither do I have any birth—for I am eternal, infinite and imperishable. I have no gross body and none of its organs such as the gross organs of perception (ears, nose, eyes, tongue and skin) and the organs of action (legs, hands, mouth, genitals and excretory), and neither do I have the subtle body consisting of the mind-intellect complex. None of the five primary elements of creation—such as the

earth, water, fire, air and sky—have any relevance for me or define me in the remotest’ (23).

[Note—Refer verse no. 6-8. The Atma is synonymous with Brahm—both are Absolute, Truth and Reality personified in this creation; both are Consciousness personified, the Atma at the level of the individual creature and Brahm at the cosmic level. The creation is so stupendous and varied as pointed out in verse no. 7-9 above that it is impossible to build a comprehensive picture—see also verse no. 24 below.]

24. Any wise, self-realised and enlightened person who becomes conscious of the presence of this stupendous, most magnificent and mystical entity known as Brahm and grasps the profound but most esoteric truth of this supreme transcendental entity—an entity that is most esoteric, enigmatic and mystical, an entity that is immaculate, pristine, spotless and untainted, an entity that is non-dual and one of its only kind, an entity that is the only neutral witness of everything that exists, and that is none but Truth personified—such a person is able to have access to that entity and becomes as pure and exalted as that supreme essence itself¹ (24).

[Note--¹In other words, a person who has intelligently comprehended what this Upanishad says and believes in, a person who practices its doctrines with firm faith and conviction—such a person is able to appreciate its ‘truth’ as well as the importance and impact of this ‘truth’. When one keeps company of ‘truth’ it is naturally expected that ‘non-truth’ would not come near him. That is, he would be freed from all falsehoods and delusions based on ignorance of ‘truth’ about something which is not so apparent, not so tangible, not so visible, and not within the reach of the senses, but is nevertheless irrefutable and unequivocal. Therefore, when one becomes ‘self-realised’ one also become ‘Brahm-realised’ because both the terms are synonymous with each other.]

25. A person who worship this ‘Shat-Rudra’, i.e. who pursues the Truth which is most beautiful, eternal, holy, auspicious, blissful and divine, becomes as pure as the sacred fire, as swift and agile as the wind or air element, and is deemed to have accepted virtuousness and piety, holiness and divinity, blissfulness and contentedness as an inseparable part of his character.

He is absolved of such horrible sins as killing of a Brahmin, drinking wine and stealing gold¹. In fact, such persons are freed from such mundane considerations as having to undergo punishment for bad deeds or getting to enjoy the rewards of good deeds².

Such an enlightened person obtains the exalted state of being freed from all fetters. Such persons who have risen above the mundane and untied their shackles should read this Upanishad on a regular basis. He should remember and contemplate upon its profound tenets regularly (25).

[Note—¹This stanza should be interpreted in the proper way and not distorted to mean that it gives a license for committing such sins in the belief that they would be forgiven if one worships this or that deity, or reads this or that scripture. The plain intention is that if one sincerely wishes to atone for one’s sins then it is not that there is no way out for him. If a man sincerely regrets and realises his mistakes and wants to amend himself, by all means he should be given a chance. But a sincere realisation of having committed an error entails that it is not repeated; therefore the repentance also is sincere without expressly saying so. This Upanishad’s assertion about forgiveness is meant for such sincere aspirants and not for deceitful imposters who wish to escape from the sufferings that come with punishments for their sins in the garb of repentance and plea for forgiveness.

²This observation answers why the sins mentioned here are pardoned. It is because he had committed them when he had not realised that he should not be doing them because he is not basically a sinful soul but a pure and holy entity, and doing anything ignominious do not behoove his exalted stature. And once this auspicious thought finds foothold in his mind, he would automatically shun all such activities that come under the broad category of sin and evil. Another interesting observation is this—a self-realised man comes to understand that the body that does all the deeds is not at all his truthful identity, because it is his pure conscious Atma which is absolutely distinct from the body. The Atma simply lives in the body like a tenant in a house; the house does not belong to him unless of course he ‘illegally’ usurps it. The erroneous idea of the Atma when it is under the influence of delusions that the body is its ‘self’ (as mentioned in verse no. 12 of this Upanishad) is like illegally usurping the house under wrong advice of unscrupulous elements who wish to grab it. The righteous man would not pay heed to such nefarious designs of bad advisors and think for himself that grabbing someone’s property is an unrighteous act and counterproductive; why should he betray the landlord who has given him shelter? This righteous way of thinking would prevent him from falling prey to temptations. In the present context, this is like ‘thinking for one’s own self as to what is true and what is false vis-à-vis the world and the self.]

26. This constant study and contemplation helps him to acquire special knowledge and higher degree of erudition and enlightenment that would pave the path for his overcoming the obstacles created by this colossus world of delusions and all sorts of ignorance which are like a huge ocean most difficult to cross. When a person grasps the importance and significance of this Upanishad and the profound knowledge it contains, he is able to easily access the supreme stature known as ‘Kaivalya’ as described herein. Indeed, he is able to find that supreme stature of ‘Kaivalya’ (26).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 5

Shwetashwatar Upanishad/Shwetashwataro-panishad

This is one of those Upanishads which are exclusively dedicated to the theme of Brahm and repeatedly stress the importance of realising this grand quintessential Absolute Truth of existence. It is to be noted that this Upanishad espouses the philosophy of Sankhya Shastra and Sankhya Yoga, and elucidates their fundamental principles.

It was first revealed to the great sage-cum-seer named Shwetashwatar (6/21), and hence it bears his name.

Canto 1 describes succinctly about the Atma, the pure conscious ‘self’ both at the individual level of the creature as well as the universal level of the cosmos or creation. There are two beautiful analogies of the *wheel* and the *river* to explain the fundamental principles.

Canto 2 is dedicated to the praise of the Sun as a giver of life and a visible manifestation of the supreme Brahm. It goes on to describe the basic steps in Yoga (meditation exercises).

Cantos 3 to 6 are fully dedicated to enumerate the long eclectic list of the divine virtues and qualities of the Supreme Being. It also outlines the principles of *Sankhya Shastra* and *Sankhya Yoga*, as has been explicitly stated in 6/1-3 and 6/13. This school of spiritual philosophy was first propounded by sage Kapil to whom this profound knowledge was revealed by the supreme Brahm himself (5/2).

The metaphor of *two birds* sitting on a tree has been beautifully employed to describe the relationship between the Jivatma (the creature) and the Parmatma (the Supreme Being, the Lord of creation) in Canto 4, verse nos. 6-7.

The cycle of birth and death has been called the giant *Brahm-Chakra* or the wheel rotated by the supreme Brahm (6/1-2), and the cycle of deeds and their unavoidable consequences as the great *Karma Chakra* (6/3). The process of evolution has been also outlined in Canto 5, verse nos. 10-12.

In short, this unique Upanishad brings profound ‘truths’ of creation and existence to the fore in a very effective and succinct manner. Each observation about the divinity and supremacy of Brahm as well as about what is the irrefutable Truth is emphasised by way of repetition to drive home the point that what is being said is indeed the Truth.

We should note here that the basic tenets of the Upanishads have a striking similarity to the religio-philosophical beliefs of the great Christian saint named *Thomas Aquinas*. An entire set of religious doctrines based on his philosophy of the soul, human knowledge and God is known as *Thomism*. St Thomas was born 1224/25 A.D. and died 7 March, 1274. He was a leading philosopher and theologian of the Catholic Church and taught at the University of Paris. He was a prolific writer and penned about eighty great books on the subject of theology and philosophical aspects of religion. One of his great works is *Summa Theologica* which he wrote between 1265-73, and was his last major treatise on religious philosophy. His profound doctrine is known as *Thomism*. This is a philosophical and theological system developed by him which has great similarity with the philosophy of the Upanishads. Briefly it states that ‘the human soul is immortal and a unique subsistent form, that all human knowledge is based on sensory perceptions that are experienced by him but it also depends upon the mind’s reflective capacity, and that all creature’s have a natural tendency to love God that can be perfected and elevated by grace and application’.

In the context of our present reading, we should use the word ‘application’ as the practical method of Yoga and other means adopted by an aspirant to realise the supreme truth of the soul by focusing the mind exclusively on it, and the ‘God’ referred by Thomas is the supreme transcendental Brahm of the Upanishads. The rest of the things automatically fall into their right place.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
 ॐ_शान्तिः_!_शान्तिः_!!_शान्तिः_!!!

The meaning of this Shanti Paath is given in appendix no. 1.

Canto 1

1. OM salutations! Those who were naturally inclined to contemplate upon and deeply ponder about the great mysteries of Brahm and used to gather in groups to discuss the various aspects of this divine and enigmatic Brahm, asked one another, 'What is the form of Brahm which is the cause of the entire creation? From what or whom are we all born? How are we all kept alive and sustained? Where are we present and what is our basis, support and foundation? And oh experts on the subject of Brahm, what impels us or inspires us to wander in the seemingly endless cycle of birth and death, all the while being buffeted, pounded and tossed around by numerous troughs and crests of sorrows and joys? (1).

2. Are 'Kaal' (age, time and circumstance which results in change of the present and determines fate of the future), 'Swabhav' (a creature's natural temperament, inclinations and habits), 'Niyati' (certain fate or destiny that is dependant upon the deed and actions of a creature), 'Yadrisha' (unexpected and sudden happenings), 'Bhuts' (the various permutations and combinations in which the five fundamental elements of creation—space, air, fire, water and earth—mingle with one another to create an infinite variety of creatures of this creation), 'Yoni' (literally a womb, but here referring to the cosmic womb of Mother Nature) and 'Purush' (literally the male, the father, but here referring to the Viraat Purush, the macrocosmic gross body of creation) independently or jointly in various combinations responsible for this creation and its individual creatures coming into being? One should ponder deeply upon this question.

This is not a possibility because all of them, either independently or in combination¹, are subservient to the Atma or consciousness that lives inside the body of all living beings; they obey the command of the Atma and therefore cannot be the senior most authority.

And neither is this Atma residing in the body of the creature the senior most entity because it is subjected to being buffeted and pummeled by the affects of deeds done by the creature, having to suffer their bad affects and inclined to enjoy the good results of these deeds², (2).

[Note—¹The creation is such a complex phenomenon that none of its single unit that forms the composite compound can be independently and unilaterally responsible for the creation of the entire structure. Each plays its own part in forming the full picture, but only that much. For example, we have umpteen number of complex chemical compounds based on the numerous permutations and combinations of different elements and their configurations, but none of them can say boastfully that it is the 'one' which is 'the only cause' of that particular compound coming into existence, though it is an integral part of the entire structure and as important and essential as the other component. The independent elements of any compound cannot be visible to the naked eye; no one can see carbon, hydrogen, oxygen, nitrogen, sulphur etc. of any finished organic chemical compound because the finished product is very much different from the initial ingredients that go into its making.

Similarly, this creation exists at two levels—one is the invisible subtle level consisting of the fundamental elements of creation called the various Tattwas or Principals, and the other is the gross world that is visible and tangible, which we see and feel as the physical world.

The unit at the basic level of creation is the individual creature having a body and its parts. This creature is subjected to the affects of time and circumstance or Kaal, is driven by its natural habits and temperaments called its Swabhav, and it does deeds each of which have a certain pre-determined effect or result called the Niyati which decides the fate of the creature and what would happen to it in its future. Then there are things over which the creature has no willing control, which are called accidental

or sudden happenings which are called Yadricha, but which affect the fate nevertheless. Finally, the birth of a living being is a result of a union between a male Purush and a female's Yoni or reproductive organs. The resultant embryo is considered as an 'accidental happening' because out of the countless sperms, only one is able to fertilise the female egg.

Now, in this entire process it is to be observed no one unit is the totally decisive factor in the entire cycle, though each plays its own important role.

Starting from the union of the sperm and the egg, the development of the embryo in the womb, its emergence as a creature, the infinite external factors that come into play immediately upon its birth and go on affecting the creature as long as it lives, buffeting and tossing it around like a stray piece of wood afloat on a heaving ocean, till its final death or end—no one is certain of anything. Where there is no certainty one cannot be sure of anything, and therefore none of such 'unsure' elements of creation can be the 'Truth' of creation for the simple reason that 'Truth' is certain and fixed; it does not change and is not indeterminable.

²Now, certainly there is something that is driving the creature's body from the inside, that is riding as the passenger of this chariot-like body. This is the pure consciousness called the Atma. But ironically this Atma is so deluded once it comes into the contact of the body and its nefarious designs and tendencies that it gets tainted or affected by it. How? Well, the passenger sitting in the chariot cannot remain immune to the tossing and swaying of the chariot, can he? Unless of course he is able to control the chariot, has an expert charioteer, and is more focused and concerned about reaching his destination than about the tossing and swaying of the chariot.

Similarly, the creature's Atma that is influenced by the worldly delusions which constantly pummel it from all sides is not the 'truthful' nature of the Consciousness which is universally regarded as the supreme Authority of creation. The creature's deluded Atma thinks that it is doing various deeds, and therefore has to either suffer the adverse results of bad deeds or is enticed to enjoy the good ones. In other words, it does not remain neutral and gets sucked in the vortex of 'this and that deed'. Hence, it cannot be the supreme Authority because such an authority is expected to be neutral, decisive and steady in its demeanors and bearings. Hence we observe that there is a subtle difference between the Jiva Atma (the creature's Atma) and the Pramatma (the supreme cosmic Atma)—the former appears to be deluded while the latter is beyond such notions and is pristine pure and immaculate.]

3. Then those learned and wise sages and seers decided to stop debating and instead meditate and deeply contemplate to unravel the secret of that supreme transcendental Authority which is the divine cosmic force and dynamic cosmic energy responsible for creation, including their own self.

When they deeply meditated they were able to experience a divine effulgence of radiant and splendorous energy sprouting forth from deep within their own selves. This 'illuminated and radiant self' was surrounded by the shroud of various Gunas¹ so characteristic of all the living beings that it affected this brilliant glow (as any covering would naturally affect the light source which it surrounds).

This powerful divine source of cosmic energy was the basis (much like a pillar) of the entire setup, right from the Kaal up to the Atma as debated by these wise ones earlier² (3).

[Note—¹Every creature has three basic character-determining qualities called the *Gunas* in it. The density and intensity of these *Gunas* determine what the creature is like in its basic temperament and nature; they decide its personality. These three *Gunas* are in brief the following--(a) *Sata Guna* or quality is the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. It is marked by such high standards of ethical

existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them.

The Sata Guna or quality is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

The three Gunas that determine the individual character of the creature, that determine his 'individuality' as compared to the general character of the group to which that individual belongs, are like the *isotopes* in chemistry. The isotope refers to the phenomenon wherein one of two or more atoms of the same chemical element that contain the same number of protons but different numbers of neutrons in their nuclei and therefore have the same atomic number and chemical properties but different mass numbers and physical properties. For example, two brothers have the same genes and the same inheritance, but the presence of the three Gunas in different ratios between them changes their personality and thought processes. One may be a highly righteous man while the other might be just the opposite. Their parents are the same, their upbringing is the same, they have attended the same school and ate the same food, but there is a deep chasm when it comes to their character as individuals.

(b) *Raja Guna* is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour, ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Rajsic quality or Guna can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality. Rajsic tendencies are the second best quality which produces worldly desires, ambitions, passions, selfishness, various obsessions, desire to sustain and expand etc.

(c) *Tama Guna* is the third quality which is the meanest and basest of the three types of qualities in a creature. It is marked by evilness, perversions and sinfulness. It is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc. In brief, behaviour which is utterly immoral, denigrating and depraving for the creature, marked by grossness, crassness and recklessness of demeanors. It is the lowest and meanest of the three qualities leading to a person's downfall, ignominy and ruin.

The Tamsic quality or Guna covering the soul is like a foetus in the womb covered by the embryonic membrane—they cannot be removed easily and require diligence, effort, dedicated and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, the worst type to possess, and is marked by such negative traits as sin, evil, perversions, immorality, vices, misdemeanors, anger, inertia, delusions, deception, gloom, ignorance et al.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al. Two individuals having the same external form of the gross body—e.g. two men—might look very much alike but they vary immensely in their nature, habit, behaviour, thinking, outlook, action and deeds, wisdom and way of living. This is what is meant when it said that a creature has to roam in 84 Lakh wombs or forms of life; it is only a metaphor—it does not mean an actual, countable specific number that there are actually and physically 84 Lakh types of bodies of living beings; it only symbolically refers to the huge possibilities that are possible with these three 'Gunas' and their different combinations that can imaginably produce a myriad variety of creation that can be created with these three basic qualities and their various sub classes of qualities.

The proportion of the three Gunas decides the nature, natural temperament, tendencies, habits and inclination of the creatures. For example, a person with a greater proportion of 'Satvic' (noble) characteristic will be considered nobler than a man with a greater proportion of 'Rajasic' or 'Tamsic' qualities. So we can say that sages, seers, prophets, scholars and generally enlightened persons have a high degree of 'Satvic' qualities in them; kings and householders who live a noble life are example of those with higher amount of 'Rajasic' quality in them; while sinners, killers, drunks, rowdy elements, cheats etc. are those people with higher 'Tamsic' quality in them. These Gunas have direct bearing on the personality of a man.

²When the wise ones could not come to any firm conclusion, they decided to meditate, because when a vexing question is raised even today, wise and learned men stop wasting time in endless debates and take time off to ponder over it privately in a secluded place, such as their study room, because this helps to concentrate the mind on the subject under question. When these wise sages adopted this technique of meditation and contemplation, they experienced a glow emanating from within themselves much like the glow of a 'glow-worm'. Does the *glow-worm* know that it is glowing? No, it does not. But does its ignorance of its own effulgence mean that the light is not there? No, it is not so either. When the glow-worm begins to wonder about the light illuminating its immediate surroundings even while the environment is absolutely dark, it is only then it starts researching how it happens, how and from where is the light coming, and to its amazement it then discovers that it is 'it' itself that is radiating this light!

Similarly, since the creature is ignorant of the divine and illuminated source of life and existence present inside his own self, he goes on endlessly debating upon it as being this or that. But as soon as he starts researching for it inside his own self, the answer comes out as the Truth that is astonishing for the creature. This realisation is called 'self-realisation' and is tantamount to enlightenment.]

4. They observed a glorious 'Chakra' or wheel (i.e. a symbolic whirling wheel representing the entire creation) whilst thus meditating. This wheel had one 'Nemi' or the rim (circumference of the wheel)¹, three 'Vrittis' or fastening circles that surround the central axle and hold the spokes of the wooden wheel in place (or it might also refer to the three tiers of rings or fasteners used in the wheel to tie its spokes and other parts)², sixteen 'Antas' or ends or extremities³, fifty 'Aaraas' or spokes⁴, twenty 'Pratyaa-raars' or counter spokes⁵, six 'Ashtaks' or six sets of eight factors that strengthen it⁶, a single 'Paash' or a leash representing the entire creation which is used as a symbolic belt to tie the entire structure together.

This wheel is driven to its one destination⁷ along three different paths varying from one another, and hence called 'Trimaarga Bheda'⁸. One round of this rotating

wheel gives the delusion of two⁹—that is, it is out of delusion that the wheel rotating in one direction appears to be rotating in the opposite direction as well (4).

[Note—This is an excellent allegory of the *wheel* cited in this Upanishad. Wheel is also called a *Chakra*. The ideas expressed in this verse are reflected in Canto 6, verse no. 1 of this Upanishad also. Now let us see what are these individual parts or components of this wheel, and what do they stand for.

¹The *one rim* stands for the ‘Avyakta’, i.e. that entity which is un-manifest and beyond comprehension but is at the core and form the cause of the rest of the things to have their basis and existence. It also stands for ‘Prakriti’ which is also called Avyakta because it is not verifiably, it is un-manifest, invisible and cannot be seen directly but can only be deduced by interpretation and implication.

²The *three tiers or fasteners* are the three Gunas or qualities that form the nature and basic temperament of a man. These are Sata or the best form defined by being righteous, auspicious, noble and proper; Raja which is the medium quality marked by worldly desires, passions and activity; and Tama which is the meanest and lowliest of the three and is characterised by perversions, inertia, ignorance etc.

³The *sixteen ends or extremities* are the eleven organs (five organs of perception—eyes, ears, nose, tongue and skin + five organs of action—hands, legs, mouth, genitals and excretory + one mind) and the five elements (space/sky, air/wind, fire/energy, water and earth).

⁴The *fifty spokes* of this wheel are the five misconceptions, twenty-eight disabilities, nine contentments, and eight accomplishments or Siddhis.

The *five misconceptions* called Viparyayas are the following—(1) ‘Tama’ which makes one think that the body is the pure self; the mistaken notion that what is non-self is the self. (2) ‘Moha’ which is the endearment for or infatuation with the sensual material objects of the artificial world. (3) ‘Mahamoha’ literally the great Moha is the high of delusions when one thinks that the world is real. (4) ‘Taamisra’ when one gets angry if the desired objects are not obtained. (5) ‘Andha Taamisra’ is the blindness that comes in the wake of failure at fully enjoying the obtained objects of desire. For example, having to leave a meal midway due to an urgent call from the office; it leaves one frustrated and angry.

The *twenty-eight disabilities* or ‘A-shaktis’ are the following—eleven are related to the eleven organs as stated above, nine are related internally to the Anthakaran which are nine kinds of discontent as opposed to the nine kinds of contentment described below, and eight disabilities which are related to the inability to achieve the eight Siddhis described below.

The *nine kinds of contentment* or ‘Tushti’ are to be always satisfied with what one already has and not to yearn for more. They are—contentment from the knowledge of Nature (such as the study of sciences), contentment from material gains, contentment from time (because time is a great healing factor and such people derive consolation that the worst of time would pass one day), contentment from good fortune (because many people believe that good luck is round the corner), contentment from renunciation, dispassion and detachment (which is however the best form of contentment), contentment from desisting from activity not out of renunciation but because one feels that all activity would bring with it some gain and then it would be difficult to maintain it, so it is better avoided), contentment from being satisfied with whatever one has because one feels that whatever material thing is gained is perishable and would bring in its wake pain and sorrows, contentment from being satisfied with what one has because one thinks that the more one acquires the more the desires go on increasing, and contentment from the thought that no gain is possible without causing even a little harm to others, so it is better not to desire anything at all.

The *eight achievements or accomplishments* or Siddhis are the especial mystical authority and supernatural powers that one possesses. These are—(1) ‘Uha’ or the

intuitive knowledge, skills and powers that one is born with. (2) 'Shabda' or the power of acquiring knowledge and skill just by listening to words instead of actually reading and mugging up of texts. (3) 'Adhyayan' or studying deeply and with concentration to acquire knowledge and skills. (4-6) 'Dukh-Vighaatam' or the abilities to eliminate sorrows and sufferings. There are three sorrows that affect a man—viz. (4) sorrows that originate from external and perceivable sources; they are called 'Aadhi-bhautik', (5) sorrows that come from unknown phenomenal sources such as malignant stars and non-favourable Gods; called 'Adhi-daivik', and (6) sorrows that have their origin in the body and the mind; called 'Adhyaat-mik'. (7) Then comes the seventh Siddhis which is 'Suridha-Prapti' or receiving the fortunate company of someone who is compatible and like a soul-mate for the person, as opposed to the company of pervert and tormenting people. (8) And finally, 'Daan' or ability to give which implies that a person has sufficient for himself; it also implies that the person has an inherent noble nature and a renunciate and compassionate temperament.

So these are the so-called fifty spokes of the wheel representing Brahm.

⁵The *twenty counter-spokes* are the ten organs (five of action and five of perception) and their corresponding objects such as sound (ear), colour and shape (eye), taste (tongue), touch (skin), smell (nose), speech (mouth), walking or moving or going to a place (legs), grasping or accepting anything (hands), droppings (excretory), and enjoying sensual pleasures (genitals).

These literally act as 'fasteners or belts' that hold or fix the above fifty spokes in place.

⁶Next comes the *six sets of eight factors called Ashtaks*. These are the following—(1) 'Prakriti-Ashtakam' or the eight-fold nature of Prakriti; it consists of the five elements (sky, air, fire, water and earth) + mind + intellect + Ahankar (ego, pride). (2) 'Dhatu- Ashtakam' or the eight factors that sustain the outer body—outer skin (charma), inner skin (tvak), blood (rakta), flesh (mangsa), fat (medha), bones (asthi), marrow (majjaa) and semen or mucous (shukra). (3) 'Astha-Aishwariya' or the eight majesties and glories that are symbolic of the great mystical powers that a man possesses—'Anima' or the power to become as small as an atom; 'Mahima' or the capacity to become huge and majestic like a colossus; 'Garima' or to become authoritative, dignified, assertive and a heavy-weight; 'Laghima' or to have humility and simplicity in spite of being powerful and potent; and 'Prapti' or the ability to acquire anything desired. (4) 'Bhav- Ashtakam' refers to the various eight states of the mind and the corresponding virtues and vices. These are the following—'Dharma' or righteousness, probity, propriety, and nobility of thoughts and conduct, as well as its opposite component called 'Adharma'; 'Gyan' or truthful knowledge and erudition, wisdom and enlightenment as well as its opposite component called 'Agyan'; 'Vairagya' or renunciation, detachment and dispassion as well as its opposite component called 'Raga or A-vairagya'; 'Aishwarya' or having material prosperity, lordship, majesty, magnificence, renown and pelf as well as its opposite component called 'A-aishwarya or non-aishwarya' or poverty and lack of renown. It is obvious that each of these virtues affects the mental bearing of different persons in different ways. (5) 'Deva-Ashtakam' or the eight kinds of celestial beings. These are the following—Brahma the creator, Prajapati the guardian of the visible creation created by Brahma, the Gods, the Gandharvas (heavenly musicians), Yakshas (semi-gods; like Kuber the treasurer of the Gods), Rakshas (the demons), Pittars (spirits of dead ancestors), and Pishach (monsters and ghouls). All these entities have supernatural powers. (6) 'Guna-Ashtakam' or the eight qualities. These are Daya or compassion and mercy; Kshma or forgiveness; Anasuya or freedom from jealousy, hatred and ill-will; Shauch or purity and immaculacy; Anaayaasa or freedom from fatigue and indolence; Akirpanya or generosity and magnanimity or lack of miserliness; and Aspriha or lack of craving or yearning for sensual pleasures.

⁷The *one destination* of this wheel is to take the creature to its home called Brahm where its soul would find its eternal resting place. Another interpretation is that the entire wheel representing this world revolves around one thing—and this is ‘desire’. This basic desire assumes three forms—viz. Satvic or noble desires, Rajasic or that which pertains to worldly gains, and Tamasic or that which deals with all that is evil and pervert. These desires are called ‘Vishwa-rupi Paasham’ because they tie the creature in their ‘Paash’ or fetters represented by the desires for the enjoyments offered by the world of material sense objects, its pleasures and comforts.

⁸The *three Paths* along which the wheel is driven are represented by—‘Dharma’ or the path of righteousness and virtuousness, ‘A-dharma’ or non-Dharma or the path of evil and perversions, and ‘Gyan’ or the path of knowledge and erudition, of wisdom and enlightenment.

⁹It will be observed in practical life that when a wheel rotates at speed in a clockwise direction for example, it gives an impression that the spokes are turning in an anti-clockwise direction. This is due to optical illusion. In the present example, each *revolution* of the wheel gives rise to *two types of delusions*—such as good and bad, sorrows and happiness, etc. These opposite sets of notions are called ‘delusions’ because in actual fact the world where they are felt, the mind and the body which feel them are all delusory and have no truthful existence. The real entity that exists is one, and it is the pure consciousness known as the Atma at the micro level of creation, or Brahm at the macro level of creation. The rest is all delusion.]

5. [In this verse the analogy of the turbulent river is cited to describe the world and the creature that lives in it.]

We know of a great river¹ that is fed by five streams²—i.e. there are five streams that pour into it as it moves ahead from its point of origin. This causes turbulence in the river at these five points where the streams join it because the current of waters of different streams clash with each other, thereby bending the normal path of the river at five points³. The five Prans or vital winds form the five types of waves of this river⁴.

This five-faceted river has however one point of origin like all great rivers have, and in this case it is the Buddhi or intellectual mind⁵.

The river has five types of whirlpools⁶ swirling in it and trapping whatever comes within their range. There are five rapids⁷ in this turbulent and tossing river. It has five aspects or branches or tributaries⁸. And it is said to have fifty segments or sectors⁹ along its banks. [The mysterious river referred here is the world which is as turbulent, moving, unstable, unpredictable and trapping as the five-faceted river having five streams pouring into it, along with its whirlpools, waves, branches and rapids.] (5).

[Note—¹The *Great River* referred here is the world which is as turbulent, as topsy-turvy, as entrapping, as fearsome and as ever-changing as this river.

²The *five streams* represent the five organs of perceptions such as the eye, ear, nose, tongue and skin of the body of the creature. This is because the creature receives the numerous stimuli from the external world through these five organs. These stimuli disturb his normal peace of mind and keep it in constant state of agitation and flux; the creature cannot find peace as long as the organs of perception continue to receive perceptions from the world and fill the mind with their inputs. This is the reason of the *turbulence* referred in this verse. It must be noted that this world exists and has relevance only till the time the creature is alive and living in it. Hence, the world is synonymous with the creature that is engrossed in it and becomes an inseparable part of it. There is no world if there is no one to inhabit it.

³Further, the pouring in of the five streams into one body of the river and becoming one with it refers to the five primary elements that have independent

existence like these five streams but merge with each other to form the body of the creature as well as the world. These five elements are sky, air, fire, water and earth. Each of these five elements has its own characteristic defining qualities, virtues and attributes, so when they mix into one body it is obvious that they would create a great deal of turmoil represented by the turbulence. They would affect the original nature of the creature's 'self' by forcing him to bend himself according to the demands of the body and the world in which the creature lives. The creature with a gross body cannot remain immune to the demands of the body—which is tantamount to bending and twisting the straightforward nature of the creature's 'true self' and giving it a tainted form. This is referred here by the *bending of the river at five points*. These five elements do not allow the Atma of the creature to retain its pristine pure form, but force it to adapt to its new habitat in the gross body made up of these five elements.

The fact that mixing of these five elements would create a lot of agitation for the Atma of the creature is easy to understand when we realise the consequences of mixing opposite forces of Nature. For instance, the water is cool by nature but the fire is hot, so when they mix together it is natural that there would be a lot of noise and fury. This can be easily verified when we pour water in a brightly lit fire—there is a tremendous amount of noise, hissing, spluttering, cracking, as well as a dense cloud of smoke, flying of dry ash, dust, powdered cinder and sparklers.

⁴The *five waves* are the five vital winds present in the body of all living creatures—viz. Pran (breath), Apaana (the wind that controls digestion and excretion), Samana (wind responsible for circulation and equal distribution of nourishment in the body), Vyan (wind which maintains equilibrium), and Udana (which helps the body to get up and move about). They are likened to the wave because like the wave which forms an integral part of the turbulent river, this active and agile body is also moved around and kept as such because of the presence of the vital winds inside its body. In the river also, waves rise only when the placid water is pummeled by gusts of strong wind; otherwise the river would flow calmly.

⁵The *one causative factor* which has resulted in the origin of the river is basically a glacier. In the present context in which the metaphor of the river has been cited to represent the world and its inhabitant creature, this one causative factor is the 'intelligent mind' or *Buddhi* because it is the mind that makes the creature aware of the external world and its material attractions, its comforts and pleasures, thereby creating in him a desire to acquire them and get sucked in the vortex of desires and more desires. The creature gets involved in numerous deeds and then expects results from these deeds, thereby getting trapped in the cycle of birth and death. If the mind decides that everything is false then the very cause of all upheavals and turmoil just vanish from existence and this river-like life of the creature would be led along in a tranquil and calm path like the easy flowing, placid and calm water of the river which is not in spate.

⁶The *five whirlpools* are the five sense objects pertaining to the five sense perceptions such as the object of that the eyes sees, the objects that the ears hear about, the objects that the nose smells, the objects that the tongue tastes, and the objects that the skin touches and feels. These objects create desires and attraction for themselves and keep the creature trapped in their vice-like grip. They are likened to the whirlpool as they keep the creature churned, going round and round in circles, continuously tossing and turning helplessly under their influence, and gradually sinking in their vortex-like trap. These perceptions encircle the creature like the tentacles of an octopus which suck the creature in, and completely drown it in the water of the river. It means that the creature gets so much hooked to the enticing attractions of the material world and its alluring charms that he just cannot get out of their vice-like grip once he falls in their clasp.

⁷The *five rapids* are the *five types of miseries and sorrows* that afflict all creatures in this world. These are related to the creature staying in the mother's womb which is

like a hellish experience, the agonies of birth, various diseases that he has to suffer in life, old age, and death.

⁸The *five aspects or branches* of this symbolic river are Agyan (ignorance), Ahankar (false pride, ego, haughtiness, arrogance and hypocrisy), Raag (attractions, attachments, love and affections for worldly things), Dwesh (ill wills, malice, animosity, enmity, hatred and spite) and Bhaye (fear) of dying or the desire to cling to life. In other words, even as a river appears to have different forms such as turbid, muddy, clear, frothy, milky white or greenish at different places due to a variety of reasons, this world also appears to have these five types of basic characteristics that determine how it looks to the creature. For example, if the element of Ahankar is the dominant factor in a man then he would have a particular take on this world which would be very different as compared to how a humble and selfless man treats the same world.

⁹The *fifty segments or sectors* represent the uncountable variations in the character, qualities, virtues and attributes that the resultant world would acquire. This net result in which the world shapes itself vis-à-vis the creature as well as the basic character and personality of the individual creature itself would be the composite effect of all the above mentioned factors taken together. This is because this world is not an isolated unit but a composite mosaic of so many factors.

In practice also we observe that long rivers have many local names and significance. At places it is a holy river, while at others it is simply a flowing stream. Even as a holy river, some use its water to offer oblations to the Gods while others wash dirty clothes in it and spit in its water. At places it is calm and at others it causes havoc when it is in spate. Somewhere it is like an almost dry thin streak of water, while at other places it inundates large tracts of land. At places it is ankle shallow while at other places it can sink a boat load of passengers. The diversity of the river is starker than the ocean.]

6. The great wheel of creation has been created by the supreme Brahm, and hence is called 'Brahm Chakra'¹. All the living creatures are part of this great wheel—they live in it, have their foundation in it and find their sustenance and rest in it. As a result they continue to endlessly rotate with this wheel in the never-ending cycle of birth and death accompanied by all the attendant delusions, horrors and miseries².

When the wise and enlightened creature realises this fact and disassociates himself from this wheel and delusions created by it, instead regarding his 'true self' as a separate entity known as the pure consciousness called the Atma which is Brahm personified, it is only then that he finds eternal and immutable bliss, peace and tranquility³.

This is the reason why such a creature is referred to as a Hans or a Swan⁴. [Refer the fourth word in the verse.] (6).

[Note—¹Refer Canto 1, verse no. 4, Canto 5, verse no. 12, and Canto 6, verse nos. 1-4 for details of the concept of this Brahm Chakra.

²The enlightened creature understands that it is the gross body that remains trapped in this wheel of creation, but the ethereal Atma cannot be subjected to this entrapments. How this rotating wheel creates a delusion is easy to visualise if one has ever turned rapidly in circles or had ridden a giant wheel. In the former case, even after he has stopped turning, the entire room appears to be going round and round in circles for quite sometimes around him, and the giddy and the stomach-wrenching hollow feeling when the giant wheel turns is to be experienced to be believed. This would happen when the person keeps the eyes open while turning in circles, but if one keeps the eyes closed the effect of this turning would be the minimum. In other words, only as long as the creature is aware of this world and feels that it is a part of it

and participating in its activities is the creature affected by the delusions created by this world. On the other hand, if the creature 'closes its eyes to this world' or simply ignores it then the cause of delusions would simply not arise.

The deluded creature thinks that his conscious 'self' and the supreme Consciousness represented by the transcendental Self (Brahm) are two separate entities. As a result he continues to whirl endlessly in this cycle consisting of births in various forms in this mortal world which sustains and nourishes all the living creatures, and then dying to reach the other world obtained at the end of the present one. That is, he takes birth and dies to take another birth in this world itself, in one or the other forms in which the countless varieties and species of creatures exist. The phrase 'in this world itself' is indicative of the fact that life characterised by 'death and birth' is limited to 'this gross mortal world' and that this cycle is non-existent in the ethereal world of the Spirit and the Atma—because the Atma is eternal, infinite and imperishable, the Atma is the cosmic Consciousness that has no birth and death.

This cycle of birth and death and its attendant horrors happens because the deluded creature thinks that he has a physical body living in this world and doing various deeds in an attempt to satisfy the desires of the sense organs. Naturally therefore the creature would expect some results from these deeds, and then a desire to enjoy the rewards of his efforts. Once he tastes blood so to say, he would want more hunting, and the chain continues. Since the creature continues to have desires till his last minute and goes on doing deed in this world till his last breath, the creature cannot ever expect to find lasting happiness and peace. He would yearn for new lease of life so that his unfilled desires can be fulfilled and the rewards of his previous deeds can be enjoyed by in the new life. This traps him in the wheel created by the supreme Brahm.

Now the question arises why would the supreme Brahm want the creature trapped in it? The answer is that it is a necessary evil which Brahm has to tolerate if it wants to sustain and propagate its own creation. And that is why Brahm created 'Maya' or the power of delusions which would prevent the creature from realising the Truth and then breaking free from the bondage of delusions.

³On the contrary, when the creature has become wise and enlightened by pursuing the Truth, i.e. when he is able to overcome misconceptions induced by delusions and ignorance, and begins to honour the 'true' self in the form of the pure consciousness residing in his own bosom as the microcosmic counterpart of the cosmic Consciousness known as Brahm, he distances himself from the temptations of getting involved with artificiality and falsehoods which are the trademarks of this world. As a result, a wise and enlightened creature sheds his mortal and gross body that is rotating in this great Brahm Chakra and lives in his causal body where the ethereal Atma or the pure consciousness resides. This frees him from going round and round with this wheel of creation and destruction and instead find eternal freedom marked by beatitude and felicity.

⁴It would be noted that this living creature that remains trapped in this wheel of creation called the Brahm Chakra is called a 'Hans' or a Swan. This word implies that the world in which the creature is roaming endlessly is also regarded as a large water body such as a large lake or lagoon etc. because swans are found floating on the surface of water and not sitting on some giant wheel which is the Brahm Chakra here. The swan spends its entire life floating on the surface of the water and produces offspring that also continue to do the same thing. Likewise, the creature continues to roam in this world, spending his entire lifetime endlessly pursuing his desires and ambitions. At the same time, a swan is regarded as a wise bird because it is reputed to drink milk and leave aside its water content, or pick up pearls from an assortment of gems which symbolically indicate its abilities to pick and choose the best from whatever is available. This swan is a bird like other birds, but this capability sets it apart from the rest. Likewise, the creature having a gross body and continuing to

roam endlessly in this world is also inherently wise, erudite and intelligent, but out of ignorance he has forgotten his special stature.

The Upanishads on Yoga describe how the practitioner of meditation should contemplate upon his Atma as a Hans and use the two letters of this word—viz. ‘Ha’ and ‘Sa’ as Mantra while meditating and doing Pranayam (breath control exercises) much like using the Mantra OM for this purpose. Refer Hanso-panishad of Shukla Yajur Veda tradition, the Yogchudamani Upanishad, verse no. 82-83 of Sam Veda tradition, Yogshikha Upanishad, Canto 1, verse nos. 131-132, Canto 2, verse nos. 9-11, and Canto 6, verse no. 20, 52-54, and Dhyanbindu Upanishad, verse no. 63 of Krishna Yajur Veda tradition.]

7. The supreme transcendental Authority of creation whose glories are being sung by the Vedas is known as Brahm. It is a divine entity that is beyond the purview of all worldly deceptions and delusions, is most pure, sublime and holy, and is eternal, truthful and imperishable. It is in this Brahm that the entire world having three dimensions, called the ‘Triad of Creation’¹, is firmly established, or has its basis and foundation.

Those who are well versed in the eclectic knowledge pertaining to Brahm and have a holistic view of this supreme Divinity realise that it is present in their own bosom (heart) itself and nowhere else. This self-realisation takes a firm foothold by deep meditation, resulting in a state of perpetual blessedness. Such self-realised spiritual aspirants remain submerged in the bliss obtained by experiencing the presence of Brahm inside their own self. The affect is that they are able to get rid of the fetters of ignorance and delusions that tie them to this body and the world, and consequentially they find permanent liberation and deliverance from this entrapment (i.e. they attain emancipation and salvation for their ‘self’, for their soul) (7).

[Note—¹According to the revered sage Adi Shankarcharya’s commentary on this Upanishad, the *three fundamental aspects of the world* which give the latter three distinct characteristic forms are (1) ‘Bhokta’ or the one who enjoys or suffers, or the consumer who finds pleasure in the objects of this material world as well as the one who has to suffer the consequences of his actions, i.e. the living creature, (2) ‘Bhogya’ or that which is enjoyed or suffered from, or consumed in one form or the other, i.e. the material objects of this consumable world, and (3) ‘Niyantaa’ or the one who controls and rules over the other two, i.e. the Supreme Being. Refer Canto 1, verse no. 12.

These ‘three aspects of creation’ are called the *Triad of Creation*. Other interpretations of this phrase are the following-- (1) Creation, sustenance and conclusion.

(2) The *Trinity Gods*—Brahma the creator, Vishnu the sustainer, and Shiva the concluder.

(3) The three worlds called *Triloki*—terrestrial, subterranean and celestial; also the Bhu Loka or the earth where we live, the Bhuvha Loka or the sky immediately above the earth where those creatures which fly live, such as the birds, as well as where the spirits live, and Swaha Loka or the far away heaven where the Gods live.

(4) The *three Yugs or Eras* —Sat Yuga or the age when righteousness and virtuousness was at its zenith, Treta Yuga when Lord Ram had made his manifestation, and Dwapar Yuga when Lord Krishna came.

(5) The *three chief human pursuits* —love, wealth and duty.

(6) The *three qualities* that a creature possesses and which determine his temperament and behavioural pattern —‘Sata’ which is the most auspicious noble and righteous of the three qualities, ‘Raja’ where worldly passion and desire are predominant factors, and ‘Tama’ where lowly qualities marked by perversion, evil and sins are the dominant feature.

(7) The *three chief tribes or classes* into which the human race was divided by the ancients—the Brahmins who were the learned class, the Kshatriyas who were the warrior class assigned the task of giving protection to the society, and the Vaishyas who did commerce and took care of the societies material needs.

(8) The *three primary colours*—black, red and yellow.

(9) The *three primary scriptures*—the Rig Veda, the Sam Veda, and the Yajur Veda.

(10) The *Trivikram*—the word ‘Tri’ is a prefix meaning ‘three’, and ‘Vikram’ means ‘brave, courageous, bold, heroic, powerful, valorous, valiant, strong, best and excellent’. It also refers to Vishnu because he has all these qualities. According to the Puranic concept, Trivikram refers to Lord Vishnu in his manifestation as the dwarf mendicant called Vaaman who had begged the demon king Baali for land measuring three steps as charity. When Baali had agreed, Vaaman revealed his true identity as Vishnu, who was the Viraat Purush who encompassed the whole creation in his own body. So, in one foot Vishnu measured the whole earth, in the second, the whole sky, and in the third the king’s head was measured, symbolically defeating and subjugating him. So, Trivikram refers to the Viraat Purush or Lord Vishnu from whose navel even the creator Brahma was produced aloft a divine lotus with a long stem, and the holy river Ganges emerged from the toe nails of his divine feet. According to Vedas, this Viraat Purush is a manifestation of the supreme, transcendental, attributeless, all-pervading and all-encompassing authority of the universe, known as Brahm. Rig Veda, 10/90/4, states that this Brahm has three legs (Tri) established in the heavens. The macrocosmic male, called Purush, is its first manifestation; from this Purush came into being this creation consisting of ‘those who eat food’ (the living creatures of the zoological realm) and ‘those who do not eat’ (the plants and vegetables of the botanical realm). These three—the Viraat Purush, the living creatures and the non-living things—formed the three legs of Brahm.

(11) The *three Divine Shaktis*—The three cosmic energies referred here pertain to the three forms that the supreme Brahm had taken for the purpose of creation. ‘Brahmi’ is the energy with which Brahma creates, and its relevant subtle counterpart here is the power to wish and aspire for and expect something. ‘Rudrani’ is the cosmic energy by which Shiva/Rudra ends this creation, or brings to a conclusion the creation which Brahma had made possible. ‘Vaishanvi’ is the cosmic energy by which Vishnu sustains and nourishes the creation, and its subtle counterpart is taking actions and doing deeds because without actions and deeds, the creation cannot be sustained. For all these activities—creation, sustenance and conclusion, knowledge, wisdom and intelligence are needed because success in any of these requires the requisite expertise and the ability to use and apply it judiciously.

In other words, Brahma makes this creation possible by wishing to do so in his mind. If the creation is righteous and virtuous, it is sustained and nourished by Vishnu, but if it goes wayward and starts committing evil and sins, Rudra takes charge and uses his energy called ‘Rudrani’ to destroy that evil part of the creation. Extending this logic further, we deduce that when the evil tendencies in the world will almost eclipse or outweigh the good qualities, Rudra would completely annihilate the creation, but the remnants of good elements left behind will help Brahma to re-start the cycle of creation once again.

The ‘triad of powers and strengths’ called the Trishaktis that a man possesses are the following—(a) the power to wish and have determination, called ‘Ichha-Shakti’, because it is only when one wishes to do anything and has the determination to do so that he actually does anything at all and strives hard to get success in it; (b) the power, strength and empowerment obtained as a result of acquisition of knowledge, wisdom, erudition, enlightenment, sagacity, scholarship and expertise. This is called ‘Gyan Shakti’, simply because merely wish and determination wouldn’t suffice if a person does not have the required knowledge and skill, the expertise and wisdom to

accomplish his objectives successfully, and (c) the actual ability to carry out his plans to their successful completion, i.e. the ability to do deeds and perform, to take actions and enter into enterprise, called the 'Kriya Shakti', because simply sitting and procrastinating endlessly wouldn't give success unless there is assiduous activity and diligent effort, no matter how wise a man is and how determined he might be. Besides these three, the following are also called Trishakti or the potential powers present in a man— (a) to have influence, impact, affect and sway upon others, (b) to have enthusiasm, zeal, flourish, drive and courage, and (c) to have a good advise in this world as well as the support of divine intercession or intervention of Gods who should be benign and favorably inclined towards him. Further, the three Goddesses—Kali (the black complexioned goddess of war), Tara, and Tripura also known as Tripur Sundari, are also called the Trishaktis, or the divine cosmic energy which has revealed itself in the form of these three divine Goddesses. These Goddesses are the various manifestation of Parvati, the divine consort of Lord Shiva. Parvati is usually referred to by one single epithet—Shakti—which literally means energy, vitality, strength and powers;

(12) The *Trividya* or the triad of knowledge pertaining to creation has many hues or shades of meanings as follows—(i) It refers to the legendary rewards of righteousness—'Artha' or material well being and prosperity, 'Dharma' or possessing righteous qualities, being virtuous and noble, and 'Kaam' or being successful in fulfilling all desires; (ii) the creation, sustenance and annihilation of creation; (iii) the three qualities called 'Sata' or noble, 'Raja' or mundane, and 'Tama' or mean and base; (iv) the three classes of society —viz. Brahmin or the learned class who are generally teachers and priests, Kshatriyas or the warrior class, and Vaishyas or the trading and farming class; (v) the three periods of time—the past, the present and the future; (vi) the three states of existence of pure consciousness —the waking state called 'Jagrat', the dreaming state called 'Swapna', and the deep sleep state of existence called 'Sushupta' of the creature; (vii) the three types of bodies of a creature— (a) the gross body consisting of the five organs of perception, e.g. eyes, nose, tongue, ears and skin, as well as the five organs of action, e.g. the hand, the leg, the mouth, the anus, and the excretory organs, (b) the subtle body consisting of the mind intellect complex, and (c) the causal body consisting of the pure conscious Atma. (viii) The 'Trividya' is that knowledge which is enshrined in the three Vedas—the Rig, the Sam and the Yajur. This Trividya has been dealt widely in the different Upanishads.

(13) The *Triad* of Ishwar or the supreme Lord of all that exists, Jiva or the living being or the creature, and Prakriti or Nature—these also form the apex of the triangle which is called the world. See verse no. 9 below.]

8. The supreme Lord of the entire visible as well as the invisible spectrum of creation—which is a composite structure consisting of both the mortal and perishable world as well as the immortal and imperishable world (i.e. the world inhabited by mortal beings such as the terrestrial world, and the world of Spirits and Gods called the heavens)—is the only divine Being who sustains and nourishes it at all levels.

When the Jivatma (the creature having an Atma; the living being) lives in this material world of sense objects it begins to erroneously think that it is a 'Bhokta' or a consumer in this world². This causes the creature to get trapped in the snare created by these sense objects and the world in which these objects are found.

On the contrary, when it becomes aware of the Truth, i.e. when it realises that the pure consciousness residing in its bosom is the truthful supreme reality in creation as well as its truthful identity (instead of it being the gross body), the creature is deemed to have become self-realised which is synonymous with being Brahm-realised. [This is because the Atma is none other than Brahm in a microcosmic form.] With such

eclectic spiritual realisation, the enlightened creature attains freedom from all fetters (of ignorance and delusions) that shackle him to this world and its sense objects² (8).

[Note—¹That is, the creature thinks, albeit erroneously, that he is the one for whom the objects of this material world are meant, and he is the one who is actually enjoying these objects or suffering from them. This is a fallacious proposition because the true identity of this creature who thinks that he is the consumer of the material things is his Atma or his pure consciousness residing in his bosom, and not the gross body which is the entity that actually enjoys or suffers from its contact with the world. Once this wrong perception takes hold, it acts like a swirling whirlpool which sucks everything that falls within its funnel-like vortex. Even as the illusion of water in the desert leads to the ultimate death of the thirsty person who falls prey to the bait, the creature that bites this bait of the illusion presented by the deluding world also gets trapped in it which kills all chances of the creature's emancipation and salvation.

²When the creature realises that his Atma is the supreme transcendental Divinity known as Parmatma or Brahm itself in a microcosmic form, and that this Atma is his 'true self', it is obvious that such an enlightened creature would regard himself as distinct and separate from this mundane delusory world which is transient, perishable and entrapping. A wise and enlightened creature realises that the objects of this world are just like the world in which they are found—viz. transient, perishable and entrapping. So naturally he would avoid them with a long barge pole. Say, which wise man would like to voluntarily like himself to get trapped and lose his freedom?]

9. The two poles or extremities of this creation (like the two opposite poles of a magnet—the south and the north) have opposite attributes. One is an embodiment of Gyan (omniscient and all-knowing) while the other is Agyan (ignorance and lack of knowledge) personified. One is almighty and omnipotent while the other is most impotent and incompetent. [Obviously, these two poles are Brahm or the supreme transcendental Authority of creation, and the Jiva or the living creature respectively.] But both of them have one thing in common—and that is they both have no 'birth' as the term is usually and conventionally understood to mean¹.

The intermediary entity that is present between the Jiva and Brahm is the one that creates this delusion of the former being a Bhokta (consumer and enjoyer of the material objects of the world) as well as an illusion of an artificial separation between the Jiva and Brahm. This intermediary is called 'Prakriti' or 'Maya'. [This Maya is so deluding by nature that it creates the Triad of a Bhokta, Bhogya and Niyanta as described in note to verse no. 7 above. This Maya or Prakriti is un-real and imaginary; it has no real origin but it is there nevertheless because of the erroneous conception of the mind that there is difference between the individual Atma of the Jiva and the cosmic Atma of creation.]²

The cosmic Atma or the consciousness that prevails uniformly throughout the creation as Brahm personified is limitless and infinite as it has no boundaries and inhibitions. This makes it all-pervading, all-encompassing and all-inclusive as compared to the limited scope and prevalence of the creature having a gross perishable body³. It does not do any deeds either (for the simple reason that deeds are done by a physical body and Brahm at the cosmic level has no such body, and therefore the Atma which is Brahm personified does not do any deeds).

When the creature is wisened to this eclectic fact and becomes realised of the truth, it begins to see these three units (the Jiva, Brahm and Prakriti) of creation as one single indivisible whole. It is then that it is said to have acquired true and effective knowledge of the reality (9).

[Note--¹The word creature or a *Jiva* actually refers to the Atma, and not the physical gross body of the living organism, and this Atma is pure eternal consciousness which has no end or beginning. Besides this point, the pure consciousness residing in the creature is the same as the one that prevails at the cosmic level because energy by whatever name it is known or called does not perish but only changes in its form. For example, we have kinetic energy, light energy, heat energy, sound energy etc.—all are interchangeable. The energy of the spirit can be called the ‘spiritual energy’. The cosmic consciousness is called Ishwar or the supreme transcendental *Brahm* who is the Lord of all that exists even as the Atma is the Lord of the gross body and the visible world in which it lives. That is why both are without a birth as enunciated in this verse because Consciousness and the ethereal Spirit are eternal, infinite, imperishable and infinite entities.

²Citing the example of the *bar magnet* would be easier to unravel this mystery. At one end of the magnet is the North Pole which is a metaphor for an exalted stature as the ‘north’ points ‘upwards’. On the contrary, the South Pole points ‘downwards’ symbolising demotion and degradation. The former refers to the Supreme Being, the Ishwar, while the latter refers to the deluded creature shrouded by ignorance because of his lowly stature in the spiritual ladder. And the two ends are linked with each other by the shaft or body of the magnet proper which falls in between. But it must not be forgotten while artificially breaking the magnet into three units for the purpose of study that it is called a ‘magnet’ in its entirety only when it consists of these three units in an indistinguishable, immutable, indivisible and inseparable form. Go on breaking the magnet and the smaller pieces that result also would have these three fundamental units—viz. the North Pole, the South Pole and the central part.

The point is that the exalted Being known as the Lord of creation or *Ishwar*, and the offspring of this Being, the *Jiva* or the creature, are not two distinct and separable units of the creation. They are both the two ends of the same magnet symbolising the creation. Since the creation is physically visible, verifiable and tangible, it must have two ends as anything that has a definitive shape and form must have a beginning and an end. The argument ‘what if we consider the case of a circular magnet instead of a bar magnet’ is answered by the example of the *wheel* given in verse no. 4 of this Canto.

Now, the space between the two ends of the magnet links these ends much like the *Prakriti* which acts as the bridge between the *Jiva* (creature) and *Brahm* (the supreme transcendental Being of creation). When the creature is ignorant, it thinks in terms of ‘this and that end’ of the creation, whereas when it becomes wise and enlightened it sees no difference between them even as naming the two poles of the bar magnet as north or south, or designating the two electrodes of the electric cell as the positive cathode and the negative cathode, or one particle of the atom as negatively charged electron and its counter-balancing force as the positively charged proton, or the terms cat-ion and anion—are all man made terms which should be taken in the correct perspective as an attempt to explain physical phenomenon.

In this example of the magnet, there is no physical existence of any such thing as a ‘North Pole’ or a ‘South Pole’—these are man-made distinctions in order to explain the phenomenon of magnetism. We cannot separate the North Pole from the South Pole of a bar magnet and still retain an entity called ‘the magnet’, for if such separation were likely to happen at all there would be no magnet left. Likewise, we cannot separate the electron from the proton and still retain an ‘atom’, for then the atom would cease to exist. Similarly, the supreme Ishwar and the Atma have no difference at all. The *Prakriti* or Nature acts as a go-between the two, and when the wise *Jiva* or creature realises this it sees an underlying element of uniformity between itself, Nature and Ishwar—i.e. that they are all part of one uniform, indivisible and immutable whole known as Creation. It is not possible to separate the *Jiva*’s true self from *Brahm* as much as it is not possible to separate the North Pole from the South Pole of a magnet. Refer also to Canto 4, verse no. 10.

The most stunning aspect of this analogy of the magnet or the atom is this—the ‘force or energy’ that entitles the piece of rod to be called a ‘magnet’ is the universal force of Nature known as ‘magnetism’. If the magnet displays no attractive or repulsive powers, it would not qualify to be called a magnet. This hidden subtle but dynamic and powerful energy called magnetism that empowers the ordinary and innocuous looking piece of magnet with its astonishing capabilities of attracting or repelling something is a metaphor for *Brahm* because the latter also remains hidden from view like magnetism but impels, empowers and energizes the world to carry on with all its astounding variety of activities. Similarly, in the case of the atom, the hidden stupendous fount of dynamic energy lying concealed inside it which makes the atom so feared as well as adored is a metaphor for *Brahm* for the same reason as the one applied to magnetism.

In other words, the subtle and hidden but sublime and almighty Consciousness that is present concealed in a secret and an imperceptible form in the entire creation as its integral and inseparable part, and which gives the entire world its worth, importance and significance is called *Brahm*.

³The cosmic Atma or Cosmic Consciousness known as *Brahm* is an ethereal entity that can be compared to the wind, the direction and the sky which have no physical barriers and are not subjected to limitations that arise with the possession of a gross body. The individual creature on the contrary is burdened by the limitations of the gross body which cannot display the characteristic freedom and infinity shown by *Brahm* in the form of the wind, the sky or the various directions of the open sky.]

10. This world is perishable, the Atma which is the true identity of the creature who lives in it is however imperishable, and both are controlled by the supreme Authority which is one. By focusing one’s unwavering attention on that supreme overriding transcendental Authority and Lord of creation (known as *Brahm*), by thinking of this Lord, by meditating upon the truth about this Lord, one is able to vanquish the delusions and misconceptions of the reality created by this hallucinating world of artificiality. The result is the dawn of Truth and the elimination of all vestiges of falsehood (10).

11. Once that supreme Lord is known, i.e. once the ‘grand truth’ of creation and the ‘reality’ of existence dawns upon the creature and he becomes self-realised and self-awakened, once the existence of the Supreme Being is acknowledged and experienced by him, it is then that he is able to get rid of all sorts of fetters and freed from their shackles (i.e. all sorts of misconceptions and delusions based on ignorance are dispelled, and like an educated person the creature can no longer be cheated, and neither would he repeat the mistakes he has been committing under ignorance and delusions). This results in elimination of the cause of all torments and miseries pertaining to existence in this world, and in the final analysis it provides liberation from remaining trapped in the endless cycle of birth and death in this material world and provides deliverance from it. [That is, awareness of Truth and Reality paves the way for enlightenment and the obtaining of final emancipation and salvation for the creature’s soul.]

Constant meditation and contemplation upon that Truth brings a creature closer to its target (because constant company of anything has its own psychological effects). The result is that upon death it attains that third state of blessedness¹ where there is blissfulness and happiness. When this stage becomes perpetual and steady, the creature feels so fulfilled that he has no desires left. It is then that he is deemed to have reached the final state of *Kaivalya* which is unique spiritual state and the only one of its kind² (11).

[Note—¹There are four states of existence of the consciousness—viz. waking or Jagrat, dreaming or Swapna, deep sleeping or Shushupta, and the fourth state that transcends these three and is called Turiya. Currently it should be noted that the *third state* mentioned in this verse refers to the Shushupta state which is the state when the man is sound asleep and his brain ceases to remain active. Since it is the mind that prevails upon and impels the creature to get involved in this world for a variety of reasons, when the mind is side-tracked the instigator is deemed to be gone, and the creature is left free to itself. That is, the Atma has no one to provoke and influence it any longer, and the basic immaculate nature of the Atma then comes to the fore—and this results in the obtaining of a profound degree of blissfulness and happiness.

This third stage of Sushupta is a temporary phase of deep sleep because very soon the creature reverts back to the earlier two stages of Swapna (dreaming) and Jagrat (waking). The third stage of Sushupta is compared to 'death' because here the mind-intellect is completely inactive like the case of the dead body. But sooner or later the creature would become active in this world when he wakes up from his sleep, and this reversal is symbolised by saying that the creature takes a new birth after his death. When he goes to sleep again after the day's hard toil, it would be his symbolic death, and the next day would be his symbolic next birth, and the cycle continues. But, as pointed out below in this note, when the Sushupta stage becomes perpetual and steady, the creature becomes permanently liberated from this oscillation and attains final emancipation and salvation for his soul; his soul finds permanent rest and peace. This last state of existence is called Kaivalya—i.e. the only one state, simply because from here there is no reversals.

²When the third state of Sushupta becomes permanent, it is said that the creature is in a state of perpetual Samadhi which is a trance like state of blessedness. The creature has reached the fourth state called the Turiya state of consciousness. This might happen even when the creature is alive and going about his normal duties in this world—because he has dissociated himself from the body and instead associated himself with the pure consciousness residing within his bosom.

The concept of 'leaving the body upon death' is an extension of this basic philosophy of non-involvement of the Atma with the body. When a person dies, he permanently leaves the body, but this is also achieved by acclaimed ascetics even while they still retain their body. Since the Turiya state basically refers to the permanent state of Sushupta—i.e. the state of consciousness when it is perpetually detached from both the gross body consisting of the gross organs and the subtle body consisting of the mind-intellect complex—it follows that if the ascetic is able to obtain this state even while retaining the body then the latter becomes irrelevant. Again, since Turiya state refers to a permanent state of blessedness or perpetual state of Sushupta, it follows that a creature who has reached this eclectic state would not revert back to the earlier states of either Swapna or sleep (deep sleep or even dreams) or Jagrat or waking states of consciousness. This is tantamount to 'death' because from the perspective of the world such a man who has no interest in its activities and remains immune towards it is deemed to be useless and dispensable. From the perspective of the soul, this is its final liberation; this is its deliverance from the fetters of ignorance and its attendant delusions; this is the stature from where it would not have to re-enter the cycle of birth and death and re-birth as symbolised by the oscillation of the creature between the three states of existence of consciousness in the waking, the dreaming and the deep sleeping states.

Since this disassociation with the body is a one-way process during the attempt of reaching the Turiya state, it is likened to permanent death because it also ensures a one-way disassociation with the body as well as the world in which this body lives and with which it interacts. The word *Kaivalaya* means the only one, and therefore it is an apt description of the eternal blessedness obtained when the realised person reaches this exalted state of existence of Turiya.]

12. There is no better spiritual knowledge and awareness of the reality and truth than to understand and be convinced that the supreme transcendental Brahm resides in one's own self as the pure conscious Atma.

The entire creation is a manifestation of this single divine entity known as Brahm or Consciousness. The three components of it are the Bhokta (the creature who enjoys or suffers this world), the Bhogya (that object which is enjoyed or suffered from, here referring to the material world), and Prerak (the one who inspires, impels, influences, regulates and controls all forms of activities and deeds, here referring to the Supreme Being). [Refer verse no. 7 and its note.]

In other words, these supposedly three apexes of the equilateral triangle symbolising the creation are indistinguishable from one another. [Even if one corner is removed, the triangle ceases to exist.]

Therefore, a wise and enlightened person is one who sees no difference and distinction between them. All of them describe one or the other aspect of one immutable and indivisible entity known as Brahm as manifested in the form of this creation (12).

13. The fire element is latently and secretly concealed in the firewood as its integral part though it cannot be ordinarily seen by the naked eye and its physical presence actually felt. But this fire becomes evident when the firewood is lighted.

Similarly, Brahm, which is the pure cosmic Consciousness, is eternally present inside the inner self of all living beings as their 'true self' or their Atma, but it is not easily evident unless kindled by intense practice of self-realisation with the aid of meditation and contemplation using the help of the Mantra OM¹ representing the supreme divinity known as Pranav or Brahm (13).

[Note—¹To ignite the fire in the firewood and make its presence felt, one has to blow in air. Similarly, in order to activate the concealed consciousness one has to employ the power of the ethereal air element represented by OM. The Yoga Upanishads describe how the Mantra OM is used to do Pranayam (breath control) which in turn stokes the hitherto dormant spiritual energy of the aspirant's body, leading to his realising its divine glow and potentials. Refer Yogchudamani Upanishad, verse no. 71-104, and Trishikhi Brahmin Upanishad, verse no. 92-108, 161-162. Refer also to Canto 2, verse no. 8.

In the present context of lighting of the firewood, when one repeats OM, it is like drawing fresh air and blowing it into the furnace of the body to ignite the fire of consciousness hidden and lying latent as the Atma of the creature.

Refer also to Katho-panishad, 2/2/9 in this context.]

14. The aspirant should treat his body as the lower end of the Arani (the wooden drill used to ignite the fire of the sacrificial rite) and Pranav, the divine Brahm represented by the ethereal sound OM, as the upper part of this drill, and the exercise of dedicated meditation as the symbolic vigorous rubbing to ignite the subtle fire of consciousness that is otherwise normally hidden and not easily perceived in the course of a person's routine daily life. This eclectic and exhilarating experience of consciousness is called Brahm-realisation (14).

[Note—This instance of the Arani has also been cited elsewhere in this volume, for example in Brahmo-panishad, verse no. 18 and Kaivalyo-panishad, verse no. 11.]

15. Even as oil is hidden in the sesame seed, butter is concealed in fat-rich curd, water is an integral part of underground springs, and fire is latently present in firewood as its integral constituent and its defining characteristic, the supreme transcendental cosmic

Consciousness is inherently and invariably present inside the ‘self’ of the creature as its pure conscious individual Atma which is inseparable from all living creatures. This eclectic, sublime, subtle, holy and divine entity is perceived by the means of Tapa (severe meditation and great effort; observing strict principles of austerity, self control, penance and sufferance for some noble aim) as well as following the path of Satya (truthfulness and auspiciousness). It then reveals itself to the sincere spiritual aspirant even as fire reveals itself on vigorous rubbing of the Arani during the igniting of the sacred fire in the fire-pit of the fire sacrifice ritual (15).

[Note—The analogies of the oil in sesame seed, butter in curd, water in spring and fire in firewood has also been cited in Brahmo-panishad, verse no. 19.]

16. The supreme essence and cosmic Principal which a diligent seeker seeks in his own bosom as his pure conscious Atma is the same essence that is expounded and espoused by the Upanishads as the supreme transcendental cosmic Consciousness known as Brahm. It is an integral part of Atma just like butter is of fat-rich curd. This essence and principal is attainable by the awareness of the presence of the truthful Atma by special knowledge dedicated to it, and the means to successfully experience and witness it are Tapa and Satya. [That is, the pure consciousness can be accessed by painstaking hard effort and following the path of truthfulness and auspiciousness. It is not accessible by being careless, indolent, lethargic, insincere and clumsy, by lacking interest and aptitude, or by following the path of falsehoods, delusions, deceit and conceit.] (16).

Canto 2

[This Canto is dedicated to the worship of the Sun God called Savita. The Sun is obviously the harbinger and herald of life as no life is tenable in this world without the kind grace and the benevolent mercy of the Sun. The Sun sustains and nourishes life, providing it with light, heat and energy which are the basic prerequisites for life to survive on this planet. The Sun God has been honoured in another Upanishad especially dedicated to Savita, and it is ‘Savitriyu-panishad’ of the Sam Veda tradition which is included as Chapter no. 13 in the second volume dealing with the Sam Veda Upanishads in this series.

This Canto describes how one can utilise the stupendous potentials of meditation to harness the energy of the spirit for one’s liberation and deliverance from the fetters that shackle him to this world ridden with ignorance and delusions.]

1. Let the Sun God called Savita¹ divert our mind and intellect towards the Supreme Being (Brahm, representing auspiciousness and noble values) along with redirecting the energy of all our sense organs so that instead of pursuing and remaining hitched to the mundane and artificial objects of this perishable world they are directed to nobler objectives of life and inculcate auspicious values.

Let these sense organs be infused with the brilliant light that is inherent to the fire element so that we can see the reality and truth in this world². (1).

[Note--¹*Savita*—appears first in the Rig Veda, 1/24/3-4. He is the Sun God who provides the creation with virtuous, noble, auspicious and righteous inspirations symbolised by the brilliant light that emanates from the Sun. The nascent Sun at the time of dawn before its disc appears blazingly splendid in the sky is also known as Savita (Sayan Bhasya on Rig Veda, 5/81/4). This phase of the Sun is chosen because

it goes on increasing in its radiance and splendour by the passage of each moment. Savita moves between the earth and the heavens, i.e. in the solar system. Being the sustainer of life as the Sun, Savita is also regarded as the father of the Gods (Shathpath Brahmin, 1/1/2/17). Along with Varun, the God of water, he is regarded as the King of the entire realm of creation (Shathpath Brahmin, 11/4/3/14). This is obvious because water and heat are the prerequisites for life. He is also one of the Adityas (mythological Suns). Rig Veda has 11 Suktas or hymns devoted to him. The famous Gayatri and Savitri Mantras are dedicated to this God known as Savita (Yajur Veda, 36/3).

²That is, let these sense organs of perception abandon their natural tendency of getting attracted towards the illusionary charms of the world and thereby trapping us in their endless snares, but instead help us to perceive the world in the correct perspective and see that what is apparent on the surface is all falsehood and non-truth. Let these organs acquire the ability to restrain themselves from becoming indulgent and stop yearning for the comforts and pleasures of this artificial world and its sense objects, and instead concentrate upon what is the Truth and Reality in creation. This stanza also implies that these organs should be injected with fresh energy, strength and vitality so that they remain always alert and vigilant towards spiritual and nobler pursuits instead of getting sucked into the quagmire of enjoying the sensual pleasures proffered by their respective sense objects in the world. The Sun God is requested to rejuvenate these sense organs so that they do not become indolent and run-down.

Light is needed to see anything. The 'light' that is being referred here is the light of wisdom, erudition and enlightenment and the ability to discriminate between what is wrong and what is right. Though these are the functions of the mind, when these terms are applied to the sense organs they imply that these organs are properly trained and skilled in the task they are assigned to carry out for the creature—which is to 'correctly perceive' the world. These organs are like the sentries at the gate of the fort; if they are not properly trained or are corrupt then the security and integrity of city would be compromised. Incompetent or improperly trained soldiers are more dangerous than a powerful enemy.

The 'fire' referred to in this stanza is the rigorous training of the sense organs and their inherent strength, vigour and power to resist numerous temptations and other allurements that are offered by their respective objects in this world. Even as the fire can burn to ashes anything put in it, the properly trained and wise sense organs can reduce all impurities in the way of wrong and corrupted stimuli that try to enter the creature's inner self through the five doorways that these organs guard. That is, the eye would resist the temptation to see things not worth seeing, the ears would abstain from hearing things not worth hearing, the nose would run away from things that are not worth smelling, the tongue would abhor things not worth tasting, and the skin would desist from touching and feeling things not worthy of touching and feeling. Anything that would be demeaning for the exalted stature of the creature's true self called the Atma, which is the supreme Brahm personified and the most highly placed entity in the hierarchy of creation, is to be regarded as not being worthy to be accepted by any of the sense organs simply because these sense organs as well as their senior counterpart the mind-intellect are actually working on behalf of this Atma. They should not do anything that would reflect badly on the governance of the kingdom presided over by this Atma.]

2. Let us diligently and with great devotion make sincere efforts to please Savita by doing auspicious deeds (such as doing fire sacrifices) so that by this God's kind grace and divine intercession we can realise the ultimate Truth and its accompanying experience of heavenly happiness and bliss (2).

3. Let that Savita (the Sun God), who moves majestically across the sky and illuminates the vast realm of the creation with his brilliant light, inspire the patron Gods of all our sense organs as well as our mind and intellect so that they move towards light (of truth and knowledge, and away from darkness of ignorance and delusions).

[That is, let the patron God of light, i.e. the Sun God, bless us and inspire us to move on the path of auspiciousness, righteousness, wisdom and enlightenment, and away from the path of darkness representing delusions and ignorance which is just the opposite of it. Let us be wise and enlightened instead of being deluded and ignorant. Let our lives be lighted with knowledge and wisdom instead of being shrouded in a dark veil of delusions and ignorance.] (3).

4. Those exalted Brahmins (senior and learned men) who devote the efforts of their mind and sense organs towards worshipping and attaining the Supreme Being should offer sincere prayers and pay high respect to the great God known as Savita (the Sun God) for whom they make offerings to the sacred fire. This exalted God (Savita; the Sun God) is omniscient and all-knowing (because he shows light and illumination to even the darkest corners of the world so that everything comes to light or becomes known), and is deemed to be most respectable and revered one in creation (as a fount of all the glorious virtues in creation symbolised by light and illumination, such as the virtues of knowledge, wisdom, erudition, sagacity, skills in any field requiring expertise, and spiritual enlightenment) (4).

5. Oh mind and intellect! I most humbly and respectfully bow before the supreme transcendental Brahm who is your Lord and the primary cause of everything that has come into being in this creation¹. Let this prayer of mine and my humility and submission to the Supreme Being bestow me with the same glory, fame, respect and honour that an expert in any field gets in this world. Let this prayer of mine be heard by all the virtuous and exalted Spirits residing in the divine heavens who have come into being from fractional parts of the cosmic Brahm who is eternal and a fount of the elixir that provides eternity and bliss². That is why all these holy Spirits and divine Gods are called 'sons' of the Supreme Being (because all of them have come into being from his own fractions, or they represent one or the other glories and divine aspects of this Supreme Being). Like any son, they all carry the 'genes or footprints' of their cosmic Father, and therefore are to be revered and paid tributes like one would do for Brahm (who is none but the Supreme Being or the cosmic Father referred here) (5).

[Note—¹By bowing before the supreme Lord the aspirant symbolically says that he has readied his mind and intellect to shed their basically arrogant and egoistic tendencies and prepare to receive divine benediction that only comes with humility and submission. These two virtues—humility and submission—are essential necessities for realising the Lord. They are called 'Bhakti' in the realm of devotion for the chosen deity. When one submits before one's senior, the latter is morally bound to shower his compassion and benediction upon the person who has surrendered himself before him.

²The aspirant is trying to divert his mind and intellect as well as the other organs towards nobler goals in life, but in order to achieve success in his endeavour he has to ensure that the devil is kept at bay, for when one embarks upon some noble journey the devil is bound to create a ruckus. That is why the patron Gods referred to as the divine Spirits in the heaven are requested to listen to the prayer offered to the supreme Lord. These Gods must come to understand that they are now morally bound

to give their protection to the aspirant because the latter has submitted himself to the Emperor of creation who also happens to be the Father of all these exalted Spirits and Gods, i.e. to the Supreme Being known as Brahm.]

6. Such a wise man who has received divine blessing has the following characteristic signs—he always finds happiness at places where fire sacrifices are being performed in a proper way such as by igniting the sacred fire by vigorous rubbing of the Arani and harnessing the power of the air or wind element to first light this fire and then keep it burning, and where the sanctified liquid called Soma is used to create an auspicious ambience of extreme exhilaration and joy (6).

[Note—The metaphor of the fire sacrifice is used here to indicate Yoga or intense meditation and contemplation wherein a sincere aspirant meditates and practices various breath control exercises, such as doing Pranayam exercise etc., and employing other techniques such as Aasans and Mudras (postures of the body) and Bandhas (closure of all leakages) in order to harness the power of the wind element present inside his body to arouse the latent dynamic cosmic energy trapped inside in the various Chakra (whirling energy centers present inside the body) to obtain success in spiritual progress and finally obtaining the exhilarating feeling of bliss and happiness upon successful culmination of Yoga. The Soma is actually an intoxicating drink extracted from an herb of the same name, and its analogy is used here to indicate that the sense of extreme ecstasy obtained at the culmination of meditation is no less than the exhilaration obtained by drinking this Soma.]

7. Let us be inspired by Savita, the Sun God, and dedicate ourselves and pray devotedly and reverentially to the supreme transcendental Brahm who is the primary cause and the origin of the entire creation¹. Brahm is the Principal of creation.

Oh wise aspirant! You should seek and take the shelter of that Supreme Being who is the Principal Authority of creation. This would help to ensure that even your good deeds will not act like fetters to tie you down² (7).

[Note—¹Meditation and contemplation requires extensive and deep concentration. This generates tremendous amount of spiritual energy which helps to burn all traces of impurities that might be still clinging to the pure consciousness inspite of the aspirant already being wise and enlightened when he has studied the Upanishads and learnt about the ultimate Truth. The Sun is so luminous and its sunlight so powerful that if the rays are concentrated upon a spot, they create immense heat which can start a fire. This is proved when the Sun's rays are focused at a point upon a piece of paper or dry straw by a magnifying glass; the paper or the straw would very soon catch fire. Thus, this stupendous power and majestic potential of the Sun is symbolically invoked for the spiritual benefit of the aspirant when the latent fire of the Spirit, which is lying dormant, is ignited, and this in turn sets off a chain reaction which can lift the aspirant to a much higher level of spiritual existence just like a hot air balloon lifts a man to great heights.

²Good deeds are indeed like fetters as they create a sense of involvement in them, a sense of pride of doing good things, the false sense that the 'true self' is doing this or that whereas in actuality the 'true self' or the pure conscious Atma does not do anything at all for it is the body that does everything, whether good or bad, and the resultant desire to enjoy the auspicious affects of such good deeds—such as getting praise and respect. A true ascetic and hermit is one who has completely renounced all attachments with the world, and this notion of doing 'good deed' is an indirect way of getting back into the trap. It is like the so-called 'honey trap' whereby the creature is lured into the snare by some sweet bait. A truly self-realised man would remain neutral and indifferent towards deeds; he will have no notion of doing any deed at all. Therefore, a wise man who is enlightened about his 'true self' as being the pure

consciousness rather than the gross body in which this consciousness lives, and the fact that this consciousness is the same as the universal cosmic Consciousness that prevails in the entire creation as Brahm, he would naturally rise above the mundane considerations of the world and do deeds in a dispassionate and neutral manner which is not selfish and driven by vested interests. This translates in practice that such a wise man is not tied by the deeds and their consequences because he understands that the deeds are being done by the gross body and not the Atma. Such a wise and self-realised man would not yearn to enjoy the rewards of these deeds, nor would he suffer from any of their negative consequences. Therefore, no fetters related to the deeds can ever shackle him down.]

8. An expert aspirant should adopt a sitting posture that is conducive to obtaining enlightenment. It entails that he sits quietly in a steady posture with his chest, neck and head in a straight line¹. He should then make mental efforts to control the wayward tendencies of his sense organs to be extrovert, and instead divert the efforts of these organs inwards towards his inner self to facilitate self-realisation². To meditate upon the 'self' he should use the divine Mantra OM which would act like a boat to take him across this ocean represented by this horrifying world of artificiality³ (8).

[Note—¹Refer Kaivalyo-panishad, verse no. 5 which is Chapter no. 4 of this volume.

²That is, he should withdraw the sense organs from the external world and control their natural tendency to roam about aimlessly in this world amongst their respective sense objects which gratify them and which is their nature habitat because these sense organs find rest in these objects and derive comfort and pleasure in their company. Instead, the wise spiritual aspirant should endeavour to divert their energy and constant enterprise towards 'self realisation' or realisation of the Truth hidden in one's own bosom. The posture described here is symbolic of 'self control and deep concentration' as these are prerequisites for such a spiritual exercise to be successful. Even as concentration and withdrawal from the extravaganza of the external world is practiced by all serious students, researchers, philosophers and scientists etc. even in ordinary life if they have to succeed in their goal, it is all the more expected from a spiritual aspirant because his enterprise is of the highest order and he needs to focus all his energy towards reaching his lofty spiritual goal in the short span of this limited life.

³In ancient times when modern ships had not been invented, the ships had large sails which carried the ship forward when they were filled with blowing wind, billowing with it and taking the ship along. This picture of a ship with billowing sails has been used here as a metaphor to envision how the ethereal word OM helps the Atma of the creature to cross the world of horrors. The ship is the creature, the Atma is the passenger, the sail is the process of meditation involving the body and the heart, and the billowing wind is represented by OM which fills this sail to take the ship across the heaving ocean represented by the world of miseries, pains and sorrow. Besides this, OM is the universal Mantra that is used during meditation to achieve success in spiritual attainment. Refer Canto 1, verse no. 14.]

9. A sincere aspirant who is an expert in the principles of meditation and spirituality should diligently follow all the tenets and ethos of behaviour and interactions with this world while devoting his time and energy in practicing Yoga with the aid of Pranayam (wherein the ascetic controls his breath and other vital winds in the body). This practice, when mature, helps him to control all his vital winds, and then when he has been able to successfully control them and they become weak and meek and submit themselves to the force of his will, he should gradually expel them (the vital winds called the various Prans in the body) through the nostrils.

Even as an expert charioteer controls the restless horses and takes the chariot to its designated destination, a wise, erudite and expert aspirant is always alert and vigilant so that he can keep his sense organs under tight leash and harness their energy to reach his destination. [This destination is self-realisation and Brahm-realisation. This eclectic stature paves the way for the final liberation and deliverance of the creature from the snare of the tormenting gross body as well as the gross world in which this body lives. In other words, a self-realised person is able to cross this vast ocean-like world to reach his destination marked by emancipation and salvation.] (9).

10. [This verse describes the places that are conducive to meditation and contemplation.]

The aspirant should select a place that is conducive to the practice of meditation and contemplation in a comfortable way without causing any kind of disturbance, distraction and inconvenience to him.

For this purpose he should select place which is reasonably clean, calm, quiet and holy. The ground selected to sit upon should also be reasonably smooth, pleasant and comfortable to sit upon—such as a ground which is even, which has no pricking irritants and things that might cause unnecessary inconvenience such as pebbles, stones or other things that can prick and irritate, or sand because it is very dry and tends to get hot.

At the same time, the place should be reasonably pleasant and charming for the mind and the heart so that it contributes to the smooth conduct of spiritual practices without creating revulsion and a desire to move away from it. Besides this, the basic requirements of life should be easily available—such as water, shelter and peace.

It should be pleasing to the eyes as well (in the sense that it should be surrounded by natural greenery and so secluded that the aspirant does not have to see things or persons that cause any mental anguish or tension for him). Such places can be found in caves where even the wind does not disturb the aspirant when he is meditating and lost in deep contemplation (10).

11. When the aspirant practices Yoga (meditation) he experiences many visions in the beginning, such as that of fog, mist and smoke (i.e. appearance of cloud), of the sun (i.e. a brilliant disc of blinding light), of the wind or air (such as a strong breeze or storm blowing), of a glow from fire (resembling a glow-worm), of electric (such as a streak of lightening or scintillating spark from a welding machine), of a crystal, and of the moon (i.e. a large silvery white disc having emanating a soothing light). All these forms are indicators of Brahm (11).

[Note—Refer Mandal Brahmin Upanishad, 2/2/1. When all these signs are visible, the ascetic should treat them as signs of appearance of the supreme Brahm in all these forms because Brahm has revealed itself in the forces of Nature that these visions represent. This is the grand and holistic view of Brahm that is expected from a self-realised practitioner of Yoga.]

12. When the ascetic has matured in his meditation, he experiences the presence in his body of the elementary elements of creation along with their inherent virtues and characteristic features, such as the earth (represented by smoke because the latter is dense and appears near the surface of the earth), water (represented by the fog or mist because they have water vapour and moisture), fire (represented by sun and the light of the glow-worm), air or wind (represented by storm and breeze), and sky

(represented by moon against the background of the fathomless sky which makes the former more prominent), as well as the crystal which is colourless but shines with the light falling upon it (much like the moon shining with the light of the sun, or the moisture present invisibly in the atmosphere that shines and produces the colourful rainbow when sunlight passes through them, or the crystals of snow and ice that provide the dazzling glitter to the snow-capped lofty mountains).

In this eclectic state of realisation, the aspirant ascetic becomes suffused with an astonishing infusion of spiritual energy which ensures that the gross external form of his body never has any diseases, nor does it decay or become old and crippled, and die prematurely¹ (12).

[Note--¹That is, in a higher state of Yoga, the aspirant's body does not remain an ordinary motley collection of elements in their gross form, but acquires the great divine characteristics that are latent in all these elements and which give each of these elements their intrinsic value and importance in creation. For example, the earth element that forms his external body abandons its grossness and stops stinking. Instead, it acquires the eclectic virtue of sustaining and harbouring life in all its colourful connotations. Say, how can anything that has the inherent virtue of harbouring life ever result in decay and degradation? In other words, the body of the ascetic would not get old and become decrepit; instead it would remain ever-fresh and emanate a fragrance.]

13. The first benefits of Yoga are the following—the body becomes lighter and sheds flab, it becomes disease-free, one loses all interest and attractions in sense objects of the world and their alluring charms, the body effuses a divine halo, the voice and speech become amiable, sweet and pleasant, an auspicious fragrance surrounds the aspirant (because the body has been de-toxicated and cleansed of all putrefying elements which are the cause of stink emanating from the body), and there is less degree of need to eliminate waste products from the body resulting in lesser output of urine and stool (13).

14. Just like a priceless gem shines brilliantly once the mud which had been encasing it is washed off, the living being with a gross body who has been able to witness and experience the essential element known as the pure conscious Atma present inside the body is also freed from all taints and pollutions represented by the numerous sorrows, miseries and pains associated with this gross body and obtained by its association with the world. He becomes pure and holy; he becomes unique in his beatitude and blessedness, and he feels himself fulfilled and contented (14).

15. When the wise and enlightened spiritual aspirant has reached that exalted state of meditation when he witnesses a bright flame resembling the light of a burning lamp while meditating, and has the level of wisdom, erudition and enlightenment to recognise this fount of divine light as his pure conscious Atma which is a personification of the supreme transcendental Cosmic Consciousness called 'Brahm', it is at that time or state that he has indeed realised his own Atma personifying Brahm; he has realised and witnessed and experienced Brahm first hand.

Upon becoming acquainted with the pure, divine and holy entity that is the Principal of creation, he becomes one who has no birth, is steady and eternal, and free from all taints and blemishes that stick to the creature when he loses his true identity. He becomes free from all fetters that had been shackling him¹ (15).

[Note—¹This is because the aspirant would have then realised that he is not an ordinary bundle of gross elements that constitute his body which is subjected to

numerous problems and miseries associated with this world, but is rather an ethereal Spirit that transcends the limitations of the gross body and is eternal, imperishable, infinite, subtle and sublime. The gross body may have taints and blemishes, it may have shortcomings and faults, but the ethereal body has none of them. The gross body may have its negativities, but the Spirit has none such demeaning attributes. The spiritual aspirant then realises that he—as the Atma—is such a divine being that he is none other than the glorious Brahm himself who has no birth, who is eternal and steady, and who is most immaculate as well as uncorrupt and incorruptible in creation. All the problems that the aspirant had been facing till this realisation dawned upon him was because he had lost track of his own true identity as the pure consciousness, and instead, under the influences of delusions and ignorance, he had been treating the gross body as his true self and the world as his real abode and fulfiller of his desires. That was the fundamental reason why he had been neck-deep involved in this world inspite of suffering so much and groaning all along under its weight and intense battering. But realisation of the Truth wakes him up to the actual reality about himself, and then all causes of miseries vanish.]

16. This Supreme Being (Brahm) is all-pervading and omnipresent; he is present in all the directions and every point in these directions. He was the one who was the first to reveal himself (as Hiranyagarbha or the subtle body of creation at the macro level; also known as Brahma the creator by Purans), he is the one who resides in the womb as the embryo, he is the one who is born in this world (as the Viraat Purush at the macro level, and the individual creature at the micro level), and he is the one who would be born in the future as well (when the new creation would be created at the end of the present cycle of birth and death). He is the one who is present in all the living beings uniformly and universally, and he is present in all the forms in which this world exists (16).

17. We bow most reverentially before that Supreme Being who is present in the fire, in the water, in all the worlds, in all plants and medicinal herbs, and everywhere else in creation. [Refer Canto 6, verse no. 17.] (17).

Canto 3

1. Those wise and learned people who come to know about that Supreme Being who rules the entire creation by employing his maverick mystical powers and overriding authority that is astonishingly stupendous and most potent and effective, and who is capable of initiating, sustaining and developing the entire spectrum of this multifarious creation all by himself without taking any other help (refer 3/4)—such erudite and wise people become immortal (1).

2. That one Lord in creation is supreme, and he is also known by the name of Rudra¹. Those who are wise and erudite seek only the best, and since there can be only one 'best' and not two which in the present case is the only one supreme transcendental Divinity known as Brahm, they seek nothing else but Brahm. That supreme Authority rules over this creation by employing his most magnificent and stupendously mystical powers. He subtly resides in all the living beings (as their Atma and Pran). Having created the entire creation (in his manifestation of Brahma the creator), he protects and sustains them (as Vishnu the sustainer and protector), and when the opportune

time arrives, he concludes it (as Shiva the concluder and annihilator) and withdraws it into himself (much like the octopus withdrawing its tentacles into its body, or the snail withdrawing its antenna into its shell, or the spider gobbling its web which was earlier created by it) (2).

[Note—¹The word *Rudra* refers to Lord Shiva who is also known by the name of ‘Maha-deva’ or the ‘Great God’. The prefix ‘Maha’ is very significant here because it is added to the name of Shiva only and to no other God, not even Brahma the creator or Vishnu the sustainer. Let us take an example to understand its import—we have a ‘great’ grandfather, who is the one from whom our grandfather and our father himself have descended. Our ‘father’ from we children are born represents the Viraat Purush from whom this entire creation has come into being. The ‘grandfather’ in the cosmic scale is the Hiranyagarbha from which Viraat Purush was born. And the ‘great’ grandfather is the supreme transcendental Brahm from whom this Hiranyagarbha emerged. In this cosmic family, Brahm is the ‘great’ Lord God from whom we, the entire creation, have emerged. Hence, as this verse asserts, Rudra—one of the names of Shiva—is used as a synonym for Brahm.]

Why is Brahm depicted as Rudra—literally meaning the angry one, the agitated one? The primary nature of Brahm is to be peaceful and calm, not being interested in any of the upheavals or any of the activities so characteristic of this world. Brahm is neutral and dispassionate under all circumstances, and therefore is in a perpetual state of blissfulness and tranquility. But it so happens that Brahm decided to ‘do something’ and this desire set off a chain of events that robbed Brahm of his characteristic calm and peace. That is why Brahm became angry and restless—that is, he became ‘Rudra’. That was not all. As soon as the juggernaut of creation rolled forward, Brahm realised the Frankenstein Monster he has unleashed, and this made him all the more furious. Brahm tolerated this Monster as long as he could, but finally decided that enough was enough and began to wind up this creation in his role of Rudra and Shiva. When peace was restored, Rudra became Shiva—calm, peaceful, meditating and auspicious.]

3. That one Lord has eyes in all the directions (i.e. he sees everything and nothing is hidden from him), he has mouths in all the directions (i.e. he speaks all tongues and the sound that is heard in any direction is Brahm speaking), he has hands in every direction (i.e. all that the world does and all that the world receives is being done or received by Brahm), and he has legs in all the directions (i.e. the virtue of ‘movement’ that is so characteristic of life and which keeps the world on its toes is a specialty of Brahm).

That one supreme creator creates the heavens and the earth, and populates it with creatures having two hands and two legs¹ (3).

[Note—¹The eighth word used in the text is *Patatra* which indicates a wing or a flap or any thin wafer-like surface like that of a leaf also. So this verse implies that for the purpose of movement, the creator created terrestrial creature with legs, while for the inhabitants of the sky represented by the word heaven he provided two wings. The example of the former is of course the man, while the latter is the bird. Even the terrestrial trees show movement when their leaves sway in breeze as compared to their branches and stems which are like the hands. This is because the tree absorbs nutrients from the soil by its roots and then transports it to the body by the means of its stem and branches, but they show no movement like the leaves. The leaf dangles in the air like a bird on wings, and hence it shows movement like anything dangling in the sky—it quivers; it shakes and it shivers.]

Refer verse nos. 11, 14 and 16 of this Canto.]

4. That supreme Lord known as Rudra (refer verse no. 2) who is not only the cause of creation of all the divine Gods but has also provided them with their renowned fame and authority besides the magnificent powers and glory that they possess (refer verse no. 1 and 17), he who is the supreme Authority and unquestionable Lord of the entire creation (refer verse no. 17), who is omniscient and all-knowing, and is the one who created the first known sign of creation in the form of Hiranyagarbha (the macrocosmic subtle body of creation)—let this supreme Lord bless us all with an auspicious mind and intellect (4).

5. Oh Lord Girishant Rudra (i.e. Lord Shiva who resides in the mountains and spreads bliss and happiness all around)! Your blessed form is most auspicious, untainted, holy and divine. It is reassuring and soothing (like the glow of the moonlight). It is so ethereally illuminated that it eliminates the darkness cast by sins and evils (representing the darkness of night). Oh Lord, glance upon us with such a divine form; cast your benevolent eyes upon us so that we become blessed and fortunate (5).

6. Oh Girishant (one who resides in the mountains and spreads bliss and happiness all around)! The arrow that you keep ready in your hand to shoot at the living being¹, oh the Lord who gives protection even to the mountains, show mercy and make them (the arrows) harmless and auspicious for the creatures. Do not harm and kill anyone by these arrows. Instead, let these arrows shower the creature with welfare, good fortune and blessedness. [Refer also to Canto 4, verse no. 22.] (6).

[Note—¹Rudra is the God of death because Shiva represents that third force of creation which was envisioned by the supreme creator Brahm even before he started the process of creation so that he could keep a tight leash on his offspring, the world, and kept the right of conclusion exclusively with himself. This is one reason why the creatures fear the supreme Lord, otherwise as the things are, the greedy, rapacious and ambitious offspring would have cut the throat of the grandfather himself in order to usurp all authority and power vested in him, and capture the throne of creation to become the Lord God himself!

In order to prevent this incredulous thing from ever happening, the supreme creator assumes a forbidding and awe-inspiring form of Rudra. The word Rudra literally means ‘anger, wrath and vengefulness’, so the general countenance and bearing of this Supreme Being is one that instills fear of punishment in the mischievous child (the creatures of this creation) so that it does not create unnecessary nuisance. See note to verse no. 2 also.]

7. That great, transcendental and supreme Brahm is beyond the purview of the mortal world inhabited by living creatures, and who is even superior to and more exalted than the immortal world represented by Hiranyagarbha (i.e. Brahma the creator).

He is subtly present in a hidden but integral form in all the living creatures (as their pure consciousness called Atma and life called Pran), assuming as many forms as there are number and varieties of creatures because he is omnipresent and all-pervading.

He surrounds the entire creation from all sides because he is all-encompassing and all-incorporating by nature. A wise and erudite person who comes to know of this Brahm (with these unique virtues) becomes immortal¹. [This Brahm is described in the following verse nos. 8-10.] (7).

[Note—¹It has been repeatedly stressed that by knowing this Brahm the creature becomes immortal, but how? The creature would know about Brahm when he has withdrawn himself from this artificial world which is perishable and instead diverts his mind to contemplation and meditation to find out the ‘truth’ which is immortal.

He then discovers his true self as a radiant consciousness hidden inside himself as his Atma. Then he discovers, by being guided by the teaching of the Upanishads, that this Atma of his is none other than the supreme Brahm personified as is indicated in this verse when it says that Brahm resides inside each and every single creature. The creature then realises that his 'true self' is his Atma representing Brahm who is immortal rather than the body which is mortal. Therein lies the obvious key to becoming 'immortal'. The realisation that the entity known as 'I' is the Atma, and not the body, makes the creature immortal.

There is one very interesting observation to be made here by analyzing the word *immortal*. The word 'immortal' starts with the letter 'I' signifying the eternal bond between that which is immortal (Brahm) and the truthful identity of the creature which is represented by the letter 'I'. When this single letter 'I' is removed, the rest of the creation becomes 'mortal' and no longer remains 'immortal'.

[Refer to verse no. 10 below also.]

8. When the enlightened creature comes to realise and experience the presence of Brahm, he exults—'I know this great, divine, holy, radiant and splendorous Purush (Supreme Being) who is beyond the touch of darkness (representing delusions, ignorance and all other forms of taints and corruptions that are so characteristic of this mortal creation). He is shining like the glorious Sun in the sky (dispelling darkness all around).

It is only by knowing this Supreme Being that a person can cross the whirlpool of death, and there is no other way out of it' (8).

9. There is nothing better, nothing superior and more exalted than him (the Supreme Being), and neither is there anything smaller or bigger than him. He is standing alone like a huge tree in the grounds of the heaven (sky), and pervades in the entire creation much like the shadow of the tree covering the ground around it (9).

[Note—This verse refers to the Viraat Purush by referring to the huge tree, because the 'tree' harbours life in the form of birds and insects that find their abode on it, it casts shadow, it shows movement when its leaves move in the wind, and it is a metaphor for life as it produces fruits that sustain other creatures, and seeds which create a new tree. A tree has a physical body and therefore it is like the Viraat Purush that is the gross body of Brahm. It is said that the entire creation has been revealed from the body of this Viraat Purush much like the tree creating an entire world revolving around its existence.

But it is to be noted that though a tree produces another tree through its seeds, its own body is however mortal because it would die one day. This is in sharp contrast to the supreme Brahm who is immortal and therefore there is no question of it ever dying and leaving any seed behind. This distinguishes the Viraat Purush from Brahm. The Viraat Purush is the macrocosmic gross body of Brahm and a metaphor for the entire creation just like the huge tree in this verse. The 'supreme transcendental' Brahm is far more superior to this Viraat Purush because it is from Brahm that the Viraat Purush derives his glory and authority. This observation is borne by the next verse no. 10 as well as verse no. 20 of this Canto. The unique characteristics of Brahm are outlined in Canto 6 also.]

10. There is a divine entity that is beyond the one described above as having such and such attributes or not having them (as described in verse no. 9). 'That' entity is better, superior to, and more exalted than the entity mentioned above. It has no forms and attributes. It is beyond any kind of taints or faults that are inherent in everything that has an existential name, form and designation¹.

A wise and learned person who knows this Supreme Being obtains immortality², whereas all others obtain sorrows and agonies (because they would not have found the 'real and truthful' Brahm, and instead be deceived by images of Brahm such as the Trinity Gods as well as other Gods who personify one or the other dynamic powers of Brahm, etc.) (10).

[Note—¹The Supreme Being referred to in this verse is the ultimate Authority of creation known as Brahm. This Brahm is the cause of coming into being even of the Hiranyagarbha of verse no. 7 as well as the Viraat Purush of verse no. 9. Briefly, Hiranyagarbha is the macrocosmic subtle body of Brahm, the Viraat Purush is the macrocosmic gross body of Brahm, and Ishwar is the macrocosmic causal body of Brahm. Brahm itself is the universal cosmic Consciousness that prevails uniformly throughout this creation as its Principal and Absolute Truth. Hiranyagarbha has been described as being of a golden colour like the Sun, while Viraat Purush is like the tree or the macrocosmic form of the individual creature such as the man specially, whereas the 'real' Brahm has no colours in him, he has no definite forms and attributes. So the former are definitely different from the Supreme Being known as Brahm.

²Refer to note of verse no. 7.]

11. That supreme Lord (Brahm) has mouth, head and neck in all the directions. He is subtly established in the secret chambers of the bosom or inner self of all living beings, and is all-pervading and omnipresent. He is therefore everywhere in the creation. He is auspicious, truthful, holy and divine (11).

[Note--Refer verse no. 3, 14, 16 and 20 of this Canto as well as verse no. 14 of Canto 4.]

12. That supreme Lord is great, almighty, capable of doing everything, controller of all, an embodiment of brilliant light, eternal and imperishable, as well as most divine, holy and pure. He is called 'Ishan' because he is the Lord of all. He inspires the creature so that it can have a vision of that splendourous Ishan (Brahm) in its own bosom or inner self (12).

13. That supreme transcendental Being (Brahm) lives secretly in a subtle form in the inner chambers of the inner self of the creature in his heart as his Atma. This Atma lives in the subtle space of the heart (called the Hridya Akash) measuring the size of the thumb¹. The Atma is the Lord of the Mana or mind as well as the heart (i.e. it controls both the thoughts as well as the emotions). Those wise ones who know this Lord as such become immortal (because they would have realised that their true self is the pure consciousness known as the Atma which is characterised by being eternal and imperishable) (13).

[Note--¹Refer 5/8 of this Upanishad as well as 2/1/12-13 of Katho-panishad.]

14. That supreme transcendental Brahm has thousands of heads, thousands of eyes and thousands of legs¹. These numbers do not put a limit to his majesty and magnificence (but are only symbolisms for his greatness) for he is one complete whole, encompassing and enclosing the entire creation from all the sides like a girdle but still remaining at a distance of ten fingers away from it². Or in other words, he is subtly present in the heart located at a distance of ten finger width from the navel (which is like the epicenter of the universe)³ (14).

[Note—¹Earlier, verse no. 3 has affirmed that Brahm has as many eyes, hands and legs as there are directions, and verse no. 11 asserts that Brahm has his mouth, head and neck in all the directions. This fact has been repeated in verse no. 16 also for the

purpose of re-assertion and re-affirmation. Refer also to Bhasma Jabal Upanishad, Canto 2, paragraph no. 3 of the Atharva Veda tradition.

This current verse no. 14 is simply an extension of these verses. The word 'thousands' is just a figure of speech to indicate that the heads, mouths, hands, legs etc. of the Lord are present in every place of this creation in a gross form as their counterparts in the body of the countless creatures that inhabit this creation, and in their subtle form as the various perceptions and functions that these individual organs stand for—such as the eye which stands for the function of seeing, hand which indicates the ability to do anything, leg signifies the ability to move from place to place, the mouth is a symbol of speech and the ability to express oneself and to eat, and the neck shows the ability to rotate the instruments of observation located in the head, i.e. the ear, eye, nose and tongue, in any direction one wishes much like the rotating turret of a battle tank or the rotating dish of a radar.

²The allusion here is of the wall of the fort which surrounds the city represented by this creation inhabited by living beings who are its citizens, or even to the moat around this wall which encircles the wall. Brahm is neutral and so vast that even if it were possible to measure the circumference of this wall or moat, Brahm would still surpass this measurement by ten times. This is a figure of speech to indicate the vastness and all-enclosing nature of the Supreme Being. Refer verse no. 7 in this context.

³Earlier verse no. 2, 7 and 11 specially assert that Brahm lives inside the bosom of the creature in the subtle space of its heart called the Hridaya Akash. This space measures eight fingers in width (verse no. 13), and the heart itself lies about ten fingers-width above the navel.

The shape of the navel resembles the crater formed on the ground at the time of an underground nuclear test. The burst of nuclear energy is similar to the forces of creation which result in the creation of new life in the form of the embryo which traps this energy for growth and development, and finally emerges as a creature which would, in this scenario, resemble the nuclear reactor or bomb made to harness the results of the successful underground testing. It has now been almost established that the universe came into existence due to a cosmic 'Big Bang' millions of years ago. This Big Bang was the virtual 'underground testing' done in the cosmic ground represented by the vast and deep recesses of the space of the sky at the very start of creation by Brahm to unfold the energy trapped in the cosmic Atom, the pure conscious cosmic Atma, to unravel its secret potentials and eventually showcase it in the form of this creation. This 'crater-like navel' remained as the only visible sign of the original beginning of creation. It should be noted in this context that the embryo derives its nourishment through the placenta which is a tubular duct attached to the mother at one end and to the embryo at the other at its 'navel'. When the child is born, this placenta is severed, but the hole, reminding one of that original cosmic plan, remains forever.]

15. All that was in the past and would be in the future, and all that is dependant on food that is the source of nourishment, sustenance and development—all of them are nothing but one or the other manifestation of that Supreme Being. This divine Lord is the one who provides the nectar or ambrosia of eternity and salvation called Amrit, and he is the Lord of this Amrit as well. [That is, this Amrit is in his custody. Refer 1/11-13 and 2/16.] (15).

16. That Supreme Being lives everywhere. He has his hands and legs everywhere; his eyes, head, mouth and ears are everywhere. [Refer to verse no. 3, 11 and 14 in this context.] He indeed uniformly pervades and remains universally present in all the

forms that this creation has taken, being omnipresent and all-pervading. [Refer verse no. 7.] (16).

17. In spite of the fact that the Supreme Being (Brahm) has no physical attributes such as having organs of perceptions and actions, he still possesses and displays the individual virtues and characteristic features of these organs individually and jointly. [Refer verse no. 19.] He is the unquestioned Lord of everything that exists, is the supreme controller and regulator as well as the grand shelter of all that exists. [Refer verse no. 4.] (17).

18. This Lord who controls the entire animate as well as the inanimate world assumes the form of a Swan and lives inside the body having nine legendary doors¹ from where it interacts with this external world of material objects and receives its stimuli. In other words, in spite of being the Lord of the world, he begins to treat himself as an ordinary creature and plays around or swims around this world just like a Swan swims around aimlessly in a lake (18).

[Note—¹The *nine doors* are the following-- two ears, two eyes, two nostrils, one mouth, one anus, and one urethra.]

19. That Supreme Being moves most swiftly in spite of having no limbs, hears everything in spite of having no ears, and sees everything in spite of having no eyes. [Refer verse no. 17.] He knows everything worth knowing, but no one knows him. Such an eclectic and mystical Lord is addressed by the wise and learned ones as Great, Grand, Exalted and Supreme (19).

[Note—This is made possible because the Supreme Being lives secretly everywhere, even without anyone knowing about his presence. Refer verse nos. 14-16 of this Canto.]

20. That Supreme Being is smaller than the atom and more colossal and vaster than the colossus and vast. [Refer verse no. 9.] He is hidden secretly in the cave like heart of the creature. [Refer verse no. 2, 7, 11, 13 and 16.]

A fortunate man who is able to 'see' (i.e. observe the subtle and sublime presence of; to perceive, experience and witness on a subtle plain and not physical level) that supreme Brahm with the grace of the benevolent Lord himself who is untouched by the senses and their objects in this world (i.e. the Lord who resides as the Atma of the creature in his bosom and who is totally neutral and dispassionate)—such a man is able to free himself from all torments and miseries (that are associated with these sense organs and their association with the world hallmarked by torments and miseries)¹ (20).

[Note—¹This happens because such a person is no ordinary man but a self-realised man who has witnessed the blessedness of coming in direct contact with the divinity residing in his own bosom in the form of the pure consciousness called the Atma. This Atma is holy and pure, and it has nothing to do with falsehoods and false charms presented by this deluding world of artificiality. Such a person also realises that 'he' is the Atma and not the body which actually comes in contact with the sense objects of the world to either suffer from such contact or enjoy them. Such a man becomes neutral and dispassionate, thereby eliminating all causes of tensions and miseries that are associated with his interaction with this world.]

21. [The self-and-Brahm realised man firmly asserts as follows--] 'I know him who is eternal and free from such faults as aging and decay. That most ancient Purush is

present in all living beings as their Atma or soul. He is all-pervading, omnipresent, all-incorporating and all-encompassing. He is vast and colossus, being beyond dimensions and measurements. Those who are well versed with Brahm affirm that he is free from the fetters of birth and death, being eternal and imperishable'. (21)

Canto 4

1. He who was all alone at the beginning of creation and had no attributes, used his magnificent mystical and majestic powers and maverick tricks to assume numerous forms and shapes having countless attributes. At the time of the end of this creation, he withdraws the entire creation into himself (like the octopus withdrawing its tentacles). Let that stupendous and majestic supreme Lord bless us with an auspicious mind and intellect (so that we inculcate wisdom and intelligence) (1).

2. That same supreme Lord (Brahm) has manifested in varied forms such as the fire, the sun, air or wind and the moon. It is he who has taken the form of the red planet Mars, the creator Brahma, the water element as well as of Prajapati, the first male in visible creation on earth and the first father of the human race (2).

3. Oh Lord! You are the male as well as the female. You are the son as well as the daughter. It is you who reveal yourself as an old man walking with the help of a stick as well as a new embryo which develops into this myriad world of astonishing diversity (3).

4. It is you who has revealed himself as the blue/azure colour (of the sky), the kite (the sun), the green colour (plants and vegetation), the red-eyed one (the planet Mars and the Fire), the clouds (the rains), the seasons and the seven oceans. You are the Lord who has infinite authority and endless sway over all that exists. You are all-pervading and omnipresent. It is you from whom the entire creation has come into being (4).

[Note—The cosmic creation is being referred to here as well as in the next verse no. 5, hence the units of the cosmos at the macro level are the apt metaphors cited above. Some wise scholars have referred to more mundane metaphors, but they do not fit into the wider picture of the cosmic creator. Even when we consider the progression in which the creation came into being, it was started at the vast cosmic level and then metamorphosed into those forms which were closer at home on the earth. For one, the earth was a late comer in this cosmic scheme of things, and second, it was and still is merely one speck of dust on the shore of the cosmic ocean for astronomers have discovered numerous earth-like planets, still in their nascent stage of development, orbiting around distant stars representing the sun.

However, it would be in order of things that the other view is also presented here. According to this, the blue colour refers to the blue-tinged bee, and the green colour and the red-eyed creature is the parrot.]

5. There is one she-goat (the nanny goat)¹ having a three-coloured coat (skin). These colours are red (indicating the predominance of Raja quality), white (indicating Sata quality in predominance) and black (symbolic of the predominance of Tama quality)². This she-goat produces offspring in its own likeness. [That is, it produces offspring

having the predominance of one or more of the qualities represented by the three colours mentioned here.]

This she-goat is subjected to two types of treatment by the he-goat or the ram. One, she is enjoyed by the latter to produce offspring in his likeness (as described above). And two, he remains detached and indifferent to her presence, even to the extent that he does not even glance at her overtures³. [Refer verse no. 6 below also.] (5).

[Note—¹In the cosmic scale of things, this verse refers to the Mother Nature as the *she-goat*.

²The *three colours* are symbolic representations of the basic nature of all the creatures born in this creation. The Chandogya Upanishad, 3/5/4-3/9 and 6/3-4 uses these three colours to describe the different types of characters called Sata, Raja and Tama defining the three basic types of creatures and their individual personality traits and temperaments that exist in this creation.

The Paingal Upanishad, 1/3-9 of the Shukla Yajur Veda clearly states that these three colours were the ones with which Nature representing creation was born and how the supreme creator had subtly entered the entire creation to be uniformly present in its every minutest of corner.

The concept of *Gunas affecting the Atma* has been elaborately dealt with in various Upanishads, for example the Maitrayanyu Upanishad, 1/11, 2/5, 3/5, etc. of the Sam Veda tradition. Canto 6, verse no. 16 of the present Shwetashwatar Upanishad describes how the supreme Brahm was the creator of all the three Gunas. How the three Gunas were used by Brahm to create this world has been beautifully described in Paingalo-panishad, 1/7 and 2/3. Canto 2, verse no. 3 describes how Sata and Raja were used, while Canto 1, verse no. 7 narrates the use of Tama. How the three Gunas affect the man's character have been very precisely and expressly narrated in Shaarirako-panishad of Krishna Yajur Veda in its verse nos. 7-13.

The three characteristic qualities called the *three Gunas* inherently present in the creature, in different ratios, are the three thought textures which bombard the mind. These three thought textures are manifestations of the 'Vrittis and Vasanas' (inherent tendencies or desires) of the creature which mire its pure conscious Atma or soul as a covering or veil. These three basic qualities or Gunas which are inherent in all the living beings determine their nature, habits, temperaments and inclinations which in turn decide the behaviour, personality and outlook of each individual in this world.

(a) 'Sata Guna or quality' is the best quality present in a creature and it is marked by a predominance of auspiciousness, righteousness, virtuousness and noble qualities. It is marked by such high standards of ethical existence that have, as their characteristic features, such qualities as coolness of head, peace, contentedness, humility, devotion, wisdom, mercy, compassion, creativity, selflessness, service, righteousness, virtuousness, holiness and nobility of thought and action etc. As is evident, these qualities are the best qualities that one can have in him; they have a spiritual dimension to them; they are spiritually uplifting and give a divine halo to those who practice them.

The Sata Guna or quality is the veil covering the soul like a smoke covering the fire. A slight breeze will remove this smoke. Similarly a little bit of prayer and meditation will remove the Satwic desires; its removal requires the least effort. It is the foremost and the best amongst the three characteristics of a creature such as good and positive virtuous such as righteousness, creativity, noble deeds and thoughts, the positive qualities of service, benevolence, mercy, devotion, wisdom, holiness, piety etc.

(b) 'Raja Guna' is the medium quality marked by a greater percentage of worldly passions, desires and attachments and their natural offshoots in a creature. It covers such qualities as worldly yearnings, passions, a stormy nature, agitated behaviour,

ambitions, desires, selfishness, expansionist tendencies, desire to sustain etc. All these pertain to this materialistic world. Such qualities give worldly fame and prosperity. If these qualities are judiciously mixed with the Satwic qualities, then they provide the person the better of the two worlds, both in terms of worldly fame as well as spiritual well being.

The Rajsic quality or Guna can be compared to dust on a mirror. In this case some dusting and rubbing is needed to clean the mirror; a greater effort is needed as compared to the case with Satwic quality. Rajsic tendencies are the second best quality which produces worldly desires, ambitions, passions, selfishness, various obsessions, desire to sustain and expand etc.

(c) 'Tama Guna' is the third quality which is the meanest and basest of the three types of qualities in a creature. It is marked by evilness, perversions and sinfulness. It is the most degrading, denigrating and contemptible of the three characteristics in a person, leading him to such negative traits as sins, vices, perversions, greed, avarice, haughtiness, pride, lust, attachments, yearnings, intoxication, wild behaviour, promiscuity, evils, utter disregard for anything which is righteous, ethical and noble etc. In brief, behaviour which is utterly immoral, denigrating and depraving for the creature, marked by grossness, crassness and recklessness of demeanors. It is the lowest and meanest of the three qualities leading to a person's downfall, ignominy and ruin.

The Tamsic quality or Guna covering the soul is like a foetus in the womb covered by the embryonic membrane—they cannot be removed easily and require diligence, effort, dedicated and careful handling requiring time and patience. It is the basest and the lowliest of the three characteristics, the worst type to possess, and is marked by such negative traits as sin, evil, perversions, immorality, vices, misdemeanors, anger, inertia, delusions, deception, gloom, ignorance et al.

The various permutations and combinations of these three qualities create a particular 'nature' of an individual giving him his individuality and his special characters which are unique to him; they determine his temperament, behaviour, thought process et al.

³The ram or *he-goat* is used as a metaphor for the Viraat Purush, the macrocosmic aspect of Brahm's revelation as well as the creature's male form at the micro level of creation. Fundamentally there are two basic mental bearings and psychological responses that a creature exhibits in its interactions with the world—it either enjoys the interaction, finding pleasure and comfort in this world and its material objects, or wishes to be left alone and remains detached from it. The creature with the *first type of temperament* is the ram who gets involved in producing offspring with the she-goat, and by extension it refers to the Viraat Purush who got involved with his own maverick Maya (his own delusion creation powers) to start this process of creation. The *second type of temperament* signifies the ram who is a renunciate and self-realised creature that has realised the falsehood of this artificial world and does not wish to have anything to do with it. The first has a propensity of getting involved and getting caged like a bird, while the other prefers to keep all entanglements at bay, preferring to remain free as a bird out of its cage.

Therefore, the first type of ram is the ordinary creature which remains engrossed in this world and gets sucked in the vortex of joys and pains, while the other ram is the self-realised soul who gets liberation and deliverance from all these entrapments.]

6. [This verse uses the beautiful metaphor of two friendly birds perched on the same tree.] There are two friendly birds on the same tree. [Here, one bird symbolises the Jivatma or the creature, and the other bird stands for the Parmatma or its pure conscious Atma which is a personification of the Supreme Being living inside its body representing the tree. Refer verse no. 5 also.]

Out of these two birds, one enjoys the fruits of the tree while the other just watches silently. [Here, the first bird which eats the fruit is the creature which enjoys the world and the fruits of its deeds and efforts, while the second bird is the Atma which just remains neutral and does not get involved in this enterprise.] (6).

[Note—The body is required by the Atma to live in this world. When this Atma displays the eclectic and sublime qualities of dispassion and non-involvement, of not finding charm in attractions of the material world, and instead maintaining stoic calmness of demeanors and stern neutrality, exercising self restraint which is tantamount to doing constant Tapa and Yoga (severe penance and meditation), it is deemed to be an incarnation of the Supreme Being (Brahm) residing in the body of the creature.

On the other hand, when the same consciousness begins to show carnal desires and allows itself to get dirty and corrupted by getting involved in the muck of the world, then it gets sucked in the swamp in which it had voluntarily jumped. This is the creature at his worst—worldly and entangled in its own web like the spider getting entangled in its own web. Refer Brihad Aranyaka Upanishad, Canto 2, Brahmin 1, verse no. 20.

The concept of two birds sitting on a tree has been also described in Rudra Hridaya Upanishad, verse no. 41 which is Chapter 26 of this volume.]

7. Sitting on the same tree, the creature (literally ‘the Purush’ because the Viraat Purush representing the macrocosmic gross body of Brahm has revealed himself as the individual creature at the microcosmic level of creation; here represented by the *first bird*) who is overcome by delusions gets submerged in all types of miseries, sorrows and distresses, wailing and lamenting in the process¹.

This situation prevails only till the time the creature does not witness and experience the presence of the majestic glory and divinity of the supreme Lord whose mere presence dispels all causes of pains and miseries (much like the presence of sunlight automatically eliminates darkness of the night). This Lord, known as Ishwar, is served by countless spiritual seekers who focus their sight upon him by a variety of ways and try to reach him by so many paths. This Ishwar is distinct from the creature’s corrupt form (that is consequential to the creature’s ignorance and its attendant delusions, such as those that arise out of his association with this artificial world and its ensnaring sense objects). This Ishwar is not at all tarnished by any of the negativities and faults associated with the possession of a gross body as is the case with the ordinary mortal creature.

Once the creature is able to witness the presence of this benevolent Lord and understands the Lord’s majestic powers and overriding supremacy in this creation, when the creature knows that this almighty and most powerful Lord is there to give him his magnanimous protection and extend his helping hand to him so that the creature is able to overcome or get rid of all his numerous torments, miseries and agonies from which he had been suffering all along, he (the creature) feels reassured and rested that the Lord is not only able to deliver him from all his sufferings but would actually do so. It is then that the creature finds freedom from all sorrows, miseries and torments that have been overwhelming him due to ignorance about the omnipresence and omnipotence of this supreme Lord who is present literally at his own doorstep. [That is, the supreme Lord is very near the creature and not far away from him, for the Lord resides in the creature’s own heart, in his own bosom. It is like the paradoxical case of a man searching for the gold in the haystack while the gold is in his own breast pocket!] (7).

[Note—¹The ignorant creature thinks that it has a body and therefore all sorts of troubles that are associated with the body submerge it in their surging waves of delusions. The creature fears old age, diseases and death. It has enemies and friends; it has numerous attachments and as many hatreds; it has so many tasks unfulfilled and so many desires yet to realise; and so on and so forth. The result is that all its peace is snatched from it.]

8. It is in the infinite, fathomless and eternal sky or heaven that all the divine Gods are present; and it is this vast heaven that is also lauded in the Vedas. [This 'sky' is a metaphor for *Brahm* because the latter is also featureless, all-encompassing, all-pervading, omnipresent, taintless, vast, infinite, fathomless and eternal like the former.]

Those who do not understand the secret behind this can do nothing by reciting the hymns of the Vedas. [That is, it is most important to understand the secret behind the tenets and spiritual philosophy of the Vedas to benefit from them instead of mechanically repeating their hymns as if they would work miracles merely by staccato chanting. Nothing is further from the truth.]

On the other hand, those who understand that supreme eclectic and divine Being in a holistic way become fulfilled and accomplished (8).

9. All the Vedas, the various religious sacrifices and sacraments, all the different religious vows and duties, all that existed in the past, exists in the present and would exist in the future that are described in the Vedas (which are vast repositories of knowledge about these things)—all of them have been created by the maverick Supreme Being from one imperishable entity known as 'Akchar'¹. [In other words, since *Brahm* is Akchar or one who is imperishable, it follows that the entire spectrum of creation, not only the entities mentioned here, has its origin in 'Akchar'.]

This supreme entity (i.e. the Akchar *Brahm*), though it is distinct from everything else, being unique and matchless by all definitions and in all spheres, appears to be tied to this world of its own creation with the tag of *Maya* which attaches it to the latter² (9).

[Note--¹The word *Akchar* or *Akshar* means 'one that does not perish'. Such an entity is 'supreme' because everything that exists has to perish according to the laws of Nature except this supreme entity known as Akchar. Since there is only one entity known as *Brahm* that is 'supreme' and 'imperishable', and which has the characteristics of the sky such as being 'fathomless, eternal and infinite' as well as being the 'abode of everything in existence', the Akchar from which the Vedas etc. have come into being is none other but *Brahm* himself.

Again, the word Akchar also means 'a letter'. The ethereal word OM representing *Brahm* also consists of letters A, U and M. It is believed that this OM is the original sound from which the rest of creation has unfolded. Since the Vedas consists of hymns composed of 'letters' as the basic building blocks to form the words of those hymns, they represent this divine word OM. Refer 5/6 and 6/18 in this context.

²*Maya* is the delusion creating powers of the supreme *Brahm* which keeps the world on it toes, hiding the reality and truth from it. Had it not been so, all the creatures would have become renunciate ascetics and then the wheel of creation would have come to a grinding halt. So when the supreme creator decided to create this world, he entered it to control it from within, and took up an abode as the Atma of the creature. But under the delusory spell purposely cast by *Brahm*, the creature could not see the reality much like one cannot see the reality when he is under the hypnotic spell of a magician or an expert hypnotist—the audience begins to eat out of the hand of the magician or hypnotist although it might be fully alert and wide awake.

That is why Brahm appears to be involved in this world even though it is fundamentally non-attached and non-involved in anything that has to do with falsehoods and deceit just like the magician or a hypnotist who remains an active participant in the game of illusion-creation but himself is not under the illusions created because he knows that what is seen is not the actual thing but merely an illusion which he himself has created. A magician or a hypnotist is never swept off his feet by the illusion created for the audience.

The concept of Maya is described in note to verse no. 10 below along with Prakriti or Nature.]

10. Prakriti¹ (primary Nature) should be treated as the Maya², and the supreme Lord called Maheshwar (one who is ‘Maha’—great, and ‘Ishwar’—Lord, of everything) as the maverick Lord who inspires and enables the Maya to not only create this world but also imprint it with its own characteristic qualities (much like the offspring bearing the characters and features, or genes, of the parent).

Thus, the entire creation bears the characteristic qualities and virtues so typical of and unique to Maya; these qualities and virtues form an integral character and nature of this creation as a whole as well as of all its individual units. [They are called the various Gunas³.] (10).

[Note—¹*Prakriti*—The word basically means ‘nature’ with all its connotations. The Chambers dictionary defines it as the power that creates and regulates the world; the power of growth; the established order of things; the cosmos; the external world especially that untouched by man; the inherent qualities in anything that makes it what it is; the essence; the being; the constitution; a kind or order; naturalness; normal feeling; conformity to truth or reality; the inborn mind; the character, instinct or disposition; the vital power; the course of life; the nakedness of truth; the primitive undomesticated condition; the strength or substance of anything; a deity personifying some force of physical nature.

Sir Monier Monier-Williams, in his encyclopedic Sanskrit-English dictionary describes it thus—‘making or placing before or at first’.

The word Prakriti has many connotations, viz. the original or natural or basic form or condition of anything; the original or primary nature, character, condition, constitution, temperament, disposition; the fundamental form or shape or essence or pattern or standard or model, rule; Mother Nature which has the active physical natural forces that are responsible for unfolding the creation, its sustenance and annihilation; something that is inherent, innate, genuine, unaltered, unadulterated, basic, normal, bare, naked, crude, integral and stripped of all pretensions; the fundamental pattern, form, standard and model upon which the rest of the things are based; the crude or basic or root or seed form of any word, and by extension of anything expressed; that which decides the existential mode of anything; the coefficient, the multiplier of any fundamental element.

As inherent nature and temperament of a creature, it determines the way the world behaves and thinks; it determines the basic character of the creature and the creation as a whole because the individual creature is but a single unit of the creation.

The word Prakriti also refers to the ‘personified will of the Supreme Being in the creation’, and it therefore is synonymous with the powers of the Supreme Being personified as Mother Nature in whose womb the entire creation has revealed itself. It is deified forces of Nature and revealed as different renowned and powerful Goddesses.

The Prakriti represents the cosmic creative will of the creator that has revealed itself as the primary female aspect of creation which is known as ‘Shakti’, while its male aspect is known as the ‘Viraat Purush’. The Shakti is the active ingredient or force that creates and regulates everything, while the primary entity or Being whose will this Shakti is implementing is called Brahm who remains passive.

According to the Purans, this Prakriti or Nature has been personified as different Goddesses, while Brahm has been known as Viraat Purush in the terminology of Vedanta or the Upanishads, and Vishnu in the Purans. The Shakti is the female aspect of Purush, and is considered as inseparable from him; in fact they are two halves of the same Brahm. In order to create, Brahm revealed himself in these two primary forces which revealed themselves as the cosmos or Nature. As the different inherent tendencies of a creature, the forces of creation came to be known as Sattva, Raja and Tama which determines and regulates the continuous cycle of creation, sustenance and conclusion. The Purush is the male aspect while his female counterpart is the Prakriti. Since a man resides in this world, he is surrounded by Nature which casts its shadow upon him. All the maverick tricks that Mother Nature knows create an impression upon a man. He is enthralled and so overwhelmed by the deception created by Nature that he forgets about the falsehoods of what he sees, as well as about the truthful nature of his own pure self. He is deluded by false impressions so much so that they appear to be true to him. Consequentially, he drifts along in the swift currents created by those delusions. He acquires the colours of Prakriti without realising the truth about its falsehood.

According to Sankhya Shastra, Prakriti is the original producer of the material world consisting of the three Gunas or fundamental qualities that are inherent in all the creatures and they decide the character and temperament of that creature depending upon the dominance of one quality over the other two. These three Gunas are—(i) 'Sata', or those which are auspicious and righteous and noble, (ii) 'Raja', or worldly qualities marked by such notions as having passions, desires, greed etc. and (iii) 'Tama', or those qualities that are 'dark' by nature, such as those that are categorised as sinful and pervert, leading to a creature's moral downfall.

The word Prakriti refers to the following—(a) Mother Nature and (b) the natural habits, temperaments and inclinations of a person. The Purush is the male aspect while his female counterpart is the Prakriti. Since a man resides in this world, he is surrounded by Nature which casts its shadow upon him. All the maverick tricks that Mother Nature knows create an impression upon a man. He is enthralled and so overwhelmed by the deception created by Nature that he forgets about the falsehoods of what he sees, as well as about the truthful nature of his own pure self. He is deluded by false impressions so much so that they appear to be true to him. Consequentially, he drifts along in the swift currents created by those delusions. He acquires the colours of Prakriti without realising the truth about its falsehood.

²Maya-- Maya is a word which has two parts, Ma + Ya. The first half means a 'mother', while the other half refers to the notion of doubt, of either this or that. The word 'Ma' also means 'to measure, mark off, by any standard; to show, to exhibit, to display; to infer, to conclude; to be formed, built, made of'. Therefore, the composite word Maya refers to a situation which harbours uncertainties, where it is uncertain whether what is said or understood or seen or witnessed or experienced is actually the truth or not. It is virtually the 'mother of all confusions and perplexities'. It therefore refers to something or some situation which creates doubts and confusions, something that is not real; that which is deluding, illusionary, deceptive, mirage-like and deceitful, and is caused by the ignorance about its truth and reality; something that has no substance or pith; displays no certainty and leads to wrong inference. The term Maya is used to define all these phenomenons. Hence, Maya is a synonym used for all that is deceptive, faulty, false, deluding, ignorance based, illusionary, pretensions, deceitful, invisible and super-natural; all that which has no reality or substance; all that is hollow. It creates hallucinations in a creature's mind leading him to believe that what he sees is the truth. It is the deluding and magical powers of the supreme transcendental Lord that hides the reality and creates an imaginary world of deceptions and misconceptions

Maya has three basic constituent qualities. Hence it is called Trigunmayi, i.e. one which has the three Gunas or qualities. These three Gunas or qualities are— Sata,

Raja and Tama. 'Sata' is the most auspicious, virtuous and noblest quality in a man and raises him to a high moral and spiritual pedestal. It marks predominance of righteousness and the highest standards of spirituals and mental evolvement leading to high thoughts, noble actions and righteous behaviour. 'Raja' is the medium quality in a person, and it is marked by worldly passions, desires, yearnings and greed. It makes a man more worldly than spiritual. 'Tama' is the third and most lowly of the three qualities and is used as a synonym for darkness and evil. Obviously, 'Tama' means ignorance, delusions and all the forces or qualities that are evil, mean, lowly, miserly, wicked and base. They pull down a man from high pedestal and virtually dump him in the dust yard of creation to rust and decay.

These three qualities together, in various permutations and combinations, decide the innate nature of a man. The greater presence of 'Sata' makes a man nobler as compared to a high ratio of 'Tama' which makes him wicked, pervert and evil. Various proportions of these qualities will therefore produce innumerable varieties of creatures having different temperaments, thought processes, behaviours, demeanors and mental setup in this world.

The basic idea here is that Maya is like a transparent sheet which covers the supreme 'truth' in the creation. Since it is transparent, it assumes the attributes of the truth that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. This is a simple way of understanding what is called 'illusion and Maya vis-à-vis the Truth and Reality'. Maya nevertheless hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to that Truth known as the 'Nirgun Brahm' by the Upanishads when the latter is observed through this veil, while at the same time assuming the glorious attributes of Brahm itself. So ignorant fools think that the Maya is the real thing, whereas they are actually seeing the 'veiled truth' as observed through this covering of Maya, because the actual 'truth' is hidden from view by this transparent sheet which has lent it its own colour and hue to it. As a result, that Nirgun appears to have some attributes, and it thereby becomes 'Sagun', or the one with attributes and characteristics, by the interference of Maya.

Now, there are *eight forms that Maya takes*, and they are the following—the five elements forming the basic building blocks of the gross creation (i.e. the elements of earth, water, fire, air and space which form the gross body of all the living creatures) + mind + intellect (together called the subtle body of the creature) + Ahankar (the ego, pride and arrogance that the creature possesses, leading to the notion of 'I', 'me', or 'mine' = eight entities).

Maya has three names—viz. (a) Maha Maya—or the great powers exhibited by Brahm at the cosmic level. This Maya is the progenitor of all other types of Mayas which keep the individual creature trapped in their net. The Maha Maya is the virtual mistress of all the delusions and misconceptions and their attendant ignorance that keep all the creatures of this creation enthralled by their deceptive charm. (b) Yog Maya—this is the stupendous magical powers created by the union of the supreme authority of creation known as Brahm, and the mystical and esoteric powers that delusions and hallucinations can create for the creature. (c) Maya Shakti—this is the 'shakti' or power and authority displayed by Maya in association with Brahm from whom it acquires its stupendous energy and powers.

Mantriko-panishad of the Shukla Yajur Veda tradition describes Maya in substantial detail. In its verse no. 5 it says that *Maya has three basic colours*—viz. 'white', 'red' or 'dark', and the various shades in between. These three colours represent the three basic qualities, called Gunas, present in all the creatures and are only symbolic of the innumerable variations in which the basic qualities can combine to produce countless number of characteristics and virtues and behaviours that give individuality and specific characteristics to millions and millions of creatures. These are simply metaphors only meant to explain and help visualise certain things, and therefore should not be taken too literally as meaning that dark skinned people are

sinful and pervert and worthy of condemnation, or that fair skinned ones are all righteous and noble, for just the opposite is witnessed daily in our lives.

Even as an offspring gets the colour of the skin of the race to which it belongs, the inherent characters of all creatures are inherited from their mother, and this mother is Maya. The white colour stands for the best category of qualities called Sata Guna, the red colour stands for the second and medium quality called Raja, and the dark colour stands for the meanest quality called Tama. The word Tam itself means 'dark' and it stands for the worst type of qualities leading to sinful and pervert nature in a man which makes his life hellish; the word 'red' is a metaphor for anger, vehemence, vengeance, agitations, restlessness, short temper, strife, hatred, envy, jealousy and the other such negative worldly characteristics in a person; the colour 'white' stands for peace, tranquility, prosperity, happiness and wisdom, all of which are the characters of noble and gentlemanly persons.

³As has been noted above, the three inherent qualities or Gunas of Sata, Raja and Tama that characterize all the creatures of this creation are like the genes that the offspring carries of its parent. Through these Gunas, the Maya resides in the bosom of all the creatures as their defining 'nature' and basic 'temperament'—called the *Prakriti* of the creature. Even as the supreme Brahm as the Great Lord called Maheshwar used his mystical deluding maverick powers to create this illusion of the world at the cosmic level and made it so perfect that it appears to be perfectly true, the same Brahm while residing in the bosom of the individual creature as its Atma also creates this world by using its delusion creating powers, and uses its man-Friday, the mind, to ensure that it is implemented to perfection.]

11. That supreme Lord is alone competent and capable of creating and establishing all the countless forms in which all the creatures of this creation are born in this world. It is in this supreme primary Lord in whom the entire creation dissolves or merges at the time of its end, only to be reborn from him once again at the time of the start of a new cycle of creation.

When the spiritual aspirant succeeds in his endeavour of seeking the ultimate Truth and getting acquainted with the supreme Authority of creation that is the overriding authority that controls everything in existence, that governs and regulates them, that can grant boons and blessings (because only an authority that can punish can also pardon, one who is all-powerful and authoritative can bless and give or grant boons or favours), and that is worthy of praise, honour, reverence and worship—it is only then that such an aspirant finds eternal peace and tranquility, eternal bliss and contentedness (11).

[Note—This is because he would have realised his 'own true self' in the fount of bliss and peace revealed in the form of his own pure conscious Atma. He would have realised that the external world in which he had so far been searching peace and happiness was actually a mirage and it was misleading him all through much like a trickster who uses all tricks in his trade to trap the gullible innocent prey, or like a magician or hypnotist who made his subject live in a world of make belief charm which is far removed from the harsh realities of this world.]

12. The great Lord Rudra (literally Lord Shiva who is also called Maheshwar or the Great God, but here referring to the supreme Brahm—refer 3/2-6) who is the cause of coming into being of all the Gods of creation and who endowed them with their divine powers, great authority and majestic glories¹, who is the unquestioned, unequivocal and the only supreme Lord of all that exists, who is all-knowing and omniscient, and who had watched the emergence of Hiranyagarbha²—let that supreme transcendental Being (Brahm, the Supreme Lord, the cosmic Consciousness) bless us with pure, auspicious and enlightened wisdom and intellect (12).

[Note—¹It is Brahm who has created the numerous Gods and then bestowed each one of them with their divine and glorious powers and authority which are astounding and most magnificent. These Gods are of two basic types—the *primary Gods* such as the Fire God, the Water God and the Wind God which are personifications of the original elements of creation and represent the dynamic forces of creation and the different fundamental life creating, sustaining, developing and concluding powers of Brahm. They also stand for the fundamental virtues and sublime but subtle qualities that are so characteristic of Brahm. The *secondary Gods* are the ones which followed once this creation came into being, when Brahm had to devise a mechanism to regulate his own creation and ensure its orderly functioning. Brahm had to lay down the detailed infrastructure and frame the constitution for his own creation lest it would just fall apart under its own weight of unregulated growth and uncontrolled propagation. This was a distinct possibility in the creator's mind—because the very origin of this creation was based on 'Maya' or deception which tended to hide the truth. Thus, the secondary Gods are primarily guardians or 'enforcing authorities' of the doctrines and principles of creation laid down by the Father of creation.

Naturally therefore, the Father Brahm 'had' to give these Gods necessary power and authority to implement and enforce his ordinances; he had to 'delegate his own powers' to a great extent to these Gods so that this vast and measureless realm could be controlled. In this scenario, Brahm retained the central command, interfering only when absolutely necessary, and having the final say in all matters just like the chief commander of an army or the Emperor of an extended empire. That is why even the Gods fear him.

Refer Canto 3, verse no. 4, and Canto 6, verse nos. 1-3, 16 of the present Upanishad also.

The various *directions and their patron Gods* have been described in Brihad Aranyaka Upanishad, 3/1/9, 3/9/21-24.

According to the Purans, the twelve directions and their patron Gods are the following—(1) East—Indra; (2) South East—Fire God; (3) South—Yam God, the God of death and final judgment; (4) South West—Nairiti; (5) West—Varun, the Water God; (6) North West—Vayu, the Wind God; (7) North—Kuber, the God of treasure and wealth; (8) North East—Ishan, Lord Shiva; (9) Zenith—Brahma, the creator; (10) Nadir—Prithivi or earth; (11) Sun; and (12) Moon.

²*Hiranyagarbha* is the first sign of emergence of creation. It is the first embryo and, in terms of metaphysics, the subtle gross body of creation. Hiranyagarbha was the 'first born'. So if someone 'watched its emergence' it implies that this someone or some unknown entity existed even before Hiranyagarbha started to become a reality; this someone or something obviously pre-dated Hiranyagarbha. Now, it has also been said in verse no. 11 above that everything collapses into Brahm and merges into him at the time of conclusion of creation. Therefore it is very logical to say that this Brahm existed 'after the end of creation' and 'before the beginning of creation', i.e. in the intervening period. This is possible because nothing can come into being from nothing; there must be something—however unknown, inconceivable, untraceable and incomprehensible—into which everything collapsed at the end and from which it was reborn. Had it been true that after the conclusion of any given creation there was a complete 'nothing' after it, then it would have been a 'black hole' type of thing, and modern science has established that even light cannot escape from this black hole, so there was no question of the next world 'remerging' from this 'black hole of nothingness'.

This validly proves that there was indeed 'some entity that was present and existent' even after the conclusion of the last creation and before the beginning of the present creation.

The concept of Brahm watching the birth of the first-born in creation has also been stated in Canto 5, verse no. 2 of this Upanishad.]

13. He who is the supreme Lord and overriding Authority ruling over all the Gods in creation, in whom the entire creation has its foundation and basis, who is the regulator and controller of all the living beings in this world whether they are two-legged (such as humans) or four-legged (such as animals)—let us honour and worship that Supreme Being who is an embodiment of beatitude and felicity by paying tributes to him in the way of offerings of sweet rice pudding (or porridge) as sanctified food meant for the sacred fire (13).

14. He who is smaller than the minutest, who is hidden in the center of the Kalil¹ (i.e. who is surrounded by Avidya or the darkness of ignorance as is the case when Brahm voluntarily allowed himself to be surrounded by Maya or delusions, and Ahankar or ego and a false sense of pride, when he decided to forgo his neutral stature and indulge in the game of creation), who is the creator and progenitor of the entire creation², who assumes numerous forms because he pervades uniformly and universally in the entire creation (and therefore is deemed to exist in as many forms as there are types and classes of creatures in this creation), and who is most auspicious and a provider of well being to all—by being acquainted with this Lord, the spiritual aspirant finds eternal peace and tranquility as well as bliss and contentedness (14).

[Note—¹The word *Kalil* literally refers to the embryonic fluid formed by the fusion of the male semen with the female genital fluids. This results in the nascent embryo which is in the shape of a frothy bubble of viscous fluid. Since the embryonic fluid is lodged in the female womb, it is surrounded by pitch darkness. Further, this frothy fluid is the progenitor of the creation because it develops into a full blown creature. But its primary strength is derived from the sperm which fertilises the egg of the female which then undergoes rapid divisions and metamorphoses into an embryo. In the present context, Brahm is compared to this Kalil because Brahm is the cause of creation of this entire creation, including the ‘darkness of Avidya or ignorance’ with which Brahm allowed himself to be surrounded so that an excuse could be found for initiating the process of creation. The present version is according to the revered sage Adi Shankaracharya, the greatest exponent of Advaitya Vedanta and an unchallenged authority on the Upanishads. Others like Vigyan Bhagwan and Shankaranand endorse this view. According to Narayantirtha, the word Kalil refers to ‘Tamso Madhye’—i.e. to being in the center of darkness or ignorance called ‘Agyan’. Since Brahm was surrounded by negative factors of Ahankar and Maya when the process of creation rolled forward, this description also fits into place. In this interpretation, Brahm is an astonishing Being who even lives inside something that is dark and foreboding, indicating that behind the darkness of ignorance and falsehoods there is hidden the real ‘truth’.

²Refer 5/5, 6/1-3, 16 in this connection.]

15. It is he who is the protector of the entire creation in all time frames (past, present and future), is the unquestioned and unchallenged Lord of the whole world, and present in all the creatures uniformly and universally (as their Atma and Pran). It is he on whom all the learned and wise sages and seers as well as the different Gods remain focused by the way of meditation and contemplation. By becoming acquainted with or being Brahm-realised, a wise and enlightened spiritual aspirant is able to break free from the fetters of death, i.e. he is able to free himself from the causes that keep him tied to this cycle of birth and death¹ (15).

[Note—¹The cause of death is birth, because only one who is born would die. When the aspirant realises that his true self is Atma which is pure consciousness and Brahm personified, he also realises that the body is not the self he was previously thinking it to be. It is the body that dies and not the Atma because it is eternal and imperishable

and therefore without a birth. So the basis of fear of death vanishes. Besides this, when he distances himself from the body and the deeds that are done by this body as well as the world in which these deeds are done, then also he does not have to take another birth as no after-effects of deeds remain, thereby eliminating the need to take another body to suffer or enjoy the results of those deeds.]

16. [This verse describes both the macrocosmic form of Brahm as well as its microcosmic subtle form.]

That eclectic, unique and divine Supreme Being is like the clarified butter floating on the surface of milk. This butter represents the best part of milk (or curd); it enriches the value of milk (or curd), and is much sought after by food connoisseurs. This supreme and divine Being of creation is therefore honoured and worshipped by the epithet 'Shiva'—one who is eternal, beautiful, holy, auspicious, truthful, best and most divine as well as an embodiment of infinite happiness and bliss.

This supreme Lord lives secretly inside all the creatures in a very subtle form as their atomic and invisible microcosmic Atma. At the same time, this same mystical Lord pervades the entire creation and encloses it from all sides in his vast colossus form as the Viraat Purush at the macrocosmic level. When the seeker comes to know this Supreme Being (or when he becomes Brahm-realised), he is freed from all the fetters that had been shackling him from time immemorial (16).

17. That all-pervading, all-permeating, all-incorporating and all-encompassing supreme Lord is the creator and progenitor of the entire creation. He resides subtly in the heart of all the creatures (as their Atma). He is known, and the truth about him realised, by coordination between a sincere and dedicated heart, an enlightened mind, and a wise intellect. When this supreme transcendental Divinity is brought to light by this method, the seeker becomes immortal (because he would have realised that his own true self is none other but this supreme Brahm residing in his heart as his pure conscious and enlightened Atma which is his essential spirit or soul) (17).

18. When the darkness of ignorance is dispelled, there is no such notion as day or night, or of something being true and something being false¹. In other words, there is no sense of duality and confusions. When the light of enlightenment and wisdom dawns on the spiritual horizon of the wise self-realised seeker, there is only the existence of one and non-dual Truth, which is the eternal, auspicious and universal supreme Lord.

This supreme, eternal and imperishable Lord is even the object of worship by the Sun God. It is from this Lord and the supreme Authority of creation that ancient wisdom and erudition came into being and was propagated (in the form of holy scriptures and enlightened preachers) (18).

[Note--¹This is because when there is only *one state of existence*, i.e. when there is only 'truth' prevailing, and therefore there is no sense of duality and cause of any confusion and doubt, it does not matter whether one lives in sunshine or darkness of the night, he would have no sense of fear from any quarter. For example, for a man in sleep or one who is confined to a closed room, it does not matter to him whether it is day or night outside.

This 'day' and 'night' are relative terms because, as everyone knows, if one part of the earth has day, the other part has night. It is not that 'day' completely eliminates 'night' from the surface of the earth; they have a cyclic occurrence. Suppose one believes that the day is the truth and night is not the truth, then what would happen when night falls, something which is bound to happen and simply cannot be wished away. So, if one is made to believe that the 'day' is the only truth, then when night

comes and day sets, he would be completely confounded because 'truth', which for him is represented by day time, cannot be expected to set as 'truth' is everlasting. But the fact that it does is irreconcilable for him; he would not be able to comprehend how the 'truth' comes to an end.

Similarly, what appears to be 'truth' now becomes 'false' at some other moment, and vice versa. For example, the 'day light' now becomes false during night time. The existence of the creature now becomes false once he is dead. But since he takes a new birth, he is actually not dead, but only changed his body and form.]

19. This Supreme Being cannot be caught or understood from the above, from the sides, or from the middle. He whose name has the epithet 'Mahadyaash'—one who is the greatest and most magnificent, one who is grand and majestic, one who is astounding and stupendous, one who is the most exalted and superior to all others—indeed has no match because he is unique and peerless. There is verily nothing with which he can be compared, or that which can be compared with him (19).

20. The divine and esoteric form of this Supreme Being is not the subject matter for the perception of sight, therefore the physical eyes of the body cannot see him. A self-realised and enlightened seeker who can perceive this Supreme Being in his own heart with the aid of uncorrupt and wisened mind that can penetrate deep into the realm of the subtle truth (with meditation and contemplation) is able to actually become immortal (because the Atma is immortal, and the Atma is his true self as well as the personification of Brahm inside his body) (20).

[Note—When a wise and self-realised man is able to see deep inside his own self, he realises that 'he' is the Atma and not the body as he had been thinking till now. This Atma is immortal, eternal and imperishable—and therefore 'he' is also immortal, eternal and imperishable!]

21. Oh Lord Rudra! Since you have no beginning (i.e. you do not die to take a birth again as you are eternal, imperishable and infinite—because you are Brahm personified), someone who is afraid of death, or someone who is scared of this world and its horrors, seeks your shelter and refuge, or seeks your protection. [This is because only one who is immortal himself can know how to become immortal and advise others on the subject. Such holy souls as you are definitely divine and holy and worthy of seeking shelter with. They are also powerful and potent enough to give protection to their wards who seek their intercession, their refuge and blessings.]

Such scared person pleads with you to protect him with your face which faces South¹, which is a metaphor for your benevolent, compassionate, kind and favourable inclinations towards those who are meek and seek your protection (21).

[Note—¹There is an Upanishad called Dakshin Mukhi Upanishad which is Chapter 18 of this volume and it describes this South facing form of Lord Shiva along with its metaphysical importance and significance.]

22. Oh Rudra! You are requested not to destroy (kill; eliminate; exterminate; or subject to torments and miseries) any of our sons, grand-sons, our age and life (i.e. let us not die pre-maturely), cows and cattle as well as horses and other domesticated animals. You are also requested not to harm our loyal brave servants and subordinates. We always show our greatest of respect to you; we duly worship and adore you, and offer sweet puddings to you as offering in the sacred fire during religious sacrifices. [Refer Canto 3, verse no. 6.] (22).

Canto 5

[This Canto is built around the philosophy of Sankhya Shastra and Sankhya Yoga. The next Canto, i.e. canto 6, would carry on with this theme further. These twin philosophies have been explained in detail in a note to verse no. 13 of Canto 6.

It would be noted that the three Canto nos. 3-6 of this Upanishad are exclusively dedicated to describing how Brahm is and what is his form and nature.]

1. There is a transcendental entity which is superior to Brahma, the creator of the world. That supreme transcendental Authority is eternal and imperishable. It is here that Vidya and Avidya both exist but in clearly defined and delineated forms. That body of knowledge which points to truth and removes the delusions created by ignorance which are the cause of all falsehoods and misconceptions about this existence is called 'Vidya'. On the contrary, that knowledge which is misleading and the cause of delusions and falsehoods, that which is entrapping instead of liberating is called 'Avidya'. [In other words, Vidya leads to liberation of the soul from all delusions pertaining to this world ridden with falsehoods, while Avidya has the opposite effect as it creates delusions and is the cause of bondage.]

The supreme transcendental Brahm is that entity which is distinct from both these two—Vidya as well as Avidya. This Brahm is the authority that rules and controls both of them; it is Brahm that has created both the opposite characters in this creation (because it is necessary to create such a world in which one force counter-balances the other to maintain equilibrium and ensure that the wheel of creation continues to rotate) (1).

[Note--Brahm is a witness to both types of creation, one which is truthful and other that is marked by falsehood; one that is upright and auspicious while the other which is downright corrupt and inauspicious; one that has its sight fixed on the citadel of immortality located above the mundane existence, such as the pursuit of the eternal Truth and spiritual salvation, while the other contented and happy in remaining submerged in the muck of delusions and ignorance represented by the artificial and perishable world of material objects. It is like the case of a magnet which has both the North Pole as well as the South Pole—one attracting while the other repelling. If an object is to be designated with the title of a 'magnet' then it must exhibit these two opposing characteristics. Otherwise it can be called anything but a 'magnet'. Likewise, the supreme creator created this world of opposite characters in order to maintain a balance between two opposite poles, and also to ensure that the wheel of creation goes on rotating for eternity and regulating itself by the various forces of Nature till the time the creator himself decides to put a stop to it. Refer note of Canto 1, verse no. 9 also.

He watches the drama unfold like an Emperor who does not wish to interfere in the day to day running of the administration of his empire (creation) once he has laid down the constitution (the scriptures) and appointed authorities (the different Gods) to ensure the implementation of the edicts of this constitution and uphold its sanctity. But when things start going out of hand, the Emperor reserves the right to annul everything and rescind the authority that he has delegated to his subordinates, and redraw the constitution if deemed necessary. In the empire, there are both the good as well as the bad citizens; both are the subjects of the same Emperor, both get the same protection of the constitution. If a so-called 'bad' citizen feels that injustice is being meted out to him, he has all the rights to appeal to the Emperor, and a noble and benevolent Emperor is one who gives him a patient hearing and gives the 'bad' man

all the protections that he would have given to the ‘good’ man under the laws of the land. And if this ‘bad’ citizen sincerely regrets for his bad deeds and asks for mercy, the Emperor has all the powers to forgive him and give him the best of chance for atonement of his sins and also bless him with certain privilege to celebrate the occasion that he has another ‘good’ citizen in his empire!

This analogy also applies to Brahm at the cosmic level of creation. Once the above example is understood, it is easy to follow how Brahm behaves and what are his responses to this world which is symbolically like the Emperor’s vast empire having astounding diversities that are simply mind boggling.]

2. That supreme Lord has not only established but also framed the rules and regulations for the governance of this vast world of numerous types, classes, species and forms of life that exists in every nook and corner of this creation. He is the Supreme Being who had watched Kapil*, the first human sage, taking birth and then, like a loving and benevolent father, had empowered this sage with all the necessary wisdom and knowledge that would be required for the well being of the creation (here referring to the human race) that would proceed him (Kapil). [Naturally therefore, Brahm existed prior to Kapil representing the human race, and is therefore the Father of Kapil and the grandfather of all his off-springs, the human race. Further, just like a father teaches his son all the tricks of life so that he can live a happy life, Brahm taught Kapil all the laws of Nature that would govern life in this mortal world.] (2).

[Note—Even as a good lawyer learns all aspects of law and enlightens himself about how the same law, which is neutral and treats everyone equally, can be correctly interpreted to benefit the righteous people, and how this same law is used by criminals and unscrupulous elements who would spin it on its head to suit their nefarious designs. So, likewise, Brahm taught Kapil, and through him to mankind, all aspects of knowledge classified under two categories, Vidya and Avidya. He then left it to the discretion of the human race to decide for itself even as a wise father or teacher leaves it to his son or student to fend for himself when he grows up. Which father would want that his son become a mass murderer, or a teacher would like his student to use the knowledge so diligently taught to him over years to devise methods to maim and kill others on the battle field? But the naked truth of life is that it does happen, and the father and the teacher just watch helplessly. The only difference between this worldly father or teacher and the almighty cosmic Father and Teacher is that he wields the stick and can actually punish his ward.

When Kapil was given the basic laws of life, which can be compared to the Ten Commandments, he coded them in a set of principles named after him as Kapil’s Code.

*The revered sage Adi Sankaracharya has interpreted the birth of sage *Kapil* as the emergence of *Hiranyagarbha*, the cosmic subtle body of creation from which the cosmic gross body of creation, known as *Viraat Purush*, was born. The subtle body consists of the mind and the intellect, the instrument of the body that deals with knowledge and wisdom. The word ‘Kapil’ refers to the golden colour, which was the colour of the primordial egg *Hiranyagarbha* which derived its name precisely for this reason of its colour being golden. Since this verse deals with the imparting of knowledge to the first born, it refers either to the ‘first born in the invisible creation at the macro level’ meaning *Hiranyagarbha*, or the ‘first born in the visible creation at the micro level’ meaning *Kapil*. Besides this point, if we examine other places in this Upanishad, the same concept that Brahm had watched the first-born taking birth is stated in Canto 4, verse no. 12.]

3. While engaged in the process of creation of this world, the Supreme Being weaves innumerable varieties of Jaals¹ (nets, snares, traps or webs) having complex and most

intricate designs and textures using the uncountable types of threads². These Jaals in their entirety are collectively known as ‘creation’.

At the time comes for conclusion of this world (or when the maverick player wishes to wind up his joyful creative activity), he simply folds it back (and tucks it away).

Again, when the Supreme Being decides to replay the cycle of creation once again at the time of a fresh creation, he creates the different guardians of creation, called the different Prajaptatis³, to take care of this new generation⁴. (3).

[Note—¹Different scholars have interpreted this word *Jaal* in different ways. The revered sage Adi Sankaracharya says that it refers to the different species or classes of living beings that came into being at the time of creation, with each class or specie having uncountable sub-classes, divisions and sub-divisions etc. For example, the broad classes that came into beings were animals, insects, plants, humans, Gods etc., and each class has obvious uncountable number of sub-classes, divisions, families, genus, etc. which form separate bodies of scientific knowledge such as zoology, botany, astrology, etc. The creation is so astoundingly varied that no two members of the same family are exactly alike in all spheres; even twins may resemble each others in physical features but differ in habits and temperaments.

According to another scholar named Shankaranand, the word Jaal, which literally means a web or net, refers to the artificial world which keeps the creature trapped in its delusions and illusionary charms.

According to Narayantirtha, it refers to the fetters that tie the creature to his deeds and their consequences. There are no limits to the types of deeds that the man does, and hence there are also no limits to the types of consequences that he has to face. It is exactly like a web—once one gets trapped in it, it is hard to break free unless one makes diligent efforts for it.

According to Vigyanbhagwan, the body of the creature, in its numerous forms, is like the net that keeps the creature trapped in it. The creature forgets that the body is a net that has ensnared its soul much like the fish caught in the fisherman’s net, and the world and its illusive charms are like the bait that attracts the creature to get caught in this net. It is because the creature gets attracted towards this world of sense objects and sensual gratification through the medium of the body, and not the soul, and once hooked it finds it impossible to get free from the chain of events that are set in motion after that.

The term ‘Jaal’ meaning a web reminds one of a spider who creates its own thread from its mouth and weaves a web out of it. The insect then roams around this self-created web for as long as it wishes or even for the entire length of its life. Finally, it eats its own web and goes to another corner of the room to weave another net. Likewise, the creator created this world as a playground for himself, played around it as long as he wishes, and then winds it up to unfold it in a new way but almost in an identical fashion like the case of the spider cited here. The insects caught by the spider are killed by it for food, and this resembles the case of Kaal or death personified that feeds upon all the creatures that get trapped in this world.

²The *threads* used by the supreme creator are the various principal elements, attributes, qualities, virtues and other such essential principles which are called the Tattwas, Gunas and Kalaas. These threads were weaved by him in a complex structure called the ‘creation’ with its intricate and bewildering variety of textures and designs that baffles imagination and defies explanation. Briefly, Tattwas are said to number one to ninety four but according to Sankhya Sastra discussed in Canto 6, verse no. 13 and its note there are twenty five principal Tattwas, Gunas are primarily three in number—refer note to verse no. 5 of Canto 4, and Kalaas are sixteen—refer note to verse no. 14 of Canto 5.

³The *Prajapati* is the guardian of the world appointed by the supreme creator to take care of the mundane affairs of running the world. They have taken two forms—

one that of the *Gods*, and the other that of the *Manus*, the first humans. Refer also 4/11-13.

There are *twenty four Devtas or Gods*, and they are the following—Aagneya (Fire), Prajapati Brahma, Soma (Moon), Isha, Savitri, Aditya (Sun), Bhrihaspti, Varun, Bhag-dev, Aryamaa-ishwar, Ganesh, Twastaa, Pushaa, Indra, Vayu, Vamdeo, Maitraa-Varun Dev, Vishva-dev, Maatrikaa, Vishnu, Vasu-Dev, Rudra Dev, Kuber and Ashwini.

The *fourteen Manus* of mythology, who were the forefathers of the entire creation, are the following—(i)Swaayam or Swaayambhuva, (ii) Swaaroachisa, (iii) Aautami or Uttam, (iv) Taamas, (v) Raiwat, (vi) Chaakshush, (vii) Vaivaswat, (viii) Savarni, (ix) Daksha Savarni, (x) Brahm Savarni, (xi) Dharma Savarni, (xii) Rudra Savarni, (xiii) Dev Savarni or Ruchi/Raucha Savarni, and (xiv) Indra Savarni or Bhaum.

‘Vaivasvat or Vaivaswat Manu’ is the 7th Manu and the legendary progenitor of the current living beings on this earth. The word ‘Vaivaswat’ means coming from the Sun or belonging to the Sun, or relating to or belonging to Yam (the God of death and a judge of a creature’s deeds done by it during the life time). It also means the planet Saturn as well as one of the Rudras. In the present context of this text, Sri Ram means the Vaivaswat Manu who is the forefather of the human race in general and Sri Ram’s ancestor in particular because he belongs to the Solar race.

The word ‘Swayambhu’ refers to the primal man represented by the creator Brahma as well as the Viraat Purush who were both born from the Lord called Narayan who is deemed to be their father. Swayambhu was the male aspect of creation, and his female counter part was Mother Nature. The word means ‘someone who was born out of his own free will’. So, Viraat Purush and Brahma are generally regarded as Swayambhu, because both were born out of their own free will as a manifestation of Brahm. ‘Swayambhu Manu’ was the first male born on earth and from him the rest of the creation was born.

The word ‘Swayambhu’ also means ‘self existent’ and refers to Brahm, while ‘Swayambhu Manu’ is Brahma, the Prajapati or the Lord and sustainer of the subjects of this creation; he is a representative of the Male aspect of creation, the Viraat Purush, and is primal male par excellence; he is the divine father of the human race. The name ‘Manu Swayambhu’ is especially applied, in the context of the Purans of which Ramayan is a part, to fourteen successive mythical progenitors and sovereigns of the earth and who create and sustain this world through successive long period of time called ‘Kalpas’. The first such mythical progenitor is known as ‘Manu Swayambhu’ as the one who sprung (created or manifested) from the self-existent Brahm. He is regarded as a secondary creator who commenced his work of creating by producing 10 Prajapatis, of whom the first was ‘Light’ called Marichi. To this Manu is ascribed the celebrated code of conduct called ‘Manu Smriti’ and two other ancient Sutra work on Kalpa and Grihya, i.e. the sacrificial and domestic rituals. He is also known as Hiranyagarbh and Prachetas.

The other five Manus are called Swaroachish, Uttam, Taamas, Raivat and Chakshush. The 7th Manu is called Vaivasvata Manu the son of the Sun God, and he is regarded as the progenitor of the present race of living beings. He is like the Noah of the Old Testament of the Holy Bible, is said to have been preserved by Vishnu or Brahm in the form of the legendary great fish from being drowned in the great deluge of the dooms day. This Manu is also called as one of the twelve Adityas, the author of Rig Veda, VIII, 27-31, as the brother of Yam (the God of death and a judge of a creature’s deeds done by it during the life time), as the founder and first king of Ayodhya, and as the father of Ila who married the son of the Moon-God named Budha. This makes two great dynasties —the solar and the lunar races to which Sri Ram and Krishna respectively belonged —related to each other. The 8th Manu, or the 1st of the future Manus according to Vayu Puran, III, 2, will be Savarni, the 9th would be Daksha Savarni, the 10th would be Brahm Savarni, the 11th would be

Dharma Savarni the 12th would be Rudra Savarni, the 13th would be Raviya or Deva Savarni, and the 14th would be Bhautya or Indra Savarni. The life of one Manu is equivalent to roughly 311,040,000 years.

⁴This verse establishes that the creation follows a cyclic path of creation-annihilation-creation. It is like the atomic oscillation of crystal that keeps perfect time in an electronic clock. It is indicated, more vividly, in the constant cycle of day and night, or of birth and death which one witnesses all around in this world.]

4. Even as the single Sun shining in the sky is able to light-up every place, every nook and corner of the world simultaneously during the day time, this illuminated supreme Brahm also shines above, below and in every direction to illuminate this entire creation¹.

This supreme transcendental Brahm is as glorious and splendorous, and as potent to infuse life and then sustain, nourish and develop it on this earth as this celestial Sun² (4).

[Note—¹The word *illumination* here refers to the light of consciousness that characterizes life and the living world. Death in this context would be symbolised by darkness. So everywhere where there is life there would be this ‘consciousness’ with its divine light and splendorous radiance. This light of consciousness is like the light emanating from the body of the glow-worm or the glow radiating out from a red-hot piece of iron or gold. It simply effuses out from the whole being of creation; it literally drips from it like honey from the mature honeycomb. It encompasses and suffuses everything that lives and exists in this manifested world. Since Brahm is Consciousness personified, it follows that Brahm is universally present wherever there is life, and ‘light’ emanating from this Brahm is a metaphor for knowledge, wisdom, erudition and enlightenment. It should be noted that the word ‘enlightenment’ has ‘light’ as an integral part of it.

In all the major Upanishads, the celestial Sun is regarded as the metaphor for Brahm and is the latter’s most splendorous visible sign. The Sun is regarded as a visible personification of Brahm with all its glory and majesty. Its splendour and brilliance are appropriate citations to give an idea of how Brahm might look if ever one happens to see him.

²It is beyond doubt that life on this earth is sustained by the *Sun*. The Sun provides us with heat, light and energy; the Sun’s light is used by plants to generate food by the process of photosynthesis; and the world would freeze to death if there was no light and heat of the Sun which is proved by the fact that when the Sun was blocked for some months millions of years ago when a meteor hit the earth, all life forms that roamed on the surface of the earth at that time were extinguished. Science has established that it was the reason for the extinction of the Dinosaurs. In the present context it means that life exists only as long as there is ‘consciousness’ representing Brahm in this world. Shorn of Brahm this world would cease to exist.]

5. [This verse outlines the genesis of creation.]

That supreme Lord is the cause of coming into being of the entire creation, starting from the basic or fundamental five elements¹. He then determines the basic nature and character, the fundamental qualities, virtues and attributes of not only these elements but also of the produce which results from the conjunction of these elements in various permutations and combinations².

He assigns the Gunas (the inherent fundamental qualities present in all the creatures of this creation; the qualities that determine the character, nature and temperament of these creatures) with their designated functions vis-à-vis the world³.

Once the final product (the creation) is ready, the Supreme Being then regulates and rules over it as its supreme regulator and unquestioned Authority.

This supreme Lord is called Brahm (5).

[Note—¹The fundamental *five elements* of creation are usually regarded as the following—(a) sky/space, air/wind, fire/energy, water and earth. Other connotations are the following—(b) the *five sheaths*—‘Annamaye Kosh’ or the food sheath, ‘Pranmaye Kosh’ or the vital wind sheath, ‘Manomaye Kosh’ or the mental sheath, ‘Vigyanmaye Kosh’ or the intellect sheath, and ‘Anandmaye Kosh’ or the bliss sheath; and (c) the *five vital winds*—Pran, Apaana, Vyan, Samaan and Udaan.

These are the basic subtle forms in which the living world came into being. What is visibly seen externally basically consist of these five elements. That is, the five elements listed under (a) were the basic bricks of this creation. They were used in different ratios to create the body of the creature consisting of the five sheaths mentioned in (b). And finally, this body is controlled by vital winds outlined in (c).

²In other words, the supreme creator moulds this creation out of these elements and gives it myriads of forms; he crafts such an astonishing variety of creation just from these limited raw materials and then delineates them into millions of species and numerous groups that have no resemblance with their other brethrens or even their own siblings. And therein lie his astounding abilities and stupendous creative powers.

³There are three basic *Gunās* or qualities that determine the nature and inclination of each individual creature of this creation. Briefly, they are:--(a) ‘Sata’ or noble qualities leading to higher values in life. This quality creates an inherent affinity in a creature towards things in life which are of high moral value and uplifting for the soul rather than things which are demoting and denigrating for the spirit. (b) Raja or mediocre qualities that are run-of-the-mill qualities that dominate the majority of worldly creatures. In other words, those creatures who have this quality as a dominant trait are more inclined towards the world as compared to those creatures who have the Sata quality in a greater density. Such qualities give worldly fame and prosperity. (c) Tama which is the meanest of the three qualities leading to the propensity to commit sins. This quality creates an inherent affinity in a creature towards things which are very mean and lowly, which are totally sensual and pertain to the immediate gratification of the sense urges without any thought to what would be their consequences in the long run. In brief, behaviour which is utterly immoral, denigrating and depraving for the creature, marked by grossness, crassness and recklessness of demeanors. It is the lowest and meanest of the three qualities leading to a person’s downfall, ignominy and ruin.

Since each individual is like an independent piece of mosaic that completes the entire picture in conjunction with other such pieces, this individual creature’s nature and character helps to determine the overall shape of the creation. These Gunas keep the creation in a state of constant change, because numerous creatures die every moment and new ones are born. The Supreme Being has to be constantly on the alert because of this flux.

‘Brahm is the cause of creation’—this universal truth has been repeatedly said in this Upanishad and it forms the basis of the Sankhya philosophy of creation given in Canto 6, verse no. 1-3 and 16, as well as at number other places, for example 4/12, 14.]

6. That divine Supreme Being known as Brahm is the quintessential target of all the preaching and research undertaken by the eclectic Upanishads which expound upon and elucidate the secret essence and sublime message of the holy Vedas. Brahma the creator knows about that Supreme Being who has been lauded and worshipped by the Vedas¹. [This is because the Vedas have been created or pronounced by Brahma the creator, and therefore it is natural that he knew what he was saying about.]

Those ancient sages and seers as well as divine Gods who knew this Supreme Being or Brahm—i.e. who were self-realised and consequentially Brahm-realised—

indeed became one like him and attained the supreme stature of beatitude and felicity (6).

[Note—¹Refer 4/9 and 6/18 of this Upanishad.]

7. That creature (living being) who inherently possesses the different Gunas or qualities (of Sata, Raja and Tama) in different combinations (which determine its basic nature, temperament and inclinations), who does different deeds with the aim and hope of obtaining some sort of reward from them, and then either enjoys the consequences of those deeds or suffers from them, who assumes numerous roles, displays various temperaments and characteristics, and shows unpredictable spectrum of moods, and who is the Lord of the five Prans (the vital winds—Pran or breath, Apaana, Vyan, Samaana and Udaana) that live in its body and are like its subjects (subordinates)—this creature roams around in this world characterised by three Gunas (Sata, Raja and Tama—which determine the nature of the world) on three types of paths in accordance with the deeds done by it¹ (70).

[Note—¹(1) The *three paths* upon which the creature goes according to the deeds done by it are the following—the path that goes to the heaven where the Gods live, the path that leads to the world of Spirits, and the path which leads to the world of mortal creatures on this earth. These have been elaborately described in Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 36, 5/10-5/11, 6/1/1-6, 6/2/2, 14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahmin Upanishad, Canto 1; Taittiriyo-pahishad, Valli 2, Anuvak 6; and Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3 it.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1.

(2) The other interpretation of this phrase is that the *three paths* are the following—the path of 'Dharma' marked by auspiciousness, virtuousness and righteousness, the path of 'Adharma' marked by inauspiciousness, sins, perversions and guilt, and the path of 'Gyan' or the path dominated by truthful knowledge, wisdom, erudition and enlightenment.

(3) The *three paths* are also the following--(i) Karma Yoga, (ii) Gyan Yoga, and (iii) Bhakti Yoga.

(i) The 'Karma Yoga' expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get 'involved or attached' to those deeds or action in as much as we shouldn't be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one's offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person's subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

(ii) The 'Gyan Yoga' involves the intellect and mind to determine and delineate the true and the false; it helps to access and understand the reality and falsehood behind the manifested visible world which appears to be 'real' but is actually like a 'shadow of the truth'. This Gyan Yoga helps to establish the mind firmly into seeing unity in diversity. Those following Gyan Yoga are called 'seers' because they can 'see' beyond the visible, multifarious and bewildering variety of this false world. Gyan Yoga is in the realm of the intellect and discriminating mind of a creature.

(iii) The 'Bhakti Yoga' refers to having devotion for a chosen Godhead who is a person's ideal, on whom he showers all his adoration, and on whom he focuses his

attention. He is emotionally and sentimentally involved with his deity. Hence, the heart is the realm of Bhakti Yoga; it helps to commune with the divine.]

8. There is another subtle and sublime form of the Supreme Being (Brahm) that has been perceived or conceived as having the width of a thumb¹.

It is as glorious, radiant, brilliant and splendorous as the Sun. [Refer full Canto 2, and Canto 3, verse no. 8 as well as verse no. 4 of this Canto.]

Further, this manifest form of Brahm also exhibits certain gross traits and characteristics that distinguish it from the more divine and sublime form usually referred to as the Supreme Being. [Therefore, the form referred to here is the individual living creature having a gross body in which Brahm lives as its pure conscious Atma.]

Some of these traits are having Ahankaar (a sense of pride, ego, haughtiness and arrogance of its exalted status), and the tendency to make different Sankalps (vows and promises; volitions, determinations and aspirations). [Obviously, these two are characteristic features of all living beings who have a gross body. Every creature has these two traits in it to a lesser or greater degree.]

This manifest gross form of Brahm (i.e. the living being or the creature) displays all the characteristic features so typical of the mind and body. [That is, the living being shows all the specialties and attributes that characterize anything which would have a body with all its sense organs and their attendant problems. It sees with its eyes, it hears with its ears, it smells with its nose, it tastes with its tongue, and it feels with its skin. Not only this, it picks up and accepts with its hand, it moves and goes to places with its legs, it eats with its mouth, it excretes with its excretory organs, and it enjoys with its genitals. The body gets old and dies, and also suffers from illnesses and other torments. Similarly, it thinks, it understands, it analyses, it remembers, and it responds to external world with the aid of its subtle body consisting of the mind and intellect. These two—the gross body and the subtle body—are the two pillars that support the redoubt of Brahm residing as the Atma in the heart of the creature.]

This Brahm (in the form of the microscopic Atma) is smaller than the sharp point of the saw (used to cut wood). And it appears to be different from the Supreme Being of creation. [That is, the living creature—though being a true image of Brahm in its manifested form because of two reasons, one is that the Viraat Purush had revealed himself in the form of the creature at the time of creation, and second it has been repeatedly stressed that Brahm resides in the creature as its Atma—is distinctly separate and distinct from Brahm. This happens because the Atma gets covered by a veil of delusions and ignorance once it assumes a body, losing sight of its exalted heritage and lineage. It begins to erroneously identify itself with the gross body and the perishable world in which it lives. One small error of perception on its part has a deep cascading effect and plummets the Atma into the chasm of deep ignorance-based delusions from where it finds difficult to rise up again. The Upanishad's main thrust is to help it to rise up to its exalted stature once again.] (8).

[Note--¹This is the Brahm manifested as the pure conscious Atma of the individual creature living inside the subtle sky or space of the heart, called the 'Hridaya Akash'. Refer Canto 3, verse no. 13, as well as in Katho-panishad, 2/1/12-13.]

9. The size and dimension of the Jiva (literally and generally referring to the living creature, but here implying to the 'true identity' of the creature as its pure consciousness known as the Atma and not the gross body which might be as colossus

as the mammoth or an elephant, and as minute as the one-cell organisms as the bacteria and amoeba) is astonishingly miniscule and microscopic beyond imagination. It is as small as the fraction that remains after the tip of a hair follicle is split into one hundred parts and then one part of this (i.e. the one hundredth part) is further split into another hundred parts. [That is, the Atma is the size of one thousandth part of the tip of a hair follicle. The idea is not to actually measure its physical dimensions but to drive home the point that it is unimaginably minute like the atom.]

The miracle is that this single minute atomic entity expands itself into infinite variety of creatures, having as many variations in forms, shapes, sizes and colours as well as temperaments, inclinations, behavioural patterns and nature as there are number of species, classes and divisions of creation in this world (9).

10. This pure conscious Atma is neutral and without any gender or attributes. It is, in its pure and basic form, neither a male, nor a female or a eunuch. It assumes the character and attributes of the body in which it resides (10).

11. [Verse nos. 11-12 explain why the Atma takes birth as a creature and then gets entangled in this world.]

Just like the general health and well being as well as the development and growth of the physical body of the creature is dependent upon the nourishment it gets from food and water (drink), the future health and well being of the Atma also depends upon the various 'Sankalps'¹, 'Sparsh'², 'Darshan'³ and 'Moha'⁴ that it is subjected to and which affect it (if at all the Atma comes under their influence). This leads the Atma to take so many births and so many bodies according to the deeds done by it in any previous or current life⁵ (11).

[Note—¹The word *Sankalp* refers to the various volitions, determinations, vows, promises, aspirations and resolutions that a creature makes. Since the Atma is the true identity of the creature and its pure consciousness that actually makes any decision, it is the Atma that is accused of making any Sankalp when it said that the creature has done it. This is like the scenario when all things done in an Emperor's empire are done in his name though it is impossible practically for him to know each and every deed done in his empire that is being done in his name. But that does not absolve the Emperor of the consequences of those deeds—he might get ignominy or fame for the deeds done by his ministers and citizens though he might not be a party, directly or indirectly, in them. It is his designation of an Emperor that makes him responsible for each and every decision in his empire. Likewise, the Atma is responsible for each and every deed done by the creature.

²The word *Sparsh* literally means 'touch'. Here the word refers to the awareness by the Atma of the presence of the different sense objects of the external material world with the help of the various sense organs of perception in the body. It is through such perceptions, which are like 'touching' or 'coming into contact' with the outside world, that the Atma receives inputs from the external world and gets hooked to it. The Atma 'gets to feel' and 'gets the hang' of what this world is like and about.

³The word *Darshan* literally means 'sight'. Here the word refers to the next step in observing this world when the Atma, once having become aware of the existence of such and such object through the sense organs, now gets attracted to that object. It then 'sees' it through the instrument of its mind and intellect; the Atma then seeks the advice of its ministers, the intellect and the mind, to learn about the importance of this object. In other words, the Atma accepts these inputs as being useful for it, and having some value or worth which is worthy of acceptance, when advised by the mind-intellect complex.

This 'seeing' is not physical seeing but a metaphor for focusing the faculties of the mind and intellect towards the objects of the material world which the organs of perception have first located and have passed this information to the mind, which in turn has turned over this vital piece of information to the intellect to determine its worth. The mind-intellect duo, in consultation with each other, thought that this information would please their supreme Commander, the Atma which is like an Emperor, to whom they pass on the file. The Atma, which is guided by this input of the mind and intellect, then sees something attractive in what is presented to it, and as is its wont, it wishes to learn more about it. This is because the Atma wishes to see how its own maverick play is unfolding in the wider world outside the physical body in which it is currently trapped. It has already been established that this Atma is also the one which has revealed itself in the form of the vast world not limited to the individual body of the single creature about whom one is referring to in this verse. This is because the Atma is Brahm personified, and the same Atma that resides in the heart of one creature also lives in the wider world outside this single individual creature. Refer verse no. 9 above for instance. Thus, this 'seeing' is the third step before the ultimate stepping-down of the Atma from its exalted state of neutrality and dispassion to one of becoming involved and engrossed in the world of falsehoods which revolves around the various deeds done by the creature in the world.

⁴The word *Moha* literally means attractions and infatuations, to get emotional and attached to anything, as well as ignorance of the truth and its accompanying delusions. Once the Atma is misled to believe that the objects of the material world are true and really charming, and that they can bestow long lasting happiness and joy to the creature. The Atma representing the living being falls for the bait and gets hooked to the world. This is because the Atma has a natural affinity to get attracted to anything which is true, which is eternal, and which is a provider of happiness and joy.

In fact, as we have seen here, the real culprits who have led to the entanglement of the creature in this world are the mind-intellect complex, called the subtle body, along with the body and its organs, called the gross body of the creature. Since the Atma lives inside this body, it is bound to be affected by the nature of these two entities. This is one single reason why the Upanishads repeatedly and unequivocally stress on the necessity of having strict restraint over the body and mind for spiritual aspirants.

⁵It is an established principle that the creature reaps the fruits of the deeds done by it much like the saying 'one reaps what one sows'. If the creature does good deeds, it gets good and auspicious fruits or rewards, and if the deeds are sinful then the results would also be equally sinful and horrifying. Since the Atma is the true identity of the creature, it follows that it is the Atma that is deemed to be the one who actually does the deed and then has to suffer or enjoy the consequences of these deeds. It has to take a new birth because the rewards or punishments of deeds done in this life cannot always be fully nullified in a limited time frame because the body is perishable and dies sooner than expected. Katho-panishad is the one which is fully dedicated to this theme of 'what happens to the Atma after death'. It is chapter no. 1 of this volume. Other places where the question 'what happens to the Atma after death' is answered are, inter alia, Brihad Aranyak Upanishad, 3/1/3, 3/2/11-12, 3/9/28, 4/3/12, 36, 5/10-5/11, 6/1/1-6, 6/2/2,14-16, etc.; Chandogya Upanishad, Canto 5, Section 3-10; Kaushitaki Brahmin Upanishad, Canto 1; Taittiriyo-pahishad, Valli 2, Anuvak 6; and Katho-panishad, Canto 1, Valli 1, verse no. 20, and the whole of Canto 1, Valli 2 right up to Canto 2, Valli 3 of it.

What happens to ignorant people after death is explained in Brihad Aranyak 4/4/1.

The *three great Truths* to be remembered at the time of *death* have been precisely enunciated in Chandogya Upanishad, 3/17/6. They are—(1) You are eternal and imperishable; (2) You cannot be demoted, degenerate, become fallen and digressed;

and (3) You are basically most sublime, subtle, atomic and a microcosmic image of the vast and macrocosmic supreme Brahm.

The metaphor of the *tree* has been brilliantly employed to explain ‘what happens after’ death in Brihad Aranyak 3/9/28, and in Chandogya 6/11/1-3.

The important point worth noting here is that the involvement of the Atma with this world has resulted in its getting sucked in this vortex of deeds and the necessity of suffering from them. But if the Atma does not get involved in doing deeds, then obviously the need to suffer from consequences of deeds do not arise. This is essentially what the Upanishads mean by ‘liberation and deliverance’ of the soul or Atma or the creature. And the only means to do it is, again obviously, the knowledge of what constitutes ‘true freedom for the soul’ from the artificial world of delusions and snares that can cunningly trap the innocent creature in its web/net of falsehoods is called Gyan. Fundamentally again it lays stress on keeping the Atma detached from getting involved in any deed done by the body, and instead remain firmly grouted in the ‘truth’ of the Self which is pure consciousness, uncorrupt, enlightened, splendourous, glorious, holy, divine and eclectic. With this enlightened outlook, the creature does not create any hurdle in the path of lifting its Atma to the citadel of exalted existence and pure divinity.]

12. The creature assumes many types of bodies—such as the grossest forms and the subtlest forms¹—in various future births depending upon the good or bad deeds done by it in the present body. This sequence is repeated in the new birth (i.e. in the second birth) when the creature gets involved in doing a fresh round of deeds which creates the background for some other form of birth (i.e. the third birth) which might be completely different from the present body in the second life². And so goes on the wheel of creation and destruction! (12).

[Note—¹The gross form of bodies that the Atma assumes in the new birth are, say for example, those of animals and insects or still lower creatures like the insects and worms. The subtle form of bodies refer to the higher level of existence in this creation, say for example, the Gods, the semi-Gods, the Gandharvas, the Kinnars, the Spirits, and even the Humans who are noble and righteous in their demeanors and outlook as compared to vice-ridden sinful and pervert people who are no better than worms in society.

These terms are just indicators of what happens to the Atma if it at all allows its pure self to get corrupted by the corrupting influences of the world.

²This happens because the creature may have taken birth in a high class because of his past good deeds, but unfortunately allows himself to be surrounded by bad company, in which case he would start doing even those deeds and things which are forbidden for him by the virtue of his high-class birth. Naturally therefore, his third birth would bear the brunt of his misdeeds done now in his second birth, but the irony is that he would not remember why he has been suffering so much in his third life. This is why we blame ‘the God’ when misfortune befalls us. Frankly, how many people ‘thank God’ for the good deeds done by them; how many people sincerely feel and say ‘well, I do not deserve the credit for this noble deed and please do not shower lavish praise upon me because it is the supreme Lord who has done it, and not me’. No. Rather, we like to bask in the sunshine of glory, and pass on the buck to God when things go awry.

It is to be noted here that verse nos. 1-3 of the next Canto 6 describes how the creation came into being according to Sankhya Shastra, and it should be read in conjunction with these three verses here, viz. 10 to 12.]

13. When the seeker realises that one universal supreme transcendental Being (known as Brahm) uniformly pervades in the entire gross creation, he is freed from being shackled by all forms of fetters (representing ignorance and delusions)¹. This Supreme

Being is eternal, without an end or beginning, is the creator and regulator of the entire creation, multifaceted and multifarious, and the only entity that permeates throughout the creation uniformly but secretly (13).

[Note—¹When the creature realises that the Supreme Being is universally present everywhere it means that he has also realised the fact that Brahm is present in his own bosom, in his own heart and in his own body as much as in the bosom or body of the other creature. This is a true understanding of the words ‘universal, uniform, omnipresent, all-pervading, all-permeating, all-inclusive, all-encompassing and all-incorporating’ etc. Nothing escapes it; nothing is outside it; nothing is without it. So, all causes of dichotomy and duality are removed in one stroke.]

14. This divine and eclectic Authority of creation known as the supreme transcendental Brahm is attained or accessed only by a pure and uncorrupt heart as well as an equally pure and untainted mind and intellect. It has no physical body like an ordinary creature which can be corrupted or tainted, or which has any attributes and delineations, or which has any kind of dimension which can be measured. It is the cause of coming into being as well as winding up of this creation.

This supreme Authority known as Brahm is honoured by the epithet of ‘Shiva’ (which means ‘beautiful, truthful, divine, holy, auspicious, enlightened and eternal’). It is this Authority that has created the different ‘Kalaas’¹ that determine the various hues of characters and nature of this varied and colourful creation.

A wise, erudite and enlightened self-realised creature who becomes acquainted with this supreme eclectic Divinity is freed from the fetters of the body and becomes liberated (i.e. such a creature finds true emancipation and salvation for his soul) (14).

[Note—¹The word *Kalaa* has many connotations. It means—(a) shape, form, contours of a thing; (b) special qualities, art, craft, skills, expertise, attributes etc. that one possesses; (c) a division, portion, fraction, phase or degree; (d) any kind of discharge; (e) brilliance, magnificence and grandeur; (f) fraud, deceit, pretensions and trick; (g) maverick and supernatural powers. It also refers to—(h) the sixteenth part of the moon’s diameter/disc, or one of the various phases of the moon; (i) the twelfth part of the sun’s diameter/disc; (j) the division of time equivalent to about eight seconds; (k) one degree out of the three hundred and sixty degrees. So when this term ‘Kalaa’ is applied to that supreme Truth, also known as the supreme Brahm, it implies that it is so grand, so majestic, so magnificent, so stupendous that it transcends the definitions or parameters set by this particular word. That Truth or Brahm is beyond their reach and dimension; these various connotations of the word cannot either be applied to that Truth or Brahm nor can they define it in its entirety in any way.

(1) The sixteen so-called *Kalaas* of a man are his different attributes, strengths, qualities and virtues. Since a man is an exact replica of the ‘Viraat Purush’, who in turn is a subtle manifestation of the sublime Brahm, these sixteen qualities or attributes of a man refer to the sixteen qualities of Brahm himself. These qualities or attributes are the following—(i) Shraddha (faith, believe, conviction, reverence, respect, devotion), (ii) Pran (life; the very essence of creation; the vibrations of life; the rhythm and essential functions pertaining to life), (iii) Akash (the all-pervading, all-encompassing sky or space element), (iv) Vayu (wind, air element), (v) Tej (energy, splendour, radiance, glory, might, majesty and fire element), (vi) Apaha (water element which is the all-important ingredient for life), (vii) ‘Prithivi’ (earth element which is the base or foundation for all mortal creation), (viii) Indriya (the organs of the body, both the organs of perception as well as of action), (ix) Mana (mind and heart and their stupendous potentials), (x) Anna (food, the element without which life is simply not imaginable because it provides it with the basic nourishment and energy), (xi) Virya (semen, sperms, standing for courage, valour, potency, vitality

and prowess), (xii) Tapa (austerity and penance, forbearance and tolerance of hardships, carrying out strict religious vows) (xiii) Mantra (the ability to give good advice, the power to contemplate and think, concentrate and focus, logically arrive at a conclusion), (xiv) Karma (taking actions and doing deeds), (xv) Loka (worldly interactions and behaviours), and (xvi) Naam (good name, fame, reputation, honour and glory).

In simple terms it means that a person's total composite personality, his characteristic attributes and individuality, his vitality and stamina, his prowess, powers and strength, his drive and vigour et al can be divided into sixteen parts.]

Canto 6

[This Canto carries forward the discussion of Canto 5 and elaborately espouses the cause of Brahm-realisation through the philosophy of *Sankhya Shastra* as well as *Sankhya Yoga*. An elaborate note has been added to verse no. 13 to explain this concept.]

1. [Verse nos. 1-3 describe the grand cycle of this creation called *Brahm-Chakra* or the wheel of creation. This wheel has been elaborately described in Canto 1, verse no. 4 and 6 as well of this Upanishad.]

Some wise men regard the 'Swabhaav', or the inherent and basic nature and temperament of a creature as the reason for it falling into the seemingly endless cycle of birth (and death) called the 'Brahm-Chakra' or the cycle of creation set in motion by the supreme Brahm. Others regard 'Kaal', or time, age, period and circumstance as the reason. But such people are wide off the mark; none of these are the reasons for the turning of the wheel of creation (though they are contributory factors and themselves created by some supernatural Authority in order to keep the wheel in motion).

Actually, it is the magnificent potentials and divine abilities, the supernatural powers and overriding authority of the supreme Lord (Brahm) that does it (rotates this awesome and vast wheel of creation), and it is a measure of this Lord's stupendous majesty, his astounding greatness and splendorous glory (that the wheel goes on rotating on its own until the Lord himself decides to stop it) (1).

2. He who pervades uniformly throughout this whole creation, surrounding it from all the sides, he who is an embodiment of Gyan (knowledge and wisdom, erudition and enlightenment), he who is the authority that even rules over Kaal (time, age, period and circumstance), he who possesses all the qualities and virtues present in this creation, and who is all-knowing and omniscient—verily, this Brahm-Chakra is turning under his command and authority, following the laws and principles laid down by him.

Even the symbolic wheel consisting of the five fundamental elements of creation, viz. sky, air, fire, water and earth, which are the basic building blocks of life, is also in his hands. (One should be convinced of this eternal irrefutable truth.) (2).

[Note—Refer to Canto 1, verse nos. 4 and 6 that describe the Brahm Chakra in detail. There is another interpretation of the word *Chakra*. The word 'Chakra' refers to the subtle energy centers present inside the body. According to Yoga texts, when the vital dynamic energy trapped in these Chakras are activated, a person acquires immense potentials, including spiritual and mystical powers. In brief, the Chakras and their

location and shape are the following— (i) ‘Bhug’ or ‘Brahm Chakra’ is triangular in shape and represents the female genital organ; (ii) The ‘Mool Kanda’ (literally the edible root, tuber root, e.g. radish) is present near the anus, has the shape of a lotus with 4-petals. It is also called ‘Kaam’ because it is the seat of passion and lust; (iii) The ‘Mooladhar Chakra’ is located between genitals and anus; (iv) The ‘Swadhisthan Chakra’ is located in the groins of males and the Bhug area of females. It has a 5-headed male phallus like a sprouting seed and its counterpart in the female is the clitoris; The Chakras 1-4 are related to the sexual reproduction cycle marking the creation of the world. Hence are called ‘Kaam’ (lust, passion, desire), and are associated with the fire element; (v) The ‘Kundalini’ is located between the navel and Swadhisthan Chakra in the upper part of the Moolkand, and it is coil shaped having three and a half loops. Its one end blocks the entrance to the Sushumna nerve (Naadi) rising from the base of the spine and going right up to the head. Therefore, we conclude that Kundalini lies dormant at the base of the spine; (vi) The ‘Manipur Chakra’ is located in the navel area, is shaped like a gem and is surrounded by the network of Naadis (nerves) called solar plexus. It is also the site of the Sun energy; (vii) The ‘Anahat Chakra’ is located in the chest between the heart and lung area and it is shaped like a swan looking downwards. It is also assumed to be like a 8-petal lotus facing down; (viii) The ‘Vishuddha Chakra/Kanth Chakra’ is located in the throat. To the left of it passes the Eda nerve representing the moon, to its right goes the Pingla nerve representing the sun, and in the center is the Sushumna nerve through which the Kundalini energy rises up from the base of the spine to the skull; (ix) The ‘Talu Chakra’ also called Rajdant. It is the route to the 10th door of Brahm. It is located in the palate (back of the mouth); (x) The ‘Agya Charka or Bhru Chakra’ is located between the eyebrows and root of the nose. It is also called the third eye of enlightenment and wisdom; (xi) The ‘Brahm Rahandra Chakra or Sahasraar Charka’ is located in the forehead and has the form of a grey cloud or smoke. ‘Brahm Randhra’ has two connotations— (a) it means ‘an opening of fistula’, (b) the hair-like spilt in the top of the skull from where the vital wind called ‘Pran’ makes its exit from the body of a Yogi (ascetic) at the time of his death. For the purpose of Vedanta, the latter is regarded as the ‘Brahm Randhra’ while for practices of meditation in the initial stages when the ‘Apan Vayu’ is required to be diverted from the lower intestine into the ‘Kundalini’, the former definition of ‘Brahm Randhra’ is referred to; (xii) The ‘Vyom Chakra’ is symbolic of the sky and it is shaped like a 10-petal lotus located at the top of the head.]

3. That supreme creator (Brahm) did the ‘deed’ of creating this Brahm-Chakra and then set it in motion. He watched it move, and then created a circumstance whereby the subtle conjoined the gross to result in the unfolding of this vast world. [That is why this world consists of two types of attributes or qualities—one which come under the category of subtle, and the other that come under the category of gross.]

In other words, the supreme creator first revealed his own characteristic ‘Self’ in the form of the pure consciousness called the cosmic Atma which was very subtle. Then he went on progressively making it grosser and grosser by slow degrees, in a step-by-step method. Thus he created the many elements. Then he mixed them in various permutations and combinations to produce newer, more varied, and extremely fascinating array of products which become heavier by degrees and then finally resulted in the structure which we call ‘creation’ and which is still evolving.

Therefore, it all started from one element (Avidya—lack of truthfulness, substance and pith in what is being created, as all the creation that was created as a result of this endeavour of the creator was a mirage and not the reality), and this was followed by a chain reaction, progressively producing two elements (Dharma—righteousness, probity and propriety + Adharma—the opposite of Dharma), three

elements (the three basic qualities of Sata—the high moral quality of spiritualism + Raja—the mediocre quality of worldly passions etc. + Tama—the meanest quality of sinfulness), four elements (Prakriti—nature + Mana—mind + Buddhi—intellect + and Ahankar—pride and vanity), five elements (the five Prans which are the vital winds—Pran, Apaana, Vyan, Samaan and Udaan; it also refers to the five sense perceptions—sight, hearing, smell, taste and feeling), six elements (the five perceptions + Mana or mind, because it is the mind that brings effectively coordinates these five perceptions), seven elements (five perceptions + Mana or mind + Buddhi or intelligence), and eight elements (the five basic elements—sky, air, fire, water and earth + Mana or mind + Buddhi or intellect + Ahankar or pride and vanity).

The supreme creator mixed his own divine and eclectic qualities with the gross characteristics of Kaal (time, age, period and circumstance) and the subtle qualities of the inner self (such as having compassion, mercy, benevolence and magnanimity as well as desires, wishes, aspirations, hopes and expectations) to create this world. [That is why this world exhibits these basic characters because they all have been incorporated in its structure by the creator.]

The entire gross creation came into being out of this concoction.

Since this wheel came into being as a result of some deed done by this supreme creator, it was also called the 'Karma Chakra'¹. The creator, having thus created this wheel out of the subtlest of elements and the grossest of elements, watched fascinatingly as it rotated (3).

[Note—¹The cycle of deeds, their consequences, and newer deeds and their fresh consequences is called the *Karma Chakra* or the 'Wheel of Deeds'. This cycle is referred to as a 'wheel' because it rotates around the central axle consisting of the notion of 'deed' done by the creature, and therefore this wheel has its existence only till the time the creature 'does the deeds'. As soon as the creature stops doing any deed, the wheel is dismantled because the axle breaks. But this ideal scenario is always not possible as a creature has to do one or the other deed when he lives in this world, and he cannot escape the consequences of these deeds done by him, which in turn make him do other deeds as a follow up action, and these new deeds set in motion their own set of consequences, and so the wheel goes on rotating on and on. In other words, the creature gets shackled to the wheel of deeds just like the bull or the ox that turns the water-wheel for its master throughout its life but cannot get done with it. The bull or ox dies turning the water-wheel but even after its death the wheel goes on turning, albeit some other unfortunate animal is yoked to it.

Now, the question is 'how to stop this Wheel of Deeds even while living in this world'? The answer lies in the truthful knowledge of the self, which is the Atma, and the fact that it is the true self of the creature and that it is very distinct and independent from the body which is the entity that actually and physically does the deed. Once this delineation becomes obvious—and this is only possible by studying the Upanishads and intelligently understanding their fundamental tenets and doctrines in the correct perspective—the creature endeavours to distance himself from the deeds done by the body. This attitude removes the *basic cause of all the problems*, and leads to the breaking of the vicious cycle known as Karma Chakra, thereby setting the creature free from his bondage.

There is another option which is described in the next verse no. 4.]

4. Those wise persons who do all the necessary deeds as ordained by fate for them, though these deeds would entail their coming into contact with all types of Gunas (attributes and qualities)¹, but do them dispassionately and in a detached manner, offering them and their consequences to the supreme Lord², then these deeds do not leave any muck of consequences sticking to such persons.

As a result, such persons (who do deeds and then offer the consequences, the rewards of the deeds, whether good or bad, to the Lord) are able to gradually exhaust all the pending burden of consequences of deeds done in their past lives which they have been born with as their heritage and a carry forward baggage from their previous life, and which are impelling and forcing them to do what they are doing under the forces of Nature in the present life³. At the same time, they do not create any fresh burden for themselves because of the fact that they transfer the credit to their Lord⁴.

The final result is that the creature is able to break free from the vicious circle of deeds and the necessity of suffering their consequences whether in the present life or in the next life. Thus attaining an exalted state of existence which is above the mundane and gross, the creature is able to attain that divine Being who is the essential and Absolute Truth in creation⁵ (4).

[Note—¹While living in this world in which all the three types of qualities—the best, the worst and the medium—exist intricately mingled with one another, the creature does deeds in this environment with no freedom to select only the best ones, and so he is often forced to do all sorts of deeds even against his wishes. But it also happens that there is a choice for him, but the bad ones are so enticing and lucrative that he just cannot resist himself. For example, earning money is not at all bad, but who would like to sweat it out if easy grub is available round the street corner by deceit, trick, thugry and fraud, or even by use of threat, coercion and force, even if that means harming the other innocent person. This greed for enjoying the goodies of this world stops once the enlightened person transfers all the benefits of deeds to his Master who is watching him all the time. In the first place, the fear of the omnipresent Lord would pre-empt all involvements in evil deeds. But still one would like to enjoy his hard earned benefits. Here he must realise that these good results would themselves set off a chain of events that would commit him to doing more deeds, and thus he would have to take a new birth in order to enjoy these good rewards. The only way out is to not having any desire whatsoever to enjoy anything—no matter how high, good, noble and exhilarating that desire or enjoyment is.

²The wisened creature is one who does the deed in the spirit of his duty as ordained by the supreme Lord, and as a service to the latter. This is what is meant here. It is like a laborer working for his master in the fields—the former can't claim the produce, and therefore is unconcerned if the crop is sold at a loss or at a profit, or whether it is ruined by vagaries of Nature or decays in the barn. He sleeps peacefully at the end of the day's toil, while the land owner remains awake worrying over so many contingencies. In our present case, the creature, once having passed over the results of the deeds to his Lord, sleeps peacefully leaving the worrying to the supreme Lord who is accustomed to such things because he deals with such a vast universe and its as vast problems that an individual creature's burden of deeds are not even like the weight of the hair on his side.

³This law of Nature states basically that every deed has a result and it cannot be ignored or wished away sweetly, and that each result, whether good or bad, must be borne by the doer and by no body else.

The creature has brought with him some sort of baggage representing the consequences of the deeds done by him in his past life which he could not set off then. These shape the basic nature, inclinations and temperament of the creature in this present life; they decide his mental setup and how he would react to given circumstances. Since the creature cannot sit idle in a world marked by constant movement, he has to do deeds. But when wisdom and enlightenment dawns upon his intellectual horizon and he realises the affect of getting involved in doing deeds, this wisened creature withdraws himself from all involvement in deeds. But since this 'total non-involvement' is not practically feasible or possible, the Upanishads show him the way—and that is to do the deeds but offer the result to the Lord. Anything that has been 'offered to the deity' does not any more belong to the person who

makes the offering, and it also acquires a holy connotation. So, even seemingly bad deeds become holy and divine. The concept of why a creature is born in different births with different types of bodies each time has been beautifully explained elsewhere also, such as in Brihad Aranyak Upanishad, 2/1/18 of the Shukla Yajur Veda tradition.

There is another spin to this concept. When one knows that what he does do not belong to him, he becomes totally detached and dispassionate towards it. This is the basic idea in this marvelous verse. Once renunciation takes root, the tree of emancipation and salvation is bound to bloom by and by. Since deeds are done on a constant basis, and since one is required to offer each and every consequence to the Lord, it follows that the creature remembers the Lord at all times of his wakeful life. This constant remembrance of the divine Lord is in its self a form of worship because the creature would not then think of the world.

⁴This Lord is so magnanimous and obliging that he accepts whatever is offered to him by his devotee, and so he readily accepts the consequences of deeds done by him. We can draw another parallel here. When anything is offered to the fire, the latter reduces it to ashes. That is why the fire sacrifice is regarded as the best form of purification for the creature's taints and blemishes that he has accumulated over many births, willingly or unwillingly. When he does the fire sacrifice with proper understanding of its metaphysical and spiritual import, significance and importance it is obvious that the creature's soul would be privileged to regain its primary shine which had become dulled, tarnished and tainted over time. That is also why the fire is regarded as a manifestation of Brahm as the latter is the most powerful dynamic force in creation as pure and unadulterated Consciousness. Incidentally, what we call 'voice of conscience' is indeed this Brahm speaking to the creature about what is auspicious and righteous and what is not. But as it happens in practice, the deluded creature has become so deaf in the din created by the noisy and cacophonous world that he rarely hears this voice.

In this context, the offerings that are made to the fire sacrifice are symbolic of sacrificing all the worldly attachments, attractions, infatuations, lust, greed and involvements by the performer of the fire sacrifice. But does it happen in practice? Definitely no, for once the sacrifice is done the creature returns to his old rotten ways. But surely if he does them with the correct attitude then it is certain that all his bondages and fetters would be broken or reduced to ashes.

⁵The realisation of the truth as outlined here is tantamount to becoming a witness to the presence of the supreme Lord, because 'truth' is only one and not two. This Supreme Being has revealed himself as the pure conscious Atma residing in the bosom of the creature. Realising of the 'truth' is like realising of the 'pure self' or Brahm.]

5. That Supreme Being is the most ancient and primary one in existence; he is the Principal of creation. [That is, he is the great-great grandfather of creation.] He is deemed to be the one who had brought about an alliance and established a connection between two units (i.e. between Prakriti or Nature, and Atma or consciousness) which is the primary cause of coming into being everything that exists in this creation¹. This Supreme Being transcends the three periods of time (the past, the present and the future). He is beyond the definition and purview of the sixteen Kalaas that mark the nature of all life in this creation. [The concept of the term 'Kalaa' has been explained in note to verse no. 14 of Canto 5 above. See also verse no. 19 of this present Canto 6 below.]

One should revere, show due respect, adore, admire and honorably worship that Supreme Being who is secretly ensconced in the redoubt of the inner self of all the living beings. This Lord is present in every form in which this creation exists. He

has indeed revealed himself as the creation itself (i.e. this creation is nothing but a visible manifestation of the normally invisible and un-manifest supreme Brahm) (5).

[Note--¹That is, the supreme Brahm connected the Atma, which is pure consciousness, with Nature or Prakriti, which stands for the inherent subtle qualities that evolved as one of the primary elements that came into being at the very beginning of creation, determining the numerous subtle tendencies, temperaments, inclinations and habits of all the creatures that would eventually evolve in this creation. This union between the cosmic Atma and cosmic Nature created the produce called the Jiva, the living being or creature that had both the 'consciousness' as well as the 'nature' as part of its genes which formed its integral and inseparable constituent part. In this configuration, the conscious Atma represented the supreme Father, the Brahm, while the nature of the creature represented Prakriti, the cosmic Nature which played the role of the mother. The offspring inherited the characteristics of both the parents—one the one hand, it had all the virtuous qualities of the Atma inherent in him, and on the other hand his external features, his outwardly behaviour, his natural inclinations and habits, his basic temperaments and usual affinities were determined by the characteristic features which came down to him from the mother, i.e. from Prakriti or Nature. Thus, the combined effect of the two resulted in the composite personality of the creature.

Left alone, the Atma (pure conscious Self) would have remained satisfied with itself as is its wont. But when it came in touch with Prakriti (Nature), it was shadowed with myriad of desires, wants, aspiration, hopes, volitions, yearnings etc. leading to greed, rapacity, expectations, frustrations, depressions, hopes, and other types of surges of emotions and sentiments that flooded the Atma and swept it off its feet as the latter (the Atma) allowed its pure self to be influenced by the former (Prakriti).]

6. That Supreme Being is the one from whom this entire spectrum of 'Prapanch' (delusions, illusive charms, ignorance and falsehoods) pertaining to this artificial world has come into being. He is so grand and majestic, so vast and infinite, so magnificent and stupendous, so indefinable and without any attributes that he cannot be compared to this vast world which is compared to a huge and colossus tree, or to the wheel of time called Kaal (Kaal Chakra) and the wheel of deeds called Karma (Karma Chakra)¹. Indeed, the Supreme Being is distinct from all of them and transcends their limitations and definitions.

That Lord expounds, espouses and spreads the holy message of Dharma (i.e. the message of righteousness, auspiciousness, probity, propriety and nobility); he holds aloft the banner of Dharma and upholds it inviolable sanctity.

The Lord vanquishes and destroys sins and all other things that represent evil and vices. He is the Lord of all good virtues and auspicious qualities that firmly establish his glorious fame and divine name through the length and breadth of creation.

When the wise and enlightened seeker realises that this Supreme Being—who is the basis and foundation of the entire creation, who is the 'creator' and sustainer of this world, providing it with succour, shelter and protection, and who is an eternal fountain of Amrit or the ambrosia of eternal beatitude and felicity—resides in his own bosom (i.e. in his inner self in his heart), it is then that he attains or obtains access to that eternal Lord and all the divine benefits that attend such realisation. [In other words, a self-realised man is deemed to be Brahm-realised because Brahm resides in his own heart. Self-realisation leads to the opening of the flood-gates of eternal bliss, happiness and joy because it gives access to the pitcher of Amrit stored there in the form of the Atma.] (6).

[Note—¹The concept of *Kaal Chakra* and *Karma Chakra* have been described in verse nos. 1-4 above. Since the supreme Brahman is responsible for these two symbolic wheels to rotate, they are named after him as *Brahm-Chakra* which is a metaphor for the huge wheel representing this colossus world.]

7. [A self-realised man who is also deemed to be Brahman-realised proclaims thus--] 'Verily, we know and are well acquainted with that Supreme Being who is known as 'Maheshwar' because not only is he the Lord of all 'Aishwaryas' in this world (i.e. who is the Lord of all good, noble, righteous, divine, holy, eclectic and auspicious virtues, qualities and characteristics that bestow glory, name and fame to all the living beings in this creation), but also of all the great Gods (representing the patron deities who control all these Aishwaryas) at the cosmic level of creation.

He is the great, most exalted and senior most 'Pati' (literally a husband, but in the wider perspective meaning the Lord or Master or Chief or Guardian) in this creation.

He transcends even that which is beyond comprehension, and he is very mysterious, esoteric and indefinable¹. He is the supreme Lord of the entire known creation as well as that which is unknown.

Indeed, this Supreme Being is the Lord who deserves to be praised and honoured, adored and admired, revered and worshipped² (7).

[Note--¹That is, even if it was ever possible to understand something that is beyond the scope of the mind and intellect to decipher and comprehend in a coherent and cogent manner, it would still be impossible to decode the mysteries of this enigmatic and esoteric Supreme Being. He is so mystical and mysterious that the mind's comprehension powers cannot reach him, and even if it does manage to touch its periphery it would just not get any further. An analogy of the Sun can be cited here. It is impossible to go near the Sun, but supposing for a moment, in an absolutely hypothetical manner, that one were able to reach its outer burning sphere of fire, it is unimaginable to seek entrance into its cauldron of fire. And supposing that even this was theoretically possible, who would escape alive, unscathed and un-scorched from its core?

²The Lord is to be worshipped not out of some overriding fear of some awe-inspiring and terror-instilling Emperor whose slightest displeasure can harm anyone, but out of deep reverence and gratitude to honour that Lord for his exalted status as much as for the fact that in spite of his such a high stature he chose to stay such close to us, in our own hearts, that we can have easy access to him whenever and wherever we need him!]

8. That Supreme Being has no forms and attributes, i.e. he has no physical body having a shape and different organs. There is no one like him or greater than him (because he is 'supreme').

His seminal powers, potentials and authority are magnificent, majestic, supernatural and transcendental. They have revealed themselves, inter alia, as the power and potentials of knowledge, wisdom, erudition, sagacity, expertise, skill and scholarship, as well as other forms of subtle strengths that a creature possesses, such as physical strength, mental strength, emotional strength, spiritual strength, moral strength, strength and authority wielded by the virtue of being able to influence others, possession of worldly material wealth and prosperity, a good reputation, fame and name, various creative skills such as oratory, artistry and authorship, and so many other glorious virtues that give immense glory and bestow great honour and high respect to the creature (8).

9. There is no one who is the Lord of that Supreme Being; there is no Authority that can rule over that Supreme Being. [This is because the Supreme Being is 'supreme' in the true sense of the word in as much as that he is the ultimate Lord and Authority of all that exists in this whole creation and there is no one to supersede him.]

He has no gender, i.e. he cannot be categorised as a male, a female or a neutral gender (either a hermaphrodite or a eunuch).

He is the cause of everything that, and everyone who, exists in this multifarious creation. He is the Lord of the creature (as his Atma and Pran) who has given shelter to the various organs¹. [Refer 3/17.]

This Supreme Being has no creator (as he is eternal, unborn, infinite and imperishable), nor is there any overriding and superseding Lord over him (as he is supreme and beyond the apex of the metaphoric triangle consisting of this world). He is indeed the supreme Authority who rules over the entire creation, being its only supreme controller and regulator, its only arbiter and adjudicator. [Canto 3 of this Upanishad describes this all-inclusive form and nature of Brahm. There are innumerable verses in this Upanishad in this connection, for example verse no. 17 below which expressly states this thing. This concept has also been reiterated in Canto 3, verse no. 14 which clearly stated that the supreme Brahm surrounds this creation from all the sides like a moat surrounding a fort, or a wall of the fort surrounding the city, and lives even beyond this periphery at a symbolic distance of ten fingers from it.] (9).

[Note--¹The living being has a body which has eleven organs—five organs of perception, e.g. eyes, ears, nose, tongue and skin, and five organs of action, e.g. legs, hands, mouth, excretory and genitals. The eleventh organ is the mind-intellect complex. It is the combined effort of all of them that enables the Atma living inside this body to manage its affairs in this world. This Atma is the 'Lord' of this body, because the latter serves the former.

This Atma, which is pure consciousness living inside the body, is even the Lord of the Pran, which is the vital sign of life present inside the otherwise lifeless and inane body in the form of the vital winds. This is because the vital winds can remain active only as long as there is consciousness in the body; they can carry out their assigned functions in a body that is conscious and alive, but they cannot keep the body alive on their own account. The only factor that can keep the gross body 'alive' is the conscious Atma and nothing else. That is why even those who practice Pranayam, a meditation exercise whereby the practitioner can withhold air, or breath, for extended periods, cannot be termed as 'dead', for all other functions of the body, the most evident being the beating of the heart continues unabated. This profound truth has been explained in Brihad Aranyak Upanishad, in its Canto 2, Brahmin 1, verse no. 20.

When the Atma leaves the body along with the Pran, i.e. when the creature dies, the various organs have no function and no use, rendering them worthless and useless. That is why as soon as a man dies, we dispose of his body either by cremating or burying.]

10. Even as a spider allows itself to be surrounded by the web created by its own self and remains entangled in it for life, that Supreme Being, who is basically neutral and detached from everything, first created a desire to do something and then allowed himself to get entangled and be involved in the web of delusions (called Maya) created by him. Let this divine Being bless us so that we become one with and inseparable from the eternal, imperishable and unequivocal Truth represented by the supreme Brahm (10).

[Note—When Brahm decided to start the process of creation, he had to *do something*, because anything is achieved by some or the other sort of action. Remaining neutral and inactive does not start anything. So, the very first step in achieving success in any endeavour is to start ‘thinking’ how to do it in a planned manner, and then ‘making efforts’ to implement this thought into action.

Brahm is primarily neutral and indifferent, not doing anything because he need not do anything as he does not need anything for his own self or his own survival because he is self-contained and self-fulfilled. But this attitude wouldn’t set the ball of creation rolling, so he ‘did’ something, albeit most subtly, silently, secretly and imperceptibly, such as for example the very basic notion of ‘thinking’ that he must ‘do something’, and ‘wandering’ how to go about the process of creation from virtually nothing. It was a daunting thought because there was no precedent to guide him.

Once this first step was taken by Brahm, i.e. once he ‘thought that he must do something’, it got him entangled in the web. How? Since there was nothing as a raw material to start with, he had to first create an ‘imaginary’ source material for this world, and this first ‘illusion’ or ‘deception’ or ‘artificiality of imagination’ that he created is called Maya. The chain reaction was thus started, and even before Brahm realised what was transpiring, he found himself in a make-belief world of fantasy called the ‘Universe or Cosmos’ of which this mortal world in which we live is just a small speck of dust on its vast and endless shore.

It must be remembered that this entire game of creation is based on *imagination* (Maya) and is therefore illusionary and hollow like a miracle created by an expert magician, and the former is as illusive as the latter. It shows how the entire creation is just an imagination of the mind of a creature who symbolically represents Brahm at the micro level of creation—a fact so often emphasised by the Upanishads.

Once Brahm—which incidentally is said to be a personification of wisdom, erudition and enlightenment—realises that he has had enough of it and now it is time to wind up the game, he does not have to create some huge catastrophe to clean the slate, but needs only to stop his ‘mind’ in getting involved in this self-created theatre. This scenario applies to the individual creature as well because the creature is an image of Brahm at the micro level of creation.

Who can wind up the miraculous world of illusions on stage which has kept the magician’s audience spellbound? Obviously, the magician himself. Similarly, it is Brahm himself who can free his own self from his own web of self-created delusions, and not anyone else! This applies to the individual creature as well.]

11. That single supreme divine Being is established in all the living beings (as their true ‘self’ called the pure consciousness without which no creature can be called a ‘living being’). He is all-pervading, all-encompassing, all-incorporating and omnipresent. He is the inner self called the Atma (pure conscious ‘self’) of all living creatures. He is the Lord who presides over all the deeds done by each individual creature. [That is, nothing is hidden from the Supreme Being who decides how the individual should be rewarded or punished for his deeds. He also inspires the creature towards doing deeds because he himself had done it at the beginning of creation—see verse no. 10. He controls the deeds through the mind-intellect complex as well as the organs of the body.]

He is subtly and imperceptibly enshrined in the inner chambers of the creature’s self (i.e. in the heart), is a witness to all (and that is why it is impossible to cheat one’s own self and one’s own consciousness), is pure and wholesome consciousness, is most immaculate and pristine pure, and is without any (physical and gross) attributes and qualities (11).

12. That Supreme Being is the independent and unquestioned Lord of all. [That is, Brahm is like an Emperor who has no one over his own head.]

He is such an expert, skillful and maverick creator that he can transform one single seed which appears to be lifeless, inert and inactive from the outside into a multifaceted creation of myriad hues and shades¹.

Those wise and enlightened ones who observe (witness and experience) the presence of this Supreme Being inside their own self (as their Atma) become blessed and experience perpetual state of blessedness marked by bliss and happiness. They feel fulfilled. This divine and sublime feeling is not experienced by anyone else (who has not realised his true 'self' and the fact that Brahm is not outside somewhere in the upper or lower heaven in some abstract corner of the unreachable sky high above the clouds, but in his own heart) (12).

[Note—¹The *seed* of any tree appears to be lifeless, with no visible signs of life in it. Even if the seed is examined under a microscope, no living element is observed in it. It can be peeled layer after layer, but it won't yell and jump with pain, nor would it bleed and shed tears. Besides this, all the seeds basically have one standard shape, viz. they are rounded and egg-like. But the world it creates is a multi-coloured, multi-dimensional, multi-faceted canvas of astounding variations and possibilities of more variations.

In brief, the miracle is that this innocuous looking pebble-like structure known as the humble 'seed' can generate a huge tree full of colours and vibrant with life in all its splendorous best. There would be chirping birds on its branches, there would be so many insects finding shelter in it, it would produce colourful leaves, beautiful flowers and succulent fruits, and to top it all, new seeds. This extraordinary and wonderful event has been cited in Chandogya Upanishad, 6/12 of Sam Veda tradition when Shwetketu's wise father explained to him who Brahm was.

The revered sage Adi Sankracharya has regarded this 'seed' to mean the conscious Atma subtly present inside the bosom of the creature. He says in his commentary on this Upanishad that the Atma does not do anything because it is a neutral observer to all the deeds done by the body and its organ, which explains the observation that the 'seed is inactive and inert'. The Atma is also without any fixed attributes like its parent Brahm.]

13. That Supreme Being is the most divine, the most exalted and the highest eclectic entity amongst those eternal, imperishable and truthful entities, such as the Great Gods of creation, that are themselves divine, exalted and eclectic.

He is the most conscious Being amongst all the conscious entities, such as the living creatures of this creation.

He is the supreme adjudicating Authority who decides on the rewards and honours or punishments to be given to all the creatures according to the deeds done by them.

He is the primary cause of all that exists in this creation, and this Supreme Being can be known by a coordinated effort involving a dual approach, i.e. by simultaneous use of the philosophy of Sankhya (i.e. the path of knowledge and research based on the philosophy expounded and espoused by the scriptures, such as the Vedas and the Upanishad, and first preached by sage Kapil) and the philosophy of Yoga (meditation and contemplation)¹.

A wise, erudite and learned seeker who knows these eclectic and subtle facts about the Supreme Being is freed from all the fetters (representing delusions, ignorance and misconceptions) that shackle him (to this artificial and delusory world as well as the gross and perishable body) (13).

[Note--¹(a) Sankhya Philosophy or *Sankhya Shastra* –This is one of the six great schools of Indian philosophy. It was first propounded by sage Kapil as ‘Shankhya Sutras’. [Refer Bhagwata 3/25-33, and Canto 5-6 of Shwetashwatar Upanishad of the Krishna Yajur Veda tradition.]

Sage *Kapil* was the celebrated sage who is regarded as the fifth incarnation of Lord Vishnu (Bhagawata, 1/3; 3/24). He is compared to Lord Krishna in Bhagawata (10/26). He was the brother-in-law of sage Vashistha, being the brother of his wife Arundhati, and the only son of sage Kardama and his wife Dev-huti. He taught even his mother spiritual wisdom in Bhagawata, and hence this part of this scripture is called ‘Kapil Gita’ in which the sage has expounded upon the philosophies of Sankhya Shastra, Ashtanga Yoga (the eight-fold path of Yoga) and Bhakti-yoga (the path of devotion for and submission to the Lord) (3/25-33).

Sage Kapil is however renowned for one of the six schools of Indian philosophies known as Sankhya Shastra.

The word *Shastra* means any body of knowledge which has been deeply researched and then systematically codified and made useful in a meaningful way.

The word *Sankhya*, according to some scholars, refers to the ‘number’ or ‘numeral’ that it refers to, because it says that there are twenty five elements or ‘Tattwas’ in creation. However, there are some others who assert that it refers to ‘Gyan’ or acquisition of truthful knowledge of the reality behind the façade of illusions. It stresses on Gyan or truthful knowledge as the only path leading to liberation and deliverance of the soul from this world, and its attaining final emancipation and salvation riding on the boat of knowledge.

Therefore, the combined word *Sankhya Shastra* refers to the philosophy that endeavours to unravel the great secrets of creation based on sound knowledge and rational logic. It has six chapters and contains five hundred twenty six Sutras or keys or codes that unlock the profound treasure of knowledge pertaining to who the creature actually is, how has he come to be what he is at present, and how he can be freed from this vicious cycle of birth and death. Only when one understands the beginning can he understand the end, because this so-called ‘beginning’ has its origin in the previous ‘end’. That is, only after something ends and carries forward certain baggage with it does a new beginning can start. After all, this is based on the fundamental tenet of Nature that ‘nothing can start from nothing; there must be something from which anything starts’. That is why we say that there cannot be smoke without a fire.

Now, if one goes back to the ‘very beginning of creation’ when there wasn’t any prior life from which any new life could be born on the principles of ‘deeds and their consequences’, i.e. the theory that when a creature does any deed in this life then he would have to take a new birth to suffer the consequences of these deeds because they cannot be wished away, the question arises ‘what started this creation then?’ The Sankhya Shastra endeavours to answer precisely this question in a very logical and systematic manner.

This secret was revealed, according to the of the Krishna Yajur Veda tradition’s Shwetashwatar Upanishad, 5/2, to sage and seer Kapil who was the first person to whom the esoteric secrets of creation were unraveled by the Supreme Being (Brahm) himself. In fact, the whole of Cantos 5 and 6 of this Upanishad are dedicated to this philosophy of Sankhya Shastra. Sankhya Shastra has been referred to in other Upanishads of the Krishna Yajur Veda, e.g. in Pran Agnihotra Upanishad, verse no. 1, and in Varaaha Upanishad, verse no. 55.

It was propagated by Kapil’s disciple Aasuri, and then by the latter’s disciple Pancha-shikaa.

This philosophy accepts only three basic yardsticks or valid sources of knowledge—viz. ‘Pratakshya’ or direct perception or cognition of anything such as directly seeing a thing for one’s self, ‘Anumaan’ or implied knowledge or deduction of anything entails inference of something based on some other first hand knowledge,

and 'Shabda' or the word affirming this knowledge which is like a testimony of some witness or any dependable source.

So this philosophy adopts the approach of reaching the unknown from what is known. It has reduced all that can be experienced in this world to two fundamental units of creation—the Purush (the Supreme Being; Brahm; cosmic Self) and Prakriti (Nature; the invisible matrix of all forms of natures and temperaments that characterize this creation). The basic argument of this philosophy is that 'nothing can be produced from nothing'. In other words, if the creation has come into being, then there must be something that pre-dates this present creation. If this creation is the effect of some past deed, then obviously there must have some occasion when certain deed was done which resulted in the present. It states that 'Karya (the result) pre-existed (had a truthful existence) in the Kaaran (the cause of the result)'. Suppose we have an earthen lamp. This lamp, made of clay or mud, was inherently present in the un-moulded lump of clay or mud before it was shaped. Had it not been so, the clay or mud could not have been moulded into the shape of the lamp.

When this argument is applied to the experience of the world, one observes that there are three basic qualities exhibited by all things—one that gives pleasure and happiness, the other which is just the opposite, and the third which does not effect us at all, i.e. we remain neutral to it. Sankhya philosophy states that there are three 'Gunas' or basic virtues and qualities in creation which determine these three responses as well as the characters of things which evince these responses. These three Gunas are Sata which produce positive responses of happiness and bliss, Raja which create negative response of pain and sufferings, and Tama which generates neither.

In more physical terms, Sata Guna means pure and holy, and it is conducive to knowledge marked by these characteristics. The Raja Guna produces desires and ambitions which create restlessness in their wake. Tama Guna is meanest of them all, for it creates a tendency for resistance and inactivity. A man having the Tama Guna in excess would not do anything himself and neither would he allow others to do their duties.

It should be noted here that there is a situation when all these three Gunas can theatrically exist in perfect balance—this situation is the ideal situation and is synonymous with Prakriti at the cosmic level. This Prakriti, therefore, becomes perfectly 'neutral' and self centered; it is the perfect example of grossness because it remains in a state of perpetual coma or paralysis because of this balance. It is when this perfect balance is disturbed that it starts stretching and yawning like a man waking up from a deep slumber.

An example would illustrate. An electrolyte works when there is a difference of potential between the two electrodes—i.e. the cathode and the anode. A neutral solution having the same electrodes dipped in it would not perform the function of electrolysis.

On the other hand, the Purush is the cosmic Consciousness or the Atma or cosmic Soul.

The *evolution of the creation* starts when a union is established between this Purush and Prakriti. There arises a question here. Purush is neutral and absolutely unattached to anything, while Prakriti is gross and lifeless. How is their cooperation possible? Well this is illustrated by the example of physically handicapped intelligent man who has lost the leg and cannot walk and a blind man who cannot see but can walk. The blind can carry the lame on his back, and under the latter's guidance, can reach the destination.

The process of evolution of creation from this primary Nature or Prakriti is as follows—As the result of the three Gunas mixing with themselves, the first offspring was 'Mahat' or Buddhi (the cosmic intellect).

From the Raja Guna part of this Buddhi emerged Ahankar (cosmic pride and vanity, ego and the notion of individualism and selfish arrogance).

From the Sata Guna part of this Buddhi emerged Mana (the cosmic mind), the five organs of perceptions (eye, ear, nose, tongue and skin), the five organs of actions (hand, leg, mouth, excretory and genital).

From the Tama Guna part of Buddhi emerged the five Tanmatras (the five perceptions of sight, hearing, smell, taste and feeling) and from these further developed the five Bhuts or elements (such as the sky, air, fire, water and earth).

Thus, there would be twenty three such elements + Prakriti + Purush = *twenty five components of creation* in all.

There is another way at looking at this philosophy. It describes the origin of the cosmos from Brahm who created the macrocosmic first Male called Purush and his female counterpart, the Prakriti (Mother Nature), who are the basic cause of this vast and myriad creation. The individual male and female human beings are the microcosmic forms of that macrocosmic Purush and Prakriti. It is their union which resulted in this cosmos. Their offspring were—Buddhi (intelligence, wisdom, mind), Ahankar (pride, ego), the mind-heart complex called the ‘Mana’, the five perceptions (of smell, hearing, touch, taste and sight) forming the subtle body of the creature, the five elements (space, wind, fire, water, earth), the ten sense organs (five organs of perception—ear, nose, tongue, eye and skin, and five organs of action—hand, leg, mouth, anus and genitals), which together formed the gross body of the creature, the invisible Atma (pure consciousness) and Prakriti (nature of the individual creature). These are the twenty five basic constituents of creation.

So, according to Sankhya Shastra, there are *twenty-five fundamental Elements or Tattvas* as follows—one Avyakta (the un-manifest entity known as Prakriti or cosmic Nature) + one Buddhi (intellect, wisdom, discrimination) + one Ahankar (the inherent ego and pride that is integral to all the creatures) + five Tanmatras (senses—sight, hearing, smell, touch and taste) + eleven organs (five organs of perception—eye, ear, nose, skin and tongue respectively + five organs of action—hand, leg, mouth, excretory and genital) + one Purush (the macrocosmic Consciousness; the cosmic Self or Atma or Soul; the Male aspect of creation; the Viraat Purush who is all-pervading, all-encompassing, omnipresent, eternal, infinite, un-manifest and almighty Lord of creation; the macrocosmic gross body of creation).

There is another version as to what constitutes the twenty-five Tattvas. They are the following—Purush (the primal cosmic Male; the Viraat Purush), Prakriti (primal Nature), Mahtattva (the powerful Buddhi or intellect), Ahankar (ego, pride), the five organs of perception (i.e. the eye, nose, ear, tongue and skin), the five organs of action (i.e. the hand, leg, mouth, excretory and genitals), the Mana (mind), the five perceptions (such as the spoken word or speech, sight, smell, touch and taste), the five Bhuts (i.e. the five primary elements, the earth, water, fire, air and space or sky) = 25.

It further postulates that Brahm created Nature (cosmos) because it allowed itself to be covered or mired by the three Gunas—‘Sata’ meaning righteousness and virtuousness which are the best and noblest of qualities, ‘Raja’ meaning worldly passions and desires which are the medium or mediocre qualities leading to worldly desires, and ‘Tama’ meaning evils, sins and other mean mentalities leading to perversions and vices. The Purush, though he remains aloof, still gets shackled or attached to Prakriti, the creation, because of these three Gunas which act as ropes or strings that tie him down. This fact has been very stated in Shwetashwatar Upanishad, 5/10-12 and 6/10.

Breaking one’s habits is tantamount to liberation and deliverance from this bondage, and it is called Mukti. The three Gunas are the causes of the myriad temperaments, natures, thought patterns and behaviours of all the creatures, because they have all these three qualities or virtues in them, though they vary in ratio or proportion. These three Gunas are also present in Mother Nature, giving rise to a populace which is so varied and diametrically opposite to each other, even virtually getting at each other’s throat, because of the infinite possibilities created by their

mixing in different proportions to mould the innate nature, inclinations and temperaments of a creature.

This school of philosophy says that there are five elementary 'Bhuts' in this creation—they are the earth, water, fire, wind and space which, in different permutations and combinations, form all the creatures who have a gross body. A creature, it says, has eleven organs— five organs of perception (ears, nose, eyes, tongue and skin), five organs of action (hands, legs, mouth, anus and genitals) and one organ called the Mana (mind and heart).

According to Mahopanishad, 1/4 – 6 of Sam Veda tradition, these twenty-five elements or Tattwas are the following—five organs of perception (ear, nose, tongue, eye, skin) + five organs of action (hand, leg, mouth, genitals, excretory) + one Mana (mind) + one Ahankar (ego, pride, arrogance) + one Pran (the vital life-giving breath; the essential vibrations of life; the rhythm and essential functions pertaining to life) + one Atma (soul) + one Buddhi (intelligence, wisdom, discrimination) + five Perceptions (sight, smell, hearing, taste, touch) + five Bhuts (earth, water, fire, air, space) = twenty-five elements. (b) *Sankhya Yoga*—This philosophy is a combination of Sankhya philosophy and Yoga philosophy. In Shwetashwatar Upanishad 6/13 it states that the Supreme Being can be known by the means of 'Sankhya Yoga', i.e. by an intelligent fusion of 'Sankhya' and 'Yoga'.

The second chapter of Bhagvata Gita is also called Sankhya Yoga. Now, let us analyse this word. It has two parts—viz. 'Sankhya' meaning learning and knowledge, and 'Yoga' meaning a union, a conjunction, a fusion. Elsewhere, e.g. 5/5, this word has been used to signify 'Gyan' and 'Karma' or a conjunction of knowledge and the philosophy of doing deed. The 'Pran Agnihotra Upanishad', 1, uses this word to mean 'intense thinking, deep contemplation or deep insight'. It is also, therefore, synonymous with 'Gyan Yoga' or the great concentration and diligent divergence of all energies of the creature to acquire truthful knowledge of the Truth and Reality behind what is apparent but not the whole truth, and what is not apparent at all.

These two paths are not separate, independent and distinct from one another. They are like the two legs by which one walks. The word Yoga also means to bring about a union between two entities, to create a synergy between the mundane and the spiritual. Here it refers to the union between the Atma and the Brahm, or the coordination of various elements of the creature's body so that congenial atmosphere conducive to spiritual upliftment and enlightenment is created for the realisation of the true nature of the 'self', which would mean realisation of the presence of Brahm inside the very own self of the seeker. To bring this about, deep concentration of mind is needed along with the focusing of all the energies of the body in one single pursuit; this is meditation and contemplation.

The word *Sankhya Yoga* therefore means a combination of both the eclectic values of Sankhya philosophy and that of Yoga. Hence, that which brings about a fusion or union between the known and the unknown, that which establishes a coordination between the creature's individual world and the cosmic world of the pure consciousness, that which brings the Atma, the pure 'self' of the creature close to the supreme 'Self' of the cosmos, that which links and ultimately brings about a merger of the single unit with its parent body, and that which helps in the creature's final liberation from the vicious cycle of birth and death, is called Sankhya Yoga.

Now the question arise how is this brought about? The answer is in the following the manifold path of Yoga besides acquisition of knowledge as expounded and espoused in the Upanishads. Yoga has basically two connotations—viz. (1) meditation and contemplation which aim in harnessing all the energy and potentials at the disposal of the creature and diverting them and concentrating them on one single goal chosen by the practitioner of Yoga; and (b) following other methods of achieving this aim as laid down in the scriptures dealing with Yoga.

These are the four paths of (i) Gyan Yoga, (ii) Bhakti Yoga, (iii) Karma Yoga and (iv) Raj Yoga.

(i) *Gyan Yoga* involves the intellect and mind to determine and delineate the true and the false; it helps to access and understand the reality and falsehood behind the manifested visible world which appears to be ‘real’ but is actually like a ‘shadow of the truth’. This Gyan Yoga helps to establish the mind firmly into seeing unity in diversity. Those following Gyan Yoga are called ‘seers’ because they can ‘see’ beyond the visible, multifarious and bewildering variety of this false world. Gyan Yoga is in the realm of the intellect and discriminating mind of a creature.

(ii) *Bhakti Yoga* refers to having devotion for a chosen Godhead who is a person’s ideal, on whom he showers all his adoration, and on whom he focuses his attention. He is emotionally and sentimentally involved with his deity. Hence, the heart is the realm of Bhakti Yoga; it helps to commune with the divine.

(iii) *Karma Yoga* expounds on the importance of doing deeds and taking actions, but with a different attitude. It stresses that we must not get ‘involved or attached’ to those deeds or action in as much as we shouldn’t be bothered about the rewards or punishments incumbent on such deeds or actions. We must do them dispassionately and with detachment. The action or deed should be treated as one’s offering to the God as well as an offering to the sacred fire sacrifice. This will ensure that the actions or deeds are not unrighteousness, corrupt or evil. On the contrary, whatever is done in which a person’s subtle sub-conscious says is not the correct thing to do will be deemed to be unrighteous, unethical and unlawful, and therefore cannot be an offering to either the God or the sacred fire sacrifice.

(iv) *Raj Yoga* is the psycho-spiritual practice of exercise and breath control; it involves the various steps involved in meditation and contemplation, as is generally understood by the term Yoga. This Yoga lays emphasis on physical training of the body and the mind, and is the subject matter of numerous Upanishads dealing with such exercises (e.g. Yog Chudamani of Sam Veda). It deals with such subjects as Pranayam, purification and activation of Naadis, kindling of Chakras (subtle energy centers in the body) etc.

These *four types of Yogas* are not mutually exclusive; they coalesce and overlap with each other and their main aim is to help the aspirant seeker in his pursuit of ‘self-realisation’.

There is another platform of Yoga as propounded by the greatest exponent of this philosophy, i.e. sage Patanjali. According to him, Yoga consists of *eight-fold path*. These are briefly the following—(1) ‘Yam’ or self restraint; (2) ‘Niyam’ or observance of certain sacrosanct rules; (3) ‘Asana’ or postures for meditation; (4) ‘Pranayam’ or breath control exercises for purification of the body and mind; (5) ‘Pratyahar’ or withdrawal of the mind and its control; (6) ‘Dhaarna’ or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (7) ‘Dhyana’ or contemplation and concentration of the faculties of the mind and intellect; and (8) ‘Samadhi’ or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation. These eight-fold path of Yoga have been listed in Varaaha Upanishad, canto 5, verse no. 12—12 ½ of the Krishana Yajur Veda tradition.

The Mandal Brahmin Upanishad of the Shukla Yajur Veda tradition describes these terms in detail in its Brahmin (canto) 1, section 1, verse nos. 3-10.]

14. That supreme Brahm is not illuminated by the light of the sun or the moon or the stars. Even the fire has no reach there. In fact, it is just the reverse—i.e. that Brahm is the one who lights the sun and the other entities of the creation. The entire creation is illuminated by Brahm’s light (much like the light of the lamp illuminates the surroundings) (14).

15. There resides, in an imperceptible and invisible form, a symbolic divine Swan¹ in this world, making it its eternal abode, much like the fire element being imperceptibly

but undeniably present in water. When a spiritual seeker understands this fact and comes to be acquainted with this supreme Divinity known as Brahm residing in his own heart as the eclectic ‘true self’ regarded as a Swan, it is only then that he attains final emancipation and salvation. [This state of enlightenment is called self-realisation which paves the way to Brahm-realisation.] There is no other way (15).

[Note—¹The *Swan* referred to here is the supreme Brahm who resides as the pure conscious Atma hidden latently in the heart of the living creature much like the latent presence of fire in water. There are many instances in the Upanishads where the ‘true self’ or the Atma of a creature is compared to a Swan. An entire Upanishad called Hansa Upanishad belonging to the Shukla Yajur Veda tradition is dedicated to this theme. (It is Chapter 4 of volume 3 in this series of Upanishads).

At the beginning of creation there was only water everywhere. The earth coagulated and rose to the surface much like butter rises to the surface of milk when it is churned. The energy generated by the severe Tapa done by Brahm manifested as the latent ‘fire’ that heated this earth and kept it inherently warm. This prevented the earth from freezing cold as it resembled a huge iceberg floating on the surface of the cosmic ocean. (Brihad Aranyaka Upanishad, Canto 1, Brahmin 2, verse no. 2.) Thus we see that the water, earth and fire co-exist. This was necessary from the perspective of sustenance of creation—for otherwise the water would have frozen everything into ice, and the fire would have scorched to ashes. The earth harbouring life would have died—either by being frozen stiff and getting drowned in the vast ocean, or being reduced to cinders.

Therefore, the supreme creator was very wise in first creating water and then dipping earth on it to make it float. Imagine that a hot ball representing earth—of course earth is a hot ball, for who does not know that the bowls of earth have molten lava and molten iron core which gives the earth its protective magnetic field—floats on the surface of a tub full of cold water, and this water neither boiling over nor the ball losing its warmth! What a miraculous creation has the creator unfolded.

The water element was essential to counter and offset the scorch of the fire element, because had there been no coolant the fire would have burnt everything to ashes even before the first chick symbolically representing all life forms could break through the shell of the cosmic egg. The observation that ‘fire secretly remains in the water’ is proved by the fact that we have ‘warm and hot water’ though basically water is cool and cold. This latent energy of water which makes it warm or hot is the fundamental cause why water is regarded as the harbinger and herald of life in all its form.

It is a well established scientific fact that without water as well as warmth, the latter implying the obvious presence of the fire element, no life is imaginable anywhere. Water consists of two atoms of hydrogen and one atom of oxygen, both having a high ignition value as is proved by the fact that the celestial cauldron of fire called the Sun consists mainly of hydrogen and helium, which is a relative of hydrogen created by the nuclear fusion method in the Sun’s core, while oxygen is a predominant necessity to ignite any fire and then keep it burning. It is remarkable that the molecule of water contains hydrogen and oxygen together—both ingredients associated with fire. In other words, water harbours fire element in a latent and integral form.

It is also pertinent to note here that we give ‘oxygen’ to patients whose body has lost its powers to keep warm and retain life forces inside it. This is done in order to keep the furnace of life hot and burning inside the body which is full of fluids symbolising water.

Merely mixing the two gases wouldn’t produce water, as is proved by the fact that though the two gases are abundantly present in the atmosphere, the sky isn’t flooded with an ocean. Water forms on earth simply because the latter provides the necessary ‘heat’ which helps to bind the atoms of these two distinctly separate gases

to one another. In other words, 'water' has its independent existence only as long as 'fire' is present in it as its inseparable and integral part; if 'fire element' is removed from water, not only would the atoms of hydrogen and oxygen separate from one another to remove the very cause of water's existence, but also rob the exalted stature of water as being a sustainer of life on this earth.]

16. That Supreme Being is the creator of the entire creation and the principal factor at the center or core of its being in existence¹.

He is omniscient and all-knowing (refer verse no. 17 below amongst others). He is self created (in the sense that there is no cause of his coming into being, because, for one, he is eternal and infinite, and for second, he is imperishable; so the question of 'taking a fresh birth' like other entities of creation does not arise). [Refer verse no. 7 of this Canto amongst others.]

He is the supreme Authority that inspires and regulates Kaal, and is also the cause of its coming to an end (death)². He is a treasury of all the three Gunas (i.e. all the qualities, virtues and attributes that determine the personality, character, temperaments, nature and habits of a creature have been created by him)³. Being omniscient and all-knowing, he is also the treasure of all Vidya or knowledge.

Brahm is the 'supreme' Lord who is the ultimate 'Chief Authority' in creation, and senior to both the Viraat Purush (the macrocosmic gross body of creation from whom the rest of the visible and invisible world came into existence) as well as Prakriti (Nature; the so-called 'female' aspect of creation which was responsible for its coming into being in association with its cosmic male counterpart, the Viraat Purush, and for nurturing the cosmos in its womb as the cosmic embryo)⁴.

He determines the quantum, intensity, density and proportion of the basic ingredients that are required to classify the motley collection of all the basic character traits that appeared at the time of creation into the three fundamental classes of qualities and character determining attributes that eventually came to be known as the 'three basic Gunas of creation' that are inherently present in all the living beings in this creation. [These three Gunas are briefly the Sata Guna, the Raja Guna, and the Tama Guna.]

He is the supreme regulator who controls the wheel of creation (called the Brahm Chakra—refer Canto 1, verse no. 4, 6) from start to finish. Therefore, he is the one who determines, regulates and controls whether or not the creature finds Moksha, whether it remains in shackles or gets liberation and deliverance from this deluding and artificial world of miseries and pains⁵. It is he who maintains a fine balance and equilibrium between any two extremes of creation so that the latter remains balanced and existing in a perpetual manner (16).

[Note—¹This creation has an existence because the Supreme Being is present at the helm of affairs. Just like the wheel rotates around a central axis, and if this axis is removed the wheel would fall apart and cease to be of any relevance, this entire creation revolves around this central Authority known as Brahm which not only keeps every unit in its specific place but also empowers it to carry on with its designated functions, while at the same time keeping a strict tab on its functioning. He is like the Sun around which the planets not only revolve but owe their place and location in the cosmic theatre for it is the gravitational pull of the Sun which keeps the planets in their fixed position in the sky for otherwise they would have spun out of control and ran off randomly to create uncontrolled and unstoppable chaos in the cosmos, colliding with each other and with other entities just like a ball thrown haphazardly in a sports utility shop would cause havoc in it. Besides this regulatory function, it is the Sun which provides light, heat, energy and vitality—the metaphors for 'life'—to this world, it is the Sun that controls the seasons and the rainfall, it is the

Sun that is responsible for photosynthesis in plants which help to provide the basic food to all the living organisms. Therefore, it is unimaginable to have life without the Sun.

In the context of this verse and the philosophy of the Upanishads in general, Brahm is like the illuminated celestial Sun residing in the sky, and the latter is regarded as the most visible, most powerful and most potent form of Brahm. This Brahm resides in the subtle sky of the heart of the living being as his Atma or pure consciousness. It is this Atma around which all life rotates; as soon as this Atma leaves the body, all its value and worth cease to exist. In fact, life itself would cease to mean anything without consciousness. Who would like to deal with a man who is lying un-conscious as if he is dead though he might be legally and clinically alive? Refer verse nos. 4/14, 5/5, 6/9 etc.

²*Kaal* broadly refers to the factors of time, age, period and circumstance in this creation. The word also refers to the God of death. Therefore, this stanza means that Brahm is that overriding Authority which has set the agenda for the forces of Nature defined as time, age, period and circumstance to work strictly according to set rules, and then oversees that they are obeying their mandate. In the context of these forces of Nature being deified as a God called Kaal who has been delegated the powers to regulate the function of death and fate of the creature after death, it is affirmed here that this seemingly eternal and imperishable God—eternal and infinite because he outlasts every creature's life and is present in all the future lives of this creature to decide his future fate based on all records of the creature's past lives, and therefore apparently seems never to die—would also have to die one day. When? The probable answer is 'after the last creature has died at the end of creation', as there would then be no need of this Kaal for Brahm because there would be no creature left to regulate. Brahm has delegated his authority to regulate the creation to so many Gods, and Kaal is one such subordinate to Brahm. So when he is not needed, he would also go the same way as the other Gods, i.e. he would cease to exist.

According to *Adhyatma Ramayan* of sage Veda Vyas, Uttar Kanda, canto 8, verse no.21-25, Kaal is the eldest son of Vishnu incarnated as Sri Ram. The Lord's union with Maya created Kaal first, hence he is deemed to be the first entity created in this creation. It implies that before anything is born, its end is made a certainty. To quote—"Kaal, disguised as a sage or hermit said to Sri Ram, 'Listen Sri Ram! Listen to the fact as it is (20-21). Oh Lord God! Brahma has sent me to you. Oh Lord, the conqueror of enemies! I am your elder son (22).

Oh the brave one! I was born by your union with Maya (your delusory and cosmic creative powers). I am the destroyer of all, and renowned by the name of Kaal. Lord Brahma—who is worshipped by all the celestial sages, ascetics and hermits (23)—has sent the message to you that your time has come, oh the wise one, to give your protection to the heavens. In some previous time, it was only you who had lived/survived after getting annihilated the rest of the creation (24). Then, by your union with your divine consort named Maya, you had produced me (Kaal) first (as your elder son), followed by the hooded serpent called 'Seshnath Anant' who reclines upon the water (of the legendary Kshir Sagar, the celestial ocean of milk) (25)".

³All the *three Gunas* of Sata, Raja and Tama originate from him as he is the creator of the entire creation, and these three qualities are the fundamental factors which decided the seminal qualities and characters, the nature and temperament displayed by each individual creature depending upon the proportion of these Gunas that it possessed. Refer note of Canto 4, verse no. 5 for details.

⁴This conception is in consonant with the evolution of creation according to the Sankhya philosophy as described in detail in note to verse no. 13 above. The 'supreme Lord' referred to here is Brahm, the Supreme Being from whom the cosmic egg called Hiranyagarbha was born. It was Brahm who inspired both the Viraat Purush as well as the Prakriti to initiate the process of creation by establishing an alliance between the two. In other words, he is the supreme inspirer and motivator as

expressly stressed in verse no. 1-3 of this Canto. Entire Canto 1 of Brihad Aranyaka Upanishad of Shukla Yajur Veda tradition is dedicated to this basic idea that Brahm is the Principal Authority who is responsible for the emergence of this creation.

⁵Since the supreme Lord is the inspirer of all the creatures, it is he who determines whether a creature is a worthy candidate for being selected as a student researching for Truth depending upon the creature's past deeds and its present sincerity and spiritual inclinations. It is just like a college principal deciding whether or not to give a candidate admission to his college, keeping in mind the reputation of the institution as well as the ability of the candidate to successfully imbibe the culture of the college along with formal education, and whether the chances of him excelling in his field of study are bright or not because the reputation of any college or university also depends on its Alma Mater.

Once given admission, it is up to the student to live up to the principal's expectations, for simply succeeding in getting admission in a top notch college means nothing if the student has no aptitude and skills, or he becomes careless in his studies and consequentially fails in his exams. Similarly, the supreme Brahm initiates a sincere aspirant into spiritualism by 'inspiring him' and creating circumstances conducive to his spiritual progress, which we shall call 'chance' meeting with a self-realised and competent moral preceptor or guide who would show the aspirant the right path that leads to unfolding the Truth for him. It would be often be noted that there are certain people who have a natural affinity for things spiritual and an equal disdain for things pertaining to this material world. Such people can be regarded as being the fortunate ones who are selected by the Supreme Being to tread on the path he has determined for them. On the other hand there are people who won't do so even if prodded and repeatedly told of the horrific consequences for remaining engrossed in this material world of sensual gratification. They would suffer but would not realise the truth.]

17. That Supreme Being (the supreme Brahm) is uniformly absorbed in this creation, i.e. he has not only revealed himself in the form of the entire creation but actively controls it from within; he uniformly pervades the entire creation; he is an integral part of this creation (refer verse no. 4/11; 5/13; 6/5, 7 etc.); being a fountain of light, he even illuminates this world with his own light (as his manifestation in the form of the Sun--refer 2/1-7, 3/8, 4/11, 5/4, 6/14 in this connection).

He is the eternal and perpetual supreme Lord of all that exists. He is omniscient and all-knowing (refer verse no. 4/9 etc.). He has access to all the nooks and corners of this creation (refer 2/16); hence he can go everywhere. [This is obvious because the Supreme Being pervades this entire creation uniformly, being dissolved in it like sugar or salt in water, and therefore permeates each crevice and each surface, each nook and corner of this structure known as the world.]

He is the protector and sustainer of this world (refer verse no. 5/15 etc.). [This function of Brahm is carried out by him in his manifestation as Vishnu, the cosmic sustainer and protector. That is why whenever the living beings are tormented by cruel tyrants, depicted as 'demons' in folklore and mythology, Lord Vishnu, who is Brahm manifested in this form at the cosmic scale, reveals himself as one or the other incarnation to salvage Dharma, i.e. to give protection to those people who follow the principles of righteousness, auspiciousness, probity, propriety and noble conduct by trouncing the opposite forces of Adharma represented by the demons.]

He is the supreme Authority who rules over the entire creation, being its only supreme controller and regulator, its only arbiter and adjudicator. There is no one to supersede him; there is no one to exercise control over him; there is no one to overturn his decisions. [There are innumerable verses in this Upanishad in this

connection, for example verse no. 9 of this Canto no. 6 which expressly states this thing. Other examples are verse nos. 1-3, 5-14 etc.]

18. He is the supreme Lord who creates Brahma, the creator of the visible world in which we live, at the time of creation (refer verse nos. 4/2, 11-14), and it is this Lord who blessed Brahma with (i.e. taught him) the eclectic body of holy knowledge that are known as the Vedas¹ (refer verse no. 4/9, 5/6 etc.).

With the desire to obtain liberation and deliverance from the shackles of this mundane, perishable and artificial word of material objects that is the cause of all delusions and pains, to attain emancipation and salvation for my soul, I humbly take the shelter of that divine Lord who illuminates the mind (so that he can light my way to self-realisation and enlightenment, and remove the dark shadow of delusions and ignorance—refer verse no. 4/21 etc.) (18).

[Note--¹In other words, what Brahma is credited with—that he has ‘created’ the Vedas because they were first pronounced by him—are not his own creation. He just happened to be the medium selected by the Supreme Being to reveal that knowledge, and therefore, to speak the truth, to call Brahma as the ‘originator or creator’ of the Vedas would be a misnomer and misrepresentation of the facts.]

19. That Supreme Being has no ‘Kalaas’ (i.e. he has no fractions and segments that can be delineated from one another because he is one single whole, being immutable and indivisible, being non-dual and uniform—refer also verse no. 6/5).

He (the Supreme Being) does not do anything and get (emotionally and sentimentally) involved in it, being just a neutral observer and witness of all that is happening around him as he is totally dispassionate and detached from everything¹.

He (the Supreme Being) remains perpetually peaceful and tranquil (because of his non-involvement in any deed, as it is only such involvements that bring all sorts of agitations and perplexities in their wake). He is without any blemishes and taints (as he is immaculately pure and pristine, and also because of this philosophy of non-involvement in deeds as it is the world which creates tainting effects, and if one remains distanced from it then the basic cause of taint and blemish is taken care of). He is not attached to anything, being non-involved, neutral, detached and dispassionate (towards everything in this artificial world of delusion and ignorance).

He (the Supreme Being) is the best fount of Amrit (the ambrosia of eternity and perpetual beatitude and felicity). He is like that brilliant fire from which no smoke rises (as he is the most glorious, illuminated, radiant, splendorous, enlightened and divine entity in creation which has no faults and impurities—because a fire originating from firewood which has no impurities in it would burn brilliantly without producing any smoke.) (19).

[Note--¹In other words, though the Supreme Being resides in the creation as its integral part, therefore appearing to ‘physically’ doing each deed, but actually he only inspires the creature to do deeds and this is how everything happens. He, as the Atma, does not personally get involved in any of them, preferring instead to remain neutral and dispassionate. This is very crucial for him as he is the final adjudicator and arbiter of the entire creation, and therefore all are equal for him. He cannot take sides with any of his offspring’s inconsequential squabbling, but intervenes only when they get at each other’s neck as it were. This is because he is the upholder of Dharma. Refer verse no. 4/9, 6/6, 9, 11 amongst other verses in this connection.]

20. If some wise man is able to wear the sky as his skin, it is possible for him then that he can overcome all his miseries and pains even without knowing about that Lord (20).

[Note—This verse has to be understood in the correct perspective. There are many connotations to it. (a) This situation points to a high level of wisdom and self-realisation because it is then that the person would have realised that his own ‘true’ self is the pure conscious Atma and not the gross body consisting of bones, veins, flesh, organs, heart, mind etc. It is the physical gross body that needs the skin as a sack to keep everything in place, ‘sacked in’ so to say, hemmed in and sewed from all the sides, with the mouth as its upper opening and the anus as its lower. But the Atma is very subtle and ethereal, and it resides in the subtle space of the heart measuring the size of a thumb—see verse nos. 3/13 and 5/8 of this Upanishad, and 2/1/12-13 of Katho-panishad. This space of the heart, called the Hridaya Akash, is like the outer covering that surrounds the Atma as its overcoat. This space within the heart and the one outside are basically ‘one’, and as soon as the person realises that the body is an artificial boundary separating the two, he withdraws his ‘own true self’, i.e. his Atma, from having anything to do with this body. This mental state when the enlightened man feels that he is as vast as the space of the sky, whether that ‘sky’ is in his heart or in the vast recesses of the cosmos outside, that he is literally surrounded by this fathomless and measureless sky, that he is virtually ‘wearing’ this sky as his outer garment, it is then that he does not need the skin to act like that sack which holds his ‘self’ from falling apart.

Let us take an example. Grain is stored in a sack, but if this storage area happens to be a small room in the granary, then the farmer empties this grain on the floor and the sack is no longer needed. Now the ‘walls’ of the storage room become the ‘sack’ of the entire stock of grain that the farmer has. Likewise, the entire space becomes the covering of the Atma of an enlightened man and not just the physical body enclosed by the skin.

(b) The basic function of acquisition of spiritual knowledge is to enlighten a person about the truth of his own Atma and the cosmic Atma known as Brahm. It is to serve this purpose that all the scriptures are studied. So, if and when a person becomes enlightened about these two entities, then it is deemed that he has obtained his final liberation from spiritual ignorance. Hence, to say that ‘one need not know the Lord’ is a metaphoric way of saying that one need not get an overall idea of who the Lord is, how he looks, where he lives, and such other questions by searching for the answers in the scriptures if one has first-hand witnessed the Lord in his own bosom. Once the lamp of enlightenment is lighted, darkness of ‘not knowing this or that’ has no relevance!

When the self-realised person has expanded his mental horizon to cover the entire space of the sky in a metaphoric manner, he virtually disperses through the length and breadth of the sky itself to be identified with it and become one with it. He therefore no longer needs to know how wide, deep or huge the sky is. So, when the self-realised man has understood that his Atma, his ‘true self’, is Brahm personified, then he no longer has to make special efforts to know Brahm—for he is personified Brahm himself.]

21. An ancient sage and seer named Shwetashwatar had come to know about Brahm, i.e. he had become Brahm-realised as a result of his severe Tapa (sincere effort and great diligence; his single-minded pursuit of truth knowledge pertaining to Divinity by means of meditation and contemplation) as well as by the blessing of the supreme Lord himself. [That is, this most eclectic, esoteric and mysterious knowledge was revealed to him during one of his meditation sessions while he was deeply engrossed in contemplation and concentrating his mind and entire being to unravel the secrets of creation and the supreme Authority which brought it all about.]

This essential eclectic and divine knowledge pertaining to the supreme Brahm is always sought and honoured by great sages and seers. So, when he came to realise it, when it was revealed to him and he had first-hand witnessed the existence of the astounding truth, magnificence, majesty and splendour of Brahm, he preached it to other seekers or aspirants (disciples) in his hermitage who were worthy and competent enough to receive this knowledge (21).

22. This profoundly eclectic, astoundingly mystical, most esoteric and sublimely divine knowledge pertaining to the eternal truth about the supreme Brahm had already been expounded and elucidated by the Upanishads in the past and preached by them in their doctrines and tenets¹.

This eclectic knowledge pertaining to Divinity and his holiness the Supreme Being who is the Lord of the entire creation should not be given or divulged to incompetent persons such as those whose inner self has not become completely peaceful, calm and tranquil (i.e. is free from all worldly ignorance-based delusions and illusive attachments leading to all sorts of attractions or distractions and their attendant restlessness for the creature). It should also not be taught to unworthy people who are not either disciples or a son² (22).

[Note--¹This means that this knowledge, as all knowledge for that matter, already existed, and this particular sage was the one who had 'discovered' or 'decoded' its secrets. He had not found anything that was not there, but had only brought it to light and in the awareness of others. In other words, since one does not know about anything, it does not mean that the particular thing has no existence for it is simply ignorance of the existence of that particular thing. But denying that thing altogether 'because it is not known to me' is a height of stupidity and incredulity.

²A disciple has come to the teacher to acquire knowledge, he stays in the hermitage willingly, putting up with all the hardships that are natural when one is away from home for long periods of time, so it would not be proper and honourable for the teacher to not divulge to him all the intricacies of the subject taught, or teach every fine point to the disciple without hiding anything from him. Similarly, a father would do injustice to his son if he hides something of great value from his own son. But it should be remembered that if top secrets of science land in wrong hands, the consequences would be most horrible and disastrous for both the teacher as well as the society at large. For example, gun powder and dynamite opened new frontiers in development because what earlier took ages to dig, such as cutting through mountain to build roads, drilling through underground mines to harvest minerals and gems, became easier and quicker with dynamite. Similarly, nuclear science opened the floodgates of an infinite source of energy as well as medical research and diagnosis, but at the same time it has caused millions of deaths during the Second World War, and possesses the potential to completely obliterate life on earth in any future nuclear war or terror attack. This is because these magnificent technologies have gone to wrong, incompetent, misguided, narrow-minded and selfish hands.

The powers of the Spirit are not less potential and powerful. Yoga or meditation has great potentials to cure innumerable diseases, but if done wrongly it would be disastrous for the practitioner and his health. Likewise, if this knowledge is taught to less intelligent disciple, or to one who is inattentive and callous in his approach to education, even if that disciple happens to be one's own son and heir, the result would be most unwelcome. For example, if the disciple interprets some principle wrongly, then he would pass on this wrong idea to his own line of disciples in future, and the truth would get distorted beyond belief. The result would be that in the future if someone wishes to put that 'truth' to the test, it would prove negative, thereby shaking and uprooting the very foundation upon which the entire faith and that particular school of thought is based. No wise and thinking man would accept things

which are not the truth just because some old man says that it is written in such and such scripture. In fact, in due course of time, the scriptures themselves would get distorted if one single error is made in their transmission from one generation to another, because in such matters one single mistake can have a cascading effect.

Besides determining the aptitude and competence of the student or disciple, the teacher also judges his sincerity and singularity of purpose, his truthfulness, willingness and diligence, his mental steadfastness, eagerness and earnestness as well as his physical health to cope with the rigors of a disciplinary life that is necessary to pursue education in a hermitage or a college. There are instances in the Upanishads themselves when the disciple had to wait for prolonged period of time because the teacher wished to test this particular angle. For example, in Chandogya Upanishad, Canto 8, Sections 7 to 11, Indra was made to wait for one hundred one year by Prajapati before he was answered fully to him about the eternal question about the Atma. A similar instance is cited in this same Upanishad's Canto 4, Sections 5 to 8 when four different entities preached about Brahm's four legs to sage Satyakam Jabal over a period of four nights. In Katho-panishad which is Chapter 1 of this volume there is an incident where Nachiketa was made to wait for three consecutive nights before he could meet Yam, the God of death (Katha Upanishad, 1/1/9). In Maho-panishad of Sam Veda tradition there is another incident where the parrot sage name Shuk who was the son of Veda Vyas had to wait for twenty-one days before king Janak granted him an audience to test his sincerity and steadfastness (Maho-panishad, 2/21-28).

It is to be noted here that age, caste and other criterions are not the deciding factors in giving and accepting knowledge. For example, sage Satyakam Jabal was of a low birth but still his teacher Gautam accepted him as his disciple, seeing his truthfulness, eagerness and sincerity (refer Chand. Up. 4/4/5). Brihad Aranyak Upanishad, Canto 2, Brahmin 1 cites the example of a Kshatriya king Ajatshatru preaching a Brahmin sage named Balaki, and even a husband (Yagyavalkya) teaching his wife (Maitreyi) in Canto 2, Brahmin 4, and Canto 4, Brahmin 5.

The quest for the correct and truthful knowledge was so intense in earlier times that even the Brahmin father who had taught his own son did not hesitate to accept his limitations, and both of them approached a Kshatriya king to enlighten themselves, without thinking twice about their exalted stature as renowned preachers of repute and what effect it would have on their own disciples when they come to know that their teacher has gone to learn something from someone else. This is proved by the fact the father-son duo, sage Aaruni and his worthy son Shwetketu, approached king Pravaahan, the king of Panchal in Chandogya Upanishad, 5/3/1-7.]

23. It is only in the bosom (inner self) of those seekers who have deep-rooted faith, sincere and steady devotion, great admiration and firmness of conviction in their heart for the supreme Lord of creation known as Brahm, and have a similar level or degree of devotion, faith and reverence for their teacher that this divine knowledge can show its miraculous effects by showing the light of wisdom, truth, self-realisation and enlightenment to these seekers. This would remove all darkness of ignorance and delusions that had been enveloping them from time immemorial. Verily, it is only in such hearts that the light of enlightenment shines brilliantly. Indeed, it is in such hearts that the light of enlightenment shines through and through! (23).

[Note--This repetition is done to emphasis the great truth about Brahm-realisation. It shows that to experience and witness the eternal light of Brahm-realisation and to drink the ambrosia of bliss and happiness dripping from Brahm like honey from a honeycomb one must have a mind-intellect complex that is conducive to it and finally tuned for it. For the rest, it would only create skepticism, confusion, bewilderment and perplexity. In other words, a deep sense of faith, devotion, conviction and belief are the pre-requisites for success in any spiritual endeavour. Even to embrace success

in worldly pursuits, virtues like diligence, steadfastness, commitment and sincerity are needed. So they must be all the more essential pre-requisites and necessary in the pursuit of spiritual matters because they relate to things that have eternal and higher value than merely the mundane affairs of the world.]

-----*****-----*****-----

Chapter 6

Garbha Upanishad/Garbho-panishad

This Upanishad is a rare medico-philosophical Upanishad which judiciously combines metaphysics with medical science as it incorporates embryology and anatomy while describing the process of how the elements of Nature come together to form the complex structure of the living entity known as the ‘creature’ or Jivatma. It is a wonderful sample of how, in ancient times, philosophy was mixed with hard-core science, and how the ancient sages were well versed in both. This establishes one very important point—and that is that the people who taught the Upanishads were acclaimed experts not only in the field of metaphysics, theology and spiritualism alone but also in other fields, especially those that had an empirical and scientific basis. A reading of this Upanishad would prove the fact that medical science was well known at that time, because embryology and anatomy are specialised fields of learning and it is not simply any lay man’s superficial medical general-knowledge that is being proffered here.

This Upanishad was preached by sage Pippalaad, and is in the form of five long paragraphs much like modern text books. It appears that he gave five lectures, and they were collated, edited and written down in the form of this Upanishad.

Paragraph 1 describes how the gross body is formed from the basic elements, what it looks like, which are its organs, what are their functions, etc.

Paragraph 2 outlines how the body absorbs nutrients and how they are utilised.

Paragraph 3 is embryology—it describes the formation of the embryo and its development in the womb, with step-by-step process of the moulding of the different part of the body of the creature. It outlines how the single-celled zygote metamorphoses into the complex structure of the body of the living organism. It is to be noted here that Adhyatma Ramayan of sage Veda Vyas also describes this in almost the same language in its Kishkindha Kand, Canto 8, verse no. 21-32 and 39-40. An English version by this humble author has been published separately.

Paragraph 4 describes how the fully developed and conscious creature becomes aware of the hellish condition in which it finds itself inside the mother’s womb, and regrets about his past deeds that has been instrumental in his plight. He resolves not to repeat his past follies, and once born would lead an exemplary life of righteousness so that he does not have to suffer the horrors of the womb again. It urges the creature to use the golden opportunity of being born as a human being to seek permanent redemption for his ‘self’ instead of repeating the same errors that had landed him in the hell-like fire of the womb.

Finally, Paragraph 5 describes the presence of the ‘fire element’ in the body in various subtle forms. It uses the metaphor of the fire sacrifice to drive home the point that this body is to be used as sacrificial fire-pit by the creature, i.e. his pure ‘self’, to purify himself of all the past impurities that has clung to him over many lives, and obtain final emancipation and salvation through the medium of this body. this paragraph also outlines the anatomical details of the body. Read in conjunction with the outlines of embryology in Paragraph 3, this Upanishad stands out as a unique combination of metaphysics and modern medical science.

It is to be noted that this Paragraph has a close resemblance to Pranagnihotra Upanishad’s verse nos. 18-19 (fire element in the body) and verse nos. 21-22 (doing the fire sacrifice internally in the creature’s own body). This Upanishad is Chapter 29 of this volume.

-----Shanti Paath-----

ॐ सह नावतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजसि नावधीतमस्तु । मा विद्विषावहै ।
-----ॐ शान्तिः । शान्तिः । शान्तिः ।!!!-----

The meaning of this Shanti Paath is given in appendix no. 1.

1. OM Salutations! This body is made up of five primary elements of creation, and each of these elements latently harbours the footprints or the codes that are needed to mould the body of the creature¹.

The body of the living creature enjoys and relishes the flavour of six types of tastes. It is characterised by attributes and personality traits that are formed by a combination of six types of Gunas (qualities, virtues and attributes). It consists of seven structural elements that help to give it its shape. It is corrupted by three faults, taints or impurities. It has two apertures called ‘Yonis’². And this body is nourished and sustained by four basic types of food.

Why is the body said to be made up of five elements? It is because the body is basically made up of five primary elements in creation—viz. earth, water, fire/energy, air/wind and sky elements. These elements were used by the cosmic creator to mould the body out of them (much like the potter using clay and colours of different hues to craft a multi-coloured pot out of it).

So, what do these five elements take in the body and what role do they play? What are the signs of the presence of these five elements in the body? What is the part of the body that can be called the earth element? What is the part that is the counterpart of the water element? Similarly, what represents the Tej or fire element, the wind or air element, and the sky or space element? The answer is this—The gross and hard part of the body represents the ‘earth’ element; the fluid part represents the ‘water’ element; the inherent warmth of the body is indicative of the presence of the ‘fire’ element; that factor which helps all movement—whether inside the body (such as circulation of blood and nourishment, peristaltic movement of the intestines, excretion and belching, closing and opening of the various valves and flaps such as the various valves of the heart, the closing and opening of the eyelids and the glottis, the rhythmic, pulsating beating movement of the muscles of the heart, etc.) or outside of it (such as the movements of the hands, legs, tongue, mouth etc.)—are symbolic of the presence of the ‘air or wind’ element inside the body; and the various spaces in the

body (such as the intercellular, intra as well as inter organ spaces present inside the body) as well as the various holes or apertures or other passages or vestibules in the body (such as the tubular ducts called Naadis—viz. the veins, capillaries, arteries, nerves etc., the anus, the urethra, the buckle cavity and the throat, the nostrils, the opening of the ears, the pores of the skin etc.) are where the sky element is present.

What functions do they have and the characteristics that they display vis-à-vis the body? The 'earth' has the characteristic function of bearing everything. [This is evident in everyday life because the entire world rests on earth. In the context of the creature's body, the outer skin as well as the skeletal and muscular parts which are made up of the earth element carries out the function of bearing the creature's entire burden of all the internal organs just like a sac does.]

The 'water' has the main characteristic that it collects things that come in along its way. [This is evident when flowing river collects all garbage along its bank and carries them along, or a bucket of water is used to wipe the floor clean of all dust and litter. It will also be observed that when water flows on the floor of the house, it would collect any bit of rubbish or shreds of paper that might be lying on the floor. On close examination we will see that as soon as the water touches them, it would literally pluck them up or pull them in towards its self and make them flow along with its stream. So the water element in the body helps to collect all the nourishment derived from food eaten by the creature and carries it through the fluid medium of the blood to all the parts of the body. It is this fluid medium present in the blood which collects all the vitality, stamina and strength as well as the characteristic traits that are so unique to a person in the form of his genes and transfers them to his offspring through the medium of the semen which is fluid in form. It is the water element that collects all waste and toxic elements present in the body and eliminates them through urine and soft stool.]

The 'Tej' or 'fire' element has the main characteristic of giving light, heat and energy. [This translates into the body's inherent vitality, stamina, strength, warmth, energy etc. The presence of the fire element in the body is evidenced also by the fact that without heat and energy no organ can function, no digestion would take place, the circulation would cease and the creature would collapse. That is why a dead body is 'cold' to touch while a body which is 'alive' is warm inspite of the fact that the man might apparently appear to be dead when he is lying unconscious or in a medical coma, or even while sleeping soundly. In all these cases, all the external functions of the body and signs of life are absent because the body is absolutely quiet and shows no movement and activity whatsoever, but it is not considered 'dead' because it is warm to touch and all its internal organs keep on going about their normal functioning. Even the digestive process is active in a sleeping man because of the fire element present inside his body. Had the working of the internal organs of the body depended solely upon physical activity and muscular movement, a sleeping man or an unconscious man would have died automatically.]

The 'air' or 'wind' element keeps everything in the body in its proper shape besides helping in all kinds of movement—both internal as well as external. [Examples of internal movement are the movement of food down the intestines with the help of the Apaana wind, the movement of the abdominal walls due to Pran wind or the process of breathing. Examples of external movement are the movement of the hands, legs, mouth, and eyelids etc. How the winds help to keep the body its shape and texture is best understood by the example of a balloon. The balloon retains its shape as long as the air is inside it, and bursts to a wrinkled mass of crumpled rubber as soon as the air escapes from it. The balloon moves and hops around because of this

‘air’ inside it and the gust of ‘wind’ outside it. The body is also like this balloon with the presence of many forms of the vital airs inside it, both in their subtle forms as Pran, Apaana, Vyana, Udaana and Samaana etc. to mention a few, as well as their grosser forms as the wind appearing as flatus, belching, abdominal rumblings, fluttering felt inside the muscles and intestines, breathing, speech etc. These winds or airs present inside the body perform many functions³. Should these winds decide to leave the body, all other organs would die.]

The ‘sky’ element gives a dwelling to everything because it is the habitat of the entire creation. [All things in creation require space to grow and develop. This is proved by the fact that bottled plants cannot grow properly because of the limited space. The entire cosmos started with one big bang and spread out in all the directions to give the universe the shape we know about, a shape that still continues to evolve and expand because of the limitless supply of space in the sky. A child who gets enough chances to express its hidden potentials and develop its talents achieves great objectives in life when it grows up to become an adult compared to an unfortunate child who passes his formative years in a suffocative environment which stifles all his inner strengths, mental development, talents and natural aptitudes. That is why we yearn so much for our ‘personal private space’ for obtaining rest, peace and quietness in the congested world where privacy is at a premium.]

Besides this, the gross body formed by the combination of these basic elements exhibits certain other specialised functions through the medium of the various sense organs that develop in it. The ‘ears’ help the body of the creature to grasp words or sound in any form, because the function of hearing is carried out by the ear. Similarly, the ‘skin’ helps in feeling anything, the ‘eyes’ in seeing things and their forms, shapes and colours etc., the ‘tongue’ in tasting various tastes and savoring different flavours, the ‘nose’ in smelling different smells, aromas and fragrances that might be appealing to the senses as well as those that are repulsive, the ‘genitals’ in enjoying and obtaining ecstasy by sexual contact as well as to procreate, and the ‘anus’ in expelling faecal matters from the body.

[The first and basic question here is this—the body is said to be gross and inane, having no life of its own, because it is just like a sack to enclose the creature’s ‘self’. In other words, this body is merely a vessel or container that holds life inside it just like an aquarium holding a motley collection of fish and other small aquatic life forms that are bound by or interned in its walls. So how does this body acquire all sorts of knowledge and perceptions which makes it seem to be ‘alive’ and so vital and indispensable for the creature? The basic questions pertaining to the body and the mysteries surrounding it—such as for example how does the creature acquire any kind of knowledge pertaining to this world, how he decides his responses to various stimuli received from the external world, how he uses the acquired knowledge and perceptions to interact with the world and to improve his own prospects of finding permanent peace and rest etc.—are being answered now.]

A living being acquires knowledge by his ‘Buddhi’ (i.e. through his rational intellect). He makes various determinations and vows, creates yearnings, desires and aspirations, and harbours hopes and expectations through his ‘Mana’ (i.e. by his emotional mind and heart). And he speaks through his organ of ‘Vak’ (speech or voice). [That is, a man first uses his intellect to understand the world, then utilises his heart-mind duo to make certain determinations and fixes some goal to be achieved in life in this world. Then he utilises his voice and the faculty of speech located in the tongue and mouth to express himself and make his wishes and intentions known to others. If he teaches, he uses his voice; if he asks question to learn and satisfy his

queries, he uses his voice; if he desires anything, he has to express himself through his voice; if he is unhappy with anyone, he uses his voice to let it be known to the other person that he is unhappy with him. In brief, the faculty of speech and its manifestation as the 'voice' is the medium by which the creature residing in the gross body expresses himself to the outside world. In other words, the voice is the 'spokesperson' of the Atma because it is the Atma that is the truthful identity of the creature and not the body which is merely a habitat of this Atma.]

[The next question is—how does the creature use his sense of 'taste' present in the body to 'experience' the world? This question is answered here.] Now, why is it said that this body has a natural inclination and habitual propensity for enjoying and relishing the flavour of six types of tastes? It is because the creature uses his body, through its faculty of taste present in the brain and functioning through the organ of taste known as the tongue, to determine things which are more to his liking or 'taste'. Taste helps him to learn about the various 'flavours' which symbolise one of the various sensations that are presented for his enjoyment by Nature.

These flavours are metaphors for different characteristics of the environment and circumstances in which the creature lives. This word 'taste' is used here as a metaphor to describe a person's 'experience' of this world. The terms 'taste' and 'flavour' are to be understood in a broader perspective. For example, a man who has had a bad experience of certain circumstance or event or interaction with another person in his life says that it left a 'bad taste in his mouth'. Obviously he is not referring to any kind of food that he had eaten when he uses the term 'taste' but uses the word as a figure of speech to express his disapproval, disgust and his negative opinion of certain things. It also helps him to express his preferences and priorities in life vis-à-vis the world with its huge array of options. Different tastes and flavours help him to judge what is suitable for him, what is fine and elegant as far as he is concerned, what would suit his individual temperament and nature, what is to his liking and fondness, what he favors and approves, and what not.

Basically, 'taste' refers to the way he enjoys the different flavours present in the world in the form of drink and food that he imbibes, and this medium of 'taste' has been primarily devised by the supreme creator to ensure that the creature eats and drinks properly so that he can derive necessary nourishment for his (creature's) own survival, development and growth. Had there not been any taste in this world, had everything been bland and 'tasteless', no one would have liked to eat or drink anything. And without eating and drinking the wheel of creation would have grinded to a creaking halt.

The various tastes or flavours in existence have been classified into basic six categories—viz. sweet, salty, sour, bitter, pungent or hot, and astringent. Sometimes acidic (vinegar) and bland are also regarded as separate category of tastes.

[Now, the question as to how the organ of hearing, i.e. the ear, is used by the body to interact with this world and form its opinion of the latter is being discussed.] The spoken words and all other forms of sound that either the body hears or literally accepts or receives from the outside world, or which it makes itself, such as when someone speaks something, or sings or hums a melodious tune, are classified into two broad categories.

The first category consists of the type of sound based on its harmonious tune, musical meters and notes, melodious value and accent, while the second category is the tone and tenor of the words spoken or sounds made. That is, all forms of sound or spoken word have two aspects—one is the subtle aspect that deal with the fundamental primary forms of sound that form the basis of classical music. The

second aspect relates to the grosser forms of sound revealed in the form of spoken words such as the adjectives used to describe the type of sound—sweet, soft, loud, harsh, irritating, soothing etc.

The first category of sound or spoken words are of the following seven types—viz. Shadja, Rishav, Gaandhaar, Madhyam, Pancham, Dhaivat and Nishaad. These represent the seven basic sound forms that are at the root of all forms of music and all types of vocal sounds made by the body. These are represented by the seven fundamental subtle notes of Indian classical music. [That is, Shadja is the first note corresponding to the sound made by the letter ‘Saa’; Rishav corresponds to the second note of classical music made by the sound of the letter ‘Re’; Gaandhar to the third note corresponding to the letter ‘Gaa’; Madhyam to the fourth note ‘Maa’; Pancham to the fifth note ‘Pa’; Dhaivat to the sixth note ‘Dhi’; and Nishad to the seventh note ‘Ni’. These are like the nouns of pure grammar or like the vowel sounds of the Sanskrit alphabets. They originate in the throat and have a nasal component; they form the basis upon which the rest of the language is founded. That is why classical music relies more on long-drawn sounds emanating from the throat and resonating in the nose or buccal cavity in which single words or letters are stretched for prolonged periods of time.]

The second category consists of three types of words or sounds—viz. Ishta (that word or sound which is welcome, pleasant, acceptable, soothing and desirable for the ear, that which is a herald of good tidings, that everyone is eager to hear and looks forward to), Anishta (that which is the opposite of Ishta, i.e. which is unwelcome and bad, that which causes repulsion, irritation and distress, that which no one would like to hear, that which portends some kind of evil and foreboding news), and Pranidhan-kaarak (i.e. that which encourages and injects a new lease of life in a hopeless situation, that which literally acts as a support and basis for life in the form of providing hopes and encouragement for a good and better future, those words which have a spiritual value such as the Mantras and holy words of the scriptures that uplift the soul). [This second type of sound or the spoken word is like the consonant in the Sanskrit language which requires the use of the tongue and lips to pronounce. They are also like the adjectives in pure grammar which qualify the noun. That is why articulate talking or speech requires the use of tongue and lips rather than merely the nasal sound or vibrations of the vocal cords.]

These ten types of words or sounds originating in this world which the body receives helps in deciding the creature’s own reaction, his own response to the given circumstance as well as how he would interpret it for storage in his memory for future retrieval and responses. These two broad categories of words or sounds determine the body’s behaviour and responses vis-à-vis the world.

It must be noted here that the process of ‘learning and responding’ is firmly based on the ability to perceive different types of sounds and understand the meaning of words spoken. For example, when one hears the trundling sound of an approaching train one immediately becomes cautious about the imminent danger of crossing the railroad line until the time the train has passed by though the train has not warned him in articulate words that there is a danger of being crushed and smothered under it. But the sound of the train itself is sufficient to warn him of the danger because the person has learnt of this type of danger when he was told and explained about it by someone else who had used articulate words to do so; he has been taught or advised that it is fatal to cross the railway track while the train is within earshot, and teaching or giving advice requires the use of clear language. This instance establishes the equal importance of simple forms of sound such as the sound made by a running train as

well as the articulate words that are formed from these basic sounds such as the words used to explain the dangers of crossing the track when the train is near. Similarly, a song needs melody as well as lyrics to become enchanting and meaningful.

[The next question is how the organ of sight i.e. the eye, is used by the living being inhabiting the gross body, i.e. the Atma or the 'true self of the creature' that dwells in the gross body, to perceive this world and see it in its physical form, and then form his opinion of the latter? This is being discussed now.] There are seven basic colours that the body sees through the medium of the sight, and these help the creature to view this world through the spectrum of this prism. These seven colours are Shukla (White), Rakta or blood colour (Red), Krishna (Black), Dhumra (Grey), Peet (Yellow), Kapil (Reddish Brown), and Pandur (Yellowish White). These are the primary colours which are perceived by the brain and the rest of the colours are formed by a combination of them.

Like in the case of tasting, smelling and hearing, this 'seeing' is also a metaphor for discerning and determining the 'actual' physical nature of the world and actually witnessing first hand what was previously only known by the way of tasting, smelling and hearing. Seeing anything is more convincing than merely hearing about it or even tasting its acceptable or unacceptable flavour or smelling or sniffing the presence of anything. Thus, 'seeing' is the greatest proof of not only the existence of the world but also its horrific nature and painful circumstances. When a person sees for himself the pain and suffering in this world, when he witnesses the agonies and torments that endlessly make all the living beings groan and suffer under their crunching weight, when he gets a firsthand experience of the miseries associated with this world of material sense objects, when he realises that no real happiness and peace is obtainable by pursuing the material objects of this world which are as perishable and transient as the world itself, he would need no other proof of the world's dangerous prospects of being associated with this treacherous and horrifying world. He realises the truth of what has been said about this world in the scriptures—about the world's ensnaring tendencies and evil character, about the world's transience and impermanence, about the world's inherent cunning nature to first trap the creature in its tentacles by showing him the honey-trap of illusionary charms and sensual attractions and then once the helpless creature is caught to endlessly torture him till he dies, and so on and so forth.

When a wise man is able to 'see' this real nature of the world, when he is able to see the world bare its fangs, it is only then that he realises the futility of pursuing it and begins to treat it as a death-trap for himself, or his 'true self' called the Atma. He would then strive to find a way out of this quagmire; he would research how he can get out of this trap and find permanent freedom for himself. Herein comes the real metaphysical meaning of the word 'seeing'—it refers not to the physical phenomenon of seeing the outward contours of the gross things in the world that are seen by the means of the physical organ designated for this purpose, i.e. the organ of the body known as the eye, but to having the 'sight of wisdom, erudition, deep insight and enlightenment' which empowers the creature to be able to see behind the external façade and peep deep inside to see the hidden truth that is not visible from the outside. It is like the case when the x-ray machine is able to see behind the covering of the skin to peep deep inside the body and find out any anomalies in the internal organs which are not visible from the outside. Once these anomalies are detected, the doctor can treat them.

In the present context of the world in which the creature lives, this insight into its truth and reality enlightens and wakens the creature up to the harsh realities of life

and the deceptive nature of this world and its charms and attractions which appear so real on the surface but are hollow from the inside. This realisation then inspires him to 'see' or research how he can get out of the muddle and find out something that is truthful and valid. Obviously, to get out of a jam one needs to 'see a way out', for a blind man cannot find or see his way out of a, say, a traffic jam. This 'seeing of the real truth' is the main purpose of having the faculty of sight vis-à-vis the world. This wisdom, erudition and enlightenment also enable the wise man to 'see' the correct path from amongst the maze of paths available to him and proceed on it with characteristic steadfastness of purpose. So this is the real implication of having the eyes and the faculty of sight in the body.

So, a man with 'proper sight and vision' tries not to repeat the errors committed in the past which has landed him in this soup, and instead he tries to see the light down the dark tunnel in the form of his spiritual salvation by leading a righteous life of auspiciousness, nobility, humility and devotion. This is the real 'seeing' of the world and its true form and nature; this is the true use of the faculty of sight that the body possesses. Seeing does not mean gazing at some beautiful scene which gives temporary pleasures to the senses lasting only for some fleeting moment on the shore of life before it vanishes for ever the next moment, leaving a sense of desire and longing for it which robs the man of his peace and happiness.

[Basically it is emphasised in this first paragraph of this Upanishad that a wise person should understand the true meaning of the term 'body' and its 'organs' and their 'functions'. All of them are meant to serve the 'true self' of the person which is his Atma residing inside the body and which uses the body to live in and to interact with the world during its sojourn in this life. If this body is properly employed or used, the Atma is sure to reach its desired destination comfortably and peacefully. Otherwise, the Atma would be enslaved by the body. This can be easily understood by a simple example. An Emperor who falls prey to sensual pleasures and various indulgences and begins to neglect his moral duties and responsibilities towards the subjects of his realm as well as the administration of his empire, the empire crumbles and dismantles one day or the other. Such an emperor becomes a puppet in the hands of his coterie of selfish ministers who literally imprison him and mark the beginning of the downfall of the once flourishing and prosperous empire. On the other hand, a conscientious Emperor is lauded in history and acquires great fame and honour while he is still alive. This concept of the body being a chariot or a vehicle for the Atma to reach its destination is explained in Katho-panishad, Canto 1, Valli 3, verse no. 3-4; and Brihad Aranyak Upanishad, Canto 2, Brahmin 5, verse nos. 15, 19.] (1).

[Note—¹This can be visualised when we see that fire is latently present in the firewood though the former is not apparently visible in the latter. It is also said elsewhere in the Upanishads that the earth and the fire elements are latently present in the water element because both of them emerged from the latter—refer Brihad Aranyaka Upanishad, 1/2/2 of Shukla Yajur Veda tradition, and Shwetashwatar Upanishad, 6/15 of Krishna Yajur Veda tradition. For example, the earthen pot is made of clay, that means the pot is inherently present in the lump of clay even before it was moulded in this shape. The only difference between the lump of clay and the pot of clay is that the former has no shape while the latter has a fixed shape. But the fact remains that the both the lump and the pot have one common factor, one common denominator—and it is 'clay'. Had this not been so, when the pot is broken, it would have reverted into something other than clay, and it would have been impossible to mould the pot out of clay as it is impossible to craft the pot say out of water or fire. This is because water and fire do not have the pot hidden in their self as their integral part.

²The word *Yoni* literally meaning a vagina or uterus like hole or opening in the body. It is through the vagina that conception takes place, it is in the womb that the embryo develops and grows, and it is through the opening of the vagina that the infant is born. Here these two openings of the body which are being referred to by this term *Yoni* are the mouth and the anus because both are essential to sustain life in the body. The mouth takes in food which provides essential nourishment to the body, while the anus helps to eliminate waste products from it.

³The various vital winds inside the body and their functions are the following--(1) *Pran*, the wind element, as breath, that is exhaled as well as inhaled, and which is responsible for infusing and sustaining life in the body; it is considered the chief wind in the whole setup because without life no other wind would be of any significance to the creature; (2) *Apaan*, the wind that passes down the intestines and is responsible for digestion of the food taken by the creature and its excretion through the anus and urinary organs (kidneys); (3) *Samaan*, the wind that is responsible for equal distribution of nourishment throughout the body, as well as in circulation of blood; (4) *Udaan*, the wind that helps the body to rise and move about, it also helps the body to expel toxic waste gases in the body through the nostrils and mouth in the form of exhalation and cough; and (5) *Vyan*, the wind that helps in maintaining equilibrium and pressure within the body, and it also controls the functioning of the other winds.

Besides the above, there are five subsidiary winds which act more like assistants to the chief *Prans*. They are-- (1) *Naag*—this junior wind which helps in exhaling breath and belching; (2) *Kurma*—this subsidiary wind helps the eyelids to open and shut; (3) *Krikar*—this creates the sensation of hunger; (4) *Devdutta*—this creates sleep; and (5) *Dhananjay*—it prevents decay and deformation of the body immediately after death for some time.

According to *Subalo Upanishad*, canto 9, verse no.1-14 of the *Shukla Yajur Veda* tradition, these ten winds have the following functions—(1) *Pran*—this controls eyes and the faculty of sight (verse 1); (2) *Apaan*—this controls ears and the faculty of hearing (verse 2); (3) *Vyan*—this controls nose and the faculty of smell (verse 3); (4) *Udaan*—this controls the tongue and the faculty of taste (verse 4); (5) *Saman*—this controls the skin and the faculty of touch (verse 5); (6) *Vairambh*—this controls speech (verse 6); (7) *Mukhya*—this controls the hands (verse 7); (8) *Antarayam*—this controls the legs (verse 8); (9) *Prabhanjan*—this controls the anus (verse 9); (10) *Kurma*—this controls the genitals (verse 10); (11) *Shyen*—this controls the *Mana* or the thoughts and emotions (verse 11); (12) *Krishna*—this controls the discrimination, intellect and wisdom (verse 12); (13) *Shwet*—this controls *Ahankar* or the notion of ego, pride, arrogance, vanity etc. (verse 13); (14) *Naag*—this controls the ‘*Chitta*’ or the faculty of concentration, memory, sub-conscious, reasoning (verse 14).

Location of the five chief vital winds, called the *Panch Prans*, in the body—(1) *Pran*—it is present in the mouth, nose, heart, navel, big toe of the leg; (2) *Apaan*—it is present in the intestines and anus, lower abdomen, thighs, knees; (3) *Saman*—it is uniformly present throughout the body; (4) *Udaan*—it is present in the hands, legs, joints of the body; and (5) *Vyan*—it is located in the ears, thighs, waist, heels, shoulders, throat. The subsidiary winds as listed above, i.e. *Naag*, *Kurma*, *Krikar*, *Devdutta* and *Dhananjay* are located in the skin, muscles and the bones.

Besides the *Upanishad* mentioned above, there are others that elaborately describe the vital winds, their locations, their functions, how they are satisfied, along with their significance. The chief amongst them are (1) *Chandogya Upanishad* in its canto 3, sections 13-18; canto 5, sections 19-23 (describes how the five winds are satisfied); and canto 7, section 15, (2) *Jabal Darshan Upanishad*, canto 4, verse no.23-24 of the *Sam Veda* tradition, (3) *Maitrayanu Upanishad*, canto 2, verse no.6-7 of the same *Veda* (which describes the functions of these winds), (4) *Subalo Upanishad*, canto 9, verse no.1-14, and (5) *Paingalo-panishad*, canto 2, verse no.3, *Brihad Aranyaka Upanishad*, 1/3/1-24, 4/1/3, 5/13/1-4, 6/1/8-14 of the *Shukla Yajur Veda* tradition; and *Taittiriya Upanishad*, 2/3 of *Krishna Yajur Veda* tradition. These vital

winds have also been elucidated upon in sage Veda Vyas' Adhyatma Ramayan, Aranya Kand, Canto 4, verse no.38-39.

The Brihad Aranyak Upanishad of Shukla Yajur Veda tradition, in its Canto 3, Brahmin 9, verse no. 26 clearly lays down the pyramidal structure of the five important vital winds. It says that Pran depends and rests upon the Apan wind, the latter upon the Vyan wind, the latter upon the Udaan wind, and the latter upon the Samaan wind although all the Prans are equally important, and there is no distinction between the one and the other as to their importance as well as to the extent Brahm is present in them. We cannot start the counting from any particular entity, saying for example that the Pran wind is number one and more important than the other vital winds. In the present context, this structure is only to show that even in the realm of metaphysics, a hierarchy is maintained, and at the apex of this hierarchical triangle is the supreme entity from which the various vital winds derive their authority and powers and potentials. That supreme entity at the micro level is the Atma as a representative of Brahm who is the supreme authority at the macro level.

As for belching and flatus, they are equally important as the other forms of the air because they help the body to get rid of excess accumulation of waste toxic gases inside the body which can prove detrimental to the general health of the body if not expelled. The rumbling is like the stomach growling for attention and requests the body to pay heed to its problems.

The fact that the body cannot survive without the Pran representing all the vital winds present inside it has been clearly brought out in Chandogya Upanishad, 5/1/1-15, and Brihad Aranyaka Upanishad, 1/3/1-24, 6/1/8-14.

The importance of these five fundamental elements in creation (i.e. the earth, water, fire, air and sky) vis-à-vis life and the living being are succinctly brought out in Brihad Aranyaka Upanishad, 2/5/1-4, 6 of the Shukla Yajur Veda tradition.]

2. Now the answer to the question 'how is the gross body said to be made up of seven constituent parts, and what are those parts?' is being answered.

When a man named Devdutta has access to material objects of comfort and pleasure in this world, he is able to enjoy them. In other words, when the circumstances are favourable for him and he is able to acquire those material things in this world that gratify his sense organs and are pleasing for them, things of material comfort and those that are to his liking which keep him happy and in a cheerful mood. This includes the abundant availability of delectable, appetising and nutritious food and drink, having all the six types of basic tastes that the body desires to taste and enjoy (as mentioned above in Para no. 1).

When such food and drink are available, it is but natural that the man eats to his full and feels mentally contented. This has an extreme good effect on his metabolic activities, and his general excellent health shows his level of contentedness and satisfied hunger, when he has no desires to eat any more of anything (as compared to a famished man who hasn't had a good meal for so many days and yearns for some good appetising food, which has an adverse effect on his mental and psychological health and he remains in a state of perpetual hunger and on the look out for food instead of devoting his time to some other constructive activity).

[It must be noted here that usually it is a rich man who has access to the best of delicacies and a wide variety of food available to mankind along with the least of manual labour that would consume the maximum of energy and calories, and the maximum of physical comforts and pleasures with no dearth of leisure time to enjoy his drinks and the food eaten by him. Apparently he should be in the most robust and

pink of health, but unfortunately it is not so, for more often than not a rich man who leads an opulent lifestyle is ridden with innumerable diseases as compared to his brother who might be toiling in the fields or working on the factory floor. This is because of the quotient of mental happiness and contentedness that the latter has and the former lacks. This internal peace of mind helps to regulate the metabolism of the body and absorb the nutrients from whatever is eaten better as compared to the case when the best of food is dumped inside the body but go un-utilized, rather proving toxic instead for the body. So, merely availability of good food and the time to eat it at ease, or being able to lead a plush, princely and rich life well provided for are not the deciding factors for the body being well-nourished and well-fed as intended in this Upanishad. What is implied here is the level of one's spiritual state, the level of one's internal peace of mind and contentedness that helps the body to derive the maximum of benefit from whatever is eaten. As has been emphasised elsewhere, the body of the creature is a personification of the Viraat Purush, the Lord of creation, and the Atma residing in this body is the Brahm himself. Each morsel of food is to be regarded as an offering made to the sacred fire burning inside the body and meant to be accepted by the divine Being (Brahm) residing inside the same body. In this context, the body itself is regarded as the venue of the fire sacrifice—refer Pran Agnihotra Upanishad, verse no. 21-22. Since a fire sacrifice is a holy exercise and not some kind of office or college party to be enjoyed after a year's work, the food eaten with this conviction and idea becomes holy and well regulated; it acquires a divine connotation instead of something to be enjoyed to gratify oneself. In earlier times, great ascetics, sages and seers led an austere life full of hardships but their mental outputs in the form of scriptural and philosophical research and discourses have had no parallel; great sages and seers had families and their biological off springs had no match in their wisdom and mental prowess. This is the exact implication of this paragraph—a man feels contented and happy, he feels 'well fed and satisfied of hunger' at the mental level and not at the physical level of eating delicious food or drinking intoxicating liquids. A man undertaking abstinence from food for spiritual reasons might feel more exhilarated and fresh than a man just out of a sumptuous meal in a high-end restaurant.]

The psychological effect of a favourable meal which is delicious and eaten with relish is that it sets off a chain reaction in the body which in turn secretes some chemicals which promote good health and general well being by making the best out of the food eaten by utilizing all the nutrients present in it. In other words, these six basic tastes make the body absorb the goodness of the food and drink, and benefit from them. In other words, the tasty the food or drink is, the more nutritious it is for the body, because the body willingly accepts it and relishes it. This also results in direct building and repair of the tissues of the body, leading to its 'pink of health'. [This is proved by the fact that if the food or drink is not to our liking, then no matter what quantity of it is available, and no matter how much we eat or drink just to overcome the pang of hunger or thirst, the body would not accept it with the same enthusiasm as it does food or drink which are to its liking. The result is that the food or drink is not relished, and the digestive organs consequentially revolt and refuse to secrete digestive juices as a result of which the cells do not get sufficient nutrition and the general health declines.]

The juice extracted by the body from the food or drink are converted into blood. Blood is converted into flesh, flesh into muscles, muscles into nerves and veins, the latter into bones, bones into marrow, and the marrow into semen and its life-bearing element, the sperm. So, these seven fundamental elements in the body are

created out of the food or drink having the six attractions in the form of the tastes which make them acceptable to the body.

The subtle and sublime qualities present in what is eaten and drunk are collected and stored in the heart. [That is why a man's nature depends very much on the type of food eaten by him. If the food is basically of a 'hot' category, such as hot spices and flesh of aggressive animals, the man's basic nature also becomes aggressive, hostile, belligerent, short-tempered, restless, hot, angry and subject to bursts of tantrums in consonance with the basic nature of nutrients present in the food eaten by him, while those who eat food which is 'cold' in its inherent nature, such as fruits and vegetables, develop a more balanced, calm, compassionate and cool temperament. Even the same food having different origins has different constituent nature—for example, cow's milk is considered inherently cooler by nature as compared to the buffalo's milk which is considered hot. Similarly, those who drink wine excessively become prone to delirious, impulsive, reckless and aggressive behaviour than those who completely abstain from any kind of intoxicating drink. The impact of food and drink upon the general health and mental setup of a person is so profound that even drinking such innocuous liquids as water in the hot or cold forms effect his health and mood—for example, while hot or warm water infuses energy and vitality during winter, it is not acceptable in hot summers when the same purpose is served by cool water. So, in short, the general health and bearing, the temperament and behaviour, the character and nature, the personality and level of mental and moral development etc. of a man depend much on the type of food eaten and drink drunk by him.]

It is union of the male's sperm and the female's ova that the embryo is formed. Since this union is brought about by compatible hearts, it follows that the character of the food and drink also affects this relationship and its product, the embryo. [Since the offspring is formed from this lump of flesh called the embryo which develops into the foetus carrying the characters of both the parents, and since these characters are formed to a great extent by the food eaten or drink imbibed by the parent, it naturally follows that the fundamental character of the food or drink is passed on to the offspring and shape its personality, nature, temperament and behavioural patterns. Now, the presence of these vital characters of the food or drink in the heart is a metaphoric way of saying that they shape the environment in which the pure conscious Atma lives inside the body of the creature, because the heart is the dwelling of the Atma. This Atma is the 'true identity' of the creature, so we deduce that the atmosphere created by the nature of food eaten and drink imbibed by the body in turn moulds the character and nature of the creature by influencing the Atma. As the Atma lives surrounded by the subtle space of the heart, called the Hridaya Akash, anything that affects this space would naturally affect the Atma. For example, the sun shines in the sky, but if there are dark clouds in the sky, the bright sunshine would obviously be affected and for all practical purposes the sun itself would appear to be shrouded in a dark veil which blocks its shine. In other words, anything that pollutes the inner self of the father from whose body the sperm was obtained as well as the mother from whose body the egg was derived and from whose body the embryo derives its nourishment through its developmental phase would naturally pollute the inner self of the foetus and the infant that is born into this world.]

The heart stokes the 'fire' that burns inside the body of the living creature. [This observation has several connotations. It refers to the fact that while the heart is beating, the circulation of blood in the body continues, thereby keeping the body warm and alive. Only as long as the heart beats, the myriad functions of the body are

carried out, and this is manifested by the 'warmth' that the living body exhibits. Even a man in deep sleep or in an unconscious state has a warm body to show that all his internal organs such as the digestive organs, the liver, the lungs, the kidneys etc. are ceaselessly working. Another meaning of the word 'fire' in the context of the heart would be the passions and longings that have their origin in the heart and which bring about a union between the two opposite sexes, resulting in the formation of the embryo. Still another interpretation would be the creation of acidic and hot substances in the body such bile and other digestive juices which have acidic and hot character. This is elaborated further below.]

This fire produces the 'bile' which is hot in nature. This hot bile produces the wind or air element. [The fact that heat generates currents of air or a waft of wind is witnessed when we observe that when a fire is lit a slight breeze begins to blow, fanning the fire and helping the sparklers arising from it to fly away to some distances in every direction. This is because hot air near the source of the fire expands and rises up, creating convection current in the air around the fire. It is this reason why huge bush fires generate hot winds which only stoke the fire further and help it to spread quickly. The bile is secreted in the intestines to digest food. Gases are formed during this process of digestion and excess of hot bile and acids produce hot gases that rises up in the throat or down the intestines, producing a burning sensation in the chest and the passage of hot flatus in the anus respectively.]

The wind or air in turn helps the heart to function properly; it helps to develop activity in the heart; it makes the heart alive and active by making it beat and flutter occasionally. [That is why the heart beats and flutters. Its rhythmic beating is responsible for circulation of blood as well as the very life of the body. The fluttering sensation felt occasionally in the region of the heart is often due to accumulation of excessive gases in the body. After a heavy meal it is usually felt that the heart beats faster and more strongly just like a bird fluttering its wings faster and stronger to overcome air turbulence and resistance. According to metaphysical concepts, there are certain forms of winds present inside the body which are responsible for its normal functioning. These have been outlined in the note to Paragraph 1 above. Since the heart is the only internal organ whose activity can be physically verified by the virtue of its regular beating and occasional fluttering, it follows that it is virtually showcasing the ability of the vital winds in the body to create movement and activity.]

3. When conception is effected during the period of menses in the female by the union of the male sperm and the female ova, then within one night the formation of the one-celled Zygote commences. This develops into the froth-like Morula. This transforms into the Blastula or Blastocyst during the next fifteen days. This finally becomes more robust as the Gastrula within one month. The head appears within the second month, the legs within the third month, the ankle bone, abdomen and waist region are discernible in the fourth month, and the spine is formed in the fifth month. During the sixth month, the apertures of the head appear—i.e. the mouth, nostrils, eyes and ears make their appearance.

The embryo gets its first sign of life in the seventh month. In the eighth month, the embryo is deemed to be fully developed and acquires all characteristics of the would-be infant.

If the male sperm is more potent, the child is a male, while if the female genital fluids are in excess, more potent than the male reproductive fluids and denser

in viscosity, then the offspring is a girl child. If both are equally potent then the offspring is a hermaphrodite or eunuch.

If the sexual intercourse is done with an agitated and restless mind, then the offspring is blind, hunch-backed, deformed or dwarfish. [That is, they are deformed, and have abnormal physical characteristics because of the flawed and stunted growth of the embryo and foetus in the mother's womb.]

If the sperm is divided into two due to being buffeted by the air or wind element, then it results in the conception of twins.

When the gross body made up of the five gross basic elements (earth, water, fire, air and sky) is ready in the womb, it becomes conscious of life in the form of five senses of perceptions that are discerned by the mind (brain). This helps the creature to acquire knowledge of the various sense objects of the world that correspond to these respective sense perceptions. For example, the creature's perception of smell located in the nose helps him to learn about certain aspect of the world by identifying and receiving the stimuli known as 'smell' that would immediately help him to identify this individual thing in future. It also helps him to decide whether or not this thing is to his likings or not, and therefore whether or not to accept it in future. This perception of smell is like a piece of the composite mosaic that helps the creature to form an image of the world in his mind. The other 'pieces' of this mosaic are the perceptions of sight, taste, touch and sound. Together they act in concert to help the creature to receive the world and respond to it. It is like the case of using five colours to paint a picture of a bouquet of flowers—one type of colour would not serve the purpose because a rose is pink while the sunflower is yellow.

These sense perceptions are those that are related with the five sense organs of the gross body, such as the sense of sight which is related with the eye, the smell with the nose, the taste with the tongue, the hearing with the ears, and the touch and feeling with the skin. These five sense perceptions help the organism to realise that it is 'alive'; it has some intelligent capability which distinguishes it from inert and inane entities, and that the physical world does indeed exist because these sense perceptions have their origin in the external world of material objects.

While living in the womb, the unborn creature's consciousness or its pure self which is in a foetal form begins to meditate on OM, the monosyllable ethereal sound. [This is a symbolic way of saying that it starts to 'breathe' in a subtle manner because during formal meditation OM is pronounced silently within one's own mind while one slowly inhales and exhales breath in an imperceptible manner. This is also to highlight the importance of the fact that even while in its most primitive and primary form, even while it is still in the mother's womb in a nascent stage of its life, the creature had learnt to meditate and contemplate in order to acquire strategic mystical powers and potentials that would transform an otherwise formless and helpless piece of lump of flesh, muscles and bones into a formidable creature who would be born in this world do so many deeds that would turn the shape of the world in future. No one can imagine that the small embryo lying helplessly in the womb would one day turn out to be a formidable conqueror who would reduce to rubble entire civilizations under his ruthless cruelty, or a great scientist or a great sage and seer or prophet for that matter who would give new direction and vision to the world, who would show mankind light down the dark tunnel of hopelessness and despair. This meditation is also done by the 'embryonic' creature (the foetus) to break free from the hellish condition of the womb in which it finds itself. This is corroborated by Paragraph no. 4 below. Further, this OM represents the vibrations generated in the cosmic ether prior to the evolution of creation; it was the first sign that there was an activity and that this

activity would produce some sort of consequence—and as it happened, this ‘consequence’ was the unfolding of this vast creation. These vibrations produced a subtle sound and the cosmic sound was like the distant rumbling of clouds or the trundling of a train. Ancient sages who could perceive this sound during their meditation thought over the matter and decided upon the word OM as being the nearest in sound as that distant cosmic vibration. It is believed that the entire creation can be traced to this single event; the entire creation is encrypted in the four letters of this word OM, i.e. A, O, U and M.]

This meditation infuses the body of the embryonic creature (i.e. the foetus) with other signs of life—such as the acquisition of eight ‘Prakritis’ or the physical characteristics and basic nature that qualifies a creature and entitles him to be called a ‘living being’ or a Jiva. They help to establish his independent identity and personality. [These eight Prakritis are (a) the basic nature and temperament, (b) the fundamental exalted stature of the pure consciousness or Atma which is the real self of the creature, (c) the subtle ego and sense of pride that become integral to the character once the creature become aware of his own basic greatness and potentials, and (d) the five sense perceptions of sight, smell, hearing, taste and touch or feeling. $(1 + 1 + 1 + 5 = 8)$. These eight Prakritis are related to the creature at the subtle level of his existence.

Now we come to the sixteen faults or flaws that the embryonic body of the creature (i.e. his foetus) acquires—they are (a) five organs of perception (eye, ear, nose, tongue and skin), (b) five organs of action (legs, hands, mouth, genitals and excretory), (c) five gross elements (earth, water, fire, air and sky) which constitutes its basic framework and which leave their own peculiar stamp of characteristic qualities and virtues on the body in which they are present in different ratios, and (d) the Mana or mind and heart, or the emotions and thoughts that the creature possesses. $(5 + 5 + 5 + 1 = 16)$.¹ [There is another reason for listing items as ‘faults or flaws’. The embryo is an indistinguishable mass of flesh and blood and other body fluids. But what makes it so special and different from others such tumor-like structures in the body is the fact that the embryo harbours the spark of life which others do not have. This embryo would produce a living being capable of reproducing itself—a rare and magical feat. This ‘life’ in the otherwise lifeless vulgar bundle of blood, body fluids and flesh is called the ‘consciousness’ that most had surreptitiously found its way in it. This is the miracle of creation! This ‘consciousness’ would eventually become the ‘true self’ of the creature when the mature foetus comes out from the dark-cavernous interns of the womb into the outside world as an infant. Now we would observe here that this ‘consciousness’ is untainted and faultless because it is independent form both the parent whose union has resulted in the creation of the embryo. But unfortunately this ‘consciousness’ has to live in a filthy environment and surrounded by the sheaths that cover it from all sides. These sheaths or the different structural features of the embryo have come from the parent and not from outside. Thus it is obvious that the primarily immaculate consciousness now becomes ‘tainted’ due to circumstances. As the embryo becomes ‘solidified’, and as the time passes the organs begin to take their shape, the ‘consciousness’ finds itself firmly encircled and shackled and entrenched in a prison from where it is almost impossible to escape now. It is like the case of a convict condemned to life imprisonment!

There is another reason why these are called ‘faults or flaws’. It is because initially the embryo was a rounded uniform mass which had no distinguishing features. Anything which can be distinguished from the other must have certain characteristic features which either are in excess or lesser than the thing with which it

is compared, for if it is not so there can be no distinction between the two entities. Therefore, none of them is perfect, because they would appear to have some abnormality or anomaly in them when viewed from the perspective of the other entity. For example, if 'A' is deemed to be a perfect sample, then 'B' is imperfect, while if the latter is perfect then the former is imperfect. The best way to understand this concept of the organs being imperfect and ridden with some or the other type of fault is the fact that the hands only receive and give but cannot take the body to some place which is done by the legs, but the latter can't accept or give. Similarly, the eyes can only see and do nothing else, the nose can only smell, the skin can only feel, the excretory organs can only eliminate, the genital can only reproduce, etc. In short, each of these organs has a very limited role and they seem to be very jealous in guarding their territory of influence. The eyes won't allow the ear to see, and vice versa, so on and so forth. In other words, none of these organs are perfect, but the 'consciousness' is perfect; the latter can do everything at the same time while the organs have specific functions allocated to them.

The Yogtattva Upanishad of Krishna Yajur Veda, in its verse nos. 12-13 presents a list of faults or imperfections that afflict the creature and thereby taint its otherwise immaculate Atma. This Upanishad is Chapter no. 17 of this volume.]

The food and drink taken by the mother goes to nourish the embryo through the various ducts of the mother's body, i.e. through her veins and capillaries to reach the developing embryo in her womb to satisfy its hunger and thirst. [The placenta is the tubular duct that links the creature in its primitive form to the mother. When taken at the cosmic level it implies that the individual creature is linked to his cosmic mother, i.e. Nature, through the various characteristic attributes, qualities and virtues that he inherits and which decide his primary nature and basic personality traits. That is why the two are spelt the same way—the former with a capital 'N' as Nature, and the latter with the smaller 'n' as nature.]

In the final month, i.e. in the ninth month, the foetus is fully developed with all the sense organs in place. At this point of time the creature remembers its past life, and all the deeds done by him in it, whether they were good or bad, flash back into his memory (3).

[Note—¹According to modern embryology, the ectoderm of the developing embryo forms the outer skin and other external organs of the physical body. The middle layer called the mesoderm forms the flesh, muscles, genital organs and the other internal organs of the body. The inner most layer, the endoderm, forms the alimentary canal, digestive organs, liver etc.]

4. When the living being (in his ninth month in the mother's womb and when he is ready to be born in this world) has a flash back of his numerous past lives, he begins to ponder, 'I have seen (experienced and witnessed) thousands of my previous lives during which I ate so many things and drank so many drinks, and I went around wandering in so many wombs, suckling milk from so many mothers. I was repeatedly born and I repeatedly died. Whatever good or bad deed I had done for my family and my kith and kin have landed me here (in this hell like environment of the womb), and I am suffering from their consequences. All those who benefited from those efforts of mine have long gone away, leaving me alone to suffer the horrendous consequences of my evil deeds. Here I am lying in an ocean of miseries and sorrows, with no solution or end in sight. If I manage to get out of this hellish womb, I shall take the

refuge and shelter of the great Lord Maheshwar (literally Lord Shiva, but here referring to the Supreme Being in any of the manifestations in which he is worshipped and adored by the devotee). This would help me to overcome and destroy all the evil effects of my misdeeds and sins, and pave the way for my liberation and deliverance from their horrors, and provide my soul with emancipation and salvation for good, because the divine feet of Lord Maheshwar has the potential of providing such boons.

Indeed, if I manage to get freedom from this hellish womb, I shall take the refuge and shelter of the great Lord Narayan (referring to the Lord Vishnu who is also known as the Viraat Purush, the almighty, all-pervading and all-encompassing macrocosmic form of the Supreme Being or Brahm; Lord Vishnu is the sustainer and protector of this creation). This would help me to overcome and destroy all the evil effects of my misdeeds and sins, and pave the way for my liberation and deliverance from their horrors, and provide my soul with emancipation and salvation for good, because the divine feet of Lord Vishnu has the potential of providing such boons.

Indeed, if I manage to get freedom from this hellish womb, I shall diligently practice Sankhya and Yoga¹. These two are powerful tools and potent enough to terminate a creature's sufferings that accrue to him as punishment for his past evil deeds, and instead provide liberation and deliverance to him from their horrible consequences.

If I indeed manage to find liberation from the sufferings of this womb this last time, I will meditate and contemplate upon the supreme Brahm. I shall always remember the Lord and spend my life in honouring him'. [This shows that the creature has made a solemn promise of leading a noble, virtuous, auspicious and righteous life if he is pardoned for his past sins and given one last chance to atone for his past misdeeds and mend his ways. It is like going out from a prison on parole and mending one's life so that one does not have to suffer the torments of jail any more. The Lord is so gracious, benevolent and magnanimous that when the creature thus makes the solemn vow and appeals to him in earnest, the Lord gives him one more chance, and so he is allowed to come out of the womb into the world. But it is so disgraceful and shameful of this wretched creature that once set free from the hell-like prison of the womb, he forgets all his promises and righteous intentions, jumps bail, and goes about his dirty old ways with all the more vengeance that he can command!]

After that, he is allowed to reach the gates of this womb (which is like reaching the gate of the prison before he is allowed to go free into the world outside). Once there, he is squeezed out of it with great difficulty. [Even his final coming out is not without its own set of troubles, its own torments. The creature is literally pushed out from a small hole which is too small for his comfortable exit.]

As soon as he puts his head out, he is touched by the wind called 'Vaishnavi', which is a metaphor for the enchantment created by 'Maya' or worldly delusions which virtually sweep over him and takes him along its current. The creature begins to hallucinate and think that he would not have to go back to the hell-like womb representing the prison-like womb any more. The touch of this magical wind of Maya (ignorance of reality and creation of worldly delusions in its stead) has such a mystical hypnotic effect upon the creature by immediately creating an aura of delusions that he instantly forgets about his past lives and the numerous cycles of deaths and births that he has had to undergo. This gust of wind called Maya is so overpowering that it also removes all memory and knowledge of deeds, whether good or bad, that the creature had done in those lives, and the lessons that he had learnt from them. He also forgets about the horrible torments in the womb as well as the numerous promises he had made to the Lord there. That is why he cannot distinguish

between one deed as being bad and one as being good in his current life although he has had a lot of experience of doing such deeds in his numerous past lives and the consequences that they have, their results that makes one suffer so much. So, the creature repeats the same errors, the same set of misdeeds, and commits the same stupid follies that he had been committing in the past and which had caused him so much pain and suffering all along over so many lives.

[It is like a man emerging out of the high walls of the prison to jut his head into the sunshine of freedom and enjoy the first breeze of liberation blowing caressingly across his face. It titillates him no end, and he feels a flow of ecstasy radiating in his veins and nerves. And in this temporary exhilaration and joys of freedom, the creature forgets what he is out on parole and he has to mind himself, for if he does not live up to his promises, the court can cancel his bail and he would be back to square one once again. He forgets about the harsh realities of the womb and the fact that he has been allowed out on certain bonds, and therefore he must be aware and careful lest he would have to undergo the same horrors in the confines of the prison walls once again if he does not keep his part of the bargain. And what is that bargain? Obviously that he would lead a righteous, auspicious and noble life, not allowing himself to commit any misdeeds and sins, and spend his time in search of the Truth which can give him permanent peace and salvation. Hence, rejoice he can for finding freedom from the horrors of the womb but not at the cost of his long term goal of finding permanent means of not reverting to another womb in future.] (4).

[Note—¹The philosophy of *Sankhya Shastra* has been elaborately described in Chapter 5, Shwetashwatar Upanishad, Canto 6, verse no. 1-3 and 13.]

5. [This part of the Upanishad has a close resemblance to verse nos. 18-10 (fire) and verse nos. 21-22 (fire sacrifice done internally in the spiritual seeker's own body) of the Pran Agnihotra Upanishad of Krishna Yajur Veda tradition which is Chapter 29 of this volume.]

Why is the gross lump of muscles and fibers called a 'Deha', or the physical body of the living organism? The answer is because the 'fire element' in its three subtle forms—such as 'Gyanagni' or the fire of knowledge, erudition, wisdom and enlightenment, 'Darshanagni' or the fire which lights up the world with its light and resides in the faculty of sight (both the physical sight located in the physical organ of the eye as well as the ability of deep insight which enables one to penetrate the surface and see things in their natural and truthful form by the use of intelligence and wisdom), and 'Jatharaagni' or the fire that stokes hunger by keeping the oven of digestive organs burning and consuming fuel in the form of food—exists in this body; these fires take shelter in this body.

Amongst these three forms of fires, Jathraagni is one that digests anything that is eaten, drunk, licked or sucked. Darshanagni is one which enables one to see things. And Gyanagni is the one which helps to discriminate between what is good deed and what is not.

The divine 'fire' has three other forms also. Their locations in the body are as follows—the 'Ahavaniya' fire resides in the mouth, the 'Garhyapatya' fire lives in the abdomen, and the 'Dakshinagni' has its abode in the heart¹.

[Now, a symbolic way of worshipping the divine 'fire element' by treating this 'body' as a metaphor for the various components of a formal fire sacrificial ritual is being described.] The Atma (the pure conscious true 'self' of the creature) is the

Yajmaan (the chief patron on whose behalf the entire fire sacrifice is performed and who is supposed to be the beneficiary of the entire ritual) of this symbolic fire sacrifice.

The Mana (mind and heart; emotions and thoughts) is like the chief priest known as Brahma who presides over the fire sacrifice. [This is because it is the sincerity of devotion and faith in the fire sacrificial exercise that bears positive fruits for the patron. As any endeavour needs concerted efforts to succeed, the involvement of the mind and heart are the pre-requisites for success in this spiritual enterprise as well. Though the word 'Mana' is usually used technically to mean the mind only, here the heart is also included in its ambit to present a comprehensive picture of things.]

'Lobh', which refers to the various types of greed, desires and yearnings pertaining to this material world of sense objects, are like the sacrificial animals. [This implies that one should symbolically sacrifice all his worldly greed and desires in the order to achieve success in this spiritual fire sacrifice. This symbolism is based on the practice of sacrificing animals during the fire sacrificial rituals. It is more important to sacrifice all evil tendencies and burn all worldly taints in order to actually benefit from such religious activity than merely killing innocent animals to fulfill certain obligations, because blood-letting and causing pain to others for selfish motives is in no way conducive to spiritual enhancement.]

The symbolic 'Diksha' (the investiture ceremony whereby the chief patron performs certain rituals and is formally initiated into this religious sacrifice by making certain vows and undertaking to observe certain strict norms to the accompaniment of chanting of Mantras; it requires amongst other things that the patron would engage in this religious ritual with full devotion and faith) are acceptance of the sacrosanct principles of 'Dhairya' (patience, forbearance, tolerance, courage and fortitude) and 'Santosh' (a perpetual sense of contentedness and satisfaction in whatever is available, and not being rapacious, greedy, desirous and lustful towards anything).

The sense organs of perception in the body (such as the ears, eyes, nose, tongue and skin) are the symbolic pots used during a fire sacrifice. Similarly, the organs of action (such as the legs, hands, mouth, genitals and excretory) are the symbolic offerings, called 'Havi', to the sacrificial fire.

The head, called the 'Kapaal' (literally the skull), is the water pot or bowl, also called a 'Kapaal', used to keep the offerings to be made in the sacred fire; the hairs represent the green grass called 'Kusha' (which is used to make the mat upon which one sits during such rituals as well as the brush used to sprinkle water for purification during rituals); and the opening of the mouth is the pit of the sacred fire.

Since the head has four holes (such as the nostrils, eyes, ears and mouth) it is like the Kapaal, or a pot with four holes used during fire sacrifice rituals, while the row of teeth is like the Kapaal with sixteen small corrugated legs upon which it stands (because there are sixteen teeth in one row). [Liquid offerings are poured into the sacred fire through the holes in the pots referred in this stanza. The four organs present in the head, such as the eye, ear, nose and mouth, are like holes in these pots. Further, these pots are so designed that their lower half have a base which is serrated like the blade of a saw—hence they represent the lower row of teeth in the mouth.]

[Now the anatomy of the body is being outlined.] This body has one hundred seven sensitive points or locations. It has one hundred eighty joints, one hundred nine main nerves, seven hundred nerve endings or ganglions, five hundred sites of marrow, three hundred eight bones, and four and a half crore (4.5 x 10 million) hairs.

The heart weighs eight 'Pal' (1 Pal = 1 Tola = 12 grams; hence 8 x 12 = appx. 96 grams). The tongue is twelve 'Pal' (12 Tola = 12 x 12 = 144 grams appx.). Bile

weighs one 'Prastha-maatraa' (= appx. 930 grams). Mucous weighs appx. one 'Aadhak-maatraa' (= $2.5 \times 930 = 2325$ grams appx.). Semen is appx. one 'Kudav-maatraa' (= 250 grams). And fat or marrow weighs two 'Prastha' (= $2 \times 930 = 1860$ grams appx.).

Besides this, the quantity of urine and stools in the body varies according to the food or drink that the body takes in.

The knowledge contained in this Upanishad was first revealed and enunciated by sage Pippalaad. Hence it is named after him as 'Paipalaad Moksha-shastra'. It is the scripture that has the potential to provide one with liberation and deliverance. [This is because it warns the spiritual seeker of the various pitfalls of being ignorant of the horrors of remaining engrossed in this world and forgetting about the horrible experiences of the hell-like womb and the solemn promises that one had made there before emerging in this world, promises that one usually forgets once he is out of the prison gates of the womb. The knowledge of how he has come into being, how his body and its organs are formed, who he grew and developed in the hellish environment of the womb, and under what circumstances he was born etc. fills a wise man with great revulsion for his origins and he then decides not to repeat the experience again. Once he takes this decision he strives to find out a way to achieve this end by consulting the scriptures and other wise men. He then discovers the great Truth and then fixes his attention on it. He strives to do everything possible not to re-enter this hellish cycle of birth and death again, and finds that it is actually possible. This wisdom and enlightenment is the stepping stone for his ultimate liberation and deliverance from this world.] (5).

[Note—¹The *three fires* mentioned here have been elaborately described in Chandogya Upanishad, canto 4, section 10 to 13. Actually there are five formal divine fires — (a) 'Garhyapatya' (the fire of the household hearth), (b) 'Dakshinagni' (the fire used as a witness to making charities or any other religious festivity), (c) 'Ahavaniya' (the fire to invoke the Gods during a ritualistic sacrifice), (d) 'Sabhya' (the fire of the Vedic period which was continuously lit) and (e) 'Awasathya' (the fire of the later Smriti period). Worship of the three important fires have been described in Chandogya Upanishad, canto 2, section 24, while canto 5, sections 4-10, 19-24 explain their great symbolic metaphysical significance.

The *Garhyapatya fire*—This is the householder's fire. A householder has land and farm representing 'earth' in which he grows food. This food is grown with the help of the light of the Sun, and it is cooked in the fire of the fire-place in the house. Hence, the Garhyapatya fire, or the householder's fire, is intrinsically present and is implied in these 4 entities. It is an integral part of these four. The earth has the 'fire element' because without heat and warmth, no seed would germinate and no life can survive on this earth. The food has fire present inherently in it because it is the energy inherent in food which helps to energise the creature that eats it. The presence of heat in the sun does not need to be explained because it is very evident.

The *Dakshinagni fire*—is a witness to making of charities when some water is poured as libation to the Gods. It signifies that the Gods are offered water to drink. To give water to the thirsty is the greatest form of charity. Therefore, this fire is symbolically present in water, and when it is poured, it signifies that the heat produced by sins committed by the person has been doused. Charities and donations make a man famous and renowned, hence the allusion to directions of the earth. His glory shines like the bright moon and he is called a star among human beings. He is the most exalted amongst his peers and compatriots even as the moon is most prominent amongst the stars in the sky.

The *Ahavanīya fire*—is lit to invoke Gods, and the Gods live in the heaven; hence the reference to the sky, heavens and electric. Since Pran is the best form of the vital winds, the allusion means that the Gods are the most exalted forms that exist in

creation. The ‘electric’ is a metaphor for immense strength, potent and power, which of course the fire possesses. This inherent quality of Electric that it possess most stupendous powers and strength is likened to the presence of Brahm in it even as the great power and strength present in a man is due to the Atma or Pran present in him. Even as a man is useless without the presence of Pran in him, the Electric would lose its importance if there was no Brahm present in it which gives it its punch and strength.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 7

Narayan Upanishad/Narayano-panishad

Dedicated to Lord Narayan, also known as Vishnu and Viraat Purush, this Upanishad expounds and elucidates the great metaphysical and spiritual importance and significance of this form of transcendental Divinity. Narayan is the primary cause of creation, and therefore of whatever that exists in it; he has manifested himself in everything that exists, being immanent and omnipresent. Narayan is a manifestation of the Supreme Being's (Brahm's) glorious virtues of providing sustenance, protection and nourishment to the creation created by none other than the Lord himself. The etymology and other details pertaining to the Lord known as Narayan or Vishnu are given as note at the end of Paragraph 1 of this Upanishad.

There are in all five paragraphs. Paragraph 1 narrates the fact that Lord Narayan is the Supreme Being who has created the entire world, including the Gods. Paragraph 2 highlights the all-pervading and immanent facet of the Lord besides his transcendental nature and form. Paragraph 3 describes the eight-letter Mantra of Lord Narayan, and the stupendous mystical powers that it possesses which gives the worshipper all he desires. Paragraph 4 outlines the metaphysical significance of the ethereal divine word OM and the benefits of doing Japa (meditation by constant repetition) with it. This paragraph also stresses the fact the all the divine forms or manifestations of the Supreme Being are nothing but the various forms of Lord Narayan. Paragraph 5 finally concludes the exposition by eulogizing the glorious potentials of this Upanishad and the great good it can bestow upon the faithful if read diligently and with firm conviction.

It is to be noted here that each paragraph of this Upanishad concludes by saying that what has been said in it is the summary of the basic doctrines of a particular Veda. For example, Paragraph 1 says that what is said in it is the essence of the Rig Veda, Paragraph 2 summarises the teaching of the Yajur Veda, Paragraph 3 is the essence of the Sam Veda, and Paragraph 4 of the Atharva Veda. To enhance the beauty of these paragraphs, a brief introduction of these four divine Vedas has been included at the end of each paragraph as note.

There are two devotional hymns dedicated to Lord Vishnu and Lord Narayan, called the Vishnu Sukta and Narayan Sukta respectively. They have been included as two separate appendices nos. 3 and 4 at the end of this volume.

-----Shanti Paath-----

ॐ सह नावतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजस्वि नावधीतमस्तु । मा विद्विषावहै ।
-----ॐ शान्तिः । शान्तिः । शान्तिः ।!!!

The meaning of this Shanti Paath is given in appendix no. 1.

1. OM Salutations! By invoking the divine name of the Supreme Being, the narration of this great Upanishad is being commenced. Verily, it is Lord Narayan¹ who reclines peacefully and blissfully in the bosom of all living beings as their Atma or their 'true self', which is pure consciousness.

Before this visible creation came actually into being, Lord Narayan decided to initiate the mystical process of creation, and so he resolved 'Let me create living beings and a creation that has 'the mystical and esoteric factor of life' in it'².

It is from Narayan that the all-pervading and immanent life-giving and life-sustaining Pran³ has emerged. It is from Narayan that Mana (mind) and the various organs of the body emerged. The fundamental primary elements of creation, such as the sky, the air or wind, the fire or energy, the water and the earth which bears the entire living world, are all born from Narayan.

It is from Narayan that Brahma, the creator, is born. It is from Narayan that Shiva, the concluder, has come into being. It is from Narayan that Indra, the king of Gods, is born. All the Prajapatis⁴, the legendary guardians of creation and regarded as the first manifestations of the Lord as 'living beings' of the visible creation from whom the rest of the creatures were born, also have Narayan as their parent.

It is from Narayan that the twelve Adityas⁵ (the celestial suns and the Sun God) are born. It is from Narayan that the eleven Rudras⁶ (the various forms of Lord Shiva), the eight Vasus⁷ and all the Chandas (literally the poetical styles in which the hymns of the Vedas were composed, but here implying the Vedas themselves) have come into being.

Everything in existence has its origin in Narayan; everything goes about doing its assigned tasks on the orders and inspiration of Narayan; and it is in Narayan that they finally take their rest at the time of conclusion.

This is what the first of the Vedas, i.e. the Rig Veda⁸, unequivocally asserts and affirms (1).

[Note—¹Lord Narayan and Vishnu are synonymously treated in the scriptures. The etymology of the word *Narayan* is—the primary one who has his abode in the primordial causal waters of the cosmos; one who is the abode of all living creatures; one who has his residence in the bosom of all living beings as their Atma or pure self or consciousness; one who is the final goal of all spiritual pursuits. When the transcendental Supreme Being decided to initiate creation, his first revelation was Hiranyagarbha which represented the macrocosmic subtle body of creation, and from it emerged the *Viraat Purush* who is the macrocosmic gross body of creation. This 'Viraat' is literally the vast, infinite, measureless, fathomless and colossal form of the supreme Brahm, a form which is all-pervasive, all-encompassing, all-inclusive, immanent and omnipresent in creation. The 'Purush' is literally an entity that lives inside a dwelling, here referring to as the pure consciousness that lives as the Atma of all the living beings. (Brihad Aranyaka Upanishad, 2/5/18-19). This Viraat Purush is therefore the vast and all-inclusive cosmic Consciousness that entered the gross body of the creature and found a comfortable a ode in the heart as his Atma. This Viraat

Purush at the macro level of creation is known as *Vishnu*, the one who lives immanently in this creation, inseparable from it and forming its integral part.

Since Narayan or Vishnu is the term used to imply the Viraat Purush who is Brahm personified at the macrocosmic level of creation, it follows that Narayan or Vishnu is the supreme Lord of creation. It is from him that the rest of the creation has emerged. All forces of creation, right from their origin till their conclusion, have this Narayan representing Brahm as their primary source. It is Narayan that is the eternal fountain from which they all the dynamic forces of creation derive their independent strengths, abilities, authorities, potentials and powers. The primary forces are represented by Brahma the creator, Vishnu the sustainer, protector and nourisher, and Shiva the concluder. The other elements of creation are the sky, air, fire, water and earth. Indra represents the chief force that controls all other unit forces of creation, and therefore he has been depicted as the 'king of Gods' because all the Gods are deemed to personify one or the other aspects of the divine forces of creation which are responsible for controlling the various facets of the multifarious and varied creation. For example, Aditya or the Sun gives light, heat and energy to the creation in their twelve forms, including the visible Sun in the sky. The Vasus represent the essential assets that are needed to sustain all forms of life on this earth. Rudras represent the dynamic and forceful nature of a creature that helps it be pro-active and assertive in this world, to protect the assets generated by him and give protection to the society and his dependants by the use of force if necessary. And so on and so forth.

Lord Narayan or Vishnu is said to recline on the *Kshirsagar* which is the celestial ocean of milk indicating Amrit or the ambrosial fluid of eternity and bliss. That is why he is immortal and blissful, being surrounded by it. This ocean also indicates the primordial fluid from which the rest of the creation is formed, and hence it is the 'causal water' or the causative factor which is at the foundation of all living creation coming into being; it is the wellspring of life in all its varied forms. The scriptures describe that earlier there was water everywhere, and from this primordial fluid emerged the earth and the fire element that kept this earth warm, making it habitable and enabling it to harbour life forms. This fact has been affirmed in Brihad Aranyaka Upanishad, Canto 1, Brahmin 2, verse no. 2, and the Old Testament of the Holy Bible, the Book of Genesis, verse nos. 9-11.

Narayan or Vishnu has dark blue hue as his complexion, symbolising the *blue colour* of the endless sky which implies that wherever there is sky Lord Narayan is invariably present at the place. He has four arms signifying the four quarters or quadrants of the compass, implying that the Lord controls all the corners of the creation. His *Chakra* (discus) stands for the cosmic mind (because like the mind, the Chakra also flies off on the instructions of Vishnu to pursue its target relentlessly), the *Gadaa* (mace) stands for the cosmic intellect (because it acts to forcefully subdue the opponent in the form of the wayward mind and organs of the body), the *Padma* (lotus) stands for the continuously evolving world (because lotus springs forth from water, and this world also springs forth from the causal waters of the cosmos), and *Shankha* (conch) stands for the five elements such as sky, air, fire, water and earth. There are two more weapons in the hands of Narayan or Vishnu—viz. the bow called *Saarang* symbolising cosmic senses, and the sword called *Nandak* symbolising wisdom.

Let us analyse how the Shankha or conch stands for the five elements as observed here. The conch is hollow from the inside, indicating the sky or space element. It produces sound when air is blown into it, indicating the presence of air element. The snail had this as its dwelling, indicating the fire element because it is this fire that helps a creature to live. The conch is formed in water and not on dry land like trees and terrestrial animals—indicating its origin in water element. The body of the conch is hard calcium like the rocks and solid surface of the earth, indicating the presence of earth element as its integral part.

The vehicle of Narayan or Vishnu is the bird called Garud (eagle or heron), and it symbolises the faculty of speech. This is because a man's wisdom and erudition are known when he speaks. Speech and the spoken words give 'wings to a man's ideas'; his inner thoughts are made known to others only when he speaks. Words and ideas are transmitted from one person to the other like the bird flying off from one tree and perching on another. That is why speech is likened to the bird. Garud is regarded as a personification of the knowledge contained in the Vedas because this knowledge is transmitted through the means of speech. Besides this point, there is another way of looking at this aspect. The knowledge contained in the Vedas help a wise man to reach his spiritual destination much like Lord Vishnu employing the services of Garud if he wants to go any place.

Narayan or Vishnu is said to recline on the bedstead of *Sheshnath* or the legendary serpent of thousand hoods. The word 'Shesh' means 'leftover or remainder'. At the time of conclusion of creation, 'something' remains from which the new creation would come into being. This 'something' is the 'seed' represented by Shesh. So Sheshnath represents the sum total of all the souls in their subtle forms which have been leftovers from the previous generation or cycle of creation, hibernating and waiting for the opportune time to remerge as a new creation. In this context, the Kshirsagar or the ocean of celestial milk called Amrit, upon which this Sheshnath floats, is like the preservative ambrosial fluid which sustains life and gives it nourishment during the time it is in hibernating phase before the commencement of new creation or springing forth of a new generation of living organisms.

Lord Vishnu has one of his names as *Vasudeo* because he is the sustainer and protector of creation, signifying his lordship over all the essential elements in Nature, called the Vasus of which there are eight in number, created to help sustain the forthcoming creation.

The Yogtattva Upanishad of Krishna Yajur Veda, in its verse no. 2 describes Vishnu as a Maha-Yogi, Maha-Bhut and Maha-Tapa.

The Subalo-panishad of Shukla Yajur Veda, in its Canto 6 also describes the omnipresent and all pervading form of Narayan. The *Paingalo-panishad* of the Shukla Yajur Veda, in its Canto 1, verse nos. 6 and 10 describes Vishnu in the context of the genesis of creation.

Vishnu appears in the Vedas as follows—Rig Veda—1/154-156; 5/3/3; 7/99/1-3; 7/100; Sam Veda—222; 1625-27; Yajur Veda—5/15; 6/4; Atharva Veda—3/27/5.

²The word Pran refers to the vital winds that not only infuse life in the gross body but also sustains it. This Pran is the all important 'breath' which is like the spark of life in this creation, for without Pran no life is imaginable. When the creator created the gross body of the creature in his likeness he found that this body showed no signs of life—i.e. it did not move, it did not talk, it did not showed any other signs of life. So the creator 'breathed life' into this lifeless and inert body lying like a dead piece of log on the ground. This 'breath of life' is Pran. The word henceforth came to be synonymous with all the other vital winds that lend life to the living being. There are five main vital winds and they are Pran (breath), Apaana (the wind that controls digestion and excretion), Samaana (wind responsible for circulation and equal distribution of nourishment in the body), Vyan (wind which maintains equilibrium), and Udaana (which helps the body to get up and move about).

³At the very beginning of creation there was no sign of 'life', or any kind of other activity. There was complete quiet and calmness. The 'one who was present then', i.e. one who existed even before the rest of the creation came into being, is called Brahm or the Supreme Being. Since nothing can come into being without the existence of some primary source, because matter and energy can only change their form and nature but simply cannot appear from thin air, it follows that there must have been some 'source' from which the rest of the creation evolved. This 'source' was the one point where everything collapsed at the time of the end of the previous creation, only to emerge at the proper time as a new creation. Again, since only something which is

inherently alive and has latent energy present in it can show signs of life and activity, since only something which is conscious and intelligent can ‘think’ and make ‘decisions’, the fact that Narayan ‘thought’ that he must start creation, and then went about ‘actually doing’ it proves that he had consciousness and intelligence even prior to the emergence of living creatures. He pre-dated and post-dates this creation. The concept of creation has been elaborately described in a number of Upanishads. To summarise—(a) Rig Veda tradition—Aiteriyo-panishad; Mudgalo-pansishad, Canto 2-4; (b) Sam Veda tradition—Chandogyo-pansishad, Canto 3, Section 19; Canto 4, Section 17, verse nos. 1-3; Canto 6, Section 2-10; (c) Shukla Yajur Veda tradition—Trishikhi Brahmin, Canto 1; Painglo-pansishad, in its Canto 1 and Canto 2; Subalo-pansishad, Canto 1-8; Brihad Aranyak Upanishad, Canto 1, Brahmin 1-2, 4-5; Canto 6, Brahmin 4; (d) Krishna Yajur Veda tradition—Panch Brahm Upanishad; Kath-rudra Upanishad, verse nos. 17-26; Shwetashwetar Upanishad, Canto 4; Canto 5, verse no. 5; Canto 6, verse no. 1-3; Taittiriyo-pansishad, Valli 1, Anuvak 7; Valli 2, Anuvak 1-2 and 7; Yogtattva Upanishad, verse no. 10-11; Yogshikha Upanishad, Canto 1, verse no. 8-12; Shaarirko-panishad; Yog Kundalini Upanishad, Canto 3, verse nos. 20-23.

⁴*Prajapati*--Shwetashwatar Upanishad, 4/11-13, and 5/3 of Krishna Yajur Veda states that the Supreme Being who created this world had also created the different *Prajaptis* to take care of this world. The ‘Prajapati’ is the guardian of the world appointed by the supreme creator to take care of the mundane affairs of running the world. They have taken two forms—one that of the *Gods* at the cosmic level, and the other that of the *Manus*, the first humans, at the level of this mortal existence on the earth.

There are *twenty four Devtas or Gods*, and they are the following—Aagneya (Fire), Prajapati Brahma, Soma (Moon), Isha, Savitri, Aditya (Sun), Bhrihaspti, Varun, Bhag-dev, Aryamaa-ishwar, Ganesh, Twastaa, Pushaa, Indra, Vayu, Vamdeo, Maitraa-Varun Dev, Vishva-dev, Maatrikaa, Vishnu, Vasu-Dev, Rudra Dev, Kubera and Ashwini.

The *fourteen Manus* of mythology, who were the forefathers of the entire creation, are the following—(i)Swaayam or Swaayambhuva, (ii) Swaarochisa, (iii) Aautami or Uttam, (iv) Taamas, (v) Raiwat, (vi) Chaakshush, (vii) Vaivaswat, (viii) Savarni, (ix) Daksha Savarni, (x) Brahm Savarni, (xi) Dharma Savarni, (xii) Rudra Savarni, (xiii) Dev Savarni or Ruchi/Raucha Savarni, and (xiv) Indra Savarni or Bhaum.

‘Vaivaswat or Vaivaswat Manu’ is the 7th Manu and the legendary progenitor of the current living beings on this earth. The word ‘Vaivaswat’ means coming from the Sun or belonging to the Sun, or relating to or belonging to Yam (the God of death and a judge of a creature’s deeds done by it during the life time). It also means the planet Saturn as well as one of the Rudras. In the present context of this text, Sri Ram means the Vaivaswat Manu who is the forefather of the human race in general and Sri Ram’s ancestor in particular because he belongs to the Solar race.

The word ‘Swayambhu’ refers to the primal man represented by the creator Brahma as well as the Viraat Purush who were both born from the Lord called Narayan who is deemed to be their father. Swayambhu was the male aspect of creation, and his female counter part was Mother Nature. The word means ‘someone who was born out of his own free will’. So, Viraat Purush and Brahma are generally regarded as Swayambhu, because both were born out of their own free will as a manifestation of Brahm. ‘Swayambhu Manu’ was the first male born on earth and from him the rest of the creation was born.

The word ‘Swayambhu’ also means ‘self existent’ and refers to Brahm, while ‘Swayambhu Manu’ is Brahma, the Prajapati or the Lord and sustainer of the subjects of this creation; he is a representative of the Male aspect of creation, the Viraat Purush, and is primal male par excellence; he is the divine father of the human race. The name ‘Manu Swayambhu’ is especially applied, in the context of the Purans of

which Ramayan is a part, to fourteen successive mythical progenitors and sovereigns of the earth and who create and sustain this world through successive long period of time called 'Kalpas'. The first such mythical progenitor is known as 'Manu Swayambhu' as the one who sprung (created or manifested) from the self-existent Brahm. He is regarded as a secondary creator who commenced his work of creating by producing 10 Prajapatis, of whom the first was 'Light' called Marichi. To this Manu is ascribed the celebrated code of conduct called 'Manu Smriti' and two other ancient Sutra work on Kalpa and Grihya, i.e. the sacrificial and domestic rituals. He is also known as Hiranyagarbh and Prachetas.

The other five Manus are called Swarochish, Uttam, Taamas, Raivat and Chakshush. The 7th Manu is called Vaivasvata Manu the son of the Sun God, and he is regarded as the progenitor of the present race of living beings. He is like the Noah of the Old Testament of the Holy Bible, is said to have been preserved by Vishnu or Brahm in the form of the legendary great fish from being drowned in the great deluge of the dooms day. This Manu is also called as one of the twelve Adityas, the author of Rig Veda, VIII, 27-31, as the brother of Yam (the God of death and a judge of a creature's deeds done by it during the life time), as the founder and first king of Ayodhya, and as the father of Ila who married the son of the Moon-God named Budha. This makes two great dynasties—the solar and the lunar races to which Sri Ram and Krishna respectively belonged—related to each other. The 8th Manu, or the 1st of the future Manus according to Vayu Puran, III, 2, will be Savarni, the 9th would be Daksha Savarni, the 10th would be Brahm Savarni, the 11th would be Dharma Savarni the 12th would be Rudra Savarni, the 13th would be Raviya or Deva Savarni, and the 14th would be Bhautya or Indra Savarni. The life of one Manu is equivalent to roughly 311,040,000 years.

⁵*Adityas*—There are many versions describing these twelve Adityas or mythological Suns as follows—(a) The twelve Adityas are the mythological Suns and appear as patron Gods who (i) take care of the world (Rig Veda, 2/27/4); are like the heads (Taiteriy Brahmin, 1/2/3/3) and eyes (Jaimini, Uttar. 2/1/2/3) of all the creatures. These twelve Adityas appear first in the Rig Veda 1/41/4-6 and 2/27. They are the sons of Aditi, the mother of Gods (Atharva Veda, 8/9/21). They are the following—the eight Vasus + Indra + Sun + Vishnu + Shiva = twelve in number.

(b) According to Brihad Aranyak Upanishad 3/9/5, the *twelve months* of the year represent these *twelve Adityas*, one month for one Aditya. In this Upanishad, sage Yagyavalkya draws a parallel between the twelve months of a year and the twelve Adityas for the following reasons—First, with the passage of one complete year, a corresponding number of years are subtracted from the total number of years that a person is supposed to live in this world. That is, death comes so much the nearer to him. The passage of the sun across the sky from dawn to dusk is used as a symbolic way of depicting the passage of the life of a man from his birth till his death. Since there are twelve mythological suns and twelve months in a year, a parallel is drawn between them and the life of a man.

Second, the whole life of an individual creature as well as the entire creation as a whole depends upon the various seasons that appear in a year. If even one of the seasons is disturbed, the entire cycle of life is disturbed correspondingly. For the smooth functioning of life, all the seasons must appear in a rhythmic and systematic manner, and it is a scientific fact that the seasons, upon which the life on earth is so dependent, also themselves depend upon the sun. That is why the Adityas are termed as being synonymous with the twelve months of the year as well as with the life cycle of creation.

(c) According to Vishnu Puran, the twelve Adityas are the following— Dhata, Arayma, Mitra, Varun, Ansha, Bhug, Indra, Vivaswan, Pusha, Parjanya, Twashta and Vishnu.

(d) Sun God or *Surya*—appears first in the Rig Veda, 1/50. He is one of the chief Gods that sustain life. He is closely related to the Fire God; the Sun is a visible

manifestation of the fire element. The sun is regarded as the 'eye' of the Viraat Purush. The Sun God watched the deeds done by all the creatures (Rig Veda, 1/50/2). It is like the Atma of all the creatures (Rig Veda, 1/115/1; Shatpath Brahmin, 14/3/2/9).

(d) Aditya or the Sun God has been repeatedly regarded by the Upanishads as a manifestation of the Viraat Purush who himself is the macrocosmic gross body of Brahm. For example, Chandogya 1/6/3, 5, 6; 1/10/7; 2/9; 2/14; 2/24/12-14; 3/1-11; 3/18; 5/13; 6/4/2 etc.; and Brihad Aranyak 2/1/2; 2/5/5; 3/7/9; 3/9/5; 5/15 etc.

⁶*Rudra*—(a) Lord Shiva has eleven forms called Rudras. The eleven Rudras are the various manifestations of Lord Shiva. They are the following:--(i) Mannu, (ii) Manu, (iii) Mahinas, (iv) Mahaan, (v) Shiva, (vi) Ritdwaj, (vii) Ugrareta, (viii) Bhav, (ix) Kaal, (x) Vamdeo, and (xi) Dhritvrat. The eleven Rudras appear in Rig Veda 1/43/1, and Taittiriya Brahmin 3/4/9/7. They are regarded as the father of the Wind God or the Maruts (Rig Veda, 2/33/1). The word Rudra means one who is angry, terrible and wrathful. Amongst the Rudras, Lord Shiva is regarded as the most senior and enlightened.

(b) The eleven Rudras according to Vishnu Puran (1/1/15) are the following—Har, Bahuroop, Trayambak, Aparaaajeet, Shambhu, Vrishakapi, Kapardi, Raivat, Mrigvyadh, Sharva, Kapaali.

(c) Lord *Shiva* has eleven forms, and one of them is *Rudra*, which literally means anger, wrath and vehemence. The Lord is considered to be the most enlightened of the Trinity Gods, and is therefore called *Maheshwar*. He always remains in a meditative posture, always contemplating and meditating on the supreme Soul and the Truth. But still he shows anger and mercilessness, because one of his tasks is to punish the evil and sinful ones by ruthlessly slaying them in order to protect the good and righteous souls in the creation. Further, when his meditation and peace is disturbed he also becomes angry. He remains aloof and disinterested in the world, because he is very wise and enlightened, and he stays in the form of an ascetic. Ordinary people think that he is proud, arrogant and haughty because he does not give a damn to worldly formalities and niceties of behaviour. Shiva's failure to conform to set norms of proper and sane conduct makes him look most odd God. The word 'Rudra' is used as a metaphor for anger, wrath, vehemence and cussedness.

⁷*Vasus*—These 'Vasus' are the various patron Gods who preside over the essentials of life; they are eight in number—Vishnu is the sustainer, Shiva who is the annihilator, Kuber who is the treasurer of the wealth of the Gods, the Sun, Water, Fire, Wealth represented by gems and gold, and 'Ray' representing glory and fame. The element 'Fire' is the most potent, prominent and essential force in creation, because without fire the world would freeze to death. Hence, the Fire-God is said to be the chief amongst the Vasus. The 'fire' element is the active force in creation and is primarily responsible for kindling the cosmic cauldron that set in motion the process, and once having set it in motion it then sustained it and would finally annihilate it by burning it to cinders. On the other hand, Lord Vishnu is the passive force of creation represented by his other form of Viraat Purush which is the primary male aspect of creation. Lord Vishnu, who is the sustainer of the creation, is the Lord of Laxmi who is the Goddess of wealth, and is the supreme creator because Brahma, the old patriarch of creation who created the visible world and its creatures, was himself born atop the divine lotus that emerged from the navel of Lord Vishnu. Lord Vishnu utilizes the services of Laxmi who is the personification of the active forces of creation to create, sustain and annihilate the world. The Vasus are symbolic Gods who represent those essentials aspects of creation without which life would be difficult to conceive and sustain and finally conclude.

The eight Vasus are the patron Gods who provide succour and a dwelling place for the whole creation. They symbolise those primary necessities of life without which existence is not possible. They are— (i) Kuber (the God of wealth and prosperity), (ii) the Sun God (who provides energy and food) and his rays and

radiance (i.e. sunlight and the energy that it provides), (iii) Shiva (the concluder or annihilator of the creation), (iv) Vishnu (the sustainer), (v) the Water God (called Varun), (vi) the Fire God (called Agni), (vii) any body of water such as a pond, a river etc., and (viii) holy and pious people (who give advice and guidance to the creatures of the creation). According to Brihad Aranyak Upanishad 3/9/3, the Vasus are the following-. Fire, Earth, Air, Antariksha (the space of the solar system), Aditya (Sun), Duloka (heavens), the Moon, and the Nakshatras (the stars and the planets).

According to Purans, the eight Vasus are the following—Dhruv, Dhar, Som (the sap of an elixir-providing plant called Som which is used during religious ceremonies as sanctified liquid offered to the Gods), Aap (water), Anil (wind), Anal (fire), Pratush and Prabhas.

These eight Vasus are the semi-Gods who symbolise the various types of assets needed to sustain this world. They therefore represent such assets as jewels, precious stones and gems, gold and other forms of wealth and property. Vasus also refers to the fire and water elements as well as their grosser forms as the terrestrial fire and water bodies such as ponds and lakes; to the virtue of radiance, splendour and glory; to the ray of light; to Kuber (the treasurer of Gods), Shiva, Sun, Vishnu, and a simple and pious gentleman.

⁹The *Rig Veda*—The word Veda is derived from the root ‘vid’ meaning ‘to know; to be enlightened; to be aware and learned’. Therefore, the Vedas represent the vast body of esoteric and sacred knowledge concerning eternal spiritual values and metaphysical matters regarding the Absolute Truth and Reality of creation. They were revealed to great sages and seers during their meditation and contemplation sessions. The Vedas are the highest canonical literature in Hinduism. As to the rough date of their revelation, a consensus amongst scholars is that it is roughly the period between 10000 and 1000 B.C.

The Vedas are called ‘Srutis’ because they were orally transmitted and were ‘heard’ from one generation to another. Fundamentally, the Vedas honour the divine forces of Nature which govern all aspects of life in this creation by personifying them as deities or Gods who were offered respect in the form of offerings made during the fire sacrifice which was deemed to be the best and the most sacred form of religious activity since early times. That is why the hymns of the Vedas—which were initially one composite mass of verses—were divided into four divisions according to the convenience and use they were put to by the priests who performed these elaborate fire sacrifices.

Hence, the liturgical hymns used by the priest called the ‘Hota’ to invite the various deities to the sacrifice became the Rig Veda. Those hymns used by the priests called the ‘Adhvaryu’ who was the chief executor of sacrificial rites were brought together as the Yajur Veda. Collection of all the hymns that were musical chants that could be sung and had melodious intonations were grouped under the Sam Veda. These musical intonations were used during special fire sacrifices called the Soma Yagya where the extract of the Soma plant was used as offerings to the sacred fire. The priests that performed this sacrifice were called ‘Udgaatar’. The rest of the hymns, which were like the appendix and addenda, were collated in to the Atharva Veda, and the priests who used them were called the Brahma. They were the senior priests who presided over the whole sacrificial ritual.

It was sage Veda Vyas, known as Krishna Dvaipayana Vyas, who divided the Vedas into four types, and taught them to his four chief disciples—Paila was taught Rig Veda, Vaishampaayana was taught the Yajur Veda, Jaimini was taught the Sam Veda, and Sumantu was taught the Atharva Veda.

The Vedas are classified into two sections—Mantras and Braahmans. The collection of Mantra is called the Sanhita. The Braahman have two more divisions—viz. the Aranyaka and the Upanishad. The Sanhita is a pure collection of hymns in poetical style of composition while the Braahman is a liturgy in prose format. The Aranyaka may be described as basically symbolical interpretations of the liturgical

rites included in the hymns and they are based on meditation and contemplation. The Upanishads are metaphysical discussions and philosophical treatises on the esoteric and mystical meaning of the Vedic hymns, and they deal with the practical problems of life vis-à-vis the different tenets and various doctrines that form the integral part of the Vedic canons.

Taken in their purest form, the Vedas refer to the Sanhitas—the collection of hymns. The Brahmins are considered as appendages. This is probably because the main use of the Vedas in earlier times were fire sacrifices and it was not until later period that emphasis was laid on their utility and importance from the philosophical angle and the practical application to answer the problems of life and the final way to get rid of them.

Since Veda Vyas had four disciples and each of them had their own line of disciples, it is natural that the Sanhitas got edited and readjusted down the line. It is also due to the fact that they were transmitted orally, with no written standard text. So the chances of edition, readjustment, distortion, insertion, interpolation and unilateral changes, minor and major, in the origin body of Vedas was inevitable. The influence of local customs and circumstances over the thousands of years that the Vedas survived also had a great deal of role to play.

The Vedas are said to be not man-made but revealed texts, and therefore called 'Aparushya'. Their language and terminology is difficult to comprehend, and hence many subsidiary texts called the Up-vedas came into existence. These are called Vedangas or limbs of the Vedas. They are the following—Shiksha (deals with learning the hymns and how to chant them), Vyaakarana (grammar), Chandas (poetical styles of composition), Nirukta (meaning and explanation of Vedic texts), Jyotisha (astrology and astronomy) and Kalpa (formula or aphorisms called the Sutra). The Kalpa has 4 branches—viz. Shrauta, Grihya, Dharma and Shulba. This deals with all sacrificial rites and even those that are done at home by an individual householder.

The *Rig Veda* is the oldest Veda revealed over a long period of time (10000-4000 B. C.). Hence there is a variety of languages, grammar, ideas and compositions styles noted in this Veda. Two methods are used to divide this Veda. In the first method, the Sanhita is divided into eight Ashtakas, and the latter is divided into Adhyayas, the latter into Vargas, and the latter contains the Mantras. The number of Adhyayas in each Ashtaka, the number of Vargas in each Adhyaye, and the number of Mantras in each Varga is more or less the same. Therefore, there are total of 8 Ashtakas, 64 Adhyayas, 2024 Vargas, and 10552 Mantras.

The other method is that the entire Sanhita is divided into ten Mandals or sections or divisions or chapters. These Mandals are then divided into Anuvakas, the latter into Shuktas, and these Shuktas into Mantras. The number of Anuvakas is 85, and the Shuktas are 1028. The total number of Mantras are however the same as stated above—i.e. 10552. This latter method is now accepted as the norm.

The topics dealt with in the *Rig Veda* fall roughly into three broad categories. The first deals with worship of personified forces of Nature as deities such as Agni (fire), Varun (water), Indra (the king of Gods and the controlling deity of rains) etc. The second topic deals with philosophy of creation and the real nature of human life. The third topic deals with mundane subjects like marriage, wars, the virtues of generosity and magnanimity etc.

There are said to be a long chain of sages and seers belonging to the *Rig Veda* tradition, and according to some estimates their number is 800.

Basically, the *Rig Veda* deities are 33 in number—viz. the 8 Vasus, the 11 Rudras, the 12 Adityas, Indra and Prajapati. [Refer Narayan Upanishad, Verse no. 1 of Krishna Yajur Veda tradition.]

There are 10 Upanishads in the *Rig Veda*.]

2. [This Paragraph presents a very holistic view of the Supreme Being known as Narayan. He is depicted as the all-inclusive supreme transcendental Being outside of whom nothing exists, whether it is good or bad.]

Lord Narayan is perpetual, truthful and eternal. The creator Brahma is no one else but Narayan. The concluder Shiva is also no one else but Narayan. The king of Gods, Indra, is similarly no one but Narayan. The God of death and time, Kaal, is likewise none other than Narayan.

The different directions of the celestial globe (i.e. the north, east, south and west) are the different revelations of the same divine Lord known as Narayan. The angular directions (lying between the four cardinal points—such as northeast, northwest, southeast and southwest) are also manifestations of Narayan (for the same reason). Narayan is the Zenith (the upper point; the apex) and the Nadir (the bottom; the lowest point). Narayan is the inside and the outside of everything. [In other words, there is no location in the entire creation where one would not find Lord Narayan because he is immanent, omnipresent, all-pervading, all-incorporating and all-encompassing. Not only this, whatever that exists in this creation is one or the other form of Narayan. Nothing exists that is not Narayan.]

Whatever has happened in the past, whatever is happening in the present, and whatever shall happen in the future—everything is nothing but Narayan.

The only entity in creation which is without any blemishes, taints, faults and shortcomings is Narayan. He has no alternatives, comparisons and parallels. He is so stupendous, magnificent and grand that it is not possible to describe him in the slightest (or, he is beyond the scope and reach of the faculty of speech and comprehension of the mind).

Verily, he is the most immaculate and pure, the most holy and divine Lord of creation. Indeed, there is no one other than him in this creation. [That is, he cannot be compared with anyone in this creation; no one can supersede him; no one can undermine his authority.]

A wise person who knows these facts in the way they stand becomes one like Lord Vishnu. He indeed becomes Vishnu personified. [This is because Narayan or Vishnu are manifestations of Brahm who resides in the heart of all living beings as the Atma or pure consciousness. And once a wise man realises this fact, once he becomes ‘self-realised’—which entails his becoming aware of this basic fact that everything in this creation, including himself, is a manifestation of Brahm and nothing but Brahm, and the fact that his ‘true’ identity is his Atma which in turn is Brahm personified—it would automatically mean that he realises that he is a personification of the Viraat Purush, the macrocosmic all-inclusive form of Brahm who is known as Vishnu in this cosmic form. Thus, a wise, self-realised and enlightened man is personified form of the Viraat Purush or Vishnu at the microcosmic level of creation.]

Verily, this is what the Yajur Veda¹ asserts and affirms; this is what it teaches; this is the profound doctrine enshrined in this Veda (2).

[Note—¹The *Yajur Veda*—The word ‘Yajus’ means a liturgy of hymns chanted during the fire sacrifice. The Yajur Veda has been classified into Krishna and Shukla branches. It would be pertinent and interesting to add a brief note here on why the Yajur Veda has come to be known as Krishna and Shukla, meaning ‘black’ and ‘white’ respectively. The Yajur Veda Sanhita (a collection of Mantras or hymns) is classified into these two types for a variety of reasons. One of the probable reasons for this Yajur Veda having two names is that the collection in the Sanhita that came to be known as ‘Krishna’ had a mixture of prose and poetry, and hence considered ‘impure and corrupted’. This is because primarily the Vedas were composed in poetry form with the verses structured according to one or the other methods of poetical

composition called 'Chandas'. Prose as style of composition came later on and was regarded as an interpolation, interposition or juxtaposition which is all tantamount to corrupting the original method. Hence, that text which had both the poetry and prose was deemed to be 'corrupted and impure form of the Vedic text', and therefore called 'Krishna'—the dark one. On the other hand, the Sanhita which had only poetry was considered un-adulterated and pure form of the Vedic text, and hence called 'Shukla' or the white one, the colour 'white' being the colour of purity, immaculacy, divinity and holiness.

Since the primary use of the hymns of the Vedas in earlier times was for incantatory chanting during religious fire sacrifices, the poetical mode of composition was more suitable than the prose model. That is why these hymns were composed in 'Chandas' which are the different styles in which Sanskrit verses are composed. Later on, when these verses were also being used for purposes other than the fire sacrifices, the prose model evolved and developed. The Upanishads are mainly in the prose model because they are philosophical treatises and not ritualistic incantatory chanting.

Another plausible reason is that the verses of the Krishna Yajur Veda are more difficult to understand than those of the Shukla Yajur Veda. Hence, the former were called 'dark' or Krishna because of the difficulty in their comprehension and explanation as compared to the more easier ones classified as 'white' or Shukla. The Krishna Yajur Veda Sanhita was more prevalent in the south of India while the Shukla was more common in the north of the country.

The third reason is that the original classifier of Vedas was '*Krishna* Dvaipaayana Veda Vyas' who taught the text of the Yajur Veda to his disciple called Vaishampaayana. Hence, the original version of the text was named 'Krishna' in order to commemorate this fact.

There is a fourth probable reason as outlined here. The chief exponent of the Yajur Veda is regarded as the ancient sage Yagyavalkya. He was one of the several disciples of sage Vaishampayana. Once the teacher asked his disciples to perform the 'Brahmavadhya' sacrifice (a type of elaborate penance) for him. Yagyavalkya was so confident of himself, his knowledge and competency that he offered to do it all by himself for his teacher. The teacher thought that he was haughty and boastful. So, disowning or disinheriting him from his line of disciples, he commanded that Yagyavalkya should return all that he had learnt from his teacher. The sage returned all the Mantras of the Yajur Veda that he had learnt from his teacher by 'vomiting' them out. The rest of the disciples were very cunning; they transformed themselves immediately into partridges, called Tittars, and gobbled up everything. From that developed the Krishna Yajur Veda's Taittiriya branch. It is called 'Krishna' after the teacher and 'Taittiriya' after the partridges. Also, since they were 'vomited products' they were regarded as polluted and impure. Such body of knowledge came to be known as 'Krishna'—the impure one.

Now, not to be demoralised so easily and determined to get back his lost knowledge and wisdom, Yagyavalkya worshipped the Sun God who blessed him with a fresh set of Mantras of the Yajur Veda. Since it came from a 'bright source' represented by the sun, this set of Mantras was called the 'Shukla Yajur Veda'. [The word 'Shukla' means 'bright or light or illuminated'.] The sage revised this into fifteen sub-texts, called the Vaaj-sanei, i.e. those belonging to the horse race. This is because the Sun God had assumed the form of a 'horse' to teach him, and the word 'Vajis' means a horse.

Yagyavalkya had fifteen disciples (e.g. Kaanva, Maadhyandin etc.) who mastered one each of these fifteen sub-text created by Yagyavalkya. [Vishnu Puran, 3-5; Vayu Puran, 60-1.] The list of sages and seers who excelled in the Shukla Yajur Veda branch has been given in Brihad Aranyaka Upanishad, Canto 2, Brahmin 6, and Canto 4, Brahmin 6.

There are 19 Upanishads in the Shukla Yajur Veda, and 32 in the Krishna Yajur Veda.]

3. [This Paragraph describes the divine Mantra of Narayan and how one should worship it, besides outlining the great benefits the devotee gets as a result of this worship.]

One should first invoke divinity and blessings of the Supreme Being by pronouncing the ethereally divine, eclectic and holy word OM. It is to be followed by the word 'Namaha' (indicating submission and paying of greatest of respects and homage to the deity worshipped). This is followed by the word 'Naaraayanaaye' (referring to Lord Narayan to whom this prayer is being offered).

OM is one lettered word (i.e. it is a monosyllable word), Namaha has two letters (Na + Maha = 2), and Naaraayanaaye has five letters (Naa + Raa + Ya + Naa + Ye = 5). Therefore, the entire Mantra of Lord Narayan is 'OM Namaha Naaraayanaaye', and it has eight letters in all.

Verily it is certain that a person who does Japa (repetition of the Mantra while meditating on the chosen deity, which in this case is Narayan) with this Mantra is blessed with great glories, magnificence, virtues and renown; he is endowed with all the worldly fame and majesty that one can expect to possess. He lives a full and fruitful life, has lordship over other creatures, enhanced wealth and prosperity, an abundance of livestock such as cows, and is blessed with a happy and prosperous family with wife, sons and other kith and kin.

Finally, at the end of his life he is able to access the eternal fount of Amrit (which is the eternal ambrosia of eternity and bliss). He indeed finds Amrit. [That is, when he dies he obtains emancipation and salvation for his soul; he finds liberation and deliverance from the cycle of birth and death. He goes to the abode of his object of worship, i.e. the abode of Lord Narayan, where he gets eternal peace and happiness, eternal beatitude and felicity.]

This is indeed the proclamation, the unequivocal assertion and solemn affirmation of the Sam Veda¹; it is the essence of its teaching; it is the truth that it propounds in its tenets (3).

[Note—¹The *Sam Veda*—The Sam Veda is basically musical chanting of hymns, and it is basically the hymns of the Rig Veda set to music. All such Mantras of the Rig Veda which were useful for singing purposes by the Udgata priest have been brought together as Sam Veda. There are said to be 1000 Shakhas or branches of Sam Veda, but only three survive—viz. the Kauthuma, Raanaayaniya, and Jaiminiya.

The Sam Veda is divided into two parts—Aarcikaa, and Uttaraarchika. The former contains 585 Mantras and the latter 964 Mantras, bringing the total number of Mantras to 1549. Out of these, it is believed that 1474 Mantras are taken from the Rig Veda Sanhita and only 75 are original to the Sam Veda. Then, about 272 Mantras have been repeated twice. If these repetitions are taken into account, then the total number of Mantras becomes $1549 + 272 = 1821$.

Since these hymns are meant to be sung melodiously, they have been set to musical meters and notes. Thus, they have 7 musical scales called the Swars which correspond to the seven meters of classical music. These are Saa, Re, Gaa, Maa, Pa, Dha, Ni.

This Sam Veda has 9 Brahmans. Out of them, the Taandya Mahaa Braahman is the largest and the most important. Only one Aranyaka is known now, and it is called Jaiminiya.

There are 16 Upanishads in the Sam Veda.]

4. The subtle and sublime form of the Supreme Being who is called Brahm-Purush is eternally and inherently blissful and peaceful. Beatitude and felicity are integral facets of Brahm. This divine, eclectic and holy Being has three 'Matras' or sublime forms

which are very subtle and are symbolised by the three letters ‘A’, ‘U’ and ‘M’ of the Sanskrit alphabet. Though these individual letters are separate from one another and have their own independent existence, but when these are brought together their combined form, their united form, their holistic form is revealed in the form of the ethereal word OM¹. By doing Japa with this Mantra (i.e. by repetition of this Mantra known as OM while meditating and contemplating upon ethereal form of the divine supreme Brahm), the spiritual aspirant is able to free himself from the bondage of this world which entails a continuous cycle of birth and death.

Certainly, those who worship the divine and holy Mantra ‘OM Namaha Naaraayanaaye’ (as described in paragraph 3) would go to the heaven called Vaikunth where the Lord whom he worships, the Lord who is the object of his adoration and respect, i.e. Vishnu or Narayan, resides.

This divine abode of Lord Narayan is symbolically represented by the Lotus flower. It is the fount from which all wisdom and enlightenment has sprung in this creation. Hence, it appears to be as radiant and splendorous as electric symbolising the dazzling source of light which is a metaphor for knowledge and wisdom.

Lord Krishna, the incarnation of Vishnu born (in Vrindavan) as the son of Devki, is favourable towards Brahmins² (or those who are devoted to Lord Brahm; who are learned, holy and pious; who lead a righteous, auspicious and noble life; who are well versed in the basic tenets of religion and understand what religion actually stands for instead of being religious bigots and orthodox fanatics; who yearn for breaking free from the endless cycle of birth and death by sincerely repenting for their past misdeeds and atoning for their sins). Indeed, Lord Madhusudan (another name of Lord Krishna) is favourably inclined to such Brahmins. Lord Vishnu who is known as ‘Pundarik’, or one who has eyes like the lotus flower, is indeed favourable towards Brahmins. Lord Vishnu who is ‘Achut’, or one who is imperishable, eternal, permanent, immaculate and beyond any taints and tarnishes, who is eternally exalted and supreme, who cannot be pulled down from his noble and highly exalted position, is favourably inclined towards Brahmins.

Lord Narayan is the only cause for the entire creation coming into being. He is the Lord who not only created the basic ‘Bhuts’ or the primary elements (sky, air, fire, water and earth) but also resides uniformly in all of them as their inherent virtues and characteristic qualities. Since the creation is formed from these primary elements as its building blocks, it follows that Narayan has permeated in this entire creation as its integral part and is its fundamental form.

Though Narayan is the cause of the rest of creation, he himself is without any cause. In other words, there is no source from where Narayan (i.e. the Supreme Being; Brahm) has come into being. [This is simply because he is eternal, imperishable and infinite, outlasting the previous creation which collapsed into him at the end of its tenure, remaining in a hibernating state till the time Narayan decided to reveal it once again. It is like the case of the wave in the ocean—the wave arises from the water of the ocean, lasts its full term, and then collapses back into the surface of the ocean. Obviously, the ocean lasts even after the wave has subsided and it pre-dates its re-emergence as a new wave. The ocean is continuous while the wave is fractured; the ocean is eternal and infinite while the wave comes and goes.]

And this supreme Divinity is represented by ‘OM’. This is the exposition and affirmation of the Atharva Veda³; this is what it essentially preaches; this is the doctrine and tenet of this Veda (4).

[Note--¹That is, though these letters or alphabets of the Sanskrit language in which the Vedas were revealed have their independent existence in their own right but when

they are brought together they virtually attract each other and then coalesce into one another because of their mutual affinity. When this happens, the resultant sound is that of OM, and then it becomes difficult to identify these individual letters from each other. The best way to visualise how this might actually happen is to consider the colour orange for example which is produced by mixing red and yellow colours. These two constituent colours have their independent existence in their own right, but when brought together they transform themselves to assume a complete new identity known as 'orange'. Then it would be difficult to segregate the red from the yellow.

²*Brahmins*—Traditionally the Brahmins are regarded as the priestly class who presided over religious exercises, such as fire sacrifices. But there are many instances cited in the Upanishads and elsewhere where the word is meant to imply a person who is wise, erudite, scholarly, learned, self-realised and enlightened. He is a moral guide and teacher for the society, and is looked upon by people for sage guidance. The salient features of Brahmins are the following—they should possess these noble qualities—(1) 'Riju'-be expert in the Rig and the Yajur Vedas, (2) 'Tapa'-should be involved in doing penances, observing austerities and enduring sufferings for the welfare of the soul and the society, (3) 'Santosh'-be contented and satisfied, (4) 'Kshamaa'-to be forgiving and tolerant, (5) 'Sheel'-to have such virtues as good character, dignity, decorum and virtuousness, (6) 'Jitendriya'-to have self control over the sense organs, (7) 'Data'-to be a giver, one who sacrifices his own interests for the benefit of others, (8) 'Gyani'-one who is well learned, wise, enlightened and erudite, (9) 'Dayaalu'-to be merciful and compassionate. [Shatpath Brahmin.] An entire Upanishad called Vajra-shuchiko-panishad, belonging to the Sam Veda tradition is devoted to the subject. The eclectic virtues of Brahmins have been expounded in Brihad Aranyaka Upanishad, Canto 3, Brahmin 5 as well as in Canto 3, Brahmin 8, verse no. 10.

³The *Atharva Veda*—The Atharva Veda is also known as Brahma Veda since it is assigned to the Brahma priest during the fire sacrifice. The Atharva Veda Sanhita deals with more mundane things of life as compared to the Rig Veda. The composition style is more sophisticated as compared to the earlier Vedas, and therefore modern scholars conclude that the Atharva Veda is of later period origin.

The Atharva Veda has 9 Shakhas (branches) but only two are extant—viz. the Pippalaada and Shaunak.

The Atharva Veda Sanhita is divided into 4 books called the Prapaathakas comprising 20 chapters or Kandas. Each Kanda is divided into hymns or Shuktas, and the latter into individual verses or Mantras. There are a total of 4 Prapaathakas (books), 20 Kandas (chapters), 736 Shuktas (hymns) and 6077 Mantras (verses). The last Kanda, i.e. the 20th is borrowed heavily from the Rig Veda Sanhita.

No Aranyaka of this Veda has come to light so far, and only one Brahman is known—and it is the Gopath Brahman.

A major part of the Atharva Veda is concerned with the rituals of the fire sacrifice that can alleviate diseases, foster longer life, fulfill one's desires and aspirations, bring favourable environment for construction of buildings etc., matters such as economy, trade, commerce, agriculture, statecraft, penances, repentance, austerities, black magic rituals such as Tantric and other occult practices. But that does not mean that this Veda is devoid of metaphysical and spiritual philosophy as it contains 31 Upanishads.]

5. [This Paragraph describes the great glories of this Upanishad as well as its stupendous potentials to benefit those who read it with due understanding.]

A person who reads and recites this Upanishad with due faith and devotion as well as sincerity and diligence in the morning is able to destroy the sins and misdeeds of the previous night. Similarly, by reading and reciting it in the evening, the sins and misdeeds of the day are eliminated. A person who reads and recites this Upanishad

twice a day, morning and evening, is able to destroy or overcome the accumulated negative effects of the sins and misdeeds that he might have done in some past time, and consequentially he is absolved of their horrendous effects.

A person who reads and recites this great Upanishad during the noon hours while facing the Sun God is able to free himself from the five great horrors¹ of life as well as other subsidiary horrors that accompany them. He is able to reap the benefit of reading and reciting all the Vedas (because this Upanishad summarises their tenets and principles in one place as mentioned in each of the above paragraphs). At the end, i.e. at the time of death, he is able to obtain the form of Mukti (liberation and deliverance; emancipation and salvation) known as 'Sayujya'² whereby he finds redemption for his own soul in the form of its ultimate union with the supreme Soul of creation known as Narayan who is none other than the supreme transcendental Brahm manifested as Lord Vishnu or the Viraat Purush. Indeed, one who knows this fact is able to find oneness with Lord Narayan (5).

[Note—¹The five type of torments or horrors that the creature faces in this world are the following—(a) Avidya (ignorance); (b) Asmita (vanity, ego, pride, arrogance, hypocrisy and haughtiness; according to the philosophy of non-duality, to regard the Atma and the subtle body consisting of mind-intellect complex as one); (c) Raag (attachment, infatuation, desire etc.); (d) Dwesh (ill-will, enmity, malice, hatred, confrontationist attitude etc.) and (e) Abhinivesh (fear of death). Refer Adhyatma Ramayan of sage Veda Vyas, Lanka Kanda, Canto 10, verse no.61.

²There are basically three types of Muktis or liberation and deliverance that the soul gets according to its sincerity of worship of the Lord and its own wishes which the Lord fulfills. These are (i) *Saalokya* which refers to finding an abode in the supreme divine abode of the chosen deity of the seeker; (ii) *Saayujya* which refers to become one with the Lord; to merge one's own identity with the Lord so that one becomes inseparable from his Lord; this form of salvation is very similar to the one that which comes under the definition of Kaivalya; it is also called the 'Param Pad' or supreme state of being one with the Lord. (iii) *Saamipya* which refers to being able to reside near the Lord to serve him.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 8

Amrit Bindu Upanishad/Brahm Bindu Upanishad

This Upanishad has two names—viz. Amrit Bindu and Brahm Bindu. Both are indicative of the fact that it describes the path by which the spiritual seeker can reach that one cardinal point of eternal beatitude and felicity which is known in the fields of spirituality, metaphysics and theology as 'Brahm'. This one fount or wellspring of elixir called Amrit is the quintessential object sought by the soul of the creature, and once it is reached, nothing remains further to be searched or researched.

It elucidates how the mind and the heart are the cause of all bonds and fetters that shackle a creature on the one hand, and can provide freedom to him on the other hand. It then goes on to enunciate how to control this Mana (i.e. the thinking mind

and the emotive and sentimental heart) and how it can be made an instrument of attaining Mukti (liberation and deliverance; emancipation and salvation).

The next point explained is how to attain the 'unknown and undefined' supreme transcendental Brahm, the universal eternal Truth in creation that is pure Consciousness, through the medium of the 'known and defined' manifestations of Brahm, such as the presence of the 'sound' element which is characteristic of the 'living' world because the dead don't speak or make any sort of noise for that matter.

The Atma or pure consciousness, it emphasises, is eternal, universal, immortal and truthful, and it is the only 'truth' that prevails in the three states in which the creature has its existence. All the misconceptions and illusions that the creature has are due to it being surrounded by Maya, or delusions that surround the creature and cast a dark veil of ignorance around the creature's Atma's immaculate and glorious form. When this dark veil is lifted, then one sees that his own Atma and the supreme Atma of the creation known as Brahm are one and indivisible entities.

This realisation of the pure, eternal and truthful nature of the 'conscious self' known as the Atma and its oneness with the Supreme Consciousness of creation known as Brahm is possible by steady and painstaking effort done with sincere diligence involving meditation, contemplation and constant research, just like butter, which is an integral part of milk, is made evident only by vigorous churning of the latter.

What is true Gyan and Mukti (knowledge and liberation respectively) have been succinctly narrated (verse no. 2-10) along with the various states of existence of the consciousness (in verse no. 11). Emphasis is laid on understanding the real meaning of the scriptures instead of getting bogged down in their too literal interpretation (verse no. 16-21).

This Upanishad uses the analogy of the same image of the moon appearing to be numerous when reflected in different vessels full of water to bring home the point that the same Atma resides in all the uncountable number of bodies that the living beings have (verse no. 12). It also cites the example of the presence of the same sky element both inside as well as outside the clay pot to establish the fact that the universality and uniformity of the Atma is not affected by the presence of the physical gross body of the living organism (verse no. 13-14). There is the example of the bee drinking nectar in the flower and getting trapped when the flower closes to describe how the creature gets trapped in this world by the latter's charms (verse no. 15). Then there is the analogy of the butter remaining hidden inside the milk to describe how the consciousness and wisdom remains hidden inside every living being, and just like the churning of this milk brings out the butter the hidden consciousness and wisdom can be highlighted by constant practice and diligent effort (verse no. 20). The universality of the consciousness is illustrated by the example of the milk having the same colour no matter from which cow it is taken (verse no. 19).

In brief, this Upanishad, in its twenty two Mantras or verses, summarises great metaphysical truths in a very effective and convincing manner. It shows the creature the correct path to follow if he wants to reach the Truth and the Reality of existence.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
 ॐ_शान्तिः_।_शान्तिः_!!शान्तिः_!!!

The meaning of this Shanti Paath is given in appendix no. 1.

1. The Mana (implying both the thinking mind as well as the sentimental and emotional heart) of a creature can be of two types—one that is called ‘Shudha’ (literally meaning pure, immaculate, uncorrupted, unadulterated, untainted and untarnished), and the other that is called ‘Ashudha’ (literally the opposite of Shudha—i.e. one which is dirty, tainted, corrupted and influenced by extraneous considerations).

The Mana which has numerous desires, yearnings, longings, greed, hopes, expectations, aspirations and volitions pertaining to this world is called the Ashudha Mana. On the contrary, the Mana which lacks all these negative traits, the Mana which is pure and immaculate, which is not shackled by any of the worldly considerations is called Shudha Mana. [The Shudha Mana is obviously calm and peaceful, rested and contented. It is conducive to spiritual practices as it is uncorrupt, untainted, holy, pious and pure. On the other hand, the Ashudha type of Mana is restless and fidgety and therefore not conducive to spiritual practices.] (1).

2. The Mana is at the root of all types of bondages that tie down the creature in fetters. At the same time it is the Mana that provides the creature with his freedom from all bondages and unshackles him. That is, it is the Mana that is the main cause of all shackles on the one hand, and freedom from them on the other.

The Mana which is emotionally tied to or sentimentally attached to the various objects of sensual pleasure and comfort that exist in this material world and remains ever engrossed in self gratification and various indulgences is said to be the cause of all fetters that shackle the creature to this artificial and deluding world.

On the contrary, the Mana which is free from such entanglements, that makes no volitions and has no yearnings, which remains free from all desires and expectations of obtaining any pleasure and comfort from this world is said to be liberated from such bondages. It is this latter type of Mana that is said to be instrumental in liberation and deliverance of the creature from all fetters that tie him down to this world (2).

[Note—When a man desires any material thing, when he begins to long for it, he spends all his energy, mental and physical, in achieving success in obtaining this thing. Once this thing is obtained, the man begins to derive and enjoy the physical and mental pleasures and comforts that it offers to him. This achievement and possession becomes all the more attractive for him because he has spent so much effort in achieving success in obtaining it. So he becomes emotionally attached to his new acquisition, which he would protect with his life, so to say. It does not stop here as now he, having tasted success and the physical comforts and gratifications that accompany such successes, yearns for more, and then still more. Then he gets bogged down in the quagmire of enhancing this pleasure and comfort by acquiring newer and better things, and then in making arrangements for their safe keeping and perpetual existence. This sets off a chain reaction of sorts whereby his entire life is totally consumed in satisfying the desires and aspirations of his Mana, which however has no end like the futile attempt of trying to empty the ocean.

Further, these objects of the material world are all perishable simply because the world itself is perishable, and therefore no matter how hard he tries he can never be sure of their safety and continuity. Naturally and obviously therefore he loses all his mental and emotional peace, and that is why he is like a man under bondage

who is bound under obligation to serve his master and keep his orders without asking any questions of him. This master in this case is the Mana.

It naturally follows that a man who has controlled his Mana and leashed it in, who has blanked out all his longings, desires, yearnings, greed, aspirations, hopes and volitions form the radar of his Mana would be absolutely at peace with himself. Only a free man is in such an envious state of existence when he need not obey any commands of any master or lord whatsoever. This is why a man with a corrupted Mana is deemed to be like a serf or slave, while he who has an untarnished Mana free from all negative influences originating in this world is as free as a bird. A 'bonded man' yearns for freedom, while a 'free man' would never wish to be under any bondage. That is the difference between the two. A 'bonded man' would bargain everything he has for his freedom, while a 'free man' would not need to bargain for anything because no one can force anything upon him as he is already free.]

3. When the Mana is freed from any desire to derive any sort of enjoyment, pleasure and comfort from the objects of this material world, it is then said to be freed from all its entanglements with the world, and consequently it is deemed to be liberated from the fetters that shackle an ordinary creature to this deluding world of artificiality and ignorance. This entanglement and involvement with the world robs the creature of his peace and tranquility, while disentanglement and non-involvement would obviously eliminate all causes of discomfiture for him.

Hence, those who seek liberation from the fetters of this deluding world and obtain deliverance from its torments and miseries should always ensure that the Mana keeps a safe distance from all the entangling allurements proffered by this world of material comfort and sensual pleasures which nevertheless are transient and illusive in nature. They should diligently restrain their Mana from getting involved in any of the sense objects of this world (3).

4. With constant practice, a state comes when the Mana is perpetually freed from all its natural tendencies to first get attracted to and then get attached with the sense objects of this material world. In other words, the mind and heart of the wise man develops a sense of total detachment and dispassion towards this deluding world of artificiality (because it has realised their transient, artificial, deluding and entangling nature). It is then that the spiritual aspirant is able to concentrate his attention on his heart, i.e. become introspective and contemplative. It is then the man realises that the peace and happiness that he has been seeking from the outside world was misleading and deluding, and that true bliss is to be found in one's own heart (where the Atma or pure consciousness has its residence).

Such a realised man is consequentially able to attain the supreme state of perpetual beatitude and felicity when he discovers the 'truthful' fount of bliss, happiness and peace that is eternal and infinite as compared to the temporary peace and transient happiness that he had got from the material objects of this world.

In other words, when the man is able to control his Mana and teach it to become dispassionate towards the attractions of the sense objects of the world, it is only then that the wise man is able to attain the supreme stature called 'Param Pad' which is the state of absoluteness and truthfulness (4).

[Note—Refer also to verse no. 10 below in this context.]

5. A wise and erudite man should endeavour to control or restrain his Mana and train it to inculcate dispassion towards the deluding and entrapping attractions proffered by the sense objects of this material world only till the time the Mana has not been

trained to remain focused on the heart and the eternal fount of bliss and happiness that resides in it. When the Mana becomes one with the heart, i.e. when the emotions and thoughts are concentrated upon one object without pulling the creature in opposite directions, it is obvious that peace and bliss are obtained by him.

The dissolution of the Mana in the heart¹—i.e. when the creature is successfully able to keep his attention focused on his inner self where the fount of eternal bliss known as the Atma resides and prevent the mind from wandering in the external world and attempting to find the illusive peace and comfort there—is tantamount to obtaining Gyan and Mukti by the creature.

Everything else, all other interpretations and connotations of the terms Gyan² and Mukti³ are merely elaborations of this great metaphysical, theological and spiritual truth as expounded in and enunciated by the scriptures. [In other words, turning the Mana away from the material world of impermanence and delusory charms, and instead diverting its energy and efforts to the inner self where the eternal, divine and glorious Atma representing the supreme transcendental consciousness known as Brahm resides, is the main aim of studying and hearing the scriptures. This is the main aim of the scriptures and their teaching, and if this aim is achieved successfully, then the rest become redundant. Otherwise, one can go on reading reams of paper, debating the scriptural texts and listening to decades of innumerable lectures and still achieve nothing worthwhile.] (5).

[Note—¹Once the Mana plunges into the ocean of bliss, contentedness, happiness and peace bubbling over in the subtle heart where the pure conscious Atma resides, it discovers that these virtues exist there in a much finer, more refined and glorious form that is eternal and infinite as compared to their crude and temporary form it had encountered while it remained engrossed in the external world. Since the Mana had remained attached to the world not for the world's sake but because the latter gave it comfort and pleasure as well as bliss, peace, joy and happiness, when it discovers that these charms of the world are transient and illusionary compared to the new discovery of these same virtues but in a more glorious and splendorous form in the heart itself, it naturally abandons the former and swerves towards the latter. To remain engrossed in something that is attractive is the natural habit of the Mana. So it now gets hooked, literally, to this eternal fount of beatitude and felicity—which are more profound and everlasting as compared to the external ones—present in the creature's own bosom. For searching comfort and pleasure outside, the creature had to make so many strenuous physical labour, but meditation and contemplation required no such strenuous physical labour, so it was all the more attractive to him because the creature has a general propensity to do the least and gain the most from the least physical effort.

²Gyan means truthful knowledge, wisdom, erudition and enlightenment. In the present context it would be the understanding by the spiritual aspirant that truthful bliss, peace, happiness and joy are not available in the material objects of the external world, but in the deep recesses of the heart when contentedness is obtained by inculcating a high degree of detachment and dispassion. Gyan entails that the wise creature has come to realise that the comfort and pleasures of the world are transient and impermanent, and that true happiness is obtainable by realising the truthful nature of the eternal and conscious Atma which is present in the heart of the aspirant himself as his 'true self'. Gyan prepares him to realise that this 'true self' of his is distinct from the gross body as well as the subtle mind which are only meant to serve his 'self' represented by this Atma. The concept of Gyan has been explained elsewhere in other Upanishads also—such as for example the Paingalo-panishad in its Canto 4 and the Niralambo-panishad in its verse no. 14 of Shukla Yajur Veda tradition; the Tejobindu Upanishad in its Canto 6, verse no. 60; the Yogyattva

Upanishad, verse nos. 17-18, and the Sarwasaaro-panishad, verse no. 12 of the Krishna Yajur Veda tradition.

The seven steps to Gyan have been elaborately described in Mahopanishad, canto 5, verse nos. 21-47 of the Sam Veda tradition.

There are two other relevant concepts—Gyan Yoga and Gyan Shakti. (a) Gyan Yoga involves the intellect and mind to determine and delineate the true and the false; it helps to access and understand the reality and falsehood behind the manifested visible world which appears to be ‘real’ but is actually like a ‘shadow of the truth’. This Gyan Yoga helps to establish the mind firmly into seeing unity in diversity. Those following Gyan Yoga are called ‘seers’ because they can ‘see’ beyond the visible, multifarious and bewildering variety of this false world. Gyan Yoga is in the realm of the intellect and discriminating mind of a creature. (b) Gyan gives sufficient power, strength and wisdom to the creature which enlightens it about the good and the bad, about what is beneficial for it and what is ruinous for it. It is the empowerment obtained as a result of acquisition of knowledge, wisdom, erudition, enlightenment, sagacity, scholarship and expertise. This is called Gyan Shakti, simply because merely wish and determination wouldn’t suffice if a person does not have the required knowledge and skill, the expertise and wisdom to accomplish his objectives successfully.

³*Mukti* literally means freedom, liberation and deliverance. A related concept is Moksha which would mean ultimate emancipation and salvation. Both concepts are almost identical in import vis-à-vis the creature’s Atma is concerned. Mukti in the present context would mean freedom from delusions and ignorance about the truth that tie down the creature to this entrapping world and its attractions of material objects; to obtain liberation from the fetters of delusions and ignorance and thereby obtain deliverance from the endless cycle of birth and death and their attendant miseries and torments. The creature erroneously thinks that the pleasures and comforts that the world gives are permanent and real, whereas the fact is just the opposite. This is the great delusion pertaining to this world which keeps everyone tied down to it. Once Gyan or truthful knowledge dawns on the mental horizon of the creature that he is being taken for a ride, either by becoming aware of this fact through the reading of the scriptures or by hearing about it when spoken of by some wise man, it is then that he embarks on the path of finding the truth himself and the way to break free from this shackle. The scriptures and other wise men show him the path, and finally he is successful in his spiritual quest. This is Mukti.

Basically there are said to be three types of Muktis—viz. Jivan, Videha and Kaivalya. The following list summarises the Upanishads that deal with these three varieties of Muktis.

(1) Jivan Mukti—(a) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 4, verse no. 18-33; Yog Kundali Upanishad, Canto 3; Katho-panishad, Canto 2, Valli 2, verse no. 12-13, and Canto 2, Valli 3, verse no. 4, 6-15; Akchu-panishad, verse no. 32-39; Tejobindu Upanishad, Canto 4, verse nos. 1-32. (b) Shukla Yajur Veda tradition—Paingalo-panishad, canto 3, verse no. 5, and canto 3, verse no. 9-11; Mandal Brahmin Upanishad, 1/4/3-4; 2/3/6-7; 2/4/5-6; Adhyatma Upanishad, verse nos. 12 and 4-47; Muktiko-panishad, Canto 2. (c) Atharva Veda—Ram Rahasaya Upanishad, Canto 5, verse no. 11-17; Annapurna Upanishad, canto 2.

(2) Videha Mukti—(a) Krishna Yajur Veda tradition—Tejobindu Upanishad, Canto 4, verse nos. 33-81; Sarwasaro-panishad, verse no. 2; Akchu Upanishad, Canto 2, verse nos. 32-40. (b) Shukla Yajur Veda tradition—Paingalo-panishad, canto 3, verse no. 12, and Canto 4, verse nos. 7 and 15; Mahopanishad, canto 2, verse nos. 36-73, and canto 5, verse nos. 23-41.

(3) Kaivalya Mukti—It has been described in Paingalo-panishad of Shukla Yajur Veda, in its Canto 4, verse nos. 7 and 15.

(4) The *three paths* of Mukti have been described in Advai Tarak Upanishad of Shukla Yajur Veda tradition, in its verse nos. 4-13.]

6. When the spiritual aspirant treats all subjects requiring attention with the greatest of equanimity and indifference, when he does not distinguish between a thing that has any charm for the mind, which is alluring for the mind and fascinates it, and a thing that is repulsive, offensive and puts off the mind, it is only then that it can be said that his mind remains truly neutral, dispassionate and detached. The mind would treat both the circumstances, both the objects that attract the attention of the creature, equally, without showing any special favours or bias towards any one of them. The mind would not be prejudicial or partisan in its attitude towards any given object or thing or circumstances that requires its attention. [That is, detached, dispassionate and neutral mind is that which remains calm and poised even during the greatest of adversities and unfavourable circumstances. It will never lose its cool and composure; remain even-keeled and balanced no matter what is the provocation. For such a mind, both the opposite emotions of sorrows and pains on the one hand and elation and joys on the other mean the same thing. A creature with such a mental bearing never becomes bewildered, perplexed or vexed under difficult situations.]

It is under this state of total neutrality and detachment of the mind, of absolute equanimity and dispassion of the mind, of complete non-involvement of the mind that the creature attains the state of Brahm realisation¹ (6).

[Note--¹This is because Brahm is like the supreme Emperor, and for him all are equal. Without this peculiar special attitude and bearing of the mind, one cannot judge any circumstance or object with objectivity, because if the mind is prejudiced and inclined to make pre-conceived notions about any given thing or circumstance or situation, then all its judgments and decisions would be tainted, influenced, biased and corrupted. Since Brahm stands for pristine purity and highest form of truth that entails total neutrality and equanimity in dealing with anything, whether it is favourable or unfavourable, likeable or unlikable, it follows that only the mind that has attained this state of neutral existence, or the mind that is absolutely non-involved, is one that is sufficiently fine-tuned to receive the glories of Brahm.

There must be compatibility between the instrument and medium used in researching for any hidden and unknown treasure, and that treasure itself. For example, if we search for a needle in a stack of hay, we must use a simple bar magnet that has a natural affinity to iron so that as soon as it comes in proximity of the iron needle hidden from view, it would immediately pull it out of the hay stack. It is a worthless wasting of time and energy in trying to pull out that iron needle using, say, a compass which also has magnet but is meant for different purpose, or even a metal detector which would tell that the needle is indeed in the stack somewhere, but wouldn't pull it out.

Likewise, the fine-tuned mind—when it is focused on realising the supreme transcendental Truth of creation which is pure consciousness, which is most divine, holy, august and auspicious, and which is a fount of eternal beatitude and felicity known as Brahm—becomes an effective instrument and medium in achieving success in this spiritual endeavour of self-realisation, of Brahm-realisation and of Truth-realisation.

Like the example of the magnet cited here, the Mana can virtually pull out the hidden glory of consciousness ensconced in the bosom of the individual creature once it focuses its attention on it. In other words, a diligent mind can unravel the mystical secrets of the creation by bringing to the fore the hitherto unknown and hidden glory of Consciousness present in one's own bosom. This is called 'self-realisation' and 'enlightenment'.

The mind can remain steady in its spiritual pursuit and be focused on its aim only when it is unruffled, calm and tranquil, and this is made possible only when none of the stimuli originating from this material world are able to disturb its peace and poise.

This state is obtainable when the mind is totally neutral and indifferent to everything external, whether it is most enticing or most reprehensible.]

7. The sound element in creation is represented by the ethereal word OM, also known as Pranav. The sound of OM incorporates in its three letters, A, U and M, the entire spectrum of creation¹. Therefore, sound, in its primary form as OM, helps the spiritual aspirant to become aware of the existence of the supreme transcendental cosmic Consciousness known as Brahm in its manifested or revealed form. [Sound is the first and primary as well as the subtlest form of Brahm in its manifested and revealed form which is most sublime and subtle. Pranav or OM is the nearest analogue for Brahm².]

But there is another divine and superior form of Brahm which transcends this known form represented by sound (of OM and Pranav), no matter how sublime and subtle the latter form is. That transcendental eclectic form of Brahm is most esoteric and mysterious; it is beyond either comprehension or description; it is without any attributes, qualities and manifested forms.

So a spiritual aspirant should first witness and experience the presence of the holy form of the supreme Brahm which is revealed in the form of this vast creation by meditating and contemplating upon it by using the medium of the ethereal sound OM or Pranav, and then graduating as it were to reach the higher state of Brahm-realisation when he is able to experience the existence of that supreme entity which is indescribable but an irrefutable Truth and an unequivocal Reality of existence in the form of pure consciousness. In other words, he should progress from witnessing Brahm in the form of the visible and manifested existence to a higher state of realisation when he experiences the existence of the all-pervading, all-encompassing, all-incorporating, omnipresent cosmic Divinity in the form of pure Consciousness. This latter form of Brahm is beyond the scope of words to be described; it transcends even the subtlest form of all existence represented by sound and symbolised by the monosyllable OM. [In other words, a spiritual aspirant should use the Mantra OM as a medium of concentration of his mind during meditation and contemplation. Then gradually this practice would help him to elevate himself to a higher plane of spiritual existence that is called the transcendental state of the Absolute and complete neutrality. In this state he experiences the bliss and happiness that come when one is fulfilled and complete, and this feeling is Brahm-realisation.]

That eclectic, esoteric and enigmatic Supreme Being can be realised, experienced and witnessed only through the medium of firm faith, conviction and devotion, and not by being skeptical, doubtful and shaky in one's conviction of its existence. If one lacks firmness of faith and steadfastness in his beliefs, he can never succeed in realising something that is impossible to describe in words though it is irrefutable, unequivocal and universal Truth and an absolute Reality. This mysterious and enigmatic entity cannot be found in any books, including the Holy Scriptures, where he tries to research it out. That unique Truth (Brahm; pure consciousness) has to be experienced by the spiritual aspirant himself first hand before he can stand as a witness for its immanent, unequivocal and irrefutable existence³ (7).

[Note—¹The word OM has three basic sounds represented by the three alphabets A, U and M. 'A' stands for initiation, 'U' represents development, and 'M' is symbolic of conclusion of this creation. Further, the Narayano-panishad, which is Chapter no. 7 of this book, point out, in its paragraph no. 4, that the word OM consisting of these three letters is a representative of Brahm known also as Pranav.

²The concept of OM: Refer also to verse no. 16 below.

³This is because lack of conviction and faith leads to doubts and confusions in the mind, making it flummoxed and an ideal breeding ground for perplexities and

vexations. A mind bewildered and confused achieves nothing because it begins to flounder, waver, stagger and stumble every now and then, leading ultimately to its final downfall. And with this main instrument of Brahm-realisation failing and crumbling under the unrelenting onslaught of ignorance-induced delusions and doubts, the spiritual aspirant loses his only faithful companion and comrade-in-arm, a viable and potent medium which can lead him to the citadel of the ultimate Truth, not only of creation but also of his own self. Therefore, a wise spiritual aspirant should not only train the mind but also keep it in tight leash much like one keeps his pet dog who is said to be his best friend and companion. This dog will become wild if not properly trained or pampered too much. The same thing applies to the mind.]

8. That supreme transcendental Brahm has no different forms or aspects or fractions called Kalaas because it is one single indivisible and non-dual entity that is eternal, infinite, uniform, immutable and universal. This Brahm is without a second, a parallel or an alternative, being one of its only kind. It is without any taints, flaws, shortcomings and faults, being immaculate, incorruptible and pristine pure.

When the wise and enlightened aspirant realises the fact that this Brahm is he himself, when he sincerely understands the profound spiritual import of the truthful statement of the scriptures regarding the true identity of the creature when they describe the creature as 'I am Brahm', he (the spiritual aspirant) indeed becomes one with Brahm. There exists no distinction between such a self-realised aspirant and the supreme Brahm¹ (8).

[Note—¹When the aspirant realises that his own truthful identity is not the body but the pure conscious Atma or soul residing in his own bosom, and that this Atma is a microcosmic form of the supreme Consciousness known as Brahm that exists in the macrocosmic scale of creation, he is indeed speaking the truth when he affirms that 'I am Brahm'. He has understood the truth of the statement that everything that has consciousness in this creation is nothing else but the same universal non-dual supreme transcendental divine Brahm or Cosmic Consciousness revealed in that specific form which is one amongst other such myriad forms of Consciousness.

This statement 'I am Brahm' is one of the great truths expounded by the scriptures. These universal truths are called *Mahavakyas*. Mahavakyas are the great universal sayings, declarations, commandments, tenets, or the axioms and maxims of the Vedas which are absolute truths and sum up the essence of their teachings with the reference to the Supreme Being known as Brahm and his counterpart the Atma or soul, which is pure consciousness residing in the bosom of the living being. They are as follows—(i) 'Brahm Is Consciousness' (Pragnanam Brahm) appears in Aiteriya Upanishad of the Rig Veda. It means that Atma/consciousness, which gives life to the material layers consisting of the five sheaths of the creature, is the same as the Supreme Reality/Truth behind the entire universe/creation called by the name of Brahm; (ii) 'That Thou Art' (Tat Twam Asi) is found in the Chandogya Upanishad of the Sam Veda. It means that the infinite, all-pervading, omniscient Supreme Truth/Reality is the consciousness or pure self in you. It is also called a statement of advice to the seekers in as much as it contains advice addressed to the seeker that the supreme reality is the self within him; (iii) 'This Self Is Brahm' (Ayam Atma Brahm) is found in the Mandukya Upanishad in the Atharva Veda. It means that the Atma which is self illuminated and the Supreme Reality/Truth are one and the same (i.e. identical); (iv) I Am Brahm (Aham Brahm Asmi) is found in the Brihad Aranyak Upanishad of the Yajur Veda. It proclaims that the conscious principle/element in an individual is nothing other than the total consciousness. This is the statement made by the seeker after attaining self realisation.

There are a number of other Upanishads that describe these great sayings of the Vedas, called the Mahavakyas. Some of them are the following:--

(a) According to Paingalo-panishad, 3/2 of the Shukla Yajur Veda, they are the following—(a) ‘Tattwamasi’—that art thou, or ‘that truthful essence is you’; (b) ‘Twam-Tadasi’—you are that; (c) ‘Twam-Brahmasi’—thou art Brahm; and (d) ‘Aham-Brahmasi’—I am Brahm.

(b) According to Mandal Brahmino-panishad, of the Shukla Yajur Veda, they are the following—(a) ‘That is me’, or ‘that is I’ is mentioned in Brahmin 2, section 2, verse no. 5; (b) ‘I am Tej or I am energy personified’, ‘I am Pragya or personified knowledge’, ‘I am one and immutable’, ‘I am pure and non-dual Brahm’—these are mentioned in Brahmin 2, section 4, verse no. 4; (c) ‘I am the eternal and immaculate Parmatma’, ‘I am that essence’, ‘you are me’, ‘I am you’ are mentioned in Brahmin 3, section 1, verse no. 6; (d) ‘I am Brahm’ appears in Brahmin 3, section 2, verse no. 1; and finally (e) ‘You are me’ appears in Brahmin 3, section 2, verse no. 2.

(c) According to Shuka Rahasayo-panishad, 21/1-4 of Krishna Yajur Veda, they are the following—(1) OM salutations! Enlightenment and knowledge is Brahm and vice versa; (2) OM salutations! I am that Brahm; (3) OM salutations! Verily, that is you; (4) OM salutations! This Atma is Brahm. Other Upanishads that highlight the fundamental tenets of the Vedas are Atmabodho-panishad of Rig Veda, and Atmo-panishad of Atharva Veda amongst others.

(d) According to Kaivalyo-panishad, verse no. 16 of the Krishna Yajur Veda tradition, the Mahavakya is ‘That Brahm is you; you are it’. Verse no. 17-23 of this Upanishad also affirms that the truly realised person is one who sees ‘his own self in every aspect of this creation’ simply because the entire creation is nothing but a revelation of one single immutable and truthful entity known as Brahm.]

9. [This verse describes some of the eclectic virtues of the supreme transcendental Brahm.] The supreme transcendental Brahm is unique and without any alternatives or parallels; he is without an end because he is imperishable and eternal; he has no cause for his existence or for anything that he does; he is beyond the faculty of sight as he is invisible and most subtle though perceptible by the deep insight obtained by self-realisation and enlightenment; he is free from all worldly artificialities, falsehoods, delusions and illusions as well as all notions of deceit, conceit, ostentations and pretensions; he has no beginning as he is eternal and infinite; and he is an embodiment of auspiciousness and well being of the highest order.

When a wise, realised and enlightened man comes to be acquainted with this eclectic divine Being, he becomes freed from all fetters that have been shackling him till this realisation of the profound and eternal Truth dawns upon his mental horizon¹ (9).

[Note—¹This is because Brahm realisation is equivalent to realising the true nature of one’s own self, which is immaculate, truthful and pure consciousness, which is imperishable, ever contented, inherently wise and enlightened, and which is a fount of eternal bliss and peace. This realisation also implies that the aspirant understands the perishable nature of the entire external visible creation which he had till now been considering to be the ‘real’ thing. Once he has had access, by means of self-realisation and Brahm-realisation, to an eternal fount of bliss, peace, happiness and comfort—the basic reason for his being attracted to this deluding and artificial world and then remaining engrossed in it because this world had been luring him into its honey-trap with this bait of providing him with these glorious achievements, and once he realises that these virtues available in this world are not only transient but also false as compared to the availability of the same virtues with their eternal quotient that comes with Brahm-realisation, the wise and erudite aspirant would abandon the artificial world on his own account without any more prodding and beseeching, because who would not like to grab anything of a permanent value instead of something that is perishable and transient?]

10. [This verse describes the state of total dispassion and neutrality which is attained by maturity of Gyan. Refer also verse no. 4.]

For a truly wise, erudite, self-realised and enlightened man who has truthfully realised the true nature and real form of his 'true self' as being the Atma which is pure consciousness and Brahm personified possessing the divine and eclectic virtues and qualities mentioned in the preceding verses understands that this divine and holy entity is beyond the purview of such concepts as having an end or conclusion or having a birth (because the 'true self' representing the supreme transcendental Brahm is imperishable, eternal and infinite).

Similarly, the 'true self' has no such thing or concept as being bound to anything or of remaining free from it (because these notions exist only when the creature is deluded and thinks that there are any fetters that can tie him down, and there is some reason for getting shackled by them, but for the soul that is eternally free this situation does not arise). Therefore there is no desire for any freedom or deliverance from any kind of fetters or getting rid of any shackles (because the eternally free Atma or soul has never been under any bondage in the first place)¹.

Consequently, for a wise, erudite, self-realised and enlightened man there is no notion of an independent state of existence that is liberated, freed and delivered vis-à-vis an existence that is tied by fetters and bound to shackles. In other words, since the Atma is eternally free and liberated, there is no question of it having a bonded existence from where it can seek liberation and deliverance.

When one becomes firm in one's conviction of these unequivocal and irrefutable universal truths (about the 'self' and the reality of the Atma), emancipation and salvation is not to be had separately, for this knowledge and enlightenment itself is called the Principal Gyan or the truthful and knowledge of the Essence and the Absolute (10).

[Note—¹There is no separate concept of 'freedom' for the soul or the Atma that can be distinguished from a situation where the soul is 'not free' or bound by fetters on any kind whatsoever. This is because the soul which is cosmic Consciousness known as the Atma is the ethereal Spirit which can never be bound or limited by any artificial boundaries and parameters. An entity that is never tied or bound obviously is always free—and therefore the notion of it ever having to find freedom from imaginary bondages is a fallacious, incredulous and ridiculous proposition.]

11. [This verse describes the higher state of existence when the wise creature sees the same eternal and universal Atma or pure consciousness as being uniformly present in its three states of existences—i.e. in the waking, the dreaming and the deep sleep states of existences.] One should inculcate the wisdom that there is only one universal Atma, the essence of existence which is pure and truthful consciousness, that is present in all the three states in which the creature's body lives in this world. These three states are respectively called the waking or Jagrat state, the dreaming or Swapna state, and the deep sleep or Sushupta state of existences¹. In other words, an enlightened man should realise that the only truthful entity that matters in all these three states of his existence is the Atma or his pure and truthful consciousness.

Any person who is able to transcend these three states of existences, or who has reached the fourth state called the Turiya state of permanent beatitude and felicity, is the one who does not have another birth² (11).

[Note—¹All living beings have three basic states in which they live their existential life in this world. The first is the waking state when the creature interacts with the world in its wakeful state, when all the external organs of the body, viz. the five

organs of perception such as eye, ear, tongue, nose and skin, and the five organs of action such as mouth, legs, hands, genitals and excretory, are active and involved in the interactions of the creature with the external world. The second state is the dreaming state when the external organs are inactive because the physical gross body is resting or sleeping, but the mind is as active as before, and in this state the creature lives its life in the imaginary world created by the active sub-conscious part of the mind. Since the mind is the cause of this entire existence itself, so there is very little difference between the two states, except that in one case the gross body is actively involved and in the other it is not. But it ought to be noted that the mind is fully involved in both these two states of waking and dreaming.

The third state is the deep sleep state when the mind becomes inactive, and therefore the Atma of the creature, which however is the latter's truthful identity, become independent of any external interferences or influences. This is the actual inherent state of existence of the Atma if it is left to its own accord. That is, the pure consciousness does not actually need the body and the mind to remain active and alive; it has its independent existence free from the domain of the body and the mind. But since it has to live in the gross body and has to take the help of the mind in its interactions with the external world in which it lives, it is forced by circumstances to deal with these two servers.

A wise man understands this fact that it is his Atma which is actually been served by this body and the mind, whether it is in the waking state or in the dreaming state. The physical gross body has no life of its own, and neither does the subtle mind. It is the pure conscious Atma living in the 'causal' body which 'caused' them to become active and show signs of life. So this boils down to the fact that what really matters in the three states in which the creature lives is the 'consciousness', and neither the gross body nor the subtle mind.

The subtle mind and the gross body are only the medium or instrument or vehicle used by the Atma to perceive the world and interact with it. But in practical terms the Atma becomes dependent on them and relies on them for its interactions with the world. Herein lies all the problems faced by the creature—the fact that he is 'dependent' on others. Obviously, such an Atma loses its independence and would yearn for freedom. Therefore it follows that the man who is self-realised needs no freedom, while only a deluded man would need freedom. This is because the self-realised man knows that his 'self' is the eternally free, ethereal and pure conscious Atma, while the deluded man thinks that his 'self' is the gross body having the intelligent mind to govern it.

Now, a worldly man is given a ray of hope for obtaining this eternal freedom when he is advised to read the scriptures and come in contact with wise people. He then comes to know about the 'truth' and the 'non-truth'. If he is wise and clever he would immediately take steps to rectify the errors of the past and find ways to obtain eternity that is so normal for enlightened people. He would henceforth ensure that he does not do anything that would further pull him down in the bog, but would endeavour to do everything possible to extricate himself from the already existing one. Once wisdom and self-awareness dawns on him, once he realises the truth about himself, he would exult in the discovery of the eternal Truth as proclaimed in verse no. 8 above.

Since the 'true self' of every creature is the Atma, once enlightenment dawns upon him he feels himself free and liberated. The Atma would regain its original pristine form and immaculate nature that will no longer be influenced by tug and pull of this deluding world and its artificial charms. Such a wise and enlightened Atma would no longer be influenced by the cunning overtures of the mind and the selfish gestures of the body. It would keep them under tight leash like one keeps one pet dog. The Atma would realise that the body and the mind are meant to serve it, and that it should not allow itself to become a puppet in their hands, for if these so-called low-level employees of the kingdom are able to get the better of their King (the Atma) it

would be most devastating for the kingdom. The Atma of a self-realised man remains calm and unruffled; it is not at all affected by the constant nudging and prodding of the restless body and the fidgety mind. It bears them with stoic neutrality and poise as mentioned in this verse.

Ordinarily, the creature oscillates between these three states—he remains awake, goes to sleep and dreams, goes past his dreams to sleep peacefully for a fleeting moment during the deep sleep state of existence, only to retrace its steps back to the waking state. The peace and relaxation that it had found in its sleep is short-lived as it wakes up to the realities of the physical world of worries and problems.

²There is a miraculous fourth state of existence called Turiya which transcends these three states, and comes after the creature crosses the third state of deep sleep. It is one of ‘permanent and irrevocable’ bliss. When this state is realisation is reached, when an enlightened creature has crossed the threshold of deep sleep state, it would create a mystical state of existence when the creature might come back to the first state of wakefulness, but his ‘true self’ is not involved in this wakeful state of the body but in the transcendental state of Turiya. Such a creature lives in this world and goes about his normal duties, but with total detachment and dispassion as if in a trance-like state of blissfulness and ecstasy. This is because the ‘consciousness’ is eternal and imperishable as well as constant and steady, not transient, fleeting and shifting in nature like the earlier three states.

The word *birth* is very significant in this verse. It refers to the awareness of the Atma of the presence of the physical body and its active role in this world. The Atma is a ‘spirit’ and has no physical shape of any kind. When it assumes a body, it acquires a shape, and since this Atma with a body conceived in a mother’s womb emerges in the outside world as a living being, it is said to have taken a ‘birth’. Being conscious of the external world, this state of existence of the creature is like the waking state of existence described above. After birth, it lives its term and sees the myriad colours of this fascinating world, experiencing its joys and sorrows. This is like the dreaming state because this world is false and illusionary like the mirage seen in a desert. When the creature finally dies, it is like going to the third state of deep sleep, because in this state he has no more pains and worries left.

But the unfortunate part is that if the creature is not enlightened and wise enough, it would treat the ‘dreaming and waking’ states as real, and gets influenced by their deluding effects. As a result, it does not cross the third state into the fourth state of no return, but literally wakes up to enjoy this world once again by assuming another body in a new womb. This is taking fresh birth. A realised soul would actually find ‘eternal rest’ once the Atma is able to shed the cuticle of this body when it dies, and enter a state of Turiya from which there is no return; it does not take birth again.

In this context it is worthwhile to note that there is a fifth fourth state of existence of the consciousness called the Turiya-Teet state—one that goes beyond the fourth state of Turiya; one that transcends Turiya. It is a higher level of Turiya just like we have many levels in the atmosphere around the earth. If Turiya is equivalent to remaining within the magnetic pull of the earth, the Turiya-teet would be like going beyond it in the deep recesses of the cosmos from where the earth would not be able to get hold of it any longer.

Amongst the various Upanishads that deal with this topic, the following are noteworthy—(1) The three states of existence of the consciousness have been described in the following Upanishads amongst others—(a) Shukla Yajur Veda—Brihad Aranyaka Upanishad 2/1/16-20, 4/3/9-38. (b) Krishna Yajur Veda—Varaaha Upanishad, Canto 1, verse no. 11. (2) The four states of existence of the consciousness have been described in the following Upanishads amongst others—(a) Shukla Yajur Veda—Subal Upanishad, Canto 4 full as well as Canto 9, verse no. 1-7; Paingal Upanishad, 2/11-15; Mandal Brahmin Upanishad, 2/4-2/5; (b) Krishna Yajur Veda tradition—Varaaha Upanishad, Canto 2, verse no. 61-64; Canto 2, verse no. 61-64; Brahm Upanishada, verse no. 1, 20-21; Kaivalya Upanishad, verse no. 12-14;

Dhyan Bindu Upanishad, verse no. 93/12-93/15; Sarwasaar Upanishad, verse no. 4; Shaarirak Upanishad, verse no. 14. (3) The five states of existence of the consciousness have been described in the following Upanishads amongst others—(a) Shukla Yajur Veda—Turiyateet Upanishad; Subal Upanishad, Canto 9, verses 1-7; Mandal Brahmin Upanishad, Brahmin 2, section 4, verse no. 1; Paingal Upanishad, Canto 2, verse nos. 11-15. (b) Krishna Yajur Veda—Dhyanbindu Upanishad, verse nos. 93/12—93/15.]

12. The pure conscious Atma which is present in the heart of one living being is also present in the heart of all the other living beings in this creation (because the Atma is one indivisible and uniform divine entity which cannot be partitioned or fractioned into components; because it is all-pervading, all-encompassing, all-inclusive and all-permeating, being immanent and omnipresent; because it cannot be limited to any specific place and bound by any specific definitions).

It is like the case of viewing different images of the same glorious moon as it is seen being reflected in a number of different vessels filled with water. [Here, the moon is the universal consciousness called the Atma, while the images seen in different vessels of water are like the presence of same consciousness in myriad number of countless creatures in this existence.] (12).

13. The space symbolising the sky present inside the hollow of the earthen pot appears to be completely separate and distinct from the space present outside the body of the pot, but when the pot is broken all differences and distinctions between these two spaces automatically vanish without leaving any trace. When the earthen pot is broken it is only the pot that gets destroyed but the space element present inside its hollow cavity is absolutely unaffected; it simply merges with its counterpart present outside the pot. Once the pot is broken, no one would be able to distinguish between the two spaces; no one can delineate or draw a line between the space that existed inside the pot and the one that existed outside the body of the pot.

Likewise, this Atma is compared to this space while the body of the living being is like the clay pot. When the perishable body dies or is subjected to any kind of decay and ruin, nothing happens to the eternal and imperishable Atma even as nothing happens to the sky element when the clay pot is broken. Rather, in this eventuality, it is set free to become one with the universal cosmic Consciousness present everywhere (13).

14. The bodies that all the living beings have are like this earthen pot which is made and broken repeatedly. [The gross body is moulded from the earth element much like the earthen pot. The body is made or moulded in the mother's womb much like the pot is moulded by the potter. The body takes birth, is used by the Atma as long as it lasts, and when the body gets old and decrepit the Atma abandons it to take residence in another new body. This is like the making and breaking of the pot.]

This inherently perishable body, which is gross, inert and inane, does not know or is unaware of the fact that it is the habitat of the eternally conscious supreme Atma residing inside its own self, and that it is the presence of this Atma which is the causative factor that has made the body acquire so much importance.

On the other hand, the Atma is consciousness personified; it is wise and enlightened because it is inherently omniscient and all-knowing. This Atma is fully aware of the presence of the body. This Atma representing the supreme transcendental Brahman knows everything (and that is why the body begins to 'feel, see, taste, hear and touch' as soon as the conscious Atma becomes active in it, otherwise it remains in an

‘un-conscious state of coma or paralysis’ as it were). This is the basic difference between the body and the Atma. The Atma can make the body ‘live’, be conscious, become active and acquire its worth, but the body cannot do the same to the Atma. The body can’t survive without the consciousness residing inside it, but the consciousness can do without the body (14).

[Note--In other words, the body has any importance at all as it is the abode for the Atma and is used by the latter to perform its duties in this world. Without the vehicle of the body, the Atma would not be able to carry out its wishes in this gross and physical world of material objects because the Atma is a ‘spirit’ and so subtle, sublime and microscopic that it is impossible for it to interact with this world which has just the opposite characteristics. There is no compatibility between the ‘pure, truthful, sublime, subtle, eternal and conscious spirit’ and the ‘gross, dense, inane, lifeless, transient and illusionary world of perishable material things which are hollow from the inside and lack any worthwhile essence and pith’.]

15. As long as the creature’s Atma remains surrounded by the veil of Maya, or covered by the shroud of delusions and ignorance about its true nature, making it erroneously think that it has a name and form in the shape of the body, it is only till then the creature remains like a trapped insect inside the closed lotus flower. When this darkness of ignorance is removed, when this veil of delusions is shed off, the creature is set free in the light of knowledge (much like the lotus opening its petals during the day time and setting free the trapped insect which remained in a hibernating state during the dark period of the night when the lotus remained closed)¹.

It is in this bright light of enlightenment that the wise creature is able to see the oneness between the true ‘self’ called the pure conscious Atma of the individual creature, and the supreme Self which is the cosmic Consciousness known as Brahm. [The analogy of the clay pot cited above in verse no. 13 and of the moon in verse no. 12 would fit in well here.] (15).

[Note—¹A bee alights on a flower to drink nectar. It so happens that it becomes engrossed in the bliss and enjoyment of the taste of that flower’s nectar that it forgets that the petals close at nightfall. When the dark night arrives, the flower closes its petals and the insect gets trapped inside, spending its night remaining submerged in its blissful state. At the crack of dawn the petals reopen and the bee flies off to another flower, only to discover that the nectar is as tasty and blissful here as it was in the previous flower.

This example would sum up what is said in this verse. The night indicates the darkness of ignorance and delusions which traps the insect into thinking that the flower on which it has alighted is the only flower in the world, and the cavity of the flower is all there is to it in this world because it is unable to see anything due to darkness of the night. When the light of day symbolised by wisdom and enlightenment dawns upon the mental horizon of the bee, it is then able to see the vast world of so many other flowers in the garden which have the same nectar to offer to it, and numerous bees hovering over flowers or actually drinking nectar from numerous flowers that outstrip the number of bees. It then realises that it is only a small speck in the entire garden, and from the cosmic point of view all the bees and the flowers are the same.

The bees and the flowers are linked together by the common denominator of the nectar. Similarly, the individual creature and the objects of the world are linked together with the Atma—it is the Atma that keeps the creature alive and makes it interact with this world, and it is a living world having consciousness that keeps attracts the creature towards it for no one would want to deal with dead entities. The creature remains engrossed in this world but when he is fed up with the latter, he endeavours to find out the reason for his uneasiness. It is then that he discovers that

he had been trapped by the delusions created by this world because the he had sought to derive the bliss so typical of the Atma from the world. The creature would then research what that eternal fount of bliss is, and discovers that the Atma is that fount and that it is very much inside his own self.

In this example of the bee, the light of enlightenment is like the daylight which opens the petals of the flower to enable the bee to fly off to freedom. Till then, the bee is trapped inside the closed flower which had attracted the insect with the bait of the nectar. The nectar is like the various charms and enticements offered by the entrapping world of delusions and material sense objects to trap a creature. A creature who remains engrossed in enjoying this world is like the bee engrossed in drinking the nectar and getting trapped in the closed flower, while a wise and enlightened man who has seen the truth is like the bee which flies off after drinking the nectar without getting trapped by the closing of the flower.]

16. There are two entities called ‘Akchar’. This word literally has two connotations—one meaning a letter of the alphabet or a monosyllable word, and the other meaning something that is imperishable, immortal, indefinite, infinite and eternal; that which does not decay and die. The former meaning is applicable to the ethereal divine word OM which stands for the supreme transcendental Brahm, while the latter meaning applies to this Brahm itself.

The ‘word’ may perish; it might be forgotten and become unknown over long periods of time in history. But the ‘Brahm’ is eternal and everlasting as it is steady and omnipresent as the universal Truth and Absolute Reality. ‘Truth’ never perishes and it is evergreen by its basic nature. Therefore, out of the two forms of ‘Akchars’, the latter form, i.e. Brahm, is the real ‘Akchar’ as it is not only imperishable and immortal, but also represented by the ethereal word OM. Hence, Brahm fits in with both the connotations of Akchar.

In other words, when these two entities are weighed against each other or compared with each other, it is found that one (i.e. the ‘word’) might fade over time, but the other (i.e. Brahm) is eternal and infinite. Therefore, Brahm is honoured by the epithet ‘supreme and transcendental’ as nothing supersedes Brahm, nothing goes beyond it, but Brahm is beyond everything in existence, it goes beyond definitions and comprehension.

A wise, erudite and enlightened man who seeks real peace and tranquility should constantly contemplate and meditate upon that supreme transcendental Divinity known as Brahm that is ‘Akchar’ in the real sense, i.e. it is infinite, eternal, immortal and imperishable in the truthful sense of the word (16).

[Note—The eternal word OM made up of the basic elements of sound in the cosmic ether is called ‘Akchar’ meaning a monosyllabic word. Likewise, the supreme transcendental Brahm which is pure cosmic consciousness is also called ‘Akchar’, meaning something that is imperishable and eternal. These two entities are usually treated as one because of this linking factor of ‘Akchar’ which creates a synergy between the ethereal word which pervades the entire creation in a uniform manner and the cosmic consciousness which also pervades the creation in equally uniform manner.

But a situation may arise when there is completely no sound whatsoever, and then there is absolute silence, absolutely no activity. That which remains in this situation is the ‘truthful and real’ imperishable entity; it is an entity that is undoubtedly and irrefutably eternal, and it is indeed ‘Akchar’, or something that is imperishable and eternal in the truthful sense of the word.

Any sound is heard in the background of silence, and the cosmic sound represented by the monosyllable word OM has its origin in the waves that are generated in the cosmic ether. Friction in these waves cause the generation of energy and this is manifested as sound. Anything that has even a rudimentary form of life in it will show activity and the latter needs energy. Since vibrations in ether were the first signs of activity and hence of life, it is deemed that any form of basic sound is the subtlest and the confirmed form of existence of life anywhere. To understand this concept we may take this example—when a patient had been terminally ill and in a state of coma for a long time but is on the way of recovery, the doctor sees the ability of the patient to respond with verbal answers to questions put to him as the surest sign of his gaining consciousness. Mere wiggling of toes or moving of lips is not sufficient evidence for the patient regaining full consciousness.

The very fact that ‘some kind of energy’ existed in the cosmic ether to produce the subtlest manifestation of life as ‘sound’ is indicative of the existence of life in an invisible and imperceptible nascent form even before sound came into existence. This ‘primary entity’ predated even sound, and it is from it that the first signs of life gradually made themselves evident. This mystical, esoteric and mysterious entity which is the forefather of even sound and the rest of the creation which rolls out after this first cosmic appearance of energy is known as the imperishable and eternal Divinity or cosmic Consciousness called Brahm. It is this Brahm that is being referred to as the ultimate ‘Absolute’ one that is called ‘Akchar’—i.e. one that is really, truthfully and without doubt imperishable, immortal, infinite and eternal. The cosmic sound represented by the word OM may be Akchar in the technical meaning of the word because any word has letters and this OM specially fits the bill as it is a monosyllabic word, but it is not ‘absolute and infinite’. Any word can be pronounced, it can be transmitted by oral method, by writing and by speaking, it can be analysed and explained—and so it is subjected to some definitions and criterions. But Brahm is an entity that defies analysis, comprehension and definitions. So naturally Brahm is ‘transcendental and supreme’ as compared to the word OM or any word for that matter.

The appearance of cosmic sound cause by frictional energy in the cosmic ether can be compared to the roar of the ocean waves. These waves are generated by the energy dissipated by the varying speed of different layers of water currents flowing in the body of the ocean. These waves rise high, move at astounding speeds like colossus walls of water, and then when their life ends or their energy dissipated, they collapse back into the surface of the ocean. The ocean outlasts the waves and pre-dates them. From the perspective of the wave, the ocean is the eternal and real truth that exists even after the life of the wave ends and from which a new generation of waves emerge.

In this analogy, the fathomless and measureless ocean is the supreme infinite and transcendental Brahm and the wave is the new sequence in creation, while the sound generated by the heaving ocean is the cosmic OM which exists in the background of everything. Even a blind man who cannot see the ocean learns about its existence by hearing that typical ‘roar of the ocean’, and therefore even though one cannot actually see the presence of Brahm, the latter’s existence is certified by the presence of the cosmic Naad or sound represented by the monosyllabic word OM.

Again, even as a man can know the direction in which the ocean is present by hearing the roar, an aspirant can make out the general location of the cosmic Truth known as Brahm when he hears the cosmic sound called ‘Naad’ when he meditates. Yoga texts preach that this Naad can be heard inside one’s own self during meditation, and this establishes that Brahm is located inside one’s own bosom as one’s pure consciousness or Atma, and not in some far away mythological imaginary heaven.

It must be noted in the example of the ocean cited here that though one can know about the ocean by hearing its roar, it is not possible to measure or fathom the ocean

by just being aware of its presence. Even by actually seeing the ocean and undertaking extensive research on the ocean no one can ever truly measure or fathom it. Likewise, OM may help one to become aware of the cosmic Consciousness but it is impossible to measure it or completely know it.]

17. [This verse is a sort of an extension of verse no. 16.]

There are two forms that divine spiritual knowledge takes—one is known as ‘Shabda Brahm’ and the other is ‘Param Brahm’.

The Shabda Brahm is the spiritual knowledge that pertains to the Divinity known as Brahm which is obtained by the medium of letters which form numerous words (‘Shabda’) that endeavour to outline the special characteristics, attributes and virtues of the truthful entity in the creation that is most mystical, very esoteric, purely consciousness, and absolutely supreme (‘Brahm’). Hence, all the scriptures that are based on words are a manifestation of the Shabda Brahm.

The ‘Param Brahm’ on the other hand is the spiritual knowledge that pertains to the Divinity known as the supreme transcendental Being who is the ultimate Truth and Authority in creation (i.e. Param Brahm) that cannot be confined to letters and words formed by these letters. This Param Brahm cannot be restricted to the scriptures and goes much beyond their reach—this is because words have their own limitations and are subjected to interpretations and distortions. [This is the reason why there are so many scriptural texts, and there are more commentaries on them than there are scriptures.]

One must have a systematic approach to learn about anything, and this applies to the knowledge of Brahm as well. So, one must first resort to understanding that esoteric, enigmatic and mysterious entity by studying about it in the ‘words’ (Shabda) of the scriptures and hearing about it in the ‘words’ spoken by other wise and Brahm-realised persons who are deemed to be experts in this field and who have already succeeded in actually witnessing Brahm first hand. This is the practical and intelligent way to the understanding of, to the researching of and to the accessing of the unknown and the undefined. By adopting this systematic and intelligent approach, the aspirant succeeds in realising and gaining access to the knowledge pertaining to the supreme transcendental Divinity known as ‘Param Brahm’. [This systematic way to learning and becoming educated is prevalent even today.] (17).

[Note--Obviously, when we go to an unknown place or meet an unknown dignitary, we first gather knowledge about that place or dignitary by reading and hearing all that we can about them. This is a modern and rational approach in dealing with the unknown. So, when a researcher wishes to be fully aware of Brahm himself, he must be adequately prepared to unravel the secrets of this esoteric Divinity. Reading of scriptures and hearing of discourses, consulting others and removing doubts before hand makes the aspirant well prepared, more ready and enlightened about the reality which he is about to unravel. When eventually he succeeds in accessing that divine fount of scintillating energy he is fully prepared to receive its blast and not get blinded by the dazzle and stunned by its stupendous and splendorous presence. So the pre-preparedness is not only welcome but a wise and intelligent way of researching and accessing Brahm.]

18. A wise and scholarly man is one who extracts the essential spiritual knowledge contained in the scriptural text books (such as the Vedas, Upanishads, Purans etc.) and then discards the books themselves even as a farmer harvests the paddy crop, separates the grain from the husk, and then accepts the grain and takes it away to be stored carefully in his granary while leaving the husk behind.

In other words, after learning what is to be learnt from any scripture, a wise, prudent and erudite scholar should concentrate his energy and focus his attention more in putting that knowledge into practice and benefiting from it, rather than getting bogged down in futile and endless debates and discussions on those texts, or referring other texts to verify the truthfulness of what he has studied in the previous text. If the knowledge contained in the scriptures is not used for one's spiritual enhancement and spiritual well being which is the intention of studying them in the first place, if one learns by rote and does not understand what is actually being said and what is the real intention of whatever is said in these great spiritual and devotional texts, then the entire exercise is futile and goes in vain, leading to a waste of time and energy (18).

[Note—Refer Amrit Naad Upanishad, verse no. 1 which is Chapter 9 of this volume.]

19. The colour of different samples of milk would remain the same notwithstanding the different colour of the skin of the cows from which they are milked. Similarly, a wise, erudite and learned man sees, tries to understand and benefits from the underlying eclectic philosophy and principles, the basic tenets, the fundamental doctrines and the spiritual intention of whatever has been said in the scriptures that guide the faiths and beliefs of different traditions, sects, religions and communities in this world instead of getting confused, perplexed and misled by their superfluous and erroneous interpretations, external appearances, formal rites and ritualistic practices¹ (19).

[Note--¹That is, just like the milk is always white in colour no matter the breed of the cow and the colour of its hide, the basic tenet and teaching of all religions and their offshoots are universally the same, because they all speak about one single Truth. Therefore, one should not fight over external signs and other paraphernalia of different religions as this is a stupid and ignorant way of looking at things which are divine, holy, pristine pure and sublime in nature and essence. Getting entangled in such things as insignia, symbols, rituals and formalities of religious practices of various dispensations without peeping deep into their basic meaning and understanding the underlying philosophy is like predicting the colour of the milk by merely looking at the colour of the hide of the cow or breed of the animal without actually making efforts to know what the milk actually looks like and what are its benefits. It must be noted here in this context that geography, circumstances, era of time and history, language and communities etc. all play a combined role in how the ancient sages, seers, prophets or angels have revealed the same Truth in so many varied forms as they exist today—in different languages, using different idioms, examples, phraseology and terminology etc. to suit the prevailing environment, circumstances, situations, era, geographical considerations etc. For instance, a sage who resided in a land where there were rivers, green fields, verdant forests and lofty mountains naturally would differ in his citations than another sage who lived in areas where there were dry deserts and no rainfall. Then the level of social development was also a major factor as was the type of students and their mental aptitude that had to be factored in. Contemporary examples can prove this point however—a student of today would easily understand what a Mobile Phone, an I-Pod, a Computer, a CD (compact disc) or an MP 4 music player is but he would not understand anything about a rotary phone, a turn-table gramophone record player, or what is meant by a 'LP record' of yesteryears.]

20. Even as butter is inherently present in fat-rich milk as its integral part, consciousness representing Brahm and its accompanying enlightenment and wisdom are inherently present in the bosom of all living beings, forming their integral part and their true self.

Just like one vigorously churns milk to extract butter from it, a wise man should treat his mind as the churning rod and constantly contemplate and meditate upon the pure conscious 'self' in order to gain access to the divine and eclectic entity known as the supreme transcendental Brahm hidden inside his own bosom as pure consciousness known as the Atma which is the ultimate essence and absolute 'truth' in creation. [This is like extracting butter from milk.] (20).

21. Once the aspirant is able to acquire the subtle and sublime vision that helps him to have a deep and penetrating insight into the mysteries of the glorious, splendorous and supreme Brahm residing in his own bosom as the pure and radiant consciousness, it becomes clear to him that this Brahm is his own Atma or his truthful 'self'. True spiritual wisdom and enlightenment envisages that such an aspirant is fully convinced of this eclectic fact that this Brahm—which is free from all sense of duality, which is free from all factionalisms and divisions, which is without any taints, blemishes and faults, which is constant and steady, and which is most peaceful, tranquil and serene—and the 'self' (Atma or soul) are one and the same entities. That is, Brahm and Atma are one and non-dual entities known as the 'self'.

This realisation is called true spiritual enlightenment and wisdom; it is the truthful learning and scholarship in the scriptures; it is the essential teaching and benefit derived from following any religious doctrine and philosophy. [That is, the main purpose of studying the scriptures is to become aware of the spiritual 'truth' that is 'absolute and undiluted'. So when the aspirant is able to sincerely realise—without any kind of pretensions, deceit and conceit—that his 'true self' is the Atma, the pure consciousness personified, and that this Atma is nothing else but Brahm, the cosmic Consciousness, it is deemed that the aspirant has not only studied the scriptures but understood their essence and fundamental principles. He has 'drawn the milk from the scriptural cow' as it were; he has extracted the butter from their milk.] (21).

22. I (the pure conscious Atma which is the truthful 'self' of the spiritual aspirant) am that Vasudeo (one of the names of Lord Vishnu, the sustainer, nourisher and protector of creation) in whom all the creatures have their dwelling and find their final resting place. It is me who resides in the bosom of all the living creatures in this creation (as their Atma or soul). And it is me who is famous because of my basic nature of being most benevolent, magnanimous, kind and gracious towards all the creatures in this creation.

Indeed, that supreme transcendental Brahm known as Vasudeo who lives in the bosom of all the living beings as their pure conscious Atma or soul is none other but 'me' (because my true identity is also pure conscious Atma, and since 'truth' can be one and not two, it follows that my self and Vasudeo are one and the same divine entities). Verily, I am that Vasudeo. This is what this Upanishad teaches; it is its profound tenet and doctrine; it is the great truth that it affirms and proclaims (22).

-----Shanti Paath-----

-----*****-----

Chapter 9

Amrit Naad Upanishad/Amritnaado-panishad

Belonging to the Krishna Yajur Veda tradition, this Upanishad is based on the philosophy of Yoga or meditation by which a spiritual aspirant establishes a union between his individual self and the cosmic supreme Self known as Brahm. It has thirty nine verses.

This union between the individual 'self' and the cosmic 'Self' results in the individual being drowned in the ethereal vibrations present in the fathomless and measureless cosmos, vibrations that generate a subtle reverberating cosmic noise called Naad. These vibrations completely submerge him and virtually massage his nerves so much so that the practitioner of Yoga hears nothing else but this Naad all around him. This result in his feeling an overwhelming wave of ecstasy overflowing him which in turn gives him the much sought after sense of bliss and happiness of the highest order. It is something that can neither be conveyed or preached or explained; it is only experienced first hand.

It regards the ethereal divine word OM that is universally used during meditation as a vehicle for concentration of the mind as a chariot (a vehicle) which can take the spiritual practitioner to his destination of attaining supreme state of enlightenment. The divine, spiritual and eclectic value of OM, which is also known as 'Naad', the cosmic ethereal sound that is all-pervading and all-encompassing as the background sound present in the cosmos and heard by an ascetic during his meditation, is elaborated upon in a very succinct manner.

Verse no. 2 beautifully uses the analogy of the chariot to describe how OM can be used as a vehicle to reach the supreme state of extreme bliss and ecstasy that is conventionally regarded as the state of existence that accompanies Brahm-realisation.

It goes on to describe the various limbs or branches of Yoga, and the most acclaimed of all meditation exercises that is known as 'Pranayam' which entails control of the vital winds inside the body and diverting their energy towards spiritual upliftment. The benefits of Yoga are outlined in this context. This Upanishad is one of the major ones dealing with the concept of Yoga.

Finally, this Upanishad deals with the vital winds called the various Prans which sustain and protect the body. It describes their importance, location and symbolic colours. It concludes that when an ascetic who practices Pranayam manages to concentrate his vital life forces called Pran in the head, he finds final deliverance from the shackling effects of this gross body when he dies, and therefore he does not have to take birth again. Hence we can summarises that this Upanishad prescribes the path of Yoga as a means to fulfill the spiritual aspirations of a wise person.

-----Shanti Paath-----

ॐ सह नावतु । सह नौ भुनक्तु । सह वीर्यं करवावहै । तेजस्वि नावधीतमस्तु । मा विद्विषावहै ।
ॐ शान्तिः । शान्तिः । शान्तिः ।

The meaning of this Shanti Paath is given in appendix no. 1.

1. A wise, erudite and sagacious man should constantly study the scriptures, ponder upon their profound truthful tenets, and actually practice them in his life (i.e. implement them). He should realise that this life—which is like the transient streak of lightening or the meteor flying across the dark sky for a fleeting moment only to vanish in the next moment—is a golden and unique opportunity given to the soul to acquire truthful and eclectic knowledge of the supreme transcendental Divinity known as Brahm. Therefore, a wise man should not let go of this opportunity and make the best use of it. He should not fritter away his life in the pursuit of things that are perishable and worthless. Instead, he should spend his life in accessing what is immortal and a provider of eternal peace and happiness (1).

[Note—This verse essentially emphasises the fact that a human body, especially a life as a wise and intelligent man who has favourable circumstances and gets all the opportunities for his spiritual upliftment such as the chance to study the scriptures under the aegis of a learned teacher, a healthy body, a conducive environment for spiritual pursuits, and reasonable availability of worldly necessities and comforts so that precious time is not wasted in their procurement etc. is not obtained so easily and repeatedly. So a truly wise man is one who utilises this golden opportunity to ensure that his soul finds redemption for its self and breaks free from the endless cycle of birth and death in numerous lives, wandering in countless wombs and subjected to horrors of unimaginable magnitude. A wise man should strive to salvage his soul while there is still time, i.e. while his body has not become old and decrepit, and he still has control over its vital functions. It is like an advice given to a school student by his wise and loving father that he must be very careful in his formative years and concentrate upon his studies and character building, because if he loses his chances to do this now, he would repent for this lost opportunity for the rest of his life. Refer Brahm Bindu/Amrit Bindu Upanishad, verse no. 18 which is Chapter 8 of this volume.]

2. [This verse describes the vehicle that the spiritual aspirant should use to attain the supreme citadel of self-realisation which is akin to having access to the supreme Brahm. Two versions are presented here.]

A wise and erudite person who embarks upon the spiritual journey of self and Brahm realisation aiming to reach the abode of Brahm called the Brahm Loka¹ should board a chariot or vehicle symbolised by OM² (the monosyllabic ethereal word standing for Brahm), make Lord Vishnu his charioteer³, and fix his attention on the target of Brahm-realisation by emulating Lord Rudra or Shiva⁴ who remains always in a state of Samadhi or a trance-like state of meditation where one enjoys perpetual bliss and ecstasy. [In other words, a wise aspirant who wishes to attain success in obtaining the eternal fount of bliss and eternity represented by Brahm, called Brahm-realisation, should be devoted to Lord Vishnu by leaving his destiny in the Lord's hand which is symbolised by making the Lord his charioteer. Since mediation is regarded as the medium of attaining spiritual success, Lord Shiva is invoked as the deity because Shiva is the patron God of ascetics. OM is the Mantra universally used in meditation, so this becomes a vehicle for attaining the state of Brahm-realisation.]

There is another way of interpreting this verse. One should ride upon the symbolic chariot of OM, and make Lord Vishnu its charioteer. Astride this glorious and divine chariot, he should investigate and explore the vast kingdom of Brahm, the Lord of creation. That is, the spiritual aspirant should research the actual 'truth' in existence behind the façade of illusions and delusions by using the divine Mantra OM and being devoted to Lord Vishnu. While doing this, he should retract his mind from

everything else and remain perpetually in a state of Samadhi (which is a trance-like state of complete bliss and detachment) like the one obtained by Lord Rudra or Shiva. [Lord Shiva also happens to be the God of death and conclusion. So it implies that the aspirant always keeps in mind the fact that this life and the rest of the world would surely come to an end one day because everything that has a birth and existence is certainly destined to decay and die one day or the other. This would help him to remain always vigilant and alert against falling prey to the enticements of the deluding world which is mortal and perishable; it would prevent him from going astray from his spiritual path of seeking the Truth which is immortal and imperishable.] (2).

[Note—¹The word 'Brahm Loka' refers to the state of existence where the self-realised person becomes one with Brahm. It is the finding of the eternal fount of beatitude and felicity, the attainment of liberation and deliverance of the soul from the endless cycle of birth and death. It is like reaching the citadel where the supreme transcendental Divinity known as Brahm is attainable. It is to be noted that this Brahm Loka is actually not located somewhere in the hypothetical corner in the universe called the Heaven, but in the spiritual aspirant's own heart where his Atma lives, because this Atma is a personification of Brahm.

²OM is the divine Mantra used during meditation as clearly laid out in Yogchudamani Upanishad of Sam Veda tradition in its verse no. 71. Further, verse nos. 72-89 of this Upanishad describe the metaphysical importance of OM as an embodiment of Brahm. Refer also to verse nos. 20-25 of this present Amrit Naad Upanishad below which emphasise the use of OM as a medium of doing Yoga.

Now let us see what this OM refers to. The word OM is the ethereal divine word representing the supreme transcendental Brahm which is the only and absolute Truth in creation. This word is used as a Mantra or a group of letters combined together to enable the aspirant to symbolically witness the entire spectrum of creation, right from its conception thorough its expansion till its conclusion.

OM has been treated as the nearest analogue of Brahm which is the only 'truth' in creation and therefore eternal and infinite, because 'truth' has these characteristics. Since the wise aspirant has already become aware that his 'own true self is pure consciousness', and that it is the same as the 'cosmic supreme Consciousness and the universal Truth known as Brahm', he finds a resonance and sync between these two entities. Truth is always eternal and imperishable as compared to falsehood and delusions. Study of the scriptures as advised in the opening lines of this Upanishad inculcates in him the wisdom about the perishable and deluding nature of this world and the eternal nature of his true self. So naturally he would reject something impermanent and go and investigate something that is permanent. With this aim in view, the aspirant relentlessly pursues his goal of finding it without getting distracted by delusions and false charms of this world. This is indicated by the fact that he constantly remembers Lord Shiva, symbolising his constant awareness of the fact that the life would very soon come to an end.

Now, the word OM has three basic sounds represented by the letters A, U and M. These three are called *Matras* which literally means the time taken or marked to pronounce a short vowel in the Sanskrit language; it also means a vowel mark. Matra refers to the basic ingredients and their magnitude in any given entity. It also means quantity and intensity of an ingredient. In the case of creation, there are three basic components—its coming into being, its development and expansion, and its conclusion. These three are symbolically represented by the three letters of OM—viz. 'A' represents the initiation, 'U' the development and expansion, and 'M' the conclusion. This is because to say the letter 'A', one has to open the mouth, signifying life coming into existence. This is evident from the fact that when the child takes birth, the first thing it does is starting to cry, entailing the opening of the mouth. Or when a man wakes up from sleep, he yawns and utters some incomprehensible

monosyllables to indicate that the sleep is over. Similarly, to say 'U' one has to cup the lips and the muscles of the tongue are rolled forwards, indicating progress and outgoing nature. Finally, to say 'M' one has to close the mouth, indicating the reversal of the process when the mouth was first opened to indicate the initiation of life. That is, M stands for conclusion of life; it symbolises death.

In the present context, this verse is talking about meditation on the divine word OM with the eclectic view point that the first letter of OM, i.e. 'A' is Lord Vishnu because he is the Viraat Purush from whom the entire cosmos has evolved. Once the creation comes into being, 'U' represents the vast kingdom of Brahma, the patriarch creator of this visible world. A wise and erudite spiritual seeker of the Truth researches this world to find out the truth him, and this he does by meditation and contemplation. For this purpose he invokes Lord Shiva who is represented by the third letter 'M' signifying the conclusion of creation, or death. Further, Shiva is the patron deity of ascetics and seekers of truth who have renounced the illusionary charms of this world and taken the strict vows of a monk or a friar. Shiva is worshipped as the Lord who symbolises truth and its beauty, an auspicious way of life full of dispassion and detachment from this material world which has a profound impact upon the whole spiritual well being of the creature, including his peace of mind and blissful heart.

For this purpose of meditation, the spiritual aspirant uses the word OM as a vehicle to concentrate his mind and attention on divinity, truth and the eternal source of peace and tranquility, beatitude and felicity known as Brahm. As to why he chooses OM to do meditation to the exception of all other Mantras, the answer is that if one wishes to study, for example, a specialised branch of advanced molecular biology, then he would buy relevant books, go to a relevant college, here relevant lectures and use relevant knowledge to succeed. It would be highly incredulous and incongruous for him to use physics text book and attend classes on this subject in order to study molecular biology! Likewise, OM is the proper channel, the correct path, the right instrument and the fine-tuned apparatus that can enable him to succeed in Brahm realisation. No other way is as effective and as fruitful as this.

³Let us see the meaning of the symbolism here. Lord Vishnu is depicted as the charioteer here to draw a parallel to his incarnation as Lord Krishna when he had become a charioteer of Arjun during the famous Mahabharat war when the Lord had preached the much acclaimed philosophical treatise known as Gita. Vishnu is regarded as Brahm personified in his macrocosmic form as the Viraat Purush, the invisible, all-encompassing and all-pervading macrocosmic gross body of Brahm. So, when the spiritual aspirant makes Vishnu his charioteer he is literally leaving his spiritual destiny in the hands of the ultimate Lord himself; he is making the Lord his guide and guardian. This ensures that the aspirant would not be tormented by evil forces because the Lord is now responsible for his protection and welfare.

Form the metaphysical interpretation of OM, making Vishnu the charioteer is like meditating and contemplating upon the first letter 'A' of OM. Since the aspirant has made OM as his vehicle for spiritual journey to Brahm-realisation, he must choose a charioteer who is well versed with the path leading to enlightenment as well as the destination which is self-realisation and Brahm-realisation along with their eternal beatitude and felicity. Lord Vishnu knows this path well because he has created the cosmos and is the supreme Brahm himself. Lord Vishnu takes the aspirant through the journey, showing him all the way side villages and towns represented by the countless experiences and ideas that the aspirant comes across in his lifetime. The charioteer gives him a running commentary of all these places, symbolising the fact that if one listens to the divine voice of the inner self where Vishnu is supposed to reside as one's Atma or consciousness, then the chances of his falling from his chosen devotional path are remote, and the progress of the chariot towards its destination of self-realisation and Brahm-realisation would go on smoothly.

The second letter 'U', as we have seen above, represents the expansion of the creation, indicating that the spiritual aspirant is given a wide choice and shown all the pitfalls that come in the way as well as the horrendous consequences of falling from his spiritual goal and getting distracted by the road-side tricksters and cheated by moral imposters. He would then be trapped in the endless cycle of birth and death, and go back to where he has come so far. When the aspirant relies upon his wisdom cultivated by the study of scriptures, he does not allow himself to be laid astray and fall in the trap of such wayside delusions. This ensures that the chariot progresses smoothly onwards towards its final goal.

The last letter 'M' represents conclusion or death. When a man is face to face with the reality of an imminent death, no amount of worldly enticements of material comforts and sensual pleasures would move him, especially if he sees in that death a chance of eternal liberation and deliverance from the cycle of birth and death. Such a man would be totally detached from this world, and turn inwards in search of peace and tranquility. This is the culmination of meditation and marked by a perpetual state of Samadhi. This is why such a person worships Lord Shiva who is a living personification of these eclectic virtues and in a perpetual state of Samadhi. The age old adage that 'one becomes what one thinks' is fully applicable here—the aspirant becomes one like these three icons of auspiciousness, righteousness, truthfulness, divinity and holiness (i.e. Vishnu, Brahma and Shiva) with whom he constantly keeps company; he inculcates their virtues and ultimately loses his own independent identity, being completely infused, soaked and drenched in their diving glory, completely imbued in their spiritual colour.

⁴Lord Shiva and Rudra are two names of the same divinity, while Shiva and Vishnu are both regarded as manifestations of Brahm, and therefore synonymous with each other and with Brahm—refer Skanda Upanishad which is Chapter 19, and Rudra Hridaya Upanishad which is Chapter 26 of this volume. Shiva is regarded as the patron God of ascetics and of those who do meditation. The emphasis in this present Upanishad is on attaining the eclectic state of Brahm-realisation through the medium of meditation as described in the following verses, and therefore it is appropriate to regard Shiva or Rudra as the patron God who is invoked during the journey to Brahm.]

3. A wise aspirant should ride the chariot only as long as the path permits so, but as soon as he reaches a point where the chariot is no longer needed or cannot go further, he should disembark from it and move ahead on his own. In other words, till the time the aspirant has not reached a certain point in his stated objective of spiritual enlightenment and self realisation after which he does not need any more support to move ahead in his spiritual pursuit, he should diligently follow the directions laid down by the scriptures and practice various means prescribed by them, one of them being the practice of Yoga (meditation). But as soon that point is reached when he becomes aware of the pure consciousness present in his bosom, he no longer needs a prop or crutches to move ahead in his spiritual journey any more. After a certain point, the progress is automatic and self-propelled. It becomes so powerful a spiritual force that it magnetically pulls the aspirant towards itself, and then there is no longer any need for meditation and contemplation as well as study of the scriptures and listening to religious discourses. Obviously, when one reaches his goal, there is no point in sticking to the means employed earlier to reach there, because from this exalted citadel of self-realisation and Brahm-realisation where the aspirant has found an eternal wellspring of beatitude and felicity, there is no question of going back to the mortal and perishable world of delusions and miseries, and therefore there would no further need of this 'chariot' and to ride on it again any longer (3).

[Note—This is like getting a car started or a heavy stone rolling. Initially it requires a lot of energy to push the two to get moving, but once the start to move they gain momentum and then no more pushing is needed. Another example would be a space vehicle—the earlier part of its journey to outer space, the time of lift off from earth and the time it is in the lower part of the earth’s atmosphere is the most difficult part of the flight because of the exceptional weight of the vehicle, the inertia that has to be overcome, and the high gravitational pull. Once the required height and momentum is gained, the progress becomes easier and requires less energy.]

4. The different Matras of Pranav or OM (as described in verse no. 2) are symbolic of the basic seeds of creation, because it is from them that the rest of the creation has come into being. Letters are the elementary building blocks of words, and the words are at the heart of the holy scriptures because it is by the means of words that the profound spiritual teachings of these scriptures are brought to light.

According to the genesis of creation, the world, both the visible and the invisible, has come into being when the creator Brahma had turned his face in the four directions and pronounced the first elementary words of creation, called the ‘Vyahritis’¹. These Vyahritis and the Matras of OM are symbolic of the manifestation of this creation having different attributes and characteristic features from a single divine entity which has no such distinguishing attributes and characteristic features whatsoever.

That attributeless and featureless entity which outlasts this creation and pre-dates it, which is the cause of everything coming into being and is the final point where everything collapses at the end, is the absolutely almighty, omniscient, all-knowing and self-enlightened Brahm or Ishwar. Since this Brahm or Ishwar has no attributes and outlasts the creation, it is represented by the third letter ‘M’ of OM. This is because ‘M’ represents conclusion of this deluding and artificial world started by ‘A’ and expanded by ‘U’. Beyond ‘M’ there is no physical creation as we understand it to mean. Therefore, this state is symbolic of the fourth state of existence called Turiya when the world ceases to exist.

By progressively meditating upon these Matras of OM, the aspirant gradually evolves in his spiritual pursuit from the waking state of consciousness represented by the first letter ‘A’ of OM symbolising the initiation of creation, to the second state called dreaming state represented by the second letter ‘U’ of OM symbolising development and expansion of the creation, and moves ahead in this progression to reach the third state known as the deep sleep state of consciousness represented by the first letter ‘M’ of OM symbolising the conclusion of creation. When the visible and perceptible creation concludes, there exists the fourth state of consciousness which transcends these three earlier ones, and it is known as Turiya².

This Turiya state is most subtle and sublime; it is beyond the known and perceptible world symbolically represented by the letters of the Sanskrit alphabet, such as the vowels starting with the first letter ‘A’ and the consonants starting with the first letter ‘Ka’. In other words, in the Turiya state of consciousness all delusions and imaginations are eliminated and barred; it is a state of supreme enlightenment and realisation where only the Truth exists (4).

[Note—¹The *Vyahritis* are the primary root words pronounced by the creator Brahma at the time of the beginning of creation and from which formed the nucleus around which the seven worlds formed. In other words, the rest of the creation was revealed from these primary sounds created by Brahma.

The seven ‘Vyahritis’ are the words—(1) Bhu, (2) Bhuvaha, (3) Swaha, (4) Maha, (5) Janaha, (6) Tapaha, and (7) Satyam. ‘Bhu’ was the nucleus for earth, ‘Bhuvaha’ for

the sky above the earth, 'Swaha' for the space beyond the earth's atmosphere and is generally meant for the heavens, 'Maha' stands for the greater heavens beyond the solar system, called the Maha-Loka where enlightened sages and seers are supposed to dwell (as opposed to earth where ordinary creatures including subterranean creatures would finally take up residence), 'Tapaha' was the place where exalted ascetics would do penances and austerities, and 'Satyam' was the truthful and ultimate abode where the ultimate and irrefutable supreme truthful entity which is the only Authority in creation resides.

According to Sankhya Shastra and the Purans, Brahma, who is known as 'Swayambhu' (self created in the sense that he had no father or ancestor) created seven elements called 'Vyahriti', viz. Bhu, Bhuvaha, Swaha, Mahaha, Janaha, Tapaha and Satyam respectively (भू, भुवः, स्वः, महः, जनः, तपः, सत्यम्) which constitute the fundamental elements which formed the gross body of the creation as its core building blocks at the macro level. Encircling this core is the rounded globe called 'earth' which is surrounded by concentric circles constituting of 'water', 'energy' called 'Tej', 'wind or air', 'sky or space', the notions that are described as 'pride, ego, arrogance, haughtiness and vanity' collectively called 'Ahankar', and the notions of 'importance, majesty, grandeur, magnificence and lordliness' called collectively as 'Mahattatva'. Each of them was ten times larger than its preceding layer or circle.

The *seven Vyahritis* and the worlds they represent are the following—(a) 'Bhu' represents this world (earth), fire, Rig Veda and Pran (life giving breath); (b) 'Bhuvaha' represents the sky called Antariksha, wind or air, Sam Vedas and Apaana wind (i.e. the wind which passes down the intestines and helps in digestion and excretion); (c) 'Swaha' represents Dukoka (the heavens), Aditya (the celestial sun), Yajur Veda and Vyan (the wind that prevails throughout the body); (d) 'Maha' represents Aditya (the Sun God), Chandrama (the Moon God), Brahm (the supreme transcendental Being who has no specific attributes) and Anna (food which sustains life in this creation); (e) 'Janaha' represents the world inhabited by mortal creatures such as the life on earth; (f) 'Tapaha' represents the world where great ascetics and hermits live to do severe penances and austerities, and therefore it is most auspicious and holy and marked by an effulgence of divine energy and splendour; and (g) 'Satyam' representing that truthful abode where the supreme transcendental Brahm lives; it is the ultimate destination of all spiritual pursuits, and is marked by eternal beatitude and felicity.

Taittiriyo-panishad of Krishna Yajur Veda, in its Valli 1, Anuvak 5 describes these Vyahritis. It however focuses on four Vyahritis only, i.e. Bhu, Bhuvaha, Swaha and Maha. In this verse, the different 'Vyahritis' are being worshipped as manifestations of the supreme transcendental Brahm.

²The four states of consciousness are—waking or Jagrat, dreaming or Swapna, deep sleep or Sushupta, and transcendental or Turiya. The Turiya state in the context of Yoga has been explained in Trishikhi Brahmin Upanishad, 2/149-152 of Shukla Yajur Veda tradition.]

5. A wise and erudite man should treat his pure conscious Atma as a Sun whose brilliant rays illuminates the world. [That is, even as the world is made visible when it is lighted by the Sun's rays, it is the consciousness present inside the body of the creature that enables him to see and become aware of the world through the different sense perceptions of the body. Had it not been for the Atma, the body, left to its own account, would not have been able to perceive this world or know anything about it. This is proved by the fact that when the creature dies, i.e. when the Atma has left his body, he is not able to recognise or perceive the existence of the world inspite of the fact that all the organs are still there as before. The Sun is like the Atma, while its light is like the consciousness that emanates from the Atma. Even as the Sun and its

rays are synonymous with each other and can't be separated from one another, the Atma and its consciousness are the same and inseparable. Just like a man would not be able to see anything in the dark of the night when the Sun's rays are not able to illuminate the objects in this world, a man would not be able to see or perceive this world without the sense organs of perception which are the external receptors for the mind that actually does the perceiving of the world.]

In other words, it is the presence of the 'consciousness' in the form of the Atma residing in the bosom of the man that enables him to receive the stimuli in raw form from the external world through the organs of perceptions, and then use the mind to interpret them sensibly and classify them into various sense perceptions, such as sight, taste, sound, smell and feeling or touch. The Atma then uses the intellect to deduce an intelligent meaning from them and create a picture of the world in its mind-intellect complex. So, the entire process of being aware of the external world, receiving it through the sense organs of perception, making sense of it and reacting accordingly—all depends upon one single factor which is conscious and alive, which is the supreme Authority at the center of the entire reconnaissance, command and action mechanism of the creature, and without which the entire edifice of life and the existential world would lose their importance and relevance for him.

It is in the 'light' radiating out from this Sun-like consciousness known as the Atma that the mind and intellect show their stupendous powers and potentials, and the organs of perceptions (and of actions for that matter) too mark their presence felt by carrying out their respective functions which are typical to them and that are unique to the existence of 'life' in any form. A dead body would not perceive anything whatsoever.

Again, it is this consciousness or Atma which 'lights up', or infuses the vital factors of 'life, awareness, alertness, energy, strength, ability, drive and vitality' into these two units of the body (i.e. the subtle body made up of mind-intellect complex, and the gross body made up of the organs of perceptions and action, at the micro level of the individual creature, as well as the entire creation at the macro level) to enable them to carry out their functions effectively. These different functions of the body are collectively responsible for the showcasing of the most astounding and mysterious characteristics that distinguish 'life' in this creation.

In other words, had there been no consciousness, the world with all its alluring charms and enchanting attractions which are so gratifying for the sense organs and keep the mind enthralled and captivated, would automatically lose their relevance and importance. It would be like seeing the world in the dark of night.

Therefore, realising this fact, the wise and erudite aspirant should endeavour to turn away from all things that have no real worth in the world because they are not true and not illuminated themselves (i.e. he should turn away from those things of the artificial world which have no real importance, glory and value of their own, but instead depend upon the Atma to give them their importance). He should exercise restraint on his sense organs as well as the mind-intellect complex and focus them on something of real value and true importance, which is the 'consciousness' called the Atma. Had there been no Atma, the rest of the things in this world would have no value and importance whatsoever.

Exercising control over the sense organs and the mind so that they are preventing from being restless and naturally gravitating towards non-essential entities of the delusory world which have no pith and reality in them, and instead remaining under control and disciplined, is called 'Pratyahar'¹. Pratyahar is therefore putting a

tight leash on both the gross body as well as the subtle body of the creature to control their vagaries, recklessness and intransigence (5).

[Note—¹*Pratyahar* has been defined in Mandal Brahmin Upanishad, 1/1/7 of the Shukla Yajur Veda tradition in the following words—“*Pratyahar* is defined as the control of the mind and the intellect from getting engrossed with, attached to, lured by, or attracted towards the various sense objects of this material world. In other words, it is the control of the various senses of perception that impel a man towards this artificial world and get trapped in its snare.”]

6. Yoga is said to have six limbs or branches as follows—*Pratyahar*, *Dhyan*, *Pranayam*, *Dharna*, *Tarka* (logic and rationality), and *Samadhi* (6).

[Note—The *six paths of Yoga* or meditation and contemplation which enables one to realise the true nature of the pure consciousness residing in one’s own bosom as the Atma, which is the ‘true self’ of the aspirant, and establish oneness with this Atma and the supreme Atma of the creation known as Brahm, are the following--(1) *Pratyahar* or withdrawal of the mind and its control; (2) *Dhyan* or contemplation and concentration of the faculties of the mind and intellect; (3) *Pranayam* which means control of the vital winds in the body, called the subtle Prans, by the means of different meditation techniques and harnessing their latent energy and potentials to acquire stupendous mystical powers which enables the aspirant to reach higher state of consciousness which is not otherwise possible in the normal course; (4) *Dharna* or having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path; (5) *Tarka* or application of logic and analytical abilities of the mind to reach rational conclusions that are empirical and can stand the rigorous tests of rationality and truth, lending them credibility and value; and (6) *Samadhi* or a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation; or a state when all falsehoods are eliminated and what remains is an unwavering and steady light of realisation of the Truth.

The Yogchudamani Upahishad of Sam Veda tradition describes the six-limbs of Yoga in detail.]

7. Even as the impurities of precious minerals and rare elements extracted from mining of mountains are purified by heating them in the fire of a furnace, all the ignominious impurities and faults that are brought in by the various sense organs of perceptions are burnt when one practices holding of the various vital winds called Prans by the process of *Pranayam* inside the body. These impurities and faults impinge upon the purity of the soul and create a tainting layer of worldly delusions and their attendant problems around the otherwise glorious Atma, thereby suppressing its natural divinity and sublime glow. [This is like the case of a film of dust covering the glass enclosing the flame of the lantern. The light of the flame appears to be dull and gloomy. When this glass is cleaned, the light shines ever so brilliantly.] (7).

[Note—Metals are extracted by heating their ores in a furnace. This intense heating removes the impurity and brings out the purity of the metal to the fore. Similarly, the various taints that surround the Atma are removed by subjecting it to the rigors of spiritual discipline.

The inputs from the world create *Vasanas*, i.e. desires and passions to enjoy the material pleasures of the world, and these transform into *Vrittis*, i.e. natural habits and inclinations of the aspirant. The *Vrittis* tend to swerve the aspirant away from the path of spiritualism because it is a difficult path, and instead bend it to enjoyment of the sensual pleasures of the world and gratification of the senses because it is not only easy but most alluring at the same time. Slowly and over time, these faults form a thick crust over the Atma much like scum floating on the surface of the crystal clear

water of the lake, thereby suffocating the healthy and vibrant aquatic life that originally flourished in this lake before it got polluted. The Vasanas and Vrittis suppress the inherently divine glow emanating from this self-illuminated 'gem' called the Atma. The Atma then appears to be tainted and faulty, and not in its pristine pure form.]

8. Pranayam should be employed by the spiritual aspirant to reduce to ashes, i.e. to destroy and eliminate the various faults and impurities that have entered via the path of sense perceptions of the body¹. Dharna should be employed by him to similarly reduce to ashes the various sins and evil tendencies of the various organs of the body². Pratyahar should be employed to control the various organs of the body, including the mind, and divert them towards contemplating upon the numerous virtues and divine glories of the supreme transcendental Brahm residing as the soul or the Atma of the aspirant on the one hand, and as revealed in the form of the vast creation on the other hand³ (8).

[Note—¹Verse no. 7 has already shown how *Pranayam* helps the aspirant to burn the various faults that enter the mind along with the different perceptions that the mind constantly receives from the external world. For example, the mind is subjected to a constant bombardment of information in the visual spectrum which it calls 'sight'. Now, all that is seen is not always righteous, noble and auspicious, for more often than not it is just the opposite, creating a negative impact upon the mind and its subconscious, and the consequence corrupting of the Atma because the Atma relies upon the instrument of the mind and intellect to perceive the world in which it lives. The Atma has no means to directly perceive the world; it has to do so through the mind-intellect apparatus called the subtle body, and the organs of perception called the gross body. If any one of them is corrupted or tainted, the Atma is given a negative feedback, and it is no fault of the Atma if it *then* wrongly perceives the world. The fault is of the mind-intellect because it is the minister appointed by the Atma to sieve through the overwhelming wave of information from the outside world and let only the clean information to reach it. But if the mind-intellect apparatus is not itself properly maintained, then the consequences may be fatal for the Atma.

That is why essentially this Upanishad stresses on these six paths of Yoga which help the aspirant to filter out all rubbish from the world and let in only the divine nectar represented by auspicious, righteous, noble and virtuous ideas and perceptions to reach the taintless and faultless Atma so that its inherent natural beauty and divinity are not compromised.

²*Dharna* is having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path. This helps the aspirant to remain firm in it and prevent any chances of his faltering from it. This firmness helps the body to overcome temptations of the world and the natural affinity of the body and mind to fall prey to them.

³*Pratyahar* is control of the mind and body, and therefore it goes hand in hand with the other two methods. It must be noted that all limbs of Yoga mentioned here have no separate existence, and they must be used in a coordinated manner, just like the different organs of the body, both the external and the internal, function in a coordinate manner to enable the man to lead a normal life. In order to succeed in any enterprise, all the units have to function in a judicious manner and mix prudence with wisdom. When one constantly thinks about good things, it is but natural that it has a positive psychological effect on the mind, and helps it to become noble and wise in the long term.]

9. In this manner, the wise and erudite spiritual aspirant should, after having burnt all faults and cleansing the self of all taints associated with the body and the mind,

constantly contemplate upon the pure and pristine Divinity in the form of the 'conscious Atma' representing the supreme transcendental Brahm, the Supreme Being residing in one's own bosom (9).

10. Pranayam has three phases. While contemplating upon the divine and holy form of the Supreme Being (represented by the ethereal word OM—refer verse no. 1), one should keep the inhaled wind or breath inside the body for a given period of time during the phase called 'Kumbhak' (meaning a 'pot or pitcher', and here implying holding the wind like filling a pot or pitcher with air). Thereafter, it should be slowly exhaled or let out in the second phase called 'Rechak' (literally meaning cleaning or purging, because when the wind is let out of the body it takes along with it all the gaseous impurities and toxins that have accumulated inside it). The final and third phase is called 'Purak' (literally meaning to fill or compensate for the loss of wind during exhalation) in which wind is inhaled to fill the body, leading once again to the Kumbhak stage (10).

11. One cycle of Pranayam (Kumbhak, Rechak and Purak) is said to be complete when the practitioner mentally repeats the seven Vyahritis¹ and the full Gayatri Mantra² three times during each phase. [This indirectly determines the time taken for each phase.] (11).

[Note—¹The *Vyahritis* are the following primary words pronounced by Brahma the creator at the time of initiation of creation—OM Bhuha, OM Bhuvaha, OM Swaha, OM Maha, OM Janaha, OM Tapaha, and OM Satyam. Please refer to note of verse no. 4 above.

²The *Gayatri Mantra* has two versions which are presented here. (a) According to one version, it is based on the typical Gayatri Chanda which is a poetical composition consisting of three stanzas or lines each having eight letters or syllables. The total number of letters or syllables is thus twenty four. The Gayatri extolled by this Upanishad is the one strictly conforming to this rule, while the usual and commonly known Gayatri Mantra has four steps or stanzas and is called Anushtup Chanda.

In Brihad Aranyak Upanishad, Canto 5, Brahmin 14, the Gayatri of three steps is extolled as the one which is superior to other forms of the Gayatri Mantra having four steps because this three-stepped Mantra is synonymous with Pran, i.e. it is the life or the essence of all that exists.

The Gayatri Mantra having three lines is the following—"Tatsaviturvarnyam Dhimahi Dhiyo Yo Naha Prachodayat".

The fourth line honours and glorifies this Gayatri as a manifestation of the Sun God, and it is as brilliant and splendid as the latter. The Gayatri is--"Paro Rajase Suvarnam"—i.e. it is beyond the reach of darkness, and it has the hue of gold. Since the Sun is a visible manifestation of the supreme Brahm who is the transcendental Consciousness of the entire creation at the macro level of existence, having the Atma resident in the bosom of the individual creature as its micro level counterpart and Pran as its subtle manifestation, the Gayatri Mantra is in honour of the supreme Authority of creation, i.e. in honour of Brahm, the Supreme Being.

(b) The other version is based on the 'Anushtup Chanda' pattern. It is--'OM BHURBHUVAHA SVAHA¹, TATSAVIURVARENYAM², BHARGO DEVASYA DHIMAH³, DHIYO YO NAH PRACODAYAT⁴'. It means 'OM is the supreme, transcendental Brahm. He is the lord of creation of the terrestrial, the celestial and heavenly worlds. I offer my oblations to you. That Brahm is luminous like the sun. He is excellent, the best, the most exalted, a destroyer of sins, and a divine entity. May he imbibe, infuse and inspire our intellect with wisdom and enlightenment so that we are purified and move on the righteous and noble path'. The four phrases of the Gayatri Mantra are clearly marked by small numerals in this Mantra. This Mantra

appears in the Rig Veda (3/62/10), the Sam Veda (1462), and Yajur Veda (3/35, 22/9, 30/2, 36/6).

The famous Mantra is dedicated to the Sun God who is a manifestation of the supreme transcendental Brahm. It is this Mantra—which is a group of ethereal words having profound spiritual value and metaphysical importance. It is called Gayatri because it gave protection to the Pran--Brihad Aranyak Upanishad, Canto 5, Brahmin 14, verse no. 4. It has been accepted as a manifestation of Pran in Shatpath Brahmin, 1/3/5/15, while it is praised as having the potentials of Agni (fire) present in the faculty of speech known as Vak in Taittiriya Sanhita, 3/2/9/3, as Tej (energy) in Shatpath Brahmin, 1/8/2/13, and as Brahm (the supreme transcendental consciousness) in Maitri Brahmin, 4/3/1. According to the Purans (mythological histories of the Hindus), the Gayatri has been praised having manifested in the form of the Trinity Gods—Brahma the creator, Vishnu the sustainer, and Shiva the concluder--Skanda Puran, Kashi Khand, Purva, 4/9/58. Whatever that exists is a revelation of Gayatri because it is a manifestation of Brahm—Chandogya Upanishad, 3/12/1. In fact this whole earth that gives refuge to all the life forms in this world is a manifestation of Gayatri-- Chandogya Upanishad, 3/12/2. By worshipping it, a person is blessed with worldly assets such as abundant livestock and flourishing family, a long, healthy and active life, wealth and fortunes, good name and fame, as well as spiritual attainment in the form of Brahm realisation—Atharva Veda, 19/71/1.

The Gayatri Mantra has been expounded and elucidated upon in Brihad Aranyak Upanishad, Canto 5, Brahmin 14 and other Upanishads, such as the Savitri Upanishad which is entirely dedicated to it, the Maitrayanyu Upanishad, Canto 5, verse no. 7, and the Chandogya Upanishad, Canto 3, Section 12, verse nos. 1-9 belonging to the Sam Veda tradition. Besides these, the Gayatri Upanishad appears as eight assorted verses or Kandikas numbering 31-38 of the Gopath Brahmin belonging to the Atharva Veda.

It has been said in the scriptures that Brahmins, the highest class amongst the humans and who are regarded as the most learned and wise amongst them, were born from Gayatri, thereby drawing a parallel between the highest stature and exalted standing of Brahmins amongst the creatures and the Gayatri amongst the hymns. It is pertinent to note here by the way that Kshatriyas, the warrior class, were born from the Chanda known as Trishtup, and Vaishya, the trading class, from the Chanda known as Jagati. In other words, the divine and eclectic powers encrypted in the Trishtup Chanda revealed themselves as the Kshatriya, and those of the Jagati as the Vaishya. The Trishtup Chanda has four lines each having eleven letters or syllables, totaling forty four letters or syllables in all, while the Jagati Chanda has six lines with eight letters or syllables each, totaling to forty eight letters or syllables.]

12. The sign of properly doing Rechak phase of Pranayam is that the wind or breath is exhaled fully from the body into the outer space or sky through the nostrils. No trace of wind is to remain inside the body at all. During this phase, the practitioner should be absolutely in a mentally neutral state of existence so that there are no thoughts of any kind impinging upon his consciousness (12).

13. The sign of properly doing Purak phase of Pranayam is that the wind or breath is slowly and gradually inhaled inside the body through the nostrils (with the mouth shut tightly) just like one draws liquid into the mouth by sucking it up through a long straw (13).

14. The sign of properly doing Kumbhak phase of Pranayam is to remain absolutely immobile and retaining the wind inside the body such that no part of it is able to escape or leak from it through any aperture, such as the nostril or mouth or anus (14).

[Note—The three phases of Pranayam and the entire process to successfully do it have been described in great detail in the following Upanishads—Trishikhi Brahmin of Shukla Yajur Veda tradition, Canto 2, verse nos. 24-158; Yogchudamani Upanishad of the Sam Veda tradition; and in Yog Kundali, Canto 1 of Krishna Yajur Veda.]

15. The sign of attaining the state of 'Prashant' which literally means achieving total neutrality and its attendant tranquility, peace, equanimity, dispassion and detachment from everything in this world is the state when one begins to see or observe everything having any shape and form in this world with the same detachment and disinterest as shown by a blind man, and hearing any sound or word emanating from this world with the same indifference and lackadaisical attitude as displayed by a deaf man. Such an acclaimed practitioner treats the body as a log of wood, i.e. he is not at all ruffled by either the pains or discomfiture of the body, or gets joyous and happy when the body feels comfortable and its desire for gratification attended to (15).

16. A wise man is one who understands the fact that the mind is the root cause of all types of 'Sankalps', i.e. all volitions and yearnings, all desires and aspirations, all vows and promises, all hopes and expectations that a man has or makes. So in order to overcome this hurdle and exercise control over the mind, he should diligently merge it with his intellect and the discriminating consciousness so that the mind is put under tight leash. It is because the intelligent Atma or consciousness knows that the world is delusory and misleading, and all the things with which it attempts to tempt the mind are perishable and illusionary. Following this trail would ultimately lead to endless miseries and perpetual restlessness for the mind much like running after a mirage in the desert in search of the illusive water. When this notion becomes firmly engrained in the aspirant's mind and it is put under the care of the wise and erudite intellect working under the guidance of the discriminatory Atma, it is called 'Dharna' (16).

17. Intelligently consulting and interpreting the scriptures and understanding their tenets and doctrines with a rational and logical mind-intellect apparatus, employing the method of discussing and debating them with a positive attitude so that all confusions and doubts are dispelled and the empirical 'truth' is grasped, is called 'Tarka'.

The final state when the aspirant arrives at the ultimate Truth and when nothing remains to be searched anymore because the spiritual citadel has been reached, then this state is known as 'Samadhi'. [It is marked by exemplary steadiness and fortitude.] (17).

18. The spiritual aspirant should select a proper place to practice meditation. This site should be reasonably comfortable and favourable for such practices (because unnecessary physical discomfort is counter productive). Therefore, the ground should be even, the surroundings pleasant, and the place should have a general holy ambience conducive to spiritual practices. [This is to ensure that the practitioner of meditation can concentrate on his spiritual pursuit with concentration and single-minded devotion without suffering from avoidable and unnecessary hardships which can cause physical and mental irritation and consequent distraction for him. For example, pebbles, thorns, un-natural dryness and hardness etc. of the ground where he sits for meditation, or excessive heat and cold, or dampness and aridity in the environment, or disturbance in the form of noise of any kind, or where worldly

mundane matters are the dominant feature as compared to a spiritual environment—all these circumstances would have their bearing upon the aspirant's peace of mind and his ability to concentrate; they would have a negative effect on the final consequences of the spiritual effort. Refer Shwetashwatar Upanishad, Canto 2, verse no. 10, and Yog Kundali Upanishad, Canto 1, verse nos. 22-23 of the Krishna Yajur Veda tradition.]

In such a favourable site which encourages spiritual practices, the aspirant should sit down with a peaceful and undisturbed mind to practice meditation and contemplation. He should repeat the eclectic Mantras of the Mandal Brahmin¹ to help him in concentrating his mind and focusing it on the practice of Yoga (meditation and contemplation) (18).

[Note—¹The Mandal Brahmin Mantra is the following—“Yadet Mandalam Tapati” etc. These Mantras essentially are dedicated to the Sun God as manifestation of the supreme Brahm or the Viraat Purush (the invisible and all-inclusive macrocosmic gross body of Brahm). The Sun God is said to ride a chariot as he moves across the sky. This movement of the Sun produces a sound which can be verified by the occurrence of breeze that whistles and gushes during the pre and post noon hours across hot plains and in the valleys of the mountains during the day time. This sound when envisioned in the backdrop of the cosmos has been visualised as Naad which in turn is pronounced as OM. The Mandal Brahmin Upanishad of the Shukla Yajur Veda is revealed by the Sun God to sage Yagyavalkya, and since this sage is regarded as the greatest exponent of the Yajur Veda, it is expected that the Sun is honoured as the equivalent as the Atma in all the Upanishadic texts of this Veda.]

19. He should sit properly in any one of the following three sitting postures—viz. Padmasan¹, Swastikasan², or Bhadrasan³, while facing the North (19).

[Note—¹*Padmasan* is to sit in a lotus posture. This entails to sit crossed-legged in such a way that the foot of the left leg rests on the upper and inner part of the thigh of the right leg, and vice versa. The spine, neck and head are in a ram-rod straight position, and the hands, with palms facing upwards and resting one on the top of the other, are placed on the folded legs in front of the navel region. This Asan has been described in Trishikhi Brahmin Upanishad, Canto 2, verse no. 39 of the Shukla Yajur Veda tradition.

²*Swastikasan*—The sitting posture called ‘Swastik-Asan’ is one in which a person sits with the sole of his one foot lying on the center of the thigh of the opposite leg, and the hands are held in such a way that one is bent at right angle at the elbow and held upright while the other is bent and rests upon the thigh of thigh of that side. This Asan has been described in Trishikhi Brahmin Upanishad, Canto 2, verse no. 35 of the Shukla Yajur Veda tradition.

³*Bhradrasan*—A ‘Bhadrasan or Bhadra Asan’ (literally, to sit like a gentleman) is when the two ankles are placed on either side of the suture region, called the ‘siwani’, below the testicles and the feet are clasped or held tightly by the hand of that side (i.e. lift foot by the left hand and the right foot by the left hand). This Asan has been described in Trishikhi Brahmin Upanishad, Canto 2, verse no. 45 of the Shukla Yajur Veda tradition.]

20. Then he should close one nostril with one of his fingers and inhale gradually with the other nostril. When his abdomen and lungs are full, he should close both the nostrils and withhold the breath. During this process, he should think of nothing else but the glorious and divine ‘word¹’ (20).

[Note--¹This ‘word’ is OM which is the cosmic ethereal sound representing Divinity known as Pranav which is synonymous with the supreme transcendental Brahm. In other words, while inhaling breath during the ‘Puruk’ phase of Pranayam as well as

during the ‘Kumbhak’ phase when it is retained for a certain period inside the body, the practitioner of Yoga should contemplate upon nothing else but OM. That is, he should concentrate his mind on mentally repeating this divine Mantra with stress on each of its syllables so that the sound waves of the repeated Mantra and the ones that are inherently present in the cosmic wind inhaled as breath coalesce with other and mutually enhance the latent energy present in them. This is like two waves in the ocean overlapping each other and resulting in a surge of energy which builds up and accumulates so much force that it can capsize huge ships if it so wills. Thus, the aspirant is able to harness the latent energy present in the sound waves of the divine Mantra OM along with that which is generated by the movement of the air in and out of the body during Pranayam]

21. This monosyllable ‘word’ is OM, the ethereal sound representing the eternal, imperishable and infinite supreme transcendental Brahm.

OM is also to be repeated and contemplated upon while gradually exhaling breath during the ‘Rechak’ phase of Pranayam.

In this way, the spiritual aspirant should repeatedly invoke this divine ethereal Mantra OM and do Pranayam to cleanse his mind and free it from all impurities and faults pertaining to this world. [Refer Shwetashwatar Upanishad, Canto 1, verse no. 14.] (21).

22. The practitioner of Yoga should cleanse the mind (and body) of all impurities by diligent practice of Pranayam. He should employ this cleansed mind to focus on the finer aspects of the ethereal word OM by contemplating upon each of its five elementary sounds (A, U, M, ‘Anuswar’ or dot •, and the crescent shaped ‘Naad’ (~)) placed on the symbol for the word OM. The final shape of the word OM is— ॐ .

While thus meditating upon OM, he should contemplate upon the different divine aspects of each of these syllables, their divine qualities and eclectic attributes, as well as their patron Gods or deities¹.

He should take the precaution that this type of practice of holding of the breath while repeating OM should not exceed the prescribed limits. There are three cycles in doing Pranayam with the help of OM.

The first is called ‘Sthul Matra’ or crude or coarse form of Pranayam. This involves eighty cycles of inhaling breath, retaining it and then expelling it while saying OM once each time. The second is called ‘Ati Sthul Matra’ or the finer or more refined form of Pranayam whereby the breath is held inside the body during which OM is repeated eighty times. And finally, the third is called ‘Sthulaati-sthul’ or the best and finest form of Pranayam wherein the second type is repeated eighty times in succession. It is said that more than that in one session is not advisable.

This cycle of Pranayam is to be done four times a day—at dawn, at noon, evening and night (22).

[Note—¹The patron deities of these five syllables of OM are the following—Vishnu patronises the letter ‘A’, Brahma the letter ‘U’, Shiva the letter ‘M’, the cosmic Shakti or the energy at the core of creation and its regulation is represented by ‘Dot’, and the supreme transcendental Brahm himself is indicated by the cosmic Naad represented by the symbol of the crescent moon on the top of the symbol of OM. Refer Shwetashwatar Upanishad, Canto 1, verse no. 14.]

23. A wise and expert practitioner of Yoga is one who sits completely immobile (in any of the postures mentioned above) and fixes his eyesight either in the straight line

in the front of him, or in the upwards direction towards the sky, or in the lower direction towards the ground in the front (23).

24. This form of Yoga takes some time to yield result like the palm tree that takes some time to bear fruits. It is to be practiced in a systematic manner, and without disruption. [That is, it should be practiced daily, at a fixed time and place, adhering to the number of cycles of Pranayam done daily, and not doing them on an ad-hoc basis or in a fluctuating or erratic manner.]

Similarly, it is prescribed that the time taken to mentally say the twelve 'Matras' or letters or elementary sounds of OM¹ should also be maintained and observed religiously. That is, the time taken to say the word OM should always be the same, no matter how many times it is repeated. It should not be done in an irregular, haphazard and erratic manner; it must be ensured that the time taken to say OM is the same each time (24).

[Note—¹The *twelve Matras* of OM are equivalent to four cycles of saying this word. This is because OM consists of the three basic sounds represented by the letters A, U and M. So, one cycle of three letters multiplied by four such cycles would yield twelve Matras of OM. Refer Kshuriko-panishad, verse nos. 2-5 of the Krishna Yajur Veda.]

25. This cosmic ethereal sound represented by the divine word OM is so mystical, esoteric, enigmatic and mysterious as well as inimitable that it cannot be described in words or mimicked by the body by its own physical efforts. It is not easily perceived by the organ of hearing present in the body (i.e. by the ear) and neither can it be reproduced by the organs of speech or voice of the gross body (i.e. by the tongue and the mouth). It is neither a consonant nor a vowel; it is neither tenor nor bass or baritone sound; it is neither grave and somber nor shrill and light; it is not a moan or a cheerful crackle. It is not a sound that can be copied or mimicked by the throat (as a gurgling, guttural, husky or squeaky sound emanating from the throat; or such sounds as 'Ha, Ah, Oh' etc.), palate (as a chuckling, clucking, quacking or chirping sound emanating from the back of the tongue and the roof of the mouth, such as the sound of the alphabets K, Q, S, T etc.), lips (such sounds that require perceptible lip movement such as when pronouncing the letters B, F, M, P, Q, U, V, W and Y etc.) and nose (i.e. the nasal sound of the vowels; sounds resembling a snore, or when one hums a musical note through the nostrils with the mouth closed; a resonating and sonorous sound). It is not also the sound of the 'R' which resonates in the head in the cerebrum region and has its origin in the upper part of the hard palate.

The divine ethereal word OM cannot be pronounced or mimicked by the region of the mouth behind the lips where the teeth are located. [That is, none of the sounds generated in the front part of the mouth where the two rows of teeth are located, or even by the rubbing of the teeth against themselves such as gnashing of the teeth in anger or chattering of the teeth when one shivers in severe cold, can resemble, by any stretch of the imagination, the sound emanating from OM.]

'It' (i.e. the supreme, transcendental and absolute Truth in creation, known as Brahman and pure cosmic Consciousness, which is at the heart and core of the entire existence, the very cause of all that exists) is the only imperishable and eternal entity that is sublime, divine, holy, eclectic and immaculate, and which does not decay and become extinct. 'It' is the entity referred to by the divine word OM representing the ethereal cosmic sound known as 'Naad' that permeates and pervades uniformly throughout the length and breadth of the entire universe much like the all-pervading

and all-encompassing cosmic Consciousness known as Brahm. [It is like saying that 'water' is present throughout the 'ocean' or the 'space' is present wherever there is the 'sky'.]

So, OM is regarded as being synonymous with Naad and Brahm (25).

[Note--In other words, the divine word OM is used as a means for meditation and contemplation because of its eternally divine and eclectic value. Anything which is glorious and of a high order itself would impart its own characteristic imprint on things with which it comes in contact. If a man works in perfume factory for instance, his clothes are bound to bear the sweet fragrance even after he has left his work place a long time back; this smell lingers on and sticks to his body and his clothes. An expert doctor always ensures that medicines of the best quality are given to his patient so that the disease is cured rapidly and permanently. Since meditation is a highly evolved form of spiritual exercise, it needs the best medium, and nothing is better than OM in helping the aspirant in concentrating his mind on the supreme transcendental Truth. It is because OM is eternal and imperishable like the Truth.

The idea here is that the practitioner of Yoga should employ the components of sound represented in their entirety by the word OM as a means of focusing his mind during meditation, as well as a means of establishing a unity between his own true pure 'conscious self' with the cosmic 'Supreme Consciousness' known as Brahm. He should envision the presence of the cosmic Consciousness around him when he uses OM as a Mantra during meditation. He must be convinced and certain that this Mantra he is using is the best representative of Brahm, or the best medium to reach his spiritual destination.]

26. Whichever path the mind of the ascetic regards as attractive and worth pursuing, the Pran or consciousness also follows that path. In other words, when the ascetic 'thinks'—and this 'thinking' process involves the mind—that one particular thing is beneficial for him and his spiritual welfare, he whole-heartedly goes for it. Since the pure consciousness is the true 'self' and identity of the ascetic, it follows that it follows the path shown by the mind.

That is why it is very imperative that the spiritual aspirant keeps a strict tab on the functioning of his mind. Hence, to ensure that the Pran or consciousness invariably and infallibly pursues a path that is most noble, auspicious and righteous, the wise and erudite ascetic should regularly practice restraint upon his mind (26).

27. The valves of the subtle heart are like the trap-doors through which the vital winds called 'Pran' present in the body enter the path called 'Sushumna'¹ which snakes upwards (from the bottom of the spinal cord) and reach the top of the head. At this top end is the opening through which the Pran can finally escape from the cage of the body and find permanent liberation, thereby delivering the ascetic for good from the captivity of the body. This opening in the skull is called 'Brahm-Randhra', and it is also called the symbolic 'door of Moksha', or the door that opens up to enable the Pran or the vital life-bearing winds present in the ascetic's body to escape from its entrapments and provide the ascetic with final liberation and deliverance for his 'self'².

Another name for this Brahm-Randhra is 'Surya Mandal' or the space around the Sun in the sky. This is a symbolic way of saying that as soon as the vital winds called Pran escape from the body into the outer atmosphere, the sense of liberation and expansion is akin to going up high in the air, much above the gravitational pull of the earth, and feeling a profound sense of weightlessness and expansion so typical in the higher reaches of the solar system. While on the earth the body feels so heavy and constrained by its physical limitations, but higher in the deep recesses of the cosmos

the sense and feeling of liberation and expansion is so exhilarating and elating that no words can define them. Similarly, when the expert and wise ascetic practices Yoga and manages to sufficiently control his vital winds so that he can divert them from remaining trapped inside the body and wandering aimlessly in it to moving upwards through the duct in the body called *Sushumna*, to finally reach the top of the head and then escape from the hair-like slit known as '*Brahm-Randhra*' present there into the outer space called the '*Surya Mandal*', it is said that the ascetic has attained liberation and deliverance from the physical limitations imposed on the *Pran* by the gross body (27).

[Note—¹The *Sushumna* duct is the nerve going from the bottom of the spinal cord, through its central core, right up to the top of the head. According to Yoga philosophy, there is a coiled subtle energy center at the base of the spine, and it is called *Kundalini*. When it is activated, the energy trapped inside it also snakes up this same *Sushumna* nerve to go up to the top of the head. As hot air is known to rise up in a closed vessel and escape through any opening at the top, like the spout of a kettle, the heated vital winds inside the body also rise up when *Pranayam* is practiced. The heart is the pump of the body, and it is the subtle sight where the consciousness known as the *Atma* is present. The best proof of this is when the heart stops functioning, all other signs of life in the body would also immediately collapse. On the other hand, as long as the heart continues to beat, the man is said to be 'alive' in spite of the fact that his other organs might have ceased to function. For example, a man paralysed in the limbs, or one suffering from the failure of one or the other internal organs such as the liver and kidneys is deemed to be alive as long as the heart beats. Even when the mind and intellect are not working properly, for instance in a mad man or when the man is in comatose state, he is not declared dead because the heart is still functioning.

The heart is the *sanctum sanctorum* where the revered deity is enshrined. This 'deity' is *Brahm* in the form of the consciousness known as the *Atma* which is in turn the 'true self' of the creature. The rest of the body is merely a 'vehicle or a chariot' for this 'self' to reach its destination. Refer *Shwetashwatar Upanishad*, Canto 3, verse no. 20.

So, heart is the defining factor which determines whether or not the ascetic is alive. That is why it is the site of the consciousness or *Atma*. *Prans* is also synonymous with life, and therefore both the *Pran* and the *Atma* co-exist. Now, this *Atma* or pure consciousness uses the vehicle of the *Pran* to move out of the body of the ascetic at the time of his death.

The wind needs some opening in the body to go out of it, and these openings are referred to as the *doors* of the body because they facilitate the exit of the vital wind along with the consciousness from the enclosure of the body. According to one version, there are said to be nine doors in the body through which it can move out. These so-called 'nine doors of the body' are two ears, two eyes, two nostrils, one mouth, one anus, and one urethra. Refer *Shwetashwatar Upanishad* of Krishna Yajur Veda tradition, 3/18.

Besides these nine, there is the 'tenth door' or opening, and it is this '*Brahm Randhra*' present at the top of the head.

According to *Kathopanishad*, Canto 2, *Valli* 2, verse no. 1, there are eleven doors of the body. They are the following—two eyes, two ears, two nostrils, one mouth, navel, anus, genitals and *Brahm-randhra* (the hair like slit on the top of the head).

A practitioner of Yoga or meditation is able to control this exit; he is able to determine how his *Atma* or consciousness, representing his 'true self', leaves his body along with the *Pran* by the means of meditative exercises. The escape of the vital winds (*Pran*) along with the consciousness (*Atma*) through the hair-like slit called the *Brahm-Randhra* present at the top of the head is considered as the best path

to leave the body as compared to other means of leaving it. Since everyone wants the best type of end for himself, it is but natural to expect that the ascetic would endeavour and strive to ensure that he trains himself sufficiently enough to ensure that his Pran, along with his conscious 'self' or Atma, would leave the body by the best path available to it, and it is obviously the top of the head. This word 'top' itself indicates something which is the best, something that is excellent and most desired.

Hence, the end obtained by the conscious Atma by its escape through this symbolically 'highest placed door' in the body is tantamount to its obtaining the most exalted state of permanent deliverance from the entrapments of the body. It is like the Atma of that ascetic being welcomed in the palace of the supreme Emperor where other such noble and liberated souls have their abode.

Refer also Yog Kundali Upanishad, Canto 3, verse nos. 12-17 and Kshurikopanishad, verse no. 18-20.]

28. A wise ascetic should honestly abstain from such negative traits as having fear, becoming angry and wrathful, being indolent and lethargic, sleeping excessively or remaining awake for long times at a stretch, and eating a lot and more than that needed to sustain a healthy and well nourished body, or fasting unduly for long periods of time (28).

[Note—The various hurdles in Yoga and which should be avoided by a spiritual aspirant have been enumerated in Yog Kundali Upanishad, Canto 1, verse nos. 56-61 of Krishna Yajur Veda tradition.]

29. Those wise ascetics who practice Yoga (especially Pranayam, using OM as the Mantra to do meditation and contemplate upon the supreme transcendental Being) in a progressive, regular, systematic and organised way along with strict adherence to all its doctrines and tenets, honestly honouring all the proscribed restrictions as well as diligently following all the sanctioned ways to achieve success in one's spiritual objective as mentioned in this as well as other Upanishads, are able to obtain success in their spiritual endeavour and become enlightened and self-realised in a period of three months.

In other words, within a short period of three months, the diligent and sincere practitioners of Yoga are able to successfully harness the latent spiritual energy lying dormant and hitherto untapped inside them, and utilise it to uplift their soul from remaining engrossed and entangled in the web of worldly ignorance and its attendant delusions, and instead reach for the high and venerated citadel of self-realisation which would open the gates to their ultimate liberation from the endless cycle of birth and death, and pave the way for the emancipation and salvation of their souls. The awareness of the stupendous glories, splendour, potentials, powers and authority of the pure 'self' which is nothing but pure consciousness and a personification of the supreme Brahman is called 'self-realisation' which is tantamount to liberation from ignorance and delusions pertaining to the body and the world in which it lives. Deliverance from this world is the ultimate aim of doing Yoga by the ascetic, and when he becomes aware of the path that can lead him to his objective, and when he actually follows that path with due diligence and sincerity, it is deemed that he is wise and erudite. Such ascetics who have realised their hidden potentials as well as the astounding power and authority, the radiance and splendour, the glory and majesty of their 'true self' or their Atma, are indeed called a 'Gyani' or a learned man who is well versed in the truthful knowledge pertaining to what constitutes delusions and entanglements, and what is true liberation and deliverance, what is real emancipation and salvation (29).

30. Within a time of four months he is able to have visions of the divine Gods. Within five months he acquires mystical powers which make him as powerful as the Gods themselves. And within six months¹, if he so wishes, he can obtain the final liberation and deliverance for himself when he achieves the exalted stature of 'Kaivalya'² (30).

[Note—¹The different periods of time have been reiterated elsewhere also. Refer Yoga Kundali Upanishad, 1/13, 2/31-36, 42, 44-48; and Trishikhi Brahmin Upanishad, verse nos. 122-127.

²Kaivalya is that state of liberation of the soul when the ascetic's Pran or vital winds leave the subtle space inside the body and merge with the cosmic wind present outside his body. The path taken for this final escape is narrated in verse nos. 26-27. This sort of deliverance is sought by ascetics who have enlightened enough to realise that their 'true self' is the pure consciousness Atma which is a 'spirit' having no forms, no contours, no sizes and no colours. This 'self' and the cosmic 'Self' are no different from one another, they are both pure consciousness, there is nothing but this consciousness that is of any value and importance in creation, that this 'consciousness' is at the root cause of creation and is known as the supreme transcendental Brahm, that there is no other deity to whom worship and honour should be offered than this pure conscious Atma, and there is no greater 'truth' than this fundamental realisation. Refer Trishikhi Brahmin Upanishad, verse no. 148.

Such a self-realised and Brahm-realised ascetic would not wish any other form of emancipation and salvation, called 'Mukti', than to reunite his Atma (pure conscious soul) and his Pran (the vital winds that drive the body and keep the Atma protected and sustained inside the otherwise inane and gross body of the creature) with the supreme Atma and transcendental Pran of this creation known as Brahm. Since Brahm is omnipresent and all-pervading, since this divine entity is formless and attributeless, the ascetic simply removes the barrier between his 'true self' residing in his gross body as his Atma by discarding the latter, and merges with his principal form as the 'spirit' which leaves the body to vanish for ever in the cosmic 'Spirit' that is universally present everywhere. He need not die and go to some imaginary 'heaven' where such and such God lives, because for him that 'God' is no one else than his own true self or his own conscious Spirit.]

31-32. While contemplating upon the five elementary elements of creation, such as the earth, water, fire, air or wind, and sky, one should meditate on one or more 'Matras' or basic sounds that constitute the texture of the cosmic fabric revealed in the form of the ethereal divine word OM representing the entire creation in its nascent and primary form. It is from OM symbolising these basic elements that the rest of the visible and invisible creation has evolved. The meditation should start from the grossest and heaviest of the five elements because it represents the physical 'earth' upon which we live, which needs no other proof of its existence besides its own visibility and the physical support it gives the entire visible creation, and which is the easiest element to visualise and focus one's attention on. The meditation then progresses gradually to higher level, and the five elements are meditated upon depending upon their subtlety and sublimity, with the most sublime and subtle of them being meditated at the last because of the difficulty of its accessibility. [It is like the case of the student first learning about the world in class one through visual pictures, and slowly and in due course of time graduates to become a great scientist or philosopher who would show others the way instead of learning about it himself!]

So, while contemplating upon the 'earth' element, one should meditate on all the five sound forms or syllables¹ that constitute the word OM; while contemplating upon the 'water' element, one should meditate on the four sound forms or syllables²

that constitute the word OM; while contemplating upon the 'fire or energy' element, one should meditate on the three sound forms or syllables³ that constitute the word OM; while contemplating upon the 'air or wind' element, one should meditate on the two sound forms or syllables⁴ that constitute the word OM (31); and while contemplating upon the 'sky or space' element, one should meditate on the one sound form or monosyllable⁵ that constitute the word OM.

Finally, while contemplating upon the ultimate Truth represented by Pranav which is synonymous with the supreme transcendental Brahm who is invisible, imperceptible, attributeless, almighty, omnipresent, omniscient, omnipotent, immutable, immanent, all-encompassing and all-pervading element in creation, one should meditate on only the half syllable⁶ which has no distinctive sound, no special form, no definable characteristic or attribute, and no other existence except as pure cosmic Consciousness.

A wise, erudite and enlightened ascetic regards his body as the habitat of all the five elements of creation. He visualises that his body is the microcosmic cosmos, with the grossest and the heaviest of the five elements lying at the bottom (i.e. in his leg region) and the subtlest and the lightest at the top (i.e. in his head region), while the rest of the elements occupying the space in between depending upon their grossness or subtlety. Thus, he starts his meditation at the bottom, i.e. in his toes, focusing his attention at the tip of the toes and consciously feeling the presence of life and vitality in this part of the body. Then he gradually shifts his attention from down upwards till he reaches the top of the head in a progressive manner.

In other words, for the purposes of meditation, he visualises that the 'earth' element is present in his body from the tip of the toes to the knees, the 'water' element from the knees to the hip region, the 'fire' element from the hip to the heart region (i.e. in the area of the abdomen), the 'air' element in the region from the chest to the area of the nostrils, and the 'sky' element in the top of the head. Finally, when he has reached this stage, he would have automatically become self-realised and enlightened. Then he would no longer need a prop or support in his meditation, and would hear the cosmic sound of ether reverberating in his head. This sound called 'Naad' has no definition and characterizations, and therefore it is regarded as a 'half-syllable' or just an indication of the presence of consciousness that can be felt and experienced and witnessed, but not represented by any of the known letters or syllables. It is the fundamental and primordial sound that existed even before the first trace of creation had even been imagined or visualised.

This most evolved form of meditation and contemplation helps the ascetic to gain authority over all the elements in creation. [And since the body is a product of these five elements, it naturally follows that he is able to exercise full control over his body.] (32). [31-32.]

[Note—¹The five Matras of OM are the following—A, O, U, M and the humming sound produced when the mouth is finally closed after the final letter M has been pronounced. This last sound resembles the reverberation heard when there is a distant explosion, indicating the ripples formed in the cosmic ether immediately after the first 'Big Bang' or cosmic explosion. From the metaphysical perspective, it was the first step taken by the supreme Brahm to initiate creation. These first ripples formed waves on the surface of this otherwise calm surface of the cosmic ether which overlapped each other as they moved forward from the central core of the cosmic explosion. The result was the generation of huge cosmic waves, the like of which are witnessed in the stormy ocean, and these waves produced 'sound' as they rolled on from their point of origin. This sound is conceptualised as OM. The cosmic debris and stupendous energy generated by the combined effect of the explosion and these

waves resulted in the formation of the rest of the elements, and these elements formed the building blocks of the creation as we know it today.

²The four Matras make the entity a wee bit lighter and subtler than that with five Matras. This is a metaphoric way of saying that it symbolises the next lighter form of creation, or the form that is a bit less gross and a bit more subtle than the one with the full load of five Matras. If the five Matras are represented by the earth element, which is the heaviest of the five elements in creation, then the one slightly lighter and less dense than earth is 'water' element. Hence, while meditating upon the water element, the ascetic should focus his attention on the mental repetition of these four letters of OM, which are A, O, U and M, and consciously visualise the presence of consciousness in the region of the body from the knee to the hip region. That is why urine is formed in the lower part of the abdomen, and when one remains standing for long periods of time, the legs swell due to accumulation of bodily water in them.

³The three Matras of OM are the basic sounds of A, U and M. Applying the same logic as described in paragraph 2 above of this note, this is symbolic of an element which is lighter and subtler than water. Such an entity is the 'fire' element. It is present in the abdomen region, and that is why food eaten is digested here just like it is being cooked in an oven. So, while moving the focus of this attention from the hip region upwards towards throat, the ascetic should imagine the fire element as burning inside him and contemplate upon these three primary sounds that constitute OM. The three Matras of OM are indicative of three dynamic forces of creation called 'Brahmi' related to Brahma the creator, 'Raudri' related to Rudra the concluder of creation, and 'Vaishnavi' related to Vishnu the sustainer and protector of creation—refer Yogchudamani Upanishad of Sam Veda, verse no. 86.

⁴The two Matras of OM are the two forms of sound produced by pronouncing the twin letters A and U together, and then U and M together. This is the second most subtle and lightest element in creation, and is known as the 'air or wind' element. It would be noted that when either of these twin letters are pronounced, a resonating sound is created, much like the rumbling of a plane taking off or landing in a distant respectively. The first two letters A and U = AU symbolise the taking off of the plane or the unfolding of the creation, and the second group of letters U and M = UM sound like the plane is landing, symbolising the conclusion or resting of the creation. These two Matras represent the 'sky or space' elements as it is in the space of the sky that all other elements had emerged in the beginning. This is because an open space is needed for anything to raise its head and stand up to make its presence felt; nothing can grow and develop in the confines of a closed space. Thus, while moving his focus of attention higher from the heart region to the forehead region (or the area around the eyebrows), the ascetic should concentrate upon these two Matras of OM as representing the consciousness present in his body.

⁵The single Matra of OM is the monosyllable word itself. This happens when the meditation has reached its climax, and the ascetic has submerged himself in the cosmic Naad so much so that he literally drowns in its ethereal waves, and the cosmic reverberation of OM overwhelms his consciousness. Even as a man submerged in the water of the ocean loses his sense of distinction of anything pertaining to the external world, because he does not hear any of the genres of sound that have their existence above the surface of the ocean but hears only the sounds inherently present in the water of the ocean, an ascetic who has finally submerged himself in the overwhelming sound of the cosmic Naad (the cosmic ethereal sound that is present in the background of this visible creation) and has tasted its blissfulness in his mind, he does not care about any formalities, and the only thing that he hears is the resonance of the divine cosmic word OM reverberating in his head. This happens in the highest echelons of the body in the area of the head between the forehead and the top of the skull where the 'Brahm-Randhra' is situated.

Thus, the ascetic should contemplate upon OM in its entirety when he has reached this exalted state of existence when he can withdraw his attention from the

rest of the body and focus it on the single are of it in the head. Obviously, in this state he would be unaware of the presence of the other parts of the body, and perceive consciousness only in the upper part of the head, i.e. in the region of the Brahm-Randhra. This is the highest form of Yoga, and it brings about a union of the 'self' with the 'cosmic Self'.

It would be pertinent to note here that verse no. 27 has stated that the realised ascetic's Pran or life forces leave his body through this aperture called the Brahm-Randhra. The reason is clear now—when the resonance of OM reaches a certain peak level, it creates such a crescendo of sound that the skull splits open due to the accumulated sound energy by overlapping sound waves.]

33. The area measuring thirty-and-a-half fingers width (i.e. the region approximately between the nostrils or upper lips and the lower end of the lungs) is the place where the Pran or breath lives and moves. This is the vital area of the body where the air or wind that keeps the body alive moves. If this air called the 'Pran' stops moving, i.e. if a man can't breathe fresh air, then the rest of the vital winds present inside the body would lose their importance and relevance for the simple reason that the body would be dead without breath. This part of the vital wind measuring 30 ½ fingers-width is the air that remains inside the body as opposite to the wind that is present outside the physical limits of the body. This air is not visible like the air that is present outside though both are called 'Pran' and are synonymous with breath. The air retained inside the body is however the one which is the foundation upon which the whole edifice of life rests though it cannot be seen or observed physically by the creature like the air present outside¹ (33).

[Note—¹The Pran or the vital air or wind element that sustains life inside the body but present outside it can be visually 'seen' as is evident when a mist forms outside the nose during cold weather or when breath is exhaled on a cold surface whereby a thin film of moisture collects on the cold surface. But no one can see the component of breath that is located inside the body. When one breathes, the internal air is not completely exhaled; some part is withheld inside the lungs and its tubes. This component is the Pran that is not visible, while the one that is exhaled is visible Pran.

The word Pran has two connotations here—one refers to the 'breath' and the other to the vital 'life forces' that it sustains inside the body of the creature. The latter form of Pran is synonymous with consciousness because both are indicative of 'life'. This verse is dealing with this aspect of Pran. The next verse no. 34 will deal with the former aspect of Pran, i.e. with 'breath' as a synonym of Pran. Broadly speaking, the word refers to the vital air or wind element in the body or outside of it because no life can be sustained without the presence of vital gases such as oxygen, nitrogen, hydrogen etc. which are inherently present in the air which we breathe in and breathe out daily.

The air we breathe is called Pran by the Upanishads because it is the fresh inhaled breath that injects 'life' in the otherwise lifeless body. The rest of the Prans, such as Apaana, Samaana, Vyana and Udaana depend on this Pran to function and remain active, for what good are they in a dead body?]

34. The Pran that is external to the body—that form of Pran or vital wind that moves in and out of the body as compared to the Pran that cannot leave the body unless it dies—is represented by the cycle of inhaled and exhaled breath. During the course of one day and one night, one takes approximately one lakh, thirteen thousand, six hundred and eighty breaths (i.e. 1,13,680 breaths) (34).

[Note—When one breathes, some part is always retained inside the body. This is the 'internal Pran'. The 'external Pran' would then be the air that is inhaled and exhaled—the part of breath that is located just outside the nostrils. Usually it is

believed that a man breathes approximately 21000 times during the course of a single day, so the figure of 1,13,680 mentioned here in this verse perhaps refers to a healthy man involved in strenuous exercises such as doing manual labour when he would breathe faster. Or it indicates the fact that this is the maximum number of breaths one can take in a day's time.]

35. The primary and principal vital wind called 'Pran' lives in a subtle form in the subtle space of the heart (and keeps this organ functioning); the vital wind called 'Apan' lives in the region of the anus (and is responsible for excretion of the residue from the intestines); the 'Saman' wind is found in the navel region (because it is from here that all the nerves and veins in the body radiate out from the nerve center or core called the 'Nabhi Kand', and ensure that nutrients and other essential supplies are equally distributed in the body); the 'Udan' wind lives in the region of the throat (because this wind is synonymous with the notion of 'getting up' or 'rising', so it symbolises the creature's state of wakefulness when he speaks out, and at the same time it helps it to 'raise' and spit out cough present in the lungs) (35).

36. The vital wind known as 'Vyan' spreads through the body (as it helps in maintaining equilibrium).

Now, the subtle colours of these five Prans symbolising the five forms in which the vital wind force in Nature exist are being mentioned (36).

37. The main Pran (breath which is at the core of life) is said to be red-coloured like a ruby. [This is a symbolic representation of the fact that this form of air is rich in oxygen, which in turn oxidizes the cells and help in producing red-blood corpuscles and hemoglobin in the body.]

The Apan wind present in the anus is like a red-coloured insect called 'Indragop' or an insect called 'Bibahuti' which has a scarlet colour like velvet and appears when the first rain falls. [That is why the anus region is red in colour, and malfunctioning of this vital wind creates piles which are red in colour, or bleeding dysentery or diarrhea which is also red in colour.] (37).

38. The Saman wind is located in the area of the navel and is said to be white like cow's milk or alum. [This is indicative of the presence of mucous and lymph and other intercellular and inter-muscular fluids in the body which are not red in colour as blood is.]

The Udan wind is smoky and grey in colour (like the fluffy clouds floating across the sky). [And that is why the cough or mucous raised in the throat is predominantly of this colour.]

Finally, the Vyan wind has the glorious and splendid colour like the tip of the flame of a burning candle. [This indicates that the flame is steady and burning brightly, without being subjected to any disturbances from any external factor, such as a gust of wind. Hence, this Vyan wind maintains a healthy and well-proportioned body which is not disturbed by any worldly influences. Such a healthy body has a radiant and glowing appearance, and its skin is taut and thus literally shines in the pink of its health.] (38).

39. Those wise, expert and spiritually realised ascetics who have trained their Pran to collect themselves from the different locations where they are present inside the body (as narrated above in verse nos. 35-36), and then move in a systematic and organised

manner upwards (as described in verse nos. 26-27 and 31-32), by means of meditative practices, to collect in the head (in the region of the Brahm-Randhra), are able to ensure that wherever they die they would not have to take birth again. Indeed, they find their final redemption and salvation when they are able to felicitate the exit of their Pran from the body through the Brahm-Randhra and become one with the elements of Nature (as described in verse no. 27 above). Such an ascetic does not have to take a birth again; this is his final dissolution and liberation from the fetters of the body and the world. [That is, he has attained the best form of Mukti called the Kaivalya Mukti as mentioned in verse no. 30. This is because his vital winds known as Pran leave the body and merge with the cosmic air present outside his body, and when the Pran has left the body the latter disintegrates into its primary elements such as the earth, water and fire. With the barrier of the skin and bones gone, the space inside the body just merges with the open sky outside, leaving no trace of the ascetic any longer.]

This is the great and magnificent teaching of this Upanishad; this is the profound philosophy and secret it teaches (39).

-----*****-----*****-----

Chapter 10

Kalagni Rudra Upanishad/Kalagnirudro-panishad

This Upanishad is revealed in the form of a dialogue between sage Sanatkumar and Kalagni-Rudra. It describes the proper way of marking and wearing the 'Tripundra' (three horizontal lines marked on the forehead, the chest and the shoulders (verse no. 3) of devotees of Lord Shiva using the ash of the sacrificial fire) along with its spiritual and metaphysical importance and significance. This Tripundra is an auspicious symbol of Lord Shiva who is regarded as the greatest of ascetics and the wisest, most enlightened and omniscient Being in creation. The wearer of this sign of the Lord, if he is not an imposter, becomes a personification of the Lord, and exemplifies the auspicious and glorious virtues the Lord stands for.

The whole idea of making these three lines of the Tripundra at the three places is to feel spiritually elevated and blessed, to feel holy and purified, and to feel the presence of the Lord very close to one's own self and be reassured of the Lord's constant protection. It is an external sign to indicate that the wearer is not only god-fearing but also keep the various vows and follows the different tenets of the scriptures diligently.

The metaphysical significance and importance of the three lines of the Tripundra have been elaborately described in verse nos. 6-8 of this Upanishad. Other Upanishads relevant to this present Upanishad and belonging to the Krishna Yajur Veda are the Dakshin Murti Upanishad, Chapter 18, Skand Upanishad, Chapter 19, Kath Rudra Upanishad, Chapter 25, Rudra Hridaya Upanishad, Chapter 26, and Panch Brahm Upanishad, Chapter 28. The Rudraksha Jabal Upanishad of the Sam Veda tradition describes a discussion between Kalagni Rudra and crow sage Bhusund

regarding the importance and significance of the Rudraksha beads used to make the prayer rosary by which the Mantras of Shiva are repeated.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
-----ॐ_शान्तिः_।_शान्तिः_!!शान्तिः_!!!_

The meaning of this Shanti Paath is given in appendix no. 1.

1. The Rishi¹ of this Kalagnirudro-panishad or Kalagni Rudra Upanishad is 'Samvartak Agni'²; its Chanda³ is 'Anushtup'⁴; and its Devta or patron God⁵ is Kalagni Rudra⁶. This Upanishad is invoked to worship Lord Kalagni Rudra as the almighty Lord who personifies the Supreme Being who has revealed himself as the Panch Brahm (refer verse no. 3) embodying the entire creation. [The Lord's symbolic presence is marked by the three lines of the Tripundra as described in the following verses.] (1).

[Note—¹*Rishi* is the first sage or 'seer' who had envisioned a particular metaphysical concept during one of his meditative trances. Such divine and eclectic revelations were then made known to the rest of the world in the form of poetical compositions called Chanda. This system of composing the religious text of the scriptures is in vogue since earlier times and such verses are called hymns as they are dedicated to the offering of prayers and honouring the chosen deity for which the particular hymns is meant. These hymns are also called Mantras because they are like mystical formula specific to that deity; they help the worshipper to activate the dynamic forces of Nature and creation as represented by this deity who is actually a personified form of these forces. Each deity had a particular hymns dedicated to it much like we have specific formulas in science or mathematics to solve specific problems. No one formula applies to all the problems in a universal manner, though there are some universal ones also which can be applied to all the cases, such as the Mantra OM which is used equally for all the deities. The reason is that OM represents the supreme transcendental Brahm whose manifestations all these individual deities or Godheads are. This is like the case of one listening to a particular radio station of his choice when he must tune-in to the particular frequency in which that radio station broadcasts.

²The phrase *Samvartak Agni* refers to the fire that engulfs the earth at the time of dooms-day, because the word 'Samvartak' means the end or conclusion of an era or a period of time, and Agni means fire. It also has two other connotations—viz. (1) The dooms-day cloud, because at the time of conclusion of one cycle of creation and destruction there is torrential rain which causes a deluge that drown the entire habitation on the surface of the earth. In this scenario, only certain forms of aquatic life survive, and from it the seed of the next cycle of creation is sown. (2) The fire burning under the bed of the ocean and in the bowls of the earth which keeps the water of the ocean as well as the underground springs warm. This fire is called 'Barvaanal' or 'Badvaanal'. In the present verse, this fire has been personified as the sage who first conceptualised this Upanishad.

³The *Chanda* is a particular style of poetical composition in which all the ancient scriptures were composed. All the Vedas were composed in this method.

⁴One of the styles is called *Anushtup Chanda*. It is verse of four lines with eight letters in each line. Therefore, the total number of letters in an Anushtup Chanda is $4 \times 8 = 32$ letters or syllables.

⁵*Devta* is the deity or God to whom a particular sacred hymn is dedicated. It is this deity who is worshipped, lauded and revered as the patron God whose blessings are sought by the worshipper when he reads a particular scripture, such as this Upanishad dedicated to Lord Kalagni-Rudra. This Upanishad, from the metaphysical and spiritual point of view, invokes Lord Shiva's auspicious virtues of destroying all the worldly delusions and taints that shroud the devotee like the clouds of the dooms-day, completely enveloping his wisdom and intellect in a veil of darkness of ignorance.

⁶*Kalagni-Rudra* literally means Lord Shiva, the concluder, in his most ferocious form which is like the fire of dooms-day. Shiva is the greatest ascetic, a great renunciate, most auspicious and regarded as an enlightened God. So his invocation helps the spiritual seeker to burn all his worldly delusions and taints arising out of ignorance and attachments to falsehoods. This paves the path for his ultimate liberation and deliverance from the cycle of birth and death. Lord Shiva is the designated Authority that controls death and destruction, not only of the gross physical world and its visible objects but also metaphorically of all the evil tendencies, all the blemishes and faults that are characteristic of this deluding world and which usually cover the soul of the creature like a layer of thick scum floating on the surface of the otherwise crystal-clear waters of the mountain lake.

Usually Lord Shiva is depicted in the scriptures and in iconography as sitting in a perpetual state of Samadhi or deep meditation, remaining ever calm and peaceful as well as totally dispassionate and neutral towards everything that has got anything to do with Maya or worldly delusions, deceptions, attachments and attractions. But at the same time the Lord is not unaware of his moral obligations as the patron God of ascetics who is supposed to uphold the highest traditions of righteousness, auspiciousness, nobility, probity and propriety as well as ensure that all the negative, demonic and evil factors of creation are vanquished and crushed so that positive virtues are always ascendant. Whenever this does not happen, whenever a dynamic remedy is needed to overcome a malignant force, Shiva assumes the form of Kalagni Rudra—literally the ferocious form of Shiva which is very angry and like the doomsday fire that destroys everything it beholds. After all, if the enemy is strong, then merely being merciful and compassionate is not the answer. A strong dose of antibiotic is needed to overcome a virulent form of virus, and no matter how much a person is adherent to the philosophy of non-violence, he is well advised not to extend this philosophy to ridiculous proportions of showing mercy to the virus by refusing to take antibiotic medicines because they would kill the virus!

So, while on the one hand Lord Shiva is invoked the spiritual aspirant to bless him with spiritual peace and bliss, the Lord has to be invoked to overcome all the powerful enemies of the Spirit that are ready to impede the aspirant's spiritual progress.

Refer 'Rudraksha Jabal Upanishad' of the Sam Veda tradition published as Chapter no. 14 of volume 2 in this series in which Lord Kalagni Rudra preaches the crow sage Bhusund about the importance of the Rudraksha beads used in the preparation of the prayer rosary. Further, other Upanishads relevant to this present Upanishad and belonging to the Krishna Yajur Veda are the Dakshin Murti Upanishad, Chapter 18, Skand Upanishad, Chapter 19, Kath Rudra Upanishad, Chapter 25, Rudra Hridaya Upanishad, Chapter 26, and Panch Brahm Upanishad, Chapter 28.]

2. In some ancient time, sage Sanatkumar¹ asked Lord Kalagni-Rudra (Lord Shiva), 'Oh Lord! Please explain to me the metaphysical and spiritual importance and

significance of ‘Tripundra’² in detail. What is it? Where should it be placed? What is its length (or measurement)? How many lines does it have? What is its Mantra, and what is its power and potential? Who is its patron deity or God? Who uses it, and what are its benefits?’ (2).

[Note—¹Sage *Sanatkumar* is considered as one of the four Manas Putras or the mental-born sons of the creator Brahma. The other three are Sanak, Sanat-sujaat and Sanandan. They are regarded in a perpetual state of boyhood.

Sanatkumar had taught the greatness of Vishnu to demon Vrittaasur, the enemy of Indra, the king of Gods. He also taught spiritual wisdom to sage Narad, the celestial sage.

Sanat-sujaat taught spiritual wisdom to Dhritrashtra who was the blind father of the Kauravas of the epic Mahabharat fame. Sanak is said to an eternal companion of Lord Vishnu. Sanandan is regarded as the ancient preacher of the Sankhya Shastra, even more ancient than Kapil.

²The word *Tripundra* has two parts—‘tri’ and ‘pundra’. Tri means three while the word Pundra refers to the three horizontal lines marked on the body (the forehead, the chest and the shoulders) by Hindus. The Pundra can be horizontal or crosswise lines, in which case it is called the ‘Tiryak Pundra’, or it can be vertical or upright lines, in which case it is called ‘Urdhva Pundra’. The Tiryak Pundra or Tripundra is worn by devotees of Lord Shiva and initiated ascetics and is marked by the paste of the ash obtained from the pit of the fire sacrifice by mixing it with water. Each of these three lines has a deep religious importance, and they have been explained in verse nos. 6-8 below.

3. Lord Kalagni-Rudra explained to sage Sanatkumar—‘The holy ash of the fire sacrifice is used to mark the lines of the Tripundra. The divine Mantras ‘Sadyojatadi’, which are called the ‘Panch Brahm’ Mantras¹, should be invoked at the time of marking the lines of the Tripundra using this holy ash. [There is a special Upanishad dealing with the concept of Panch Brahm, called the ‘Panch Brahm Upanishad’ which is Chapter 28 of this volume. The concept of ‘Sadyojaat’ and ‘Panch Brahm’ have been elaborately explained in its verse no. 1 and its accompanying note.]

[Since these ‘Panch Brahms’ are personifications of the stupendous powers and potentials as well as the characteristic glorious attributes and divine virtues of the five fundamental elements of creation (viz. earth, water, fire, air or wind, and sky or space), when their respective Mantras are invoked while marking the three lines of the Tripundra on the body of the worshipper, it is like establishing these glories and divine virtues on the body itself to indicate that the worshipper is blessed and empowered with the divine virtues as represented by these dynamic forces of Nature called the Panch Brahms. He becomes a living embodiment of the Godhead worshipped as the latter is supposed to be now honorably established in the worshipper’s own body.

Thus, the following Mantras should be invoked to consecrate and purify the three lines of the Tripundra and bestow divine powers to them—‘Agniriti Bhasm’ for the fire element, ‘Vayuriti Bhasm’ for the air or wind element, ‘Jalmiti Bhasm’ for the water element, ‘Sthalmity Bhasm’ for the earth element, and ‘Vyomriti Bhasm’ for the sky element².

The ash should be picked up in the fingers while pronouncing the Mantra ‘Maanastok’. It should be made into a thick paste by adding required amount of water while pronouncing the Mantra ‘Ma No Mahan’. Sufficient quantity of this paste of dampened sacrificial holy ash should first be placed on three parts of the body, viz. the forehead, chest and shoulders, while pronouncing the Mantra ‘Triyayunsha’. Then

this paste is spread as three horizontal lines at these places while pronouncing the Mantra ‘Trayambak’.

This process of smearing the sacred ash on the body is called ‘Shambhav Vrat’ or a form of religious duty and sacrament which has been extolled in all the Vedas and lauded by all those who are experts in these scriptures.

Those who aspire for liberation and deliverance from the cycle of birth and death, those seekers who wish that they do not have to take birth again in this world, should invariably wear this Tripundra in the aforesaid manner², (3).

[Note—¹*Panch Brahm*—(a) These are the personification of the stupendous divine powers and potentials of the Supreme Being as manifested in the form of the ‘five basic elements of creation’ such as the sky, air, fire, water and earth. The word *Panch* refers to the numeral five, while *Brahm* refers to the supreme cosmic Consciousness which is at the core of the coming into being of the entire creation.

(b) According to another version, these Panch Brahms are the five manifestation of the Supreme Being, and they are Sun God, Vishnu the sustainer and protector, Shiva the concluder and annihilator, Ganesh the most revered deity in the Hindu pantheon who is invoked at the beginning of any auspicious effort, and Shakti or the divine Goddess personifying the stupendous energy in Nature.

(c) Again, since everything in existence has been created from the five basic elements, it follows that Panch Brahm also refers to the *five sheaths or Koshas* that surround the pure conscious Atma which is the truthful identity of the creature. These five Koshas are the following--‘Annamaye Kosh’ or the food sheath, ‘Pranmaye Kosh’ or the vital wind sheath, ‘Manomaye Kosh’ or the mental sheath, ‘Vigyanmaye Kosh’ or the intellect sheath, and ‘Anandmaye Kosh’ or the bliss sheath. These sheaths cover the Atma or pure conscious self like various coverings or shrouds wrapping any object. The *Annamaye Kosh* is that which was created by the intake of food, was nourished and developed by food, and at the end it finally disintegrates into the basic ingredients that constitutes food and merges with the earth element from where the food has derived its original ingredients. This forms the gross body of the creature.

The *Pranmaye Kosh* consists of the five vital winds (Pran, Apaana, Vyan, Udaan, and Samaan) along with the five organs of action (hands, legs, mouth, excretory and reproductive).

The *Manomaye Kosh* consists of the mind and the five organs of perceptions (ears, eyes, nose, tongue and skin), while the *Vigyanmaye Kosh* consists of the combined apparatus made of the intellect and these five organs of perception.

A combination of these three sheaths, i.e. Pranmaye Kosh (vital wind sheath), Manomaye Kosh (the mental sheath) and Vigyanmaye Kosh (the intellect sheath) is what is known as the ‘Ling Deha’ of a creature, or the ethereal form of the corporeal body. This is the subtle body of the creature.

The sheath in which the pure conscious self is not aware of the ‘Ling Deha’ is called *Anandmaye Kosh*. This forms the causal body of the creature”.

These five sheaths are called the ‘Panch Kosha’.

(d) Life in this creation is sustained by the wind or air element, as is evident from the fact that it is possible to survive for a reasonable time without water and food but one immediately suffocates to death if there is no air. These vital winds or air element takes five principal forms, called the *Panch Prans* which are personifications of the magnificent abilities of the supreme Brahm to sustain life in a quiet and subtle manner. These primary and principal vital wind called *Pran* lives in a subtle form in the subtle space of the heart (and keeps this organ functioning); the vital wind called *Apaan* lives in the region of the anus (and is responsible for excretion of the residue from the intestines); the *Samaan* wind is found in the navel region (because it is from here that all the nerves and veins in the body radiate out from the nerve center or core called the ‘Naabhi Kand’, and ensure that nutrients and other essential supplies are

equally distributed in the body); the *Udaan* wind lives in the region of the throat (because this wind is synonymous with the notion of ‘getting up’ or ‘rising’, so it symbolises the creature’s state of wakefulness when he speaks out, and at the same time it helps it to ‘raise’ and spit out cough present in the lungs); and *Vyan* spreads through the body (as it helps in maintaining equilibrium). These vital winds have been described in Amrit Naad Upanishad, verse no. 35-38 which is Chapter no. 9 of this volume.

(e) The entire life of a religious and pious spiritual aspirant is regarded as one big wholesome fire sacrifice, and thus it is ordained that he must diligently perform the five *Panch Maha Yagyas*, or the five great noble deeds that have the same sanctity and holiness as doing a formal fire sacrifice. These are the following—(a) *Brahma Yagya*—study and teaching of the Vedas and other scriptures that enlighten the man about the ultimate Truth known as Brahman, (b) *Deva Yagya*—the performance of fire sacrifices in which offerings are given to the sacred fire which sustain the Gods and are done to honour them, (c) *Pitri Yagya*—paying homage to the spirit of dead ancestors, offering oblations to them and doing religious activities for the peace of their souls, (d) Service to mankind called Jiva Yagya, and (e) *Bhut Yagya*—service to all the creatures including animals, insects, plants etc., such as giving them food, shelter and protection, i.e. taking care of them. These five sacrifices have been described in Ashramo-panishad, verse no. 3.

²This invocation ensures that all these three lines become symbolic representatives of the *three worlds* representing the entire gamut of creation. These three worlds are ‘Bhu’ or the terrestrial world, ‘Bhuvaha’ or the sky just above the earth where life-forms such as birds etc. live, and ‘Swaha’ or the heaven representing the higher reaches of the atmosphere where exalted spirits live. In other words, by invoking the Mantras mentioned here, the worshipper symbolically empowers these three lines of the Tripundra with mystical, divine and holy powers that control the entire cosmos. By doing this, he metaphorically establishes his authority and sway over the entire realm where Lord Shiva, as Kalagni-Rudra, has his influence. Since these lines are placed across the forehead, they also signify the fact that such persons have become all-knowing and omniscient like the Lord himself.]

4. Sage Sanatkumar enquired about the length and thickness of the lines of this Tripundra (4).

5. Lord Kalagni-Rudra replied that the three lines should be made in such a way that one of the lines, the bottom one, passes through the center of the forehead at the middle point of the eyebrows just above the root of the nose, and the third line covers the top of the forehead just below the hairline on the skull (5).

6. The first line is a symbol of the ‘Garhapatya Agni’ (the sacred fire of the household hearth), the first letter ‘A’ (of the divine ethereal word OM), the second quality called ‘Raja Guna’ (that is one of the three basic qualities inherent in all the creatures in creation and which determine the creature’s basic character and mental temperament, such as his natural propensity to have worldly attractions and passions as well as a natural tendency to remain engrossed in worldly matters), ‘Bhu’ Loka (or the terrestrial world inhabited by mortal creatures), the self-conscious Atma (which is the true identity of the creature), the personification of the powers to act and perform that are natural and the basic requirement in all the creatures of this creation (because without this ability and strength to act and produce results, no creature can survive competition in this world where only the fittest survives), the Rig Veda (first of the three primary Vedas), the morning sacrament (or payers offered to the Sun God

representing the supreme Brahm in all its glorious magnificence), and Lord Maheshwar (or the great Lord Shiva himself (6).

7. The second line of the Tripundra is symbolic of the sacred fire called 'Dakshinagni' (or the holy fire which stands a witness of donations and charities made), as well as of the second letter or syllable 'U' of the sublime, divine and ethereal word OM. It also stands for and personifies the following entities—the quality called 'Sata' (which refers to the different virtuous and noble qualities present in the spiritual aspirant, qualities which are considered as the best amongst the three primary qualities that determine the character of the individual creature), the world known as the 'Antariksha' (or the second world represented by the sky above the earth where the creatures with wings, e.g. the birds, live; it is the world created when the creator Brahma had pronounced 'Bhuvaha' at the beginning of creation), the Atma or pure consciousness (which is the true self of all the living creatures and a personification of the supreme transcendental Brahm), the powers and potentials of 'Ichha' (desires, wishes and aspirations, because the whole world is driven by this virtue of Ichha that is inherently present in the heart of all men, and which inspires all actions and deeds done by them, for had there been no desire and aspiration, the man would not enter into any enterprise), the Yajur Veda (the second of the primary scriptures known as the Vedas), the sacrament performed during the noon time (i.e. the second daily prayer offered to the Sun God), and the eternal and infinite Lord known as 'Sada Shiva' (who is omnipresent, immanent, imminent, and uniform) (7).

8. The third line of the sacred Tripundra stands for and personifies the following entities—the holy fire called 'Ahawaniya Agni' (or the ritualistic fire of the formal sacrifice), the third letter or syllable 'M' of the sublime, divine and ethereal word OM, the third quality called 'Tama' (which is the lowest and grossest of the three basic qualities in creation), the 'Duloka' or the heaven (created when Brahma pronounced 'Swaha' at the time of creation, and is the realm of creation where the exalted Gods have their abode), the Parmatma or the supreme Soul which is the ultimate authority and cause of the entire creation, the stupendous and magnificent powers and potentials of Gyan (truthful knowledge, erudition, sagacity, skills and wisdom which makes a man well honoured, respected and revered in this world), the Sam Veda (which is the third primary Veda), the third sacrament performed in the evening, and Lord Mahadev himself (i.e. Lord Shiva in his manifestation as the greatest and most eminent God in the pantheon of Gods in Hinduism; the word 'Maha' means 'great and most exalted', and 'Dev' means a 'godhead') (8).

9. In this way, anyone—whether he is a Brahmachari¹, a Grihastha², a Vanprastha³, or a Sanyasi⁴—who wears this Tripundra in the manner prescribed herein above, with due respect, faith and conviction, is liberated from the horrible consequences of all types of sins and misdeeds committed by them either inadvertently or willingly, whether they are major ones, being most grave and horrendous, or minor ones but still unrighteous and inauspicious. Such a wearer of Tripundra becomes holy and cleansed of all his sins and worldly taints as if he has been to all the sacred pilgrim sites, performed necessary purification rites, offered oblations to Gods, and taken the ritualistic bath there. He gets the benefit of studying and reciting all the Vedas. He becomes so enlightened and wise that he can have easy access to all the Gods (representing all the virtues that are considered grand, righteous, auspicious and noble in creation, thereby enabling him to reach for these virtues and inculcate them easily

in his own life). He is able to enjoy all types of pleasures and comforts that he wishes for, and at the end of his life he goes to the abode of Lord Rudra (Shiva). As such, having reached the pinnacle of enlightenment and spiritual liberation by merging his soul with the great Lord Shiva, who is the supreme Brahm personified, he does not have to take birth again. [That is, he has obtained the ultimate emancipation and salvation for his 'self'.]

This is how Lord Kalagni-Rudra described to sage Sanatkumar the importance and the proper way of wearing the Tripundra (9).

10. A wise and enlightened man who diligently studies this Upanishad and understands its great metaphysical importance becomes an embodiment of the virtues extolled by it (i.e. he becomes as exalted and auspicious as Lord Shiva himself). Verily, this is the truthful assertion of this Upanishad (10).

[Note—¹*Brahmachari* is a student or elder person who observes strict vows of celibacy, abstinence and self-control in all spheres of life, spending his time in studying and devoting his energy in acquisition of knowledge of the Truth.

²*Grihasta* is a householder and he marries to raise a family. This is the second phase of life.

³*Vanprastha* is the third phase of life when one who has fulfilled all his obligations towards his family and literally heads for the forest to lead the rest of his life in a peaceful way, meditating and roaming around in pilgrim centers. In practice, it is not feasible for anyone to actually go to the forest in a modern world, so this phase should be interpreted to mean when the man prepares to pass on the responsibilities of his mundane affairs to his heirs and start leading a more relaxed life, spending his time on reading the scriptures and going to visit pilgrim sites which he had not been able to do earlier due to his worldly pre-occupations.

⁴A *Sanyasi* is a person who has entered the fourth and final phase of life of total renunciation of the world and snapping all ties with it, marked by complete detachment and dispassion, and spends his time in deep contemplation and meditation. This is the phase just before death. As in the case of the Vanprastha, he need not actually go to the forest if his health does not allow for instance, because that would be tantamount to committing suicide, which is in itself a grave sin. The basic idea is to be fully detached from everything material and prepare for the imminent death.]

-----Shanti Paath-----

-----*****-----*****-----

Chapter 11

Kshurika Upanishad/Kshuriko-panishad

This Upanishad is so named because it advocates the employment of various Yoga practices to act like a 'knife' which cuts through the different hurdles in the seeker's spiritual progress, and helps him to attain his objective of obtaining final liberation and deliverance from the fetters that shackle him to this body and the various torments that it is subjected to in this deluding world of artificiality.

Amongst the various paths of Yoga, it especially emphasises the importance and rewards of having a firm 'Dharna'—i.e. firmness of mind and steadfastness of

conviction; firm resolution and a determined pursuit of one's spiritual goals by overcoming all hurdles that come in the way; to resolutely follow the principles of Yoga in order to achieve success in one's spiritual path.

This Upanishad is highly Yoga-centric and describes in detail the process of 'Pranayam' (breath control) which helps in harnessing the stupendous potentials of the vital winds called Pran present inside the body and ensure that it gains sufficient energy to break through all the hurdles or barriers represented by blocked Naadis (the tubular ducts inside the body) that obstruct its free passage inside the body itself and its escape from the body to the outside space to merge with its primary form as the cosmic air or wind element at the time of death of the spiritual aspirant.

Since 'Pran' is a synonym for life and consciousness, when it is able to move freely and ultimately escape from the bondage of the gross body it is deemed that the practitioner of Yoga, who is a spiritual seeker, has obtained his final liberation from the fetters that tie him down to this body as well as the artificial world of delusions and numerous entrapments in which the soul has to live. He is delivered from their shackles once and for all, for the freed air element known as Pran no longer enters another body once it escapes from the previous one. This is the spiritual seeker's or ascetic's final and ultimate emancipation and salvation.

Besides controlling of the vital winds and their movement in the body, the other correlated benefit is the ability generated to exercise control over the restless mind and focus it in the direction that the aspirant wishes. This helps in concentration of the mind on the job at hand and achieve success in any enterprise.

The steps to be followed in doing Yoga, which are meditative exercises to control the vital wind called Pran, its movement upwards in the body, as well as the unclogging of the hitherto blocked Naadis, are described in graphic detail. With Naadis open, the vital winds can move freely inside the body, and with practice of Yoga sufficient energy is generated inside the body itself when the body is well ventilated. This stokes the latent fire present inside the body further, and the Pran winds move up the body to finally escape from it into the outer sky by rupturing the skull and escaping into the outer sky to merge and become one with the cosmic air or wind element present outside the body much like the heated air, in the form of steam, escapes from the spout of a kettle never to return into the body of the kettle again.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
-----ॐ_शान्तिः_।_शान्तिः_!!शान्तिः_!!!_

The meaning of this Shanti Paath is given in appendix no. 1.

1. [This verse emphasises the importance of Dharna in Yoga or meditation.]

We shall now discuss the ways and means that helps a spiritual aspirant to obtain unequivocal success in doing Yoga (meditation). In this connection, 'Dharna'—or having a firm faith and conviction in its stupendous effects and glorious potentials, a resolute mind that remains steady and determined in its chosen path, a sincerity of purpose, and ability to resist all temptations—acts like a potent and powerful 'Kshuri' or knife because it helps him to cut through all the fetters that tie him down and

prevent his liberation. Such a person who makes Dharna his weapon to aid and protect him in his spiritual progress attains success in obtaining final liberation and deliverance from the cycle of birth and death. [That is, such a person finds emancipation and salvation for his soul for good.] (1).

[Note—The concept of Dharna is explained in verse no. 16 of Amrit Naad Upanishad of Krishna Yajur Veda which is Chapter 9 of this volume.

An ordinary man remains engrossed in his worldly activities, never finding time to contemplate on what lies beyond the mundane. He is so enchanted by the deluding mirage created by this fascinating world of kaleidoscopic colours that he has neither the time nor the inclination or the intention to look at the other side of it; he prefers to remain submerged in its transient and impermanent pleasures and comforts even at the cost of risking his long-term spiritual welfare. Numerous, endless and varied hopes, desires, aspirations and expectations pertaining to this world of material objects, and the pleasures and comforts derived from them, keep him entangled in their sticky net much like the spider remaining stuck in its own web.

In this connection there is a beautiful verse in the *Holy Quran* that says—“Allah hath sealed their hearing and their hearts, and on their eyes there is a covering. Theirs will be an awful doom” (Surah ii, verse no. 7), and “These are they who purchase error at the price of guidance, so their commerce doth not prosper, neither are they guided” (Surah ii, verse no. 16).

On the other hand, a self-awakened man realises the futility of worldly pursuit because he knows that this world is illusionary, deluding, temporary and perishable, as compared to the actual ‘truth’ that is eternal and steady. But it is not easy to reach this ‘truth’ when one is surrounded by falsehoods and delusions. So such a man distances himself from the world and searches for that ‘truth’ which would give him real peace and happiness that is everlasting instead of the one obtained by pursuing this world, because such a peace and happiness is transient and illusive. The path to this ‘truth’ is a rigorous one, and it passes through a dense forest requiring strict self discipline and resistance to worldly temptations, as well as abstinence from all things that have to do with darkness symbolising ignorance and delusions. In this connection there is a beautiful verse in the *Holy Quran* that says—“And believe in that which I reveal, confirming that which ye possess already (of the scripture), and be not first to disbelieve therein, and part not with My revelation for a trifling price, and keep your duty to Me. Confound not the truth with the falsehood, nor knowingly conceal the truth” (Surah ii, verse no. 41-42).

Amongst the various options open to this spiritual aspirant is Yoga or meditation and contemplation. This Yoga is a very potent instrument that helps him effectively divert all his energy towards his chosen path of spiritual enlightenment as well as obtaining liberation and deliverance for his soul or Atma which is his pure and true ‘self’; it is an effective means in helping the aspirant in this endeavour. A person who practices Yoga is called a Yogi or an ascetic. Yoga is a spiritual science that establishes coordination between the pure conscious Atma (or soul) of the individual with the primary source from which this individual Atma had separated at the time of birth of the individual creature, thereby creating oneness between the two. Since a systematic and rational approach is needed to bring about an effective coordination and a final union between the individual’s Atma, which is the pure conscious ‘self’ and the truthful identity of the individual, and the cosmic Atma of the creation much like the merger of the water in a pot with the ocean which is the primary source of all water on earth, Yoga is called a ‘science’. As such, it has several well-designated and systematic steps towards the final goal of obtaining liberation by the pure conscious ‘spirit’ (soul or Atma) from the fetters that tie it down to this gross physical body, and emerge from it to become free like the cosmic wind or air element that pervades throughout the sky and which nothing can ever bind or enclose or capture in a sack.

Yoga helps in this liberating and delivering exercise for the Atma or soul of the spiritual seeker.]

2-5. [These four verses describe the process of Pranayam* or breath control exercises that are integral to doing Yoga.]

It has been prescribed by the self-existent and self-begotten Brahma, the primary creator of the entire creation who is called 'Swayambhu' in the sense that he had no father or ancestor from whom he descended because he is said to be 'self-created', as well as extolled and ratified by the primary scriptures known as the Vedas, that the spiritual aspirant should do Yoga (meditation and contemplation) in a systematic way and according to the stipulated procedure. For this purpose, he should select a calm and serene place, free from all types of disturbances, whether mental or physical, and sit down in a proper sitting posture called Aasans¹.

He should put the wayward and wandering tendencies of the mind and heart, which are intrinsically restless and in a state of constant flux, under strict control and tight leash by withdrawing his mind and heart from all worldly attractions and the distractions that they inherently create much like a tortoise withdrawing its limbs into its shell when it decides to do so².

This inhalation process is called 'Purak', meaning one that fills up. The time taken to inhale this breath should be equivalent to the time taken to mentally pronounce twelve Matras (letters or syllables) of Pranav, or the sublime and ethereal word OM³. During this process of inhaling air from the outside into the body, the practitioner should close all the so-called 'doors' or exit points in the body through which the wind could escape⁴.

The practitioner should sit ram-rod straight, with the spinal cord, the neck and the head in a straight line, and the chest fully expanded. While in this position, he should allow the inhaled wind to be retained in the body and spread through it. That is, the inhaled rejuvenating air is allowed to permeate throughout the body and get absorbed by the tissues. [This stage of Pranayam is called 'Khumbhak' or filling the pot. It is a metaphoric way of saying that the pot-like body is filled with fresh air after it is been emptied of stale air laden with all the gaseous impurities present in the body when it was exhaled earlier. This is done to oxidize every tissue and cell inside the body with fresh oxygen and energy, thereby stoking the inherent fire element present in these tissues and revitalizing them with new and fresh energy. It is like removing the covering ash from the pit of the sacrificial fire and blowing fresh air into the ambers lying underneath the ash to re-kindle the latent fire which had become dormant. This fire then jumps into life and burns with new vigour, thereby infusing new life into the body of the practitioner.]

Finally, when the body has sufficiently absorbed fresh oxygen present in the inhaled air and all the tissues and cells freshly revitalized by it, the different toxins and other impurities present in these tissues and cells are then expelled as noxious gases from them and collected by the residual air which has now become polluted and needs to be expelled from the body. This is done by exhaling it through the nostrils slowly in the reverse process. [This reverse process is called 'Rechak'.] (2-5).

[Note—**Pranyam* is central to Yoga practices and all the Upanishads dealing with Yoga deal with it in one or the other context. Refer to Sam Veda's Yog Chudamani and Jabal Darshan, Shukla Yajur Veda's Trishikihi Brahmin, and Krishna Yajur Veda's Amrit Naad, Yog Tattva, Dhayan Bindu and Tejo Bindu Upanishads.

¹The proper sitting postures or *Aasans* for doing Yoga (meditation and contemplation) and practicing Pranayam (breath control) have been described in

Amrit Naad Upanishad, verse no. 19. The complete process of Pranayam is dealt with in this Upanishad in substantial detail.

²In other words, he should prevent his thoughts and emotions from spreading out into the world of material sense objects like the tentacles of an octopus, and then get entangled in them and remain entangled. Then he should inhale the outside air representing the cosmic life-giving wind element metaphorically called the Atma because it infuses a fresh lease of life into the otherwise inane and inert gross body of the aspirant. [In other words, inhaling air is like blowing fresh air into the furnace of life burning inside the body of the aspirant and kindling the 'fire of life' which has become weak without proper ventilation. Inhaling air or the wind element is like giving the Atma, which is pure consciousness and the true identity of the aspirant, a fresh lease of life by stoking the latent 'fire element' which keeps it energised.]

The 'inhalation of fresh air' is a metaphoric way of saying that the spiritual aspirant imbibes eclectic virtues and qualities that are exemplarily auspicious and noble by remaining ever vigilant and conscious towards what is right and what is not. This acceptance of good and noble from the outside world is equivalent to 'breathing in fresh air or the Purak' phase of Pranayam. Now, when good ideas and virtues enter the inner self of the aspirant and are retained by him instead of just letting them pass off as a transient change then they are bound to have a permanent positive effect on his overall personality, mentality and temperament. This is equivalent to the 'holding of breath or the Kumbhak' phase of Pranayam. It is obvious that when good and positive virtues are in the ascendant the bad and negative ones would be on the decline; when fresh air enters a closed room the stale air is pushed out. This is equivalent to 'exhaling of breath or the Rechak' phase of Pranayam.]

³The word OM has three basic letters, viz. A, U and M. Therefore, pronouncing the *twelve Matras of OM* would here mean that the word is said four times—3 Matras x 4 times = 12 Matras. Refer also Amrit Naad Upanishad, verse nos. 24 of Krishna Yajur Veda tradition.

⁴The symbolic *doors* of the body are the following—two ears, two eyes, two nostrils, one mouth, one anus, one urethra and one Brahm Randhra (the hair-like slit on the top of the head).]

6-7. When the practitioner has developed sufficient expertise in controlling his vital winds called Pran by doing Pranayam in the way described above, and is able to concentrate the Pran consciously in any part of the body where he wishes it to be willingly focused, he should consciously feel that this Pran is moving or pulsating or radiating up and down two times in the region of the leg between the tip of the toes and the ankle joints (during the Kumbhak phase). That is, he consciously and willingly allows his mind to visualise that there is a sensation of conscious life pulsating or radiating solely in the foot between the tip of the toes and the ankle joints in a wave like fashion to the exclusion of any other parts of the body.

Then he draws his attention to the region of the leg between the ankle joints and the knees, and visualises that this region is the only conscious part of the body. He consciously allows his mind to perceive the existence of consciousness exclusively in this region of the body. He feels that life is pulsating in wave like pattern between his knees and ankle region, and moving up and down three times (during the Kumbhak phase).

Moving upwards, he then focuses his attention in the region between the hip joint and the knees. He allows his mind to visualise that conscious life is radiating up and down in this region in a wave like pattern two times.

Then he should shift his attention to the area between the anus and the genitals and visualise this area as the center of consciousness radiating in it. Here, the Pran is visualised as moving between the anus and the genitals in a wave three times.

Pulling up the vital winds upwards, they should be concentrated in the region of the navel, and the practitioner of Yoga should imagine that all the vital factors of life inside his body are concentrated here (6-7).

[Note—This process helps in training the mind to be focused on the job at hand, and learn not to be distracted by anything else. By pinpointing the presence of consciousness in a specific part of the body to the exclusion of any other part is a difficult proposition and requires a lot of practice. It is like training the wild horse or elephant to obey the command of its master.]

8. In this region of the navel, there is a cluster of Naadis (tubular ducts; the nerves and veins). The chief amongst them is called ‘Sushumna’ and it is surrounded by ten other Naadis such as Ida, Pingla etc. These Naadis are micro-fine in dimension and have different colours, such as red, yellow, dark hue, copper-coloured (8).

[Note—All Yoga Upanishads describe these Naadis in some context or the other.]

9. One should allow his Pran or vital winds to move amongst these Naadis just like a spider moves along the fibers created by its own saliva that forms the web on which this insect moves. [This helps to rejuvenate the Naadis, or nerves and veins, by shaking them out of their inertial mode of inactivity and lethargy, ventilating them and activating the latent energy lying dormant in them due to their being clogged and lying inactive out of long-lasting inertia and poor upkeep which has made them full of toxins and other harmful chemicals].

While at it, the wise and expert practitioner should carefully channelise his Pran into that Naadi which is very subtle, micro-fine and white or grey in colour (i.e. the Sushumna Naadi) (9).

10. Above the navel region, the next most important and glorious region in the body is known as the ‘lotus’ in the Upanishads. [This is because the pure consciousness called the Atma or soul of the creature has its divine and exalted location here.] This is the region of the heart. This area is radiant like a vibrant and blooming red lotus flower (10).

11. After ventilating all the Naadis present in the region of the heart, the Pran wind moves ahead from here and reaches the region of the throat. [That is, the practitioner of Yoga consciously feels that his vital winds have moved up from the lower part of the body and are moving in the throat. His mind is focused in this region to the exclusion of all other parts. He visualises that consciousness is pulsating in his throat region; all other parts of the body are lifeless now for all practical purposes for his mind.]

Above this is the area of the subtle mind called Mana, and above it is the region of the subtle intellect called Buddhi. This intellect or Buddhi is most potent, powerful, sharp and penetrating; it is pure, untainted and uncorrupt in its primary and natural form; it is most magnificent and mysterious in its actions and behaviour (11).

12. The practitioner of Yoga should now concentrate his mind on the private parts located in the region between the two thighs (i.e. the genitals). This area is called ‘Indra-Vajra’¹. This area is to be mentally controlled or literally ‘ruptured or bored through’ by diligent efforts and a determined will power².

This control of the genital and its natural source of stupendous creative energy which is inherently present in all the living beings enable the ascetic to harness sufficient energy and stamina to move his Pran or consciousness to the next step in his Yoga practice. So he should now move his vital Pran or life forces upwards from the genitalia and let the Pran enter the four sensitive areas³ above it by rupturing through them. [In other words, the vital winds are allowed to stoke the hitherto dormant energy centers located in these four areas, thereby igniting the latent fire element present there and unleashing its stupendous potentials and powers.] (12-14).

[Note—¹The word *Indra Vajra* refers to the hardened and invincible weapon of the king of Gods known as Indra. In the present context, the word is used to symbolise the male phallus.

²In other words, the aspirant should learn to exercise strict control over his natural sexual impulses and ensure that this organ does not cause any emotional or physical discomfort to him in his rigorous meditative and contemplative exercises. Of all the natural impulses, this impulse of sexual arousal is the most difficult to resist and control. If the ascetic is successful in exercising control over his sexual instincts, he is not only able to concentrate better on his spiritual practices but also preserve his vital energy more effectively from being wasted away, and thereby divert it in more constructive channels and spiritual activities. 'Rupturing or boring thorough or breaking in' means to overcome the impenetrable fortress-like shell representing a creature's formidable and virtually irresistible natural sexual inclinations that are inherent to all the living beings, and thereby preventing this sexual instinct from getting aroused or activated, and raising its ugly hood to create unnecessary disturbance to the mental poise and mental concentration of the spiritual aspirant, causing undue hindrance in his path and obstructing his progress to reach his desired objective in life. Thus, rupturing or breaking of this hardened shell of formidable sexual instincts having their physical location in the region of the genitals is a metaphoric way of saying that the ascetic has overcome one last strong resistance to his spiritual liberation and enlightenment.

He should consciously fix his attention in this region of the genitals between the thighs, and consciously withhold or harness the energy of his vital life forces. That is, by observing self control over his sexual urges, by diligently following the principles of abstinence and continence, the ascetic is able to accumulate a great reservoir of energy within himself which he can use to divert his Pran from wasting its vital resources and energy in pursuing pleasures of the senses and gratification of sexual impulses to more nobler and higher objectives in life.

³The four vital energy centers that are expected to be ruptured are the four 'Chakras' located in the region of the body above the genitals. These Chakras are whirling subtle energy centers in the body where great energy is lying trapped. The main objective of meditative exercises is to unleash this astounding source of subtle energy lying dormant in the body of an ordinary man, but activated in the body of a successful practitioner of Yoga. By activating these subtle energy centers, the ascetic or any practitioner of Yoga is able to master great mystical powers and authority that can be used by him for his own spiritual upliftment as well as for doing something good for others by being a source of their inspiration and moral guidance. It enables the practitioner to perform certain tasks that the ordinary man is not able to do with the limitations of his physical body.

The heated and energised and specially empowered vital winds are able to penetrate these four energy centers and help release their energy. The four Chakras are Muladhar Chakra located in the region of the genital, Nabhi Chakra located in the navel region, Anahat Chakra located in the chest region in the vicinity of the heart, and Kantha Chakra located in the throat.

Earlier it has been said in verse nos. 6-11 that the Pran representing consciousness should be diligently and consciously moved up from the lower region

of the body to the throat, traversing the navel and heart regions one by one. Now, this present verse nos. 12-14 clarifies what is meant by ‘consciously’ moving it up. It means that all the vital energy centers located in these regions are activated by being stoked by the vital wind forces moving around them much like a dormant fire in an oven is aroused when fresh wind or air is blown into it.]

15-16. Then the ascetic should diligently move the vital winds in the cluster of Naadis present in the throat. [That is, he should visualise that his consciousness is pulsating in the region of the throat where the energy center called Kantha Chakra is located.] This cluster has one hundred one Naadis. They trap within themselves the most stupendous and magnificent source of divine and supernatural energy called ‘Para Shakti’¹.

Some of the great Naadis located here are the Sushumna Naadi which remains perpetually submerged in the bliss obtained by realisation of the supreme transcendental Truth (and if the Pran enters this Naadi, it obviously also gets submerged in an everlasting ocean of bliss and contentedness that comes with realisation of the ultimate Truth). The Naadi called Virjaa is directly linked to the supreme Brahm (i.e. it has direct link with the supreme consciousness residing in the body of the individual creature, and when this Naadi is activated the individual can have direct access to that consciousness). The other two important Naadis here are called Ida which is located to the left side of the throat, and Pingla that is located in the right side of the throat. [These two Naadis move up to the nostrils located in their respective sides.] (15-16).

[Note--¹This *Paraa Shakti* represents the supernatural transcendental dynamic powers of the pure conscious Atma, and it is revealed in the form of the ability of the man to ‘speak’. This is because the very first sign of creation coming into being is deemed to be the ‘Naad’ or the cosmic sound element that was generated when there was some activity in the calm surface of the cosmic ether. This Naad was envisioned as the first cosmic movement in the otherwise calm and tranquil ether which created a ripple that formed into a wave moving across the surface of ether, causing energy to be generated, which in due course powered the cosmic dynamo at the time of the initial phases of creation at the time of its very beginning. Naad was conceptualised as the word OM, and the whole gamut of spoken language is incorporated in the basic sound created when this OM is pronounced. So, the ‘voice’ or ‘sound’ generated in the throat of a living being is the most evident and irrefutable proof of the supreme Consciousness, which is responsible for the unfolding of this entire creation, being present inside the body of the individual.]

17. Between these two Naadis (i.e. between the Ida and Pingla Naadis) is the one Naadi which is considered the best and the most magnificent one amongst all the Naadis from the spiritual perspective¹. A wise and expert practitioner of Yoga who is acquainted with this Naadi is deemed to be knowledgeable about the Vedas and their tenets. He is deemed to have acquired truthful knowledge and understood the real meaning and purpose of the doctrines of the Vedas and other scriptures, such as the Upanishads. [This is because the main thrust of Vedic and Upanishadic teaching is to provide liberation and deliverance to the soul of the spiritual aspirant. Since this Naadi, called the Sushumna Naadi, helps in achieving this aim, it follows therefore that a person who has been able to gain access to this Naadi by means of Yoga and Dharna (strict self discipline, singularity of purpose, diligent practice of various tenets and doctrines with a steady mind and firm determination, and having unwavering faith and conviction in the teachings of the scriptures) is the one who has realised the main objective of studying and preaching of the Vedas and the Upanishads by finding the ultimate emancipation and salvation for himself, i.e. for his Atma—which is pure

consciousness and synonymous with his Pran or vital life forces, as well as is his true identity—by breaking free from the fetters of this gross body and escaping from its enclosure to mingle and inseparably merge with the primary air or wind element which pervades uniformly in the cosmic space outside the limitations set by the physical structure of the body.]

There are said to be a total of seventy two thousand fine Naadis in the body². These are called 'Taitil' (17).

[Note--¹This *Naadi* is called the Sushumna Naadi which goes up to the Brahm-Randhra and provides liberation to the diligent practitioner of Yoga when his 'Pran Yau' or his vital winds, along with his consciousness representing all his vital functions and life in its entirety, makes its exit from the body through this hair-like slit located at the top of the skull. According to the philosophy of Yoga, this Sushumna Naadi is the only duct in the body which can provide liberation to the practitioner's soul when the latter rides piggy-back on the vital winds as they find their way inside this duct from its lower end at the base of the spine, at the place called the Kundalini, and then, pushed up by the energy released from this ruptured Kundalini, sneaks up this Sushumna Naadi to finally reach the top of the head where the Brahm-Randhra is located. Finally, when the Pran is sufficiently heated and energised by constant practice of Yoga (physical exercises of meditation) and Pranayam (breath control and harnessing the latent energy of the wind element), it manages to rupture or split open this aperture and escape from the body into the outer free cosmic space. This is just like a prisoner escaping from the walls of the prison and set free in the outer world. Refer verse nos. 18-19.

²The Jabal Darshan Upanishad and Yogchudamani Upanishad of the Sam Veda tradition, the Trishikhi Brahmin Upanishad of Shukla Yajur Veda tradition, and the Yog tattva, Tejo Bindu and Dhyan Bindu Upanishads of Krishna Yajur Veda tradition are amongst the major Upanishads which deal with this concept of the Naadis and Yoga. Separate appendices of this volume also explain these concepts in quite detail.]

18-19. 'Dhyan Yoga', literally meaning meditative exercises done by intense concentration of the mind and use its energy as if it were a sharp-edged knife (much like the use of laser beams to perform complicated surgery in modern medicine), can be employed by the practitioner of Yoga (i.e. by the seeker of true liberation and deliverance) to rupture or pierce through or bore into all the Naadis and let the Pran enter them. But the Sushumna Naadi is the only one which cannot be broken through or its sanctity violated¹.

A wise and sagacious person is one who pierces all the Naadis in this life itself. This is to ensure that his Pran or vital winds and life forces present in his body, which had been till now wandering aimlessly in the subtle space inside the gross body, is able to enter into these ducts and move up the correct path that can lead to its proper destination. Since the wind trapped inside the body has originated from the all-pervading free wind or air element present in the cosmic space, its 'natural destination' is this cosmic space, and its 'liberation' is its escape from the enclosure of the gross body and mingling with the parent body of the cosmic wind outside. This is its final 'deliverance' from all artificial entrapments created by the gross body because once outside, the air element would merge indistinguishably with the cosmic wind element and lose its independent identity. A realised ascetic allows this to happen when he uses the will power and determination of his mind to forcefully make his Pran to bore into the various Naadis, and move inside them. Once inside, the energised and heated Pran unclogs all the veins and nerves by its mere power of force and de-toxifying abilities, and moves freely inside them. It gradually moves up the body much like hot air, allowed to enter a network of tubes, has a propensity to move

freely inside them and head upwards because of the fact that any hot air moves up and not down. Pran, being lighter or 'subtler' than all the other elements in the body because it now resembles hot and energised air or vital wind element, has overcome all resistance and is able to enter that path that leads to arousal of the hitherto dormant spiritual energy lying trapped in the heart as the pure consciousness of the creature. Determined and steadfast practice of meditation, along with contemplation on the main objective of doing Yoga and concentrating upon the Truth, keeps the ascetic firmly on his path.

In its final leg, the Pran is able to sufficiently gather enough energy and force and momentum to unfurl the energy in the coiled Kundalini² at the bottom of the spine. When the Pran sneaks into it, it finds entry into the Sushumna Naadi which has its lower end blocked by this Kundalini. Heated vital winds then snake up this tube, much like mercury moving up the thermometer, and finally reach the top of the head at the spot called the Brahm-Randhra. When the pressure builds up, the final explosion occurs, and this Brahm-Randhra splits open, allowing the Pran to escape into the outer space for ever. This stage is called 'Kaivalya Mukti', or the 'one of its kind' of liberation and deliverance for the aspirant seeking freedom, because once the Pran merges with the cosmic wind or air element, there is no question of its re-entering the body. This is because the body of such an ascetic is allowed to disintegrate into its basic elements, such as the earth, water and fire. The subtle space inside the body would then automatically coalesce with the open space outside. No trace of the earlier creature remains. This is obviously the final closure of the scene for him.

Thus, the wise and sagacious practitioner of Yoga should use the inviolable authority and majestic influence of his Atma, i.e. the astounding supernatural power of the pure conscious 'self', to firmly direct and strictly order the mind and the intellect to use their stupendous abilities and skills along with the energised and heated vital winds called Pran present inside the body to jointly rupture and bore through the different Naadis and penetrate them. That is, the wise ascetic uses the stupendous and powerful authority inherently bestowed in his own 'self', called his pure conscious Atma, to diligently and purposefully divert all the efforts of the two powerful instruments that he has at his disposal, i.e. the Mana (mind) and the Pran (vital winds and other life forces inside the body), to actively practice strict Yoga (as described in this Upanishad).

This Yoga practice then becomes as potent, powerful and effective as a heated sharp-edged knife or 'Kshuri' that enables the ascetic to symbolically cut through the Naadis in a surgical and precise fashion. The revitalizing Pran then enters them and completely fills them. Then the Naadis become as vibrant and invigorated as the healthy Jasmine flower which gives out a sweet fragrance typical of it (18-19).

[Note--¹In other words, since this Sushumna Naadi symbolically represents the eternal and irrefutable Truth in creation, and remains soaked in its exuberant glory as mentioned in verse no. 16 above, it is impossible to subdue it and cause any disturbance in its serenity. This is a metaphoric way of saying that once the ascetic reaches that stage of self-realisation and Brahm-realisation when he has realised the actual Truth and the eternal fount of beatitude and felicity attendant with it, no force in creation can ever sway him from his exalted stature. He is deemed to have reached the pinnacle of spiritual achievement where he becomes invincible for the myriad temptations and delusions surging in the world which drown all other creatures in their swirling whirlpool.

The word *pierce* when used in the spiritual context is to overcome the resistance of the physical body and its various components, including the Naadis, to any effort

that causes inconvenience or discomfort to it. Yoga is a rigorous self-disciplining spiritual exercise that does not compromise on principles. Since the body is accustomed to remaining engrossed in comforts and enjoying pleasures emanating from the material world, it is natural for it to resist any change in the status and be subjected to control and discipline. The Naadis are singled out for such ‘piercing or rupturing’ or vanquishing or overcoming or subduing because it is through the network of Naadis that the body keeps itself alive as consciousness flows through them. The Naadis carry sense impulses from one part of the body to the other; it is through them that the blood flows; it is through the Naadis that the mind is able to receive the sensory inputs from the sense organs located on the surface of the body and then help the body to respond; it is the Naadis which are like the central network of wires and circuits of an electronic equipment. If the Naadis are blocked or made to stop working, the body would be as good as dead. Hence, the best way to control the entire edifice of the body is to control its command and control network in the form of the Naadis.

²*Kundalini*—The Yog Kundali Upanishad, Canto 3, verse nos. 12-16 of the Krishna Yajur Veda tradition is dedicated entirely on this concept of Kundalini; it is Chapter 27 of this volume. Other major Upanishads that deal with the topic of Yoga also deal with the concept of Kundalini because both are intertwined concepts.]

20. In this way, the wise ascetic should properly understand how to establish his control over the different Naadis, those which are conducive to his spiritual upliftment and therefore considered ‘Shubh’ or auspicious (such as the Virja, Pingla and Ida Naadis mentioned in verse no. 16) as well as those which relate more to his worldly interactions and mundane existence (such as the Naadis that control his digestive, excretory and reproductive functions).

The Sushumna Naadi is superior to all the Naadis in the body, and the wise and sagacious ascetic is one who focuses his attention on this Naadi. That is, he diligently practices to divert his Pran (vital winds and life-infusing conscious factors) into this duct and channelise the Pran’s energy into activating it so that the Pran can ultimately reach the point on the top of the head, the Brahm-Randhra, from where it can finally make its exit from the body for good, thereby liberating the ascetic from the shackle of the gross body for ever, and delivering his soul from the compulsion of having to live in this body to the accompaniment of its associated torments.

When his attention is exclusively and firmly fixed on this Sushumna Naadi, he obtains access to the supreme transcendental Brahm representing the eternal fount of truth, beatitude and felicity. This achievement provides him with permanent liberation and deliverance from the body. In other words, he does not have to take birth again with a body¹ (20).

[Note--¹This is because he has already detached himself from all the deeds done by the body, being totally unattached with the latter, and not-involved in the world in which the body lives, thereby freeing him from either being associated with these deeds and their consequences, whether good or bad, or with any of the entrapments of the world and the latter’s tainting effects. He has also realised the delusory nature of the artificial world of material objects, and therefore has lost all charms and attractions for it along with the material comforts and sensual pleasures that it offers to the creature. With no baggage of insatiate desires and yearnings, no unfulfilled aspirations and hopes, he has nothing pending and unfulfilled at the time of death for which he would want to take another birth in order to finish off his incomplete tasks or fulfill his dreams. This state of total and sincere renunciation entitles him to become a ‘liberated’ soul, and since ‘soul’ is an disembodied ethereal body of infinite cosmic proportions, being another form of the cosmic wind or air element, it simply

coalesces with this element as soon as the ascetic dies and the Pran leaves the gross body by rupturing the skull at the point of the Brahm-Randhra.

In this context, refer Amrit Naad Upanishad, verse no. 27, and Yog Kundali Upanishad, Canto 3, verse nos. 12-17 both of which belong to the Krishna Yajur Veda tradition.]

21. A person who has won control over his mind and intellect by strict diligence and discipline, who has been able to effectively control his senses and has learnt to focus his attention at the place he wishes it to be focused instead of becoming a mute spectator and a humble serf of the natural wayward and wandering tendencies of the mind as well of the various sense organs, who has inculcated the habit of self-restraint and self-discipline, who has vanquished his natural instincts and willingness of the body and the mind to become prey to delusions and illusive charms of this world—such a person should move to a calm, quiet, serene and uninhabited place where there is no disturbance of any kind, physical or mental.

In such an environment conducive to spiritual upliftment, he should practice meditation and contemplation which enables him to establish a union or coordination between his own consciousness (Atma) and the cosmic Consciousness that pervades throughout the creation as the eternal, ubiquitous and quintessential Truth. This is called ‘Nishang Tattwa Yoga’¹ because it involves the application of the principles of Yoga (both physical exercises of meditation and its mental aspect that helps to fix attention on some high and noble objective using the method of contemplation, deliberation and research) to arrive at the elementary principles of Nature that are irrefutable, unequivocal truths do not need props to support them.

By constant and diligent practice of this type of Yoga, he should become totally neutral and full of equanimity, dissociating himself from both the gross body as well as the world. He should be dispassionate towards everything in this world. [In other words, it should not matter to him whether he dies or lives, whether his body suffers or enjoys the comforts of the world, and whether or not the world exists at all.] (21).

[Note--¹The word *Nishang* (or *Nishung*) means without any accompaniments; with no support and help; lonely and one of its kind. The word *Tattwa* means the underlying principle of anything in existence; the essential and fundamental aspect of anything; the basics of any entity; the essence; the ‘principal principles’ of any philosophy. *Yoga* of course means to bring about a union or establishing coordination between two entities; the practice of meditation and contemplation; the physical exercises involved in these practices as well as the mental abilities to contemplate, deliberate and research and arrive at the desired results.]

22. Even as a Swan flies off into the vast sky after breaking free from the net which had kept it imprisoned, a wise and enlightened living being (the ‘Jiva’; in this case the ascetic or a practitioner of Yoga) is able to break free from all the fetters that shackle him to this artificial deluding world resembling a vast, fathomless and seemingly uncrossable ocean with its rapidly swirling whirlpools, endless stretch and numerous other hurdles which literally keep the creature trapped and hallucinating in their midst¹.

Practice of Yoga as described in this Upanishad enables the creature to overcome these insurmountable hurdles and finally cross over this ocean-like world and become free for all times to come (22).

[Note—¹Refer Shwetashwatar Upanishad, Canto 1, verse no. 5, 8 of Krishna Yajur Veda tradition. In it the world is compared to a surging river and this metaphor is

beautifully employed to describe the horrific characteristics of this world. This Upanishad is Chapter 5 of this volume.]

23. Even as the flame of the oil-lamp exhausts all the oil and burns down its wick at the time of its final dissolution into the fire element (i.e. like the time when the flame finally flickering away and dying when all the oil is exhausted and even the wick has been burnt to ashes, leaving nothing behind), the realised and acclaimed Yogi (ascetic) also burns all his deeds and their associated results, good or bad, in the powerful fire of Yoga (meditation and contemplation)¹ to obtain final liberation and deliverance from this body by merging his soul or pure conscious 'self' represented by his life-giving vital winds called Pran into the eternal and infinite cosmic Consciousness which is the supreme transcendental 'truth' and the essential primary 'element' in creation from which all other things have emerged. This is called his 'Nirvan' or final emancipation and salvation from where there is no return (23).

[Note—¹See note to verse no. 20.]

24. A wise, erudite and expert ascetic who has sharpened his knife symbolising his steady mind and sharp intellect as well as firmness of conviction and a determined will, by rubbing this knife vigorously against the stone symbolising profound renunciation and total detachment from anything related to this world and the body, employing the powerful force associated with Pranayam done by using the ethereal word OM for the purpose of rubbing the knife against this stone, is not only able to cut through all the fetters symbolising various faults associated with this perishable world of material objects and artificiality but also ensures that no fetter pertaining to this delusory and entrapping world would ever trap him in its tentacles (24).

25. When that self-realised and wise man has abandoned all his desires and yearnings pertaining to this world, he would not have any kind of expectations and hopes from it. [That is, when he has no desires, no wishes, no longings, no aspirations and no greed, he would not expect any return for the deeds done by him with his body. This makes him greatly dispassionate towards the world and detached from its entrapping enticements.]

When he is not under any delusions, when he has no worldly obligations to fulfill which might force him to bend rules and do things even unwillingly, when he is not deluded by foisted false promises of getting imaginary happiness and joy emanating from this perishable world, and mislead by illusionary sources of Amrit (which is the ambrosia of eternal beatitude and felicity), it is only then he can sincerely pursue the path of spiritualism that leads to the truthful source of Amrit. In other words, he acquires the mystical ability to ferret out the 'truth' from the labyrinthine alleys of illusions and falsehoods that are the hallmarks of this artificial world and its material objects of comfort and pleasure.

This truthful source of Amrit provides him real and eternal beatitude and felicity. Such a realised and fortunate ascetic does not get tied to any fetters any longer, or be ever shackled to this body or the world. Nothing can trap him; nothing can tie him down. This is verily what this Upanishad proclaims; this is its profound and glorious teaching (25).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 12

Sarwasaar Upanishad/Sarwasaaro-panishad

This Upanishad follows the traditional pattern of raising queries and answering them in order to elucidate profound metaphysical maxims and axioms in a very succinct manner by way of precise and clear-cut definitions, highlighting their basic tenets and fundamental precepts. Thus, concepts such as ‘Bandhan’ or getting bound in shackles, and ‘Mukti’ or being liberated from the fetters that confine the creature’s soul or Atma and prevent its independence and salvation, the concept of ‘Vidya’ or truthful knowledge of the reality and expertise in it, and its opponent ‘Avidya’ or lack of this knowledge which is tantamount to ignorance, remaining deluded and bound in fetters, the concept of the four states of existence of the pure consciousness and the five ‘Koshas’ or the sheaths that surround the true ‘self’ of the creature, the concept of a ‘Jiva’ or the independent living being, and the ‘Kshetragya’ or the authority who has complete command over this individual being, the concept of ‘Jiva-Atma’ or the soul of this individual creature and the ‘Parmatma’ or the supreme Soul of the creation, the concept of ‘Maya’ or delusions and misconceptions about the reality etc.—all have been beautifully explained in this Upanishad.

This is also the reason why this Upanishad is named ‘Sarwasaar’—for the word ‘Sarwa’ means ‘all and comprehensive’, and ‘Saar’ refers to ‘essence, fundamental, basic, principal tenets or definitions’.

When the questioner is made aware of the fundamental principles about these metaphysical concepts, he is made to realise the truth about the Atma which is his truthful and pure conscious ‘self’. It is asserted that this ‘self’ is beyond the purview of death and birth, of the idea of being a ‘doer’ of deeds and therefore being either a sufferer from or enjoyer of their consequences, of having a name and form with a physical body having sense organs, of being subjected to and affected by the numerous pains and miseries arising out of various torments and sorrows that are natural to this mortal material world and the equally mortal gross body engulfed by Maya (delusions, illusionary attachments and misconceptions about the truth).

This Atma or pure conscious ‘self’ of the individual creature is immaculate and wholesome. This ‘self’ is eternally free and unshackled, and the notion of ‘being bound’ is simply out of ignorance of the truth and the true nature of the ‘self’. It is a microcosmic counterpart of the cosmic Consciousness known as the supreme transcendental Brahm. This last awareness is the main thrust of all Upanishadic teaching efforts.

We should note here that the basic tenets of the Upanishads have a striking similarity to the religio-philosophical beliefs of the great Christian saint named *Thomas Aquinas*. An entire set of religious doctrines based on his philosophy of the soul, human knowledge and God is known as *Thomism*. St Thomas was born 1224/25 A.D. and died 7 March, 1274. He was a leading philosopher and theologian of the Catholic Church and taught at the University of Paris. He was a prolific writer and penned about eighty great books on the subject of theology and philosophical aspects of religion. One of his great works is *Summa Theologica* which he wrote between

1265-73, and was his last major treatise on religious philosophy. His profound doctrine is known as *Thomism*. This is a philosophical and theological system developed by him which has great similarity with the philosophy of the Upanishads. Briefly it states that 'the human soul is immortal and a unique subsistent form, that all human knowledge is based on sensory perceptions that are experienced by him but it also depends upon the mind's reflective capacity, and that all creature's have a natural tendency to love God that can be perfected and elevated by grace and application'.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
 _____ॐ_शान्तिः_।_शान्तिः_!!_शान्तिः_!!!_

The meaning of this Shanti Paath is given in appendix no. 1.

1. What is 'Bandhan' or being tied in shackles? What is 'Mukti' or being freed, getting unshackled and finding liberation? What are known as 'Vidya' or knowledge and special awareness about anything, and 'Avidya' or the ignorance and its accompanying misconceptions about the same subject?

What are the four states of existence of the creature which are known as 'Jagrat' or the waking state of consciousness, 'Swapna' or the dreaming state of consciousness, 'Sushupta' or the deep sleep state of consciousness, and 'Turiya' or the state which transcends these three states?

What is the meaning of the five 'Koshas' or sheaths that surround the Atma and which are known as 'Anna Maye Kosh' or the food sheath, 'Pran Maye Kosh' or the vital wind or air sheath, 'Mano Maye Kosh' or the mental sheath, 'Vigyan Maye Kosh' or the intellect sheath, and 'Anand Maye Kosh' or the bliss sheath?

What is meant by the following terms—'Karta' or the doer of deeds, 'Jiva' or the individual living creature, 'Panchvarga' or five classes of subtle elements that constitute the entity known as the creature, 'Kshetragya' or the sole authority that rules over the individual creature, 'Sakshi' or the neutral observer and witness to all that is happening in this world and is being done by the body in which the pure consciousness known as the 'self' of the individual creature lives, 'Kutastha' or the eclectic entity which subtly and secretly resides as the Atma or the pure consciousness of all living creatures and which lives even after the gross as well as the subtle bodies perish, 'Antaryami' or the omniscient and all-knowing pure consciousness that resides in the inner self of all living beings, 'Pratagyatma' or the visible, tangible and verifiable form of the cosmic Soul in the form of the living creature, and 'Parmatma' or the supreme transcendental Soul of the creation that is invisible, intangible and imperceptible but is an irrefutable, immortal, absolute and unequivocal Truth of creation?

Finally, what is this entity known as 'Maya', or delusions and misconceptions about the actual truth, and how does it affect the creature and entangle it in its vicious and uncompromising net? (1).

2. The same pure consciousness known as the Atma assumes two roles, one as the 'Jiva' or the individual living creature who has a body and is therefore subjected to

the influence of all the characteristics attributed to this gross and perishable body, as well as to the various limitations imposed by it on the Atma, and as the 'Ishwar' or the supreme Lord of all that exists, including the individual creature, who is not under such influences or limitations.

This exalted, sublime, divine and eclectic entity known as the Atma—which is most wise and enlightened and the Lord of all existence in its role as the supreme transcendental truthful consciousness needing no proof such as the existence of an active physical gross body to establish its veracity and existence—assumes (under delusory effects of the various misconceptions that are integral part of the artificial world in which this Atma lives as a creature) that it has a 'physical body'. This conception that 'I have a body', which is actually a misrepresentation of the actual truth, creates a sense of ego and pride in the Atma, a sense of belonging and attachment¹. It is this misconception that is at the root of all fetters that tie down the inherently and eternally free Atma of the creature, and prevents its liberation and deliverance from the body as well as the world in which this body lives and with which it is intricately entangled, along with their attendant problems which are natural and inherent to them. This is called 'Bandhan'—literally, a bondage, a tie or fetter that shackles the Atma.

On the contrary, to be dispassionate towards the body, to have no sense of ego and pride in this body and its achievements or feel dejected and fallen at its failures is called 'Moksha' or 'Mukti', which is being liberated and delivered from all shackles that tie down the creature and prevent its emancipation and salvation (2).

[Note--¹The Atma is inherently and primarily un-encumbered and unattached to anything, being a disembodied 'spirit' much like the wind or air element. It is, like this wind or air element, all-pervading and omnipresent as well as eternally free and liberated. But when this same wind is enclosed in, say, a mud pot, it appears to have a body which is the 'mud pot'. Essentially, the air inside the wall of the pot and the one outside its wall are the same and non-differentiable, but they appear to be two separate airs due to ignorance about the fundamental truth both about the air element as well as the mud pot.

The same thing applies to the sky element inside and outside the pot. The ignorance that both the skies are the same leads one to name the space inside the clay pot as the 'Ghatakash' (Ghat = pot; Akash = sky) and the one outside it as 'Mahakash' (Maha = greater; Akash = sky). The purity and basic characters of the air or sky within and without this pot remain unaffected by the physical mud wall of the pot.

Similarly, the Atma in its cosmic form as the supreme transcendental Consciousness and as the soul of the individual creature is the same and one, being non-dual in its essential character like the air or sky cited above. It is due to the misleading and corrupted vision created by the intervening delusions called Maya that act like a veil surrounding the Atma when it assumes the form of the individual creature living in this gross world characterised by this special quality of covering everything in a thick layer of Maya that the Atma begins to think it has a 'physical gross body'. Once caught in this delusory whirlpool, it gets sucked in its vortex of more misconceptions, leading to the situation that the basically pristine pure Atma forgets about its natural character and becomes a worldly creature who thinks that his true identity is the body, and therefore begins to link himself with everything with which the gross body is linked. The Atma becomes proud of its grand status of being a human being, for example, and looks down upon other creatures in creation; the Atma begins to treat other creatures with contempt and disdainfully looks upon them as if they were much inferior to it; the Atma looks upon all the achievements of the body as its own accomplishments, becomes proud of them and consequentially haughty of the possession of the body and its abilities; the Atma thinks that all the

deeds done by the body during the natural course of its interaction with the material world in which the body lives as being done by it (the Atma), and therefore is entitled to the rewards of these deeds, etc.

These misconceptions of the Atma vis-à-vis the body is called 'ignorance-based delusion' about its 'truthful self'. In fact, the Atma is an ethereal cosmic disembodied pure conscious 'spirit' much like the cosmic wind or air element, or even the sky element which has no forms and colours of their own.

The concept of Mukti or Moksha have been expounded in other Upanishads as well, some of them are Muktiko-panishad, Mandal Brahmin 2/4/3-4; Paingalo-panishad, 3/9-11; Tejobindu Upanishad, Canto 4; Maho-panishad, Canto 2, verse nos. 36-73 etc.

A very simple example would illustrate how the Atma gets trapped in this world. A river has its origin in the mountain glacier and cascades down its slopes and heads straight to the ocean. This is the ideal situation. But it is not so in practice as it faces numerous natural and man-made obstacles in its path. There are hills and other geographical obstacles which are natural, and dams, cities and other man-made hindrances which force it to change its normal course, get diverted and sometimes lost in this maze. Waste, city and industrial effluents and other forms of pollutants taint its pristine clarity and purity, thereby tarnishing it and robbing of it of its life-rejuvenating character. The river is milked of its dynamism and energy, and by the time it reaches the ocean it is reduced to a forked delta which appears a distant faint image of the gush of sparkling and frothy milk-like ambrosia that appears to be descending directly down from the heavens upon the earth. The Atma or the individual creature's consciousness or his soul is similarly subjected to numerous impediments in its natural course heading to its primary resting place with Brahm, the supreme transcendental Consciousness. As a result, the Atma gets distracted from its course, getting entangled in Maya and its delusory effects.]

3. This misconception about the true and real nature of the 'self', called the Atma of the creature, as being the 'gross and perishable body' is due to the lack of truthful and holistic knowledge about the Atma's fundamental and essential form as the ethereal, sublime, divine and holy entity which is synonymous with the supreme transcendental Brahm. This erroneous view that the 'self' is the body instead of the immaculate, pure conscious, eternal and imperishable Atma which remains totally detached, distinct and separate from the body is the basic cause of generating the sense of ego and pride because the creature thinks that the achievements of the body are his own achievement, that 'he' as the body has such and such marvelous potentials and powers. This creates a tendency of getting attracted to and attached with this gross body.

Once mislead into believing that the body is one's true 'self', the creature begins to remain engrossed in enjoying the sensual pleasures and comforts that the organs of the body derive from the sense objects of the material world, as well as suffer from the countless miseries and pains that this body is subjected to.

'Avidya' is defined as the fundamental ignorance about the truth and reality of the Atma. It is the basic misconception about the Atma vis-à-vis the body and the world, the deluding idea that the 'self' is the gross perishable body and not an independent exalted entity which is eternal and imperishable as well as completely different from the body, having got nothing to do with anything related with the grossness of the body.

On the contrary, that means by which this ignorance about the truth is dispelled, that which removes all sense of ego and false pride that the creature has

developed about the body and its abilities and powers, its strengths and potentials, its beauty and charm etc. is called 'Vidya' or truthful knowledge (3).

4. The living creature has fourteen instruments or organs in its body, such as the 'Mana' etc.¹ by which it perceives the existence of the gross external material world in the form of various stimuli emanating from the latter's sense objects. The state of consciousness which 'illuminates' the world for the creature, or makes it possible for the creature to be able to perceive the external material world of sense objects by its various sense organs much like the Sun illuminating the earth and making its objects visible, is called the creature's 'Jagrat state' or the waking state of consciousness. This is the first state of existence of the consciousness and it enables the creature to receive the world through the various sense perceptions which have their origin in the sense objects of the external world, such as the inputs of sound known as the perception of hearing etc. [The others being—the inputs of feeling known as the perception of touch, the inputs of shape, forms and colours known as the perception of sight, the inputs of various odours and fragrances that are grouped together and titillate the olfactory organs to produce the perception of smell, and the inputs of different chemicals which manifest themselves as the perception of taste.]

When the creature sleeps, the gross organs of perceptions (ear, eye, nose, tongue and skin) become inactive, and therefore the creature does not receive any impulses from the outside world. But the various 'Vasanas' or worldly passions, desires, yearnings, aspirations, greed, hopes and expectations that the creature has accumulated while in its waking state of consciousness are carried over to this state of sleeping state because though the gross body is virtually inactive, the subtle body consisting of the mind-intellect complex is very much active and agile. So, it creates its own world of imaginations, called the 'Swapna state of existence' or the dreaming state, which is often more fascinating, colourful, mysterious and majestic as well as more potent and far-reaching in its import than the physical world during the waking state of consciousness. [This is because during the waking state, the creature was constrained by the limits imposed by the grossness of the physical body, whereas during the dreaming state no such barriers exist as the interior mind and intellect are subtle instruments of the body as compared to the external organs of perceptions and actions of this body.] This is the second state of existence of the consciousness.

When the sleep progresses further, a stage is reached when the subtle mind-intellect instrument of the creature also become inactive and immune to all perceptions much like their gross cousins, the physical external organs of the gross body, and this state of consciousness is called 'Sushupta state' or the deep sleep state of consciousness. During this state, the creature does not even dream of anything, and there is complete state of oblivion which is tantamount to bliss and peace. This is the third state of existence of the consciousness.

Finally comes the fourth state of existence of the consciousness called the 'Turiya Chaitanya state' or the transcendental state of pure conscious existence which goes beyond the third stage. In this state, the creature exists in its purest form as the pure consciousness which is undiluted, uninterrupted and unpolluted by any impulses or inputs from the external world. This results in its pristine and immaculate form as 'consciousness' to shine through (much like the flame of the candle which shines with all its brightness and splendour once the tainted glass covering around it is removed). This consciousness is the true 'self' of the creature and his real identity. Thus, it is the 'self' as pure consciousness that is the witness of the existence of the other three states of existence of the creature. This 'self' is imperishable and without a birth or

beginning. [This is because the other three states continue to appear and disappear in a rhythmic cycle as the creature wakes up to face the world after his phase of sleep is over, only to go back to sleep again when it is exhausted, and wake up again refreshed and rejuvenated from sleep. But the fourth state is like the Sun in the sky which shines on the world and lights it up, making it visible to the creature. This Sun is unaffected by anything happening in and to this world, and remains completely dispassionate and detached from anything mundane and terrestrial. Nights and days appear and disappear in a cyclic manner, but the Sun remains the same. During the night it is erroneously assumed that the Sun is no more, but as science has proved the Sun is there in the sky though it might not be visible to the creature during that period of time called the 'night' as it is shining on the outer side of the globe. This 'self' is called the Kutastha of verse no. 10.]

Thus it is observed that the creature's 'self' or pure consciousness has four states of existence² (4).

[Note—¹The *fourteen organs or instruments of the body* by which the creature perceives the external world in which it lives are the following—one Mana or the faculty of the mind, one Buddhi or the faculty of the intellect, one Chitta or the faculty of the memory, the sub-conscious mind, and the power to focus and fix attention, one Ahankar or the sense of pride in the body and its achievements as well as its stupendous abilities, five organs of perceptions such as eye, ear, nose, tongue and skin, and the five organs of action such as the hand, leg, mouth, excretory and reproductive.

Reference of Upanishads describing the four states of existence of the Atma or pure consciousness--Brihad Aranyak Upanishad of the Shukla Yajur Veda tradition 1/1/17-20, 2/1/16-20, 4/3/9-38; Brahmo-panishad of Krishna Yajur Veda tradition, verse no. 1, 20-21; Kaivalyo-panishad of Krishna Yajur Veda tradition, verse no. 12-14; Paingalo-panishad, 2/10-16 of Shukla Yajur Veda tradition; Mandal Brahmin Upanishad, 2/4-2/5 of Shukla Yajur Veda tradition.]

5. The gross aspect or part of the physical body which is build up of and nourished by the food eaten by the creature and the fundamental elements that this food contains as its basic nutrients is called the 'Anna Maye Kosh' or the food sheath. [This Anna Maye Kosh acts as an envelop that surrounds the Atma or pure conscious self of the creature, and hence the name 'Kosh' or a shell or a veil that acts as an enclosure surrounding the 'self' like an envelop enclosing its contents.]

When Pran and other fourteen types of life-infusing vital winds enter this gross and basically lifeless body formed by the food eaten by the creature and begin moving inside it, thereby lending it their own dynamic forces of 'life' and making it show all signs characteristic of 'life', then the part of the body in which these vital winds move about is called the 'Pran Maye Kosh' or the vital air sheath. [This sheath is subtler than the earlier sheath because it has air or wind element as its basic constituent instead of the grosser elements of food eaten by the creature that constitute the outer shell known as the Anna Maye Kosh.]

The third layer that surrounds the Atma is the 'Mano Maye Kosh' or the mind sheath because it consists of the subtle mind which helps the creature's pure consciousness or 'self' to perceive the presence of the body and the external world in which it lives by the means of the fourteen instruments (as described in verse no. 4 above). This Mano Maye Kosh is internal to the other two sheaths, and closer to the Atma than them. [The mind is the subtle reception center and coordinator of all inputs originating in the external world received through the organs of perception, and it gives commands to the organs of action present in the distant corners of the body. The

mind acts as the head clerk of the Emperor known as the Atma of the creature. The inputs are sorted out by the mind and necessary information stored for future retrieval in the archives of the memory and the sub-conscious. But like all head clerks, the mind cannot decide policy matters and take important decisions, and for this it relies upon the intellect called Buddhi.]

When the conscious Atma or the pure ‘self’ of the creature coordinates the inputs of all the earlier three instruments at its disposal (i.e. the ‘food sheath’ consisting of the gross body with its sense organs of perception and action, the ‘air sheath’ which enables the body to breathe and live a fruitful life as an active entity instead of lying like a dead log of wood, and the ‘mental sheath’ which helps the Atma to make sense of all the inputs that it receives and which helps it to coordinate between the different disjointed facets of creation into one meaningful existence) and ponders over the alternatives and take intelligent decisions, it (i.e. the Atma) is helped in its endeavour by the subtler aspect of the mind called the ‘intellect’ or the ‘thinking, analytical and discriminating aspect of the mind’. So, when the Atma is attended to by the intellect which aids in its intelligent thinking, helping it in analyzing the pros and cons of a given situation, discriminating between any given two options depending upon their worth and goodness, it is said to be surrounded by the intellect sheath called the ‘Vigyan Maye Kosh’. [Vigyan implies that knowledge which is based on intelligent thinking by the instrument of the ‘intellect’ that is ‘rational, well thought after, well deliberated and well balanced’, taking into considerations all the pros and cons of any given circumstance. It is different from impulsive actions which the emotional ‘mind’ might take. So, the intellect is analytical and clinical in its approach to any given situation in this world. It acts like the chief advisor and prime minister of the Emperor represented by the Atma.]

When the Atma, along with all these instruments at its disposal, lives in a state of oblivion about its true self and its nature even though it is being provided with all the necessary instruments represented by these four layers of metaphoric ‘helpers’ who can aid the Atma in its research and ferreting out the actual ‘truth’ about its self as well as the fact that this body which it erroneously thinks to be its true ‘self’ is actually not so, it is said that it (i.e. the Atma) lives in a cocoon of ‘blissfulness’.

It is like the case of the banyan tree not knowing or being unaware of the fact that it had its origin in the small ‘seed’ which is its actual and truthful form because the whole tree is subtly and secretly present in this seed and it is from this seed that it originates, and not in the external visible format as is seen of it in this world. This external form of the tree is mortal as one day or the other it would decay and die. Similarly, the creature remains oblivious of the fact that his body is perishable and would die some day, and the only entity that would not perish is the Atma. The new birth of the creature depends upon the Atma and not the body. [This mystery is beautifully explained by sage Yagyavalkya in Brihad Aranyaka Upanishad, Canto 3, Brahmin 9, verse nos. 28/1-28/7.]

The creature is unaware that this body is a bundle of grossness and reprehensible things (such as flesh, muscles, bones, blood, mucous, nerves and veins, faecal and other garbage etc. enclosed in a sac-like skin—refer Yagyavalkya Upanishad, verse nos. 14-17 of the Shukla Yajur Veda tradition; it is Chapter 17 of the third volume in this series), that this body is like a prison for him, that it is a swamp of miseries and torments. Similarly, the creature takes this world to be real and everlasting quite contrary to the reality of the situation; he thinks that the pleasures and comforts that the world provides is the best thing to be had and there is no better form of happiness

and bliss. And this basic misconception leads the creature to get neck-deep in this swamp and remain oblivious of the reality.

This ignorance about the truth makes it live in a fool's paradise when it remains engrossed in the world and enjoying its comforts and pleasures. This fourth state of blissfulness is known as 'Anand Maye Kosh' or the bliss sheath because the Atma is surrounded by bliss and happiness (5).

[Note-- Refer *Mudagal Upanishad*, Canto 4, verse 5 which lists these five Koshas. According to *Paingalo-panishad*, canto 2, verse no. 4 of the Shukla Yajur Veda tradition, these are the following—" 'Annamaye Kosh' or the food sheath, 'Pranmaye Kosh' or the vital wind sheath, 'Manomaye Kosh' or the mental sheath, 'Vigyanmaye Kosh' or the intellect sheath, and 'Anandmaye Kosh' or the bliss sheath. These sheaths cover the Atma or pure conscious self like various coverings or shrouds wrapping any object.

The *Annamaye Kosh* is that which was created by the intake of food, was nourished and developed by food, and at the end it finally disintegrates into the basic ingredients that constitutes food and merges with the earth element from where the food has derived its original ingredients. This forms the gross body of the creature.

The *Pranmaye Kosh* consists of the five vital winds (Pran, Apaana, Vyan, Udaana, and Samaan) along with the five organs of action (hands, legs, mouth, excretory and reproductive).

The *Manomaye Kosh* consists of the mind and the five organs of perceptions (ears, eyes, nose, tongue and skin), while the *Vigyanmaye Kosh* consists of the combined apparatus made of the intellect and these five organs of perception.

A combination of these three sheaths, i.e. Pranmaye Kosh (vital wind sheath), Manomaye Kosh (the mental sheath) and Vigyanmaye Kosh (the intellect sheath) is what is known as the 'Ling Deha' of a creature, or the ethereal form of the corporeal body. This is the subtle body of the creature.

The sheath in which the pure conscious self is not aware of the 'Ling Deha' is called *Anandmaye Kosh*. This forms the causal body of the creature".

These five sheaths are called the 'Panch Kosha'.]

6. The way a creature interprets any given circumstance and sees any given thing creates either a sense of attraction towards them in the mind and intellect of the creature, or a sense of apprehension, fear, dislike or outright revulsion for them. In other words, when the creature feels that the given circumstance or thing would provide him with comfort and pleasure, that they would be conducive to his general well being and good, the creature gets tempted by their allurements and begins to love them, thereby showing interest in them and drawing solace and happiness in being associated with them. The mind and intellect that has been conditioned to think positively and endearingly about any given circumstance or thing in this world in the hope that they would bestow comfort, pleasure and happiness to the creature, gratifying his needs for them in this world, then such a tendency of the mind-intellect complex is called the 'Sukha Buddhi'. [That is, when the mind thinks that the particular aspect of the world is good for the welfare and happiness of the principal, i.e. the creature, it advises the intellect accordingly, and then this intellect in its turn makes the Atma convinced that the particular thing is good for it. Even as an Emperor depends upon his ministers for feedback and advice, the Atma has to rely upon the mind and intellect to interpret and take decision in all matters pertaining to this world. This mind-intellect that perceives a sense of pleasure and happiness in anything pertaining to this world is called a pre-conditioned mind favourably disposed towards the material world and the comforts, pleasures and happiness provided by it. This notion makes the mind-intellect to be automatically favourable towards this world and

be positively inclined towards its material sense objects. This tendency of the mind-intellect is classified as 'Sukha Buddhi'.]

On the contrary, when the same mind and intellect interprets a given circumstance or thing in an adverse manner as not being conducive to the general happiness and well being of the creature and harming the latter's self interest, thinking that it might cause miseries and problems for the creature, it develops a sense of natural apprehension, fear, distaste or disinterest in it, even to the extent of creating an outright sense of repugnance and hatefulness for this given circumstance or thing. This natural negative bearing of the mind towards any circumstance or thing in this world is called 'Dukha Buddhi'.

The creature is called a 'Karta' or a doer of deeds because it consciously does so many deeds and takes so many actions in order to either acquire things or create circumstances that its mind-intellect is interested in, and avoid those in which it is not interested. [Since it is the physical body that actually does the deed or carries out the action under the inspiration of the mind and intellect, so when the creature begins to erroneously identify himself with the body as being his 'true self' instead of the Atma, it is said to be the doer of deeds. Actually, a wise and erudite creature is one who realises the subtle difference between the 'true self' which is the sublime, divine, subtle and ethereal Atma, and the gross physical body which is 'non-Atma' in the sense that it does not possess the auspicious eclectic virtues that characterize the Atma. The Atma is primarily pristine pure and a neutral witness to whatever is happening around it, being unattached to anything pertaining to the artificial world, being unaffected by the sorrows or joys that buffet this body, and being totally dispassionate towards everything that concerns both. Since the Atma has no desires, it need not make any efforts to fulfill them, and therefore it need not get involved in doing any deed to accomplish success in this fulfillment. On the other hand, the body is never satisfied as its organs yearn for constant gratification. This perpetually impels the body to compulsorily perform endless deeds as its obligatory function and duty. It fears that it would be labeled as lethargic, indolent and lazy if it does not remain active and constantly involved in some or the other activity. Even when doing Yoga (mediation) when there is no visible external activity, the creature thinks that he is 'doing' Yoga. So the creature becomes a 'doer of Yoga'. But this entire notion of doing and not doing is based on the fallacious premise that the body is the 'self' of the creature instead of it being the Atma which does not do anything, whether Yoga or anything else for that matter.]

The primary cause of all notions of sorrows and miseries as well as of happiness and joys is the existence of the five sense perceptions which are the senses of hearing having its focus in the sound emanating from the outside world, the sense of feeling something when it touches the skin, the sense of sight when something with a visible and tangible form and shape is seen, the sense of taste when anything touches the tongue and titillates the taste buds, and the sense of smell when the same titillation occurs in the nose. [In other words, when the creature has once experienced and witnessed the sense of happiness and satisfaction, or has literally 'tasted' the sweetness of worldly charms, no matter how transient and sorrowful they may be in the long run, it gets virtually hooked to them much like a drunkard gets hooked to his favourite drink or a chain smoker to his favourite pot in spite of being aware of their fatal health hazards. Once trapped, the creature would break all rules in the book to get at his desired object which gave him his illusive pleasure and comfort. This obviously leads to a chain of problems and their attendant consequences.]

When the Atma, which is the true self of the creature, is enticed into falling prey to this body's illusive charms and begins to participate in the body's actions and the deeds in the hope of deriving comfort, happiness, joy, pleasure and peace from this involvement, it gets entangled in the web of delusions and begins to hallucinate. In order to acquire that illusive happiness and peace, that comfort and pleasure that remains beyond its reach, the creature plunges into doing all types of deeds and taking all sorts of actions, whether they are auspicious, righteous and noble or not. The creature does not even bother to consider the consequences of such deeds and actions because he is under the influence of great delusions and is therefore hallucinating.

This delirious situation when the Atma lives inside a gross body and thinks that the body is its true self and identity, when it begins to think that the deeds done by the body are being done by its own self, when it remains ever engrossed in these deeds and either suffering from or enjoying the consequences of such deeds, when it never attains permanent peace and satisfaction from these deeds, when it yearns for more and still more in order to gratify its natural instincts and impulses, it is said that the Atma has become a 'Jiva' or a living being with a physical gross body. This term 'Jiva' is like a title attached to the Atma when it has a gross body and perpetually unsatisfied (6).

7. The Atma, which is the pure conscious self of the creature, is surrounded by five classes or groups of subtle elements that constitute the body of the creature. They are called the 'Panch Varga'. They taint the natural character of the immaculate Atma and impinge upon its freedom by influencing it and virtually keeping it bound in their characteristic shackles. This translates into the creature's distorted personality which is much divergent from what it ought to have been as the immaculate and pristine pure Atma.

This Panch Varga consists of the following group of subtle elements—viz. (a) the Mana or mind along with its other companions (i.e. the mind, the intellect, the Ahankar or the sense of ego, pride and self righteousness), (b) the Pran or vital winds that sustain life in the body and its various forms (such as Apaana, Vyan, Samaana, Udaana etc.), (c) the ability of the creature to have Ichha or to have desires, wishes, passions and aspirations, along with their astounding powers and potentials, (d) the three Gunas or qualities that are inherent to all the living beings and which determine the character and behaviour of the individual, such as the quality called Sata (which is the best of the three qualities and gives rise to noble aspirations and makes the creature righteous and upright), Raja (which is the medium quality creating worldly passions and the tendency to delve into things worldly) and Tama (which is the lowest quality creating a sinful tendency and a predominance of inertia and indolence), and (e) the various deeds broadly classified into those that are righteous, noble and auspicious, and those that are the opposite.

When the 'Bhut Atma', or the pure conscious self of the living being (creature) which has acquired a gross and perishable body consisting of the primary elements called Bhuts, lives inside this body and identifies its 'self' with it, then it has to bear the burden of this body which has been classified into five sections depending upon the above five classes of subtle elements, called the 'Panch Varg' as narrated above, which give the body of the individual creature its characteristic personality, define its basic characters and govern its behavioural patterns. The Bhut Atma cannot free itself from their influences as long as it lives in the body. [That is, as long as the consciousness lives in a gross body made up of the five elements such as the earth, water, fire, air and sky called the Bhuts, it is trapped in it like the air or the sky

element present inside the clay pot. Unless the clay pot is broken, it is not possible for the enclosed air or sky to merge with their primary cosmic forms present outside the wall of the pot.]

Thus, all the characteristic attributes and qualities that are inherent to these 'Panch Vargas' become invariably associated with the Atma; the Atma cannot disassociate itself from them and their influences as long as it lives in the body and identifies itself with the latter. The Atma becomes inseparably affiliated to and linked with these Panch Vargas and assumes their special characters because of its close association with them. Therefore, when the Atma has assumed the characters of the Panch Varga (or, when the pure self is influenced by the characters typical to these five classes of subtle elements mentioned above), it acquires a subtle body of its own, and it is called its 'Linga Deha' (the ethereal form of the corporeal body).

This attachment to the body consisting of the Panch Varga and assuming its typical characters and specific attributes are manifested in the form of the metaphoric 'knots' that tie the Atma to this body and assume all its flaws and drawbacks as its own. [Therefore, as it is obvious here, in order to find true freedom from this knot, the Atma would have to free itself from the basic cause of this entanglement, and it is ignorance and delusions about its actual and truthful nature and form. What is it? The answer is that the Atma has nothing to do with the body, whether gross or subtle; it is eternally pure and without any attributes whatsoever; it is pure consciousness and beyond the purview of any worldly taints and blemishes; it is perpetually liberated and therefore there is no question of it getting entangled or trapped; it is eternally enlightened and wise and so there is no scope of ignorance ever engulfing it, and the fact that it is behaving like an ignorant entity is due to its own willingness to get entangled. Then, how can the Atma break free from this fetter of ignorance and become awakened? The obvious answer is acquisition of truthful knowledge, because it is the brilliant light of knowledge alone that can remove the darkness of ignorance that surrounds the Atma.] (7).

8. The living consciousness that is present in this 'Linga Deha' (described in verse no. 7) is the authority known as 'Kshetrageya' or the Lord who has complete knowledge of his area of influence and is in command of it. [Here, this 'authority' is the Atma, or pure the consciousness of the creature. It is this Atma that is the Lord of the body, both the gross as well as the subtle.] (8).

9. The Atma or pure eternal consciousness is all-knowing and omniscient because it knows and is well versed about the three points that form the 'Triumvirate of Knowledge', i.e. the entity that is to be known (here referring to the supreme transcendental Absolute Truth of creation as well as the true nature of the Atma and the pure self), the entity that endeavours to know it (here referring to the creature who strives to attain freedom from the shackle of ignorance and delusions and makes efforts in this direction to ascertain the Truth), and the process of knowing and acquiring this knowledge of the Absolute Truth (by various means, such as study of the scriptures, meditation and contemplation, hearing discourses and discussions).

Being all-knowing and omniscient, being wise and enlightened, it is well aware of and witnesses first hand the process of creation and destruction of the visible creation. But it remains profoundly neutral and unmoved even under these circumstances, showing the magnificent degree of its detachment and neutrality.

Such a neutral and dispassionate Atma is a mere witness or 'Sakshi' to everything around it. [In other words, how can one expect such a wise, erudite and

sagacious Atma getting actually trapped by the delusions created by the body and the world in which it lives? Therefore, the notion of the Atma getting ‘trapped’ is a misnomer and not the correct depiction of the state of existence of the Atma. When the creature becomes aware of this fact and realises the truth of this observation, he instantly gets liberated from all bondages.] (9).

10. That entity that lives as an integral and inseparable constituent part of the intellect and mind of all the living beings in this creation (in the subtle form as the virtues of wisdom, erudition, sagacity, enlightenment, knowledge, skills and expertise as well as the ability to intelligently think and clinically dissect a given situation to arrive at a rational conclusion, to research, remember, discriminate, decide and imagine the unimaginable in all matters), right from the creator Brahma to the humblest insect, and which outlasts the body even after its complete destruction (i.e. the entity which is eternal and imperishable), is called the ‘Kutastha’¹. This exalted entity that occupies the highest of existential place in creation is the Atma of the individual creature (10).

[Note--¹The word *Kutastha* means that which occupies a high place; that which is unchanging, unalterable, hidden, secret, mystical, imperishable, indestructible, immovable, steady, constant etc. All these epithets are applicable to the conscious Atma. According to Nyaya Darshan of Hindu philosophy, the supreme Lord called Parmeshwar (Param = supreme; Ishwar = Lord) is regarded as a Kutastha. The Parmeshwar is free from the cycle of birth and death. According to Sankhya Darshan of which sage Kapil is the ancient exponent, Kutastha is the Atma as a manifestation of the Purush (the Viraat Purush, the invisible macrocosmic gross body of Brahm from which the rest of the creation has emerged). This Atma has no shape, features, dimensions and specific defining attributes. This Atma-Purush prevails in all the three states of existence of the creature, viz. the waking or Jagrat state, the dreaming or Swapna state, and the deep sleep or Sushupta state. The Atma-Purush remains steady, uniform, universal, immutable and constant in all these changeable situations of existence in which the creature lives in this world. It remains unaffected or uninfluenced by, unattached to and uninvolved with anything in this world because it is inherently neutral and detached from everything. It is simply a dispassionate witness and observer of everything. It is the Jiva that is perishable, and not the Kutastha—refer the 4th paragraph of verse no. 4 above.]

11. That mystical and enigmatic entity which has so many magnificent qualifications and grand attributes such as being a ‘Kutastha’ (verse no. 10) etc. assumes as many forms with as many qualities as are possible in this creation. Though all these individual forms appear to be different from one another in some way or the other, they all have one thing in common—and that is the presence of this eclectic, sublime and divine entity in its subtlest form which is invisible, imperceptible and beyond the reach of the mind and intellect. It pervades throughout the creation, wafting and weaving intricately through it, holding it in place and preventing its scattering around into inconsequential units much like the thread that binds and holds the beads of the rosary together and gives the latter its unique characters, shape, value and identity though this thread itself is not visible from the outside.

This unique and eclectic, most mystical and esoteric, profoundly majestic and gloriously divine, most sublime and subtle entity is known as the Atma which resides in the bosom of all the living beings. Since it resides inside the creature itself and nowhere outside it, since it is omniscient and all-knowing, it is therefore called the ‘Antaryaami’ or the one who is present internally and knows even the most secret of things that are hidden in the bosom of the creature. Hence, this Antaryaami knows

even the secret thoughts of the creature, as nothing is concealed from it and nothing is inaccessible to it (11).

12. This divine, holy, sublime and eclectic entity known as the Antaryaami is the pure conscious Atma or soul of the creature. It is an embodiment of Satya (something that is an irrefutable and unequivocal truth), Gyan (knowledge in all its sublime connotations) and Anand (bliss and cheerfulness); it is devoid of all definable attributes, has no specific defining characteristics, and has no titles and epithets appended to it; it is not bound by any fetters or shackles symbolised by the bracelet or bangle or armlet or the metal ring fitted on the tusk of an elephant (called a 'Katak'), and neither does it need any honour symbolised by a crown and a tiara (called a 'Mukut') worn by an emperor to establish its authority and sway.

In other words, it does not need extraneous appendages to prove its value, magnificence and authority much like pure gold which does not need extra titles to establish its importance and worth.

This Atma or Antaryaami is the richest treasury of Gyan (knowledge in all its glorious forms) as well as an embodiment of pure consciousness called Chaitanya (literally meaning an entity that perceives everything, is sensitive, observant, alert, cautious, attentive, wide awake, most rational, discriminating, intelligent, analytical and understanding, as well as is supreme and beyond comprehension).

When the wise and enlightened creature is able to perceive this Atma in this form, when the Atma's existence is experienced and witnessed in this divine and eclectic form, it is then honoured by the exalted title of 'Twam', or 'thou art' or 'you are'. [That is, when the spiritual seeker realises that the Atma is an embodiment of pure consciousness and a microcosmic form of the supreme transcendental cosmic Consciousness of creation known as Brahm, that this Atma is the person's true and real identity, he exults and suddenly exclaims 'You are That', or 'Oh Lord, it is You!'. This 'you' is the supreme Brahm in the form of the Atma or true 'self' of the spiritual seeker; the 'self' of the person is none but 'that' supreme Brahm in the form of the Atma residing in his own bosom and no where outside of him. He therefore need not search for the ultimate 'truth' and his 'roots' outside his own self, but turn inwards to find them concealed inside his own bosom. It is like a great discovery for him, and he feels exhilarated and ecstatic at this discovery, making him proclaim 'Twam' spontaneously. It is like the case when children play hide and seek, and one child suddenly discovers the other concealed under the blanket of his own bed while he was being searched everywhere else in the house.]

Brahm is said to be an embodiment of 'Satya' (profound, irrefutable, unequivocal and absolute 'truth'), 'Anant' (one which has no end; an infinite and imperishable entity), and 'Gyan' (truthful knowledge about the reality; knowledge in all its sublime connotations; knowledge in all its glorious forms; a comprehensive knowledge which does not leave anything to be known; knowledge that can help the seeker obtain liberation and deliverance for his soul from the fetters have been shackling it to ignorance and delusions).

That which does not decay and perish is the 'Satya' or the absolute and imperishable truth.

That which survives and outlasts everything that is subjected to the affects of circumstances, time and age is called 'Avinaashi' or that which does not perish.

The fundamental body of knowledge that is of a universal and uniform nature and dimension, which neither decays, diminishes or gets old with time nor created anew, which is neither enhanced nor revived in any form, which lasts even after the

last vestiges of the present creation come to an end and before the next cycle of creation starts, that knowledge which is untouched by the dimensions of time, age, circumstance and geographical or cosmic distances is called the real and truthful 'Gyan'.

That universal Truth in the form of pure consciousness uniformly pervades throughout the entire creation in an undiluted and untainted form, forming its basic texture and constituent, its basic ingredient and identity without which this creation would not have been in existence in the first place much like the presence of clay in a clay-pot, gold in all golden ornaments, and cotton in all cotton clothes or fabrics made from cotton thread. This universal and all-pervading authority is known as 'Anant' or that which has no end. [This is because the creation has no end too, for it is an infinite and fathomless entity that continuously oscillates between decay and resurgence. If one corner of the universe is dying, there is another corner where another nascent universe is taking shape.]

That which is an embodiment of 'Sukha' or happiness and joys, as well as of comforts and pleasures, that which is an embodiment of 'Chaitanya' or pure consciousness that is enlightened, wise, erudite and wide awake, that which is a fathomless ocean of infinite 'Anand' or bliss and ecstasy, and which personifies the pristine form of beatitude and felicity that remains after all artificial happiness and joys are eliminated—such an eclectic and magnificent entity is known as 'Anand' or an entity that personifies true and purest form of bliss (12).

13. The eclectic, sublime, divine, holy and supreme entity which possesses these four magnificent and glorious virtues (of Satya, Gyan, Anant and Anand as described in verse no. 12 above), and which remains uniform and unchanging in all circumstances and in all times and eras, is known by the epithet 'Tat', meaning 'That Thing' or 'The same thing' or simply 'It'.

This entity known by the name of 'Tat' is the supreme transcendental Brahm who is the Supreme Being and the only Truth in creation as it is Absolute (13).

[Note—When the two observations or statements, i.e. 'Tat' of verse no. 13 and 'Twam' of verse no. 12 are taken together, the meaning becomes abundantly clear. It refers to the Atma as a personification of the supreme Brahm, and vice versa. This combined phrase is one of the great sayings of the Vedas, and it implies that the spiritual aspirant has realised the basic spiritual truth about himself and the rest of the creation.]

14. Both these titles of 'Tat' and 'Twam' indicate the same exalted and eclectic entity which is non-dual, supreme, transcendental and ultimate in creation though they are used separately and have different literal meanings. The entity which is indicated by these two words is the most subtle and sublime Authority which is all-pervading, all-encompassing, omnipresent, uniform and universal like the sky element. This eclectic entity is therefore known as the supreme transcendental Brahm (14).

15. The subtle, esoteric and mysterious but most astounding and potential cosmic powers wielded by this Brahm and the matching dynamic energy that it possesses, is called 'Maya'¹. This Maya is infinite, having no beginning and no end. [This is because it is a characteristic part of Nature and a manifestation of Brahm's supernatural powers. Since Brahm is infinite, Maya is also infinite.] It makes its appearance when the time comes for the decay and destruction of anything in this world because it has a magnetic pull that spares none and pulls everything along with it towards their end. [Anything overshadowed by ignorance and delusions for which

Maya is used as a metaphor, is sure to get to ruin, sooner or later.] It is neither true nor false. [It is like a mirage, or an illusionary scene created on stage by an expert magician. It is so fabulous and make-belief that no one can accept that it is not true, and since it is actually seen on stage it therefore cannot be false either.] It casts a veil of various faults around the creature, creating numerous flaws in the latter's character and nature, but it itself appears to be faultless and flawless. [Maya acts much like magic that creates so many extraordinary scenes but remains indifferent to them because magic is simply an art or science employed by the expert magician to implement the tricks that he has conjured up in his mind. The magician knows the trick behind these scenes and is therefore not interested in them. The art and science of magic is equally not concerned with what happens to the audience because it is simply acting on the instructions of the magician.] Similarly, Maya creates numerous qualities and characteristics in creation, but it itself has none. [Maya is a manifestation of Brahm's dynamic powers to conceive, create, develop, wind up and destroy this creation. If the principal Brahm has no specific attributes and defining qualities that can be limiting for it, it is expected that Maya would also not exhibit any such attributes and qualities which are not possessed by its principal and originator, the Brahm. Maya is as indefinable as Brahm.]

This entity known as Maya is very deceitful and cunning in nature. It is lowly and scheming. It represents lack of knowledge, it is an embodiment of ignorance and delusions, and it is falsehood and illusions personified. But the irony is that stupid people with low intellect and wisdom think it to be true and real, as having a real existence and very honest in its approach under all circumstances and in all three dimensions of time (i.e. in the past, the present and the future periods of time). [That is, foolish people think that since the Maya has its origin in Brahm, it would also be like Brahm. But they forget the fact that this Maya was willingly created by Brahm to act as an invisible tool in his hands to help create a situation whereby the creation created by him can go on perpetually moving on and on endlessly till the time Brahm decided to wind up the game. It is just like the art of magic employed by the magician to keep the show up and going till the time comes to wind up. No one in his wildest of imagination can say that the magician and the art of magic are one and the same entity. Similarly, Brahm has set up this cosmic show by employing Maya as a powerful tool.]

In other words therefore, 'Maya' is such a concept that is beyond definition and impossible to precisely comprehend much like its principal, the supreme transcendental Brahm. It is impracticable to construct any confirmed view about it and its nature. It is certainly most intractable and enigmatic entity related to this creation (15).

[Note--¹*Maya* is a word which has two parts, Ma + Ya. The first half means a 'mother', while the other half refers to the notion of doubt, of either this or that. The word 'Ma' also means 'to measure, mark off, by any standard; to show, to exhibit, to display; to infer, to conclude; to be formed, built, made of'. Therefore, the composite word Maya refers to a situation which harbours uncertainties, where it is uncertain whether what is said or understood or seen or witnessed or experienced is actually the truth or not. It is virtually the 'mother of all confusions and perplexities'. It therefore refers to something or some situation which creates doubts and confusions, something that is not real; that which is deluding, illusionary, deceptive, mirage-like and deceitful, and is caused by the ignorance about its truth and reality; something that has no substance or pith; displays no certainty and leads to wrong inference. The term Maya is used to define all these phenomenon. Hence, Maya is a synonym used for all that is deceptive, faulty, false, deluding, ignorance based, illusionary, deceptive,

deceitful, invisible and super-natural; all that which has no reality or substance; all that is hollow. It creates hallucinations in a creature's mind leading him to believe that what he sees is the truth. It is the deluding and magical powers of the supreme transcendental Lord that hides the reality and creates an imaginary world of deceptions and misconceptions

Maya has three basic constituent qualities. Hence it is called Trigunmayi, i.e. one which has the three Gunas or qualities. These three Gunas or qualities are— Sata, Raja and Tama. 'Sata' is the most auspicious, virtuous and noblest quality in a man and raises him to a high moral and spiritual pedestal. It marks predominance of righteousness and the highest standards of spirituals and mental evolvement leading to high thoughts, noble actions and righteous behaviour. 'Raja' is the medium quality in a person, and it is marked by worldly passions, desires, yearnings and greed. It makes a man more worldly than spiritual. 'Tama' is the third and most lowly of the three qualities and is used has a synonym for darkness and evil. Obviously, 'Tama' means ignorance, delusions and all the forces or qualities that are evil, mean, lowly, miserly, wicked and base. They pull down a man from high pedestal and virtually dump him in the dust yard of creation to rust and decay.

These *three qualities* together, in various permutations and combinations, decide the innate nature of a man. The greater presence of 'Sata' makes a man nobler as compared to a high ratio of 'Tama' which makes him wicked, pervert and evil. Various proportions of these qualities will therefore produce innumerable varieties of creatures having different temperaments, thought processes, behaviours, demeanors and mental setup in this world.

When a man understands any 'Truth' after rigorously examining the 'truthfulness' of that truth, when he has established the veracity of facts, he believes in it more firmly and more convincingly. No matter what other people tell him about the truth being not the correct or the whole truth, he would not listen to them, simply because he has verified the facts for himself, he has witnessed the truth himself, he has logically eliminated all falsehoods to deduce that what he knows is the 'truthful Truth'. His Truth is based on rigid and solid foundation; he is unwavering and steady in it. If he is steadfast and convinced in his knowledge, no matter how much ignorance and delusions (Maya) try to push him away from the absolute 'Truth', he will remain steadfast and unwavering in it. There will be no doubts and confusions in his mind.

The basic idea here is that Maya is like a transparent sheet which covers the supreme 'truth' in the creation. Since it is transparent, it assumes the attributes of the truth that it covers, because for all practical purposes an ordinary man is unable to see that veil because of its transparency. This is a simple way of understanding what is called 'illusion and Maya vis-à-vis the Truth and Reality'. Maya nevertheless hides the truthfulness of the Truth, and instead lends its own attributes and characteristics to that Truth known as the 'Nirgun Brahm' by the Upanishads when the latter is observed through this veil, while at the same time assuming the glorious attributes of Brahm itself. So ignorant fools think that the Maya is the real thing, whereas they are actually seeing the 'veiled truth' as observed through this covering of Maya, because the actual 'truth' is hidden from view by this transparent sheet which has lend it its own colour and hue to it . As a result, that Nirgun appears to have some attributes, and it thereby becomes 'Sagun', or the one with attributes and characteristics, by the interference of Maya.

The eight forms that Maya takes--The eight forms of Maya are the delusion and ignorance creating powers of Brahm without which the creation would neither be conceived nor expanded, because if everyone becomes aware of the reality, if everyone realises that everything is perishable and immaterial, that whatever is seen and enjoyed are like a mirage seen in a desert, then all would renounce the world, there would be no marriages and procreation, there would be no creation of wealth and strife and tension to protect this wealth, there would be no desire to have

dominance over others, for all are equal and one in the eyes of Brahm and they have the same Atma which prevails uniformly in the breadth and length of the creation. So Brahm uses Maya as a tool to maintain a veil of ignorance and delusions to carry forward his game plan, until the time he decides that he had had enough of it and then initiates the folding-up process of concluding this creation for good, or for at least that time when he decides to roll the carpet once again.

Now, these *eight forms that Maya takes* are the following—the five elements forming the basic building blocks of the gross creation (i.e. the elements of earth, water, fire, air and space which form the gross body of all the living creatures) + mind + intellect (together called the subtle body of the creature) + Ahankar (the ego, pride and arrogance that the creature possesses, leading to the notion of ‘I’, ‘me’, or ‘mine’ = eight entities.

Actually, a wise man understands that whatever exists in whatever form is nothing but one or the other form of the same universal entity known as Brahm. To take an example, a scientist knows that water in whatever form and colour and shape consists of the same two atoms of Hydrogen and one atom of Oxygen. Further, he also realises that everything is made of atoms and their basic structure consists of sub-atomic particles such as electron, proton, neutron etc. With this erudition and view point, a wise man sees these basic ingredients in all things that he observes around him, because everything is made up of atoms and molecules. But an ordinary man talks of the water of the ocean, of the well, of the drain and of the river etc. He talks of gold, of silver, of wood or of iron, not realising that all consist of the same building block called the ‘Atom’. Similarly, due to ignorance a man is deluded into thinking that the gross world that he sees is has an independent existence and it is real. He forgets to analyse its fundamental ingredient which is the pure consciousness that is making it alive. The five elements that are used to make up this world are all perishable and gross, and they are the creation of the mind. The mind itself is perishable because it dies with the body. Then, what is the reason why a man has so much ego and pride in himself and his abilities? It is Maya. It is his ignorance that has held him by his collars, as it were. He forgets that if his true self is imperishable, then how come he dies; if his true self is enlightened and wise, then why he suffers from so much misery and disillusionment; if his true self is eternal, then why does he have to take a birth and then die? A wise man then begins to ponder why does he treat those entities which are transient, mortal and the cause of so much misery and consternations and confusions as true; why does he not realise that the truth is imperishable and eternal and universal? This is due to the influence of delusions and ignorance created by Maya. This is how Maya keeps everyone trapped under its net.]

Maya has *three names*—viz. (a) Maha Maya—or the great powers exhibited by Brahm at the cosmic level. This Maya is the progenitor of all other types of Mayas which keep the individual creature trapped in their net. The Maha Maya is the virtual mistress of all the delusions and misconceptions and their attendant ignorance that keep all the creatures of this creation enthralled by their deceptive charm. (b) Yog Maya—this is the stupendous magical powers created by the union of the supreme authority of creation known as Brahm, and the mystical and esoteric powers that delusions and hallucinations can create for the creature. (c) Maya Shakti—this is the ‘shakti’ or power and authority displayed by Maya in association with Brahm from whom it acquires its stupendous energy and powers.

‘Yog Maya’ can be further understood as follows—The word ‘Yogmaya’ has two parts, viz.-Yog and Maya. Yoga means meditation and contemplation, while Maya refers to the cosmic energy and delusions created by the Lord at the time of creation. ‘Yog’ also means union or conjunction or fusion of two entities. Therefore, Yogmaya refers to the fusion of the cosmic energy with the delusion-creating powers of the supreme Brahm when he did decide to start the process of creation. The illusion created by him removed the distinction between the truth and falsehood so much so that both appeared the same and became interchangeable. That is why, what appears

true on the surface is actually false, and vice versa. But to enable this to happen, Brahm had to meditate and focus his attention to ignite that inherent but latent energy that is an integral part of creation. In other words, he had to do Tapa, which is another form of Yoga. The resultant stupendous forces of Nature that were unleashed by Brahm's meditation led to the chain of events that culminated in the revelation of the cosmos as it is known today. This magnificent event or the primary force that set this chain in motion has been conceptualized by the Purans as a deity known as 'Yogmaya'; she has been depicted by them as the female counterpart of the maverick Lord of creation, who has been personified as the Viraat Purush. In the case of Lord Ram, who is that Viraat Purush also known as Vishnu, that Yogmaya is represented by Sita. The other connotation of 'union' implies that this Yogmaya establishes a link between the ignorant and deluded creature, and the unadulterated, supreme and ultimate Truth represented by the Lord. The word also refers to the magical and mystical powers displayed by mystics and ascetics, which they have acquired by the virtue of their meditation and contemplation.

We can understand this phenomenon of how the Maya of the Lord has created this vast canvas of creation with a simple example. A painter wishes to paint a landscape. He starts with a pure white canvas, and using his imagination and powers to visualise a magnificently beautiful scene, he starts painting with numerous primary colours and then goes on mixing these colours to produce umpteen numbers of colours of varying hues and shades. Besides the colour, he continuously adds a stroke here and a brush there as he tries to reveal on the lifeless canvas the conception of life as he visualises in his mind; he is never satisfied with his work and goes on and on endlessly adding colours and lines to the canvas. The result is most astounding and stupendous to behold. But still the painter is not satisfied; so the net result is that the canvas gets being redone over and over again, and layers after layers of lines that had been made and erased, of paints that had been painted over numerous times, of shapes and figures that had been visualised, rejected and reconceived and placed on the canvas only to make the painter uneasy about them. In short, the basic canvas that was pristine pure at the beginning has been reduced to scrap! The painter then keeps it aside or if totally disgusted with it, he may throw it in the garbage bin.

This all but sums up how the supreme Lord creates, develops and concludes the creation. The clean white canvas represents the Satwic qualities with which the Atma starts out. The painter is the supreme Lord or Brahm, the landscape he imagines is equivalent to Maya because it has no actual existence but is imagined by him, and he is so skilled a painter that once the painting is ready, the scene that is depicted on the canvas appears to be very real and live, creating an illusion of the grandeur of the actual thing; this is a deception because the painter has used his imagination as the subject of the painting, but an ignorant man who is not aware of this fact would believe that the painting has been inspired by some actual landscape that the painter must have seen somewhere. As a matter of fact, it might also happen that the scene does actually exist, but the painter has added touches of his own imagination to add vibrancy and colour to the scene about which the observer is unaware. The scene and the 3-dimensional landscape is equivalent to the creation and the colourful Nature. The paint and the primary colours used by the Lord during the process of creation to make it vibrant and lively are the different Gunas (virtues, qualities and characteristics), the various Vasanas (desires and passions) and Vrittis (inherent tendencies and inclinations of a creature; his nature and temperaments) as well as the Tattwas (elements) which are fundamental to and inseparable from creation. The innumerable varieties of shades of characters, virtues and qualities that are present in the creature represent these myriad colours that the creator uses to paint his creation. Until at last the Lord stands back and is stumped at the Frankenstein Monster that he has unleashed! Then he decides to call it quits, and this is equivalent to annihilation of the creation. But as a painter he cannot sit quiet; and so starts the process once all over again!

Supposing the painter did not add his own name to the painting, or he had added a pseudonym. Then in such a case, there would be conjectures about his identity, leading to so many theories and debates. Then some wise man would look up the archives and dig up some evidence about who he was. This is exactly what happens here in the case of creation—no one knows for sure who that creator is, what is his name, etc. Some wise and enlightened man came to unearth the truth about him, and he tried to tell others in the words he could muster. This is how the great maverick Lord has been known and recognised by us. When his glories are sung, it is actually praising the great painter for his skills and the matchless heritage that he has created for us to cherish and behold.

Mantriko-panishad of the Shukla Yajur Veda tradition describes Maya in substantial detail. In its verse no.5 it says that Maya has *three basic colours*—viz. ‘white’, ‘red’ or ‘dark’, and the various shades in between. These three colours represent the three basic qualities, called Gunas, present in all the creatures and are only symbolic of the innumerable variations in which the basic qualities can combine to produce countless number of characteristics and virtues and behaviours that give individuality and specific characteristics to millions and millions of creatures. These are simply metaphors only meant to explain and help visualise certain things, and therefore should not be taken too literally as meaning that dark skinned people are sinful and pervert and worthy of condemnation, or that fair skinned ones are all righteous and noble, for just the opposite is witnessed daily in our lives.

Even as an offspring gets the colour of the skin of the race to which it belongs, the inherent characters of all creatures are inherited from their mother, and this mother is Maya. The white colour stands for the best category of qualities called Sata Guna, the red colour stands for the second and medium quality called Raja, and the dark colour stands for the meanest quality called Tama. The word Tam itself means ‘dark’ and it stands for the worst type of qualities leading to sinful and pervert nature in a man which makes his life hellish; the word ‘red’ is a metaphor for anger, vehemence, vengeance, agitations, restlessness, short temper, strife, hatred, envy, jealousy and the other such negative worldly characteristics in a person; the colour ‘white’ stands for peace, tranquility, prosperity, happiness and wisdom, all of which are the characters of noble and gentlemanly persons.

Swetashwatar Upanishad of Krishna Yajur Veda tradition, in its Canto 4, verse no. 10 states that—“Prakriti (primary Nature) should be treated as the Maya, and the supreme Lord called Maheshwar (one who is ‘Maha’—great, and ‘Ishwar’—Lord, of everything) as the maverick Lord who inspires and enables the Maya to not only create this world but also imprint it with its own characteristic qualities (much like the offspring bearing the characters and features, or genes, of the parent).

Thus, the entire creation bears the characteristic qualities and virtues so typical and unique to Maya; these qualities and virtues form an integral character and nature of this creation as a whole as well as of all its individual units” (10).

Here it should be noted that the three inherent qualities or Gunas of Sata, Raja and Tama that characterize all the creatures of this creation are like the *genes* that the offspring carries of its parent. Through these Gunas, the Maya resides in the bosom of all the creatures as their defining ‘nature’ and basic ‘temperament’—called the *Prakriti* of the creature. Even as the supreme Brahm as the Great Lord called Maheshwar used his mystical deluding maverick powers to create this illusion of the world at the cosmic level and made it so perfect that it appears to be perfectly true, the same Brahm while residing in the bosom of the individual creature as its Atma also creates this world by using its delusion creating powers, and uses its man-Friday, the mind, to ensure that it is implemented to perfection.

Sage Veda Vyas’ ‘Adhyatma Ramayan’, in its Lanka Kanda, canto 14, verse no.28-29 describes the relationship between Maya and Brahm, albeit in the context of Lord Ram. Let’s see what it has to say—

Verse no.28-- “Oh Sri Ram! It is at your inspiration, using your stupendous Shakti (powers and potentials), at your behest, and as per your wish that Maya creates this whole world infused and injected with all its characteristic features, such as, inter-alia, the quality of having ‘Ahankar’ (arrogance, ego, pride, haughtiness, vanity, boastfulness etc.) This is why you are blamed (accused) for all this deluding creation¹ (28).

[¹It is out of ignorance that one says that ‘you’, i.e. Lord Ram in his primary form as the supreme transcendental Brahm or Lord Vishnu, are the creator of this myriad world with all its faults and blemishes, evils and vices, entrapments and delusions, shortcomings and drawbacks, whereas in actual fact it is your Maya which has done it. Maya had simply employed your great powers to create, which you had delegated to her in order to enable it to carry out your general mandate to create, but once it got going, it lend its own flavor to it just like a master gives a brief to his servant or cook to prepare a meal and then the cook uses that excuse to create a wide variety of dishes the details of which had been decided by the cook himself and the master had no say in it, except the general instruction of cooking a meal. If suppose the cook has used a lot of spices and condiments, then one cannot accuse the master of spoiling the meal; it is the cook who is responsible for it. But once the meal is ready, there is nothing that can be done except to throw it away. In the larger picture of things, the Brahm had ordered the Maya, his maid, to prepare this painting known as the world, and then Maya used this sanction by the supreme Lord to do her own bit in order to please him and, in the process, outsmarted him by creating a creation that even Brahm was wonderstruck to behold. Since Maya had his express orders, Brahm could not even blame her for what she had done, because the details were left to her and she did what she was good at.

Again, even as each original thing has an indelible mark, a special quality that reflects the character and skills of the creator, the world created by Maya also had its share of characters and qualities that are reflective of the hand that created it—and that hand was that of the Lord’s maid called Maya. So logically therefore, the Lord cannot be accused of so many faults that are associated with the world that Maya created. In fact, the word ‘Maya’ itself means something that is illusive, deceptive and false.

It is like a world of magic created by the magician, and if one, out of one’s ignorance and foolishness thinks that this world is real and allows himself to be deluded by its charms, then the magician cannot be blamed because, to begin with, one is already aware that what he sees is a magical show, and even if he is unaware of it, there are other wise ones who tell him that it is so. If one still falls into the trap, then say how the magician can be blamed for the consequences of such ignorance and foolishness? In our example, Brahm is the magician, and the illusionary world is the magical powers that he possesses which are on display. The wise ones are the sages and seers who elucidate upon the scriptures and tell the creature to be wary, but if the creature does not pay heed, say what has the magician and the sage can do about is, except to wind up the game. This is exactly what Brahm does at the end of one cycle of creation when the fairies springing out of the Pandora’s Box just go out of hand to create the Frankenstein Monster.]

Verse no.29--Even as inanimate things like iron become mobile and active under the attractive or repulsive influences/forces of a live magnet, so do Maya creates this whole universe/creation when you glance at it, though it is inert in itself¹ The driving force here is the invisible power of the magnet which infuses the iron with the power to move. The force which activates the Maya is you and you alone (29).

[¹Here, the Lord is likened to a magnet, and the Maya is likened to the magnetic force that makes the piece of lifeless iron, which stands for the gross and lifeless world, to move and show signs of life. Since Maya cannot be seen even as the magnetic forces of a magnet cannot be visibly seen or perceived except being understood by logic and

knowledge of physics and magnetism, one accuses the Lord of creating this world with its myriad characteristics. Even as the iron piece would show signs of movement in spite of the magnet not desiring at all that it does so, the very proximity of the two automatically creates such a situation. Only wise ones realise that the iron is inane and it is the magnet that is responsible for its life, and whatever signs of life that the iron shows is illusive for as soon as the magnet is removed, the iron would not move in spite of it now wanting to do now.

The concept of Maya affecting the Atma has been elaborately dealt with in various Upanishads, especially Maitrayanyu Upanishad, cantos 2-4 of the Sam Veda tradition, an English version of which by this humble author has been published separately.

The example of the water molecule H_2O can be cited to explain the relationship between Maya and Brahm, and how the former distorts one's perception of the facts about the latter.

Water molecules exist in a number of forms—viz. clouds, rain, water vapour/steam, moisture, mist, foam, liquid pure water which we drink, water in the form of numerous water-bodies such as an ocean, a river, stream, well, pond, lake, puddle, pool etc., ice, snow, and water in the form of the basic ingredient of all things that have their existence in a fluid form. A lay person calls this 'water' with so many names; he sees a difference between all of them, but for a wise man who knows the chemistry of the water element all these existential forms of water are nothing but two atoms of hydrogen and one atom of oxygen combined in a fixed configuration which cannot be tempered with if the water has to retain its characteristic basic features, virtues and qualities.

The molecule of water acquires various forms depending on the circumstances in which it has to exist, but none of them would affect the basic nature and facts about water.

Similarly, *Brahm*, which is one indivisible immutable and unfractionable entity, assumes, or appears to exist in myriad forms, having mind-boggling permutations and combinations of shapes, sizes, colours and contours, depending upon the prevailing circumstances and requirements of existence. The same entity when viewed with different glasses appears to have different colours—as is evident when we observe anything with sunglasses of different colours. It acquires different meanings when viewed from different perspective—as is evident when the same event is interpreted differently by people having different views, different intelligence, different cultures, and different mental bearings. The same things changes in size and colour when observed from different distances—as is very clear when we observe a thing from very close quarters and then view it from a great distance; even the same mountain appears to be blue, green, dark and of other colours when seen at different times of the day and varying distances and through changing atmospheric conditions.

So it would be erroneous to say with certainty that what one has observed is the actual truth, for it might be very misleading and at odds to what others have observed. When, say, five people describe a mountain or scenery, each would narrate what he has observed. All of them are correct, but there is much more to that mountain or scenery than what one gathers from these narrations. Herein lye the importance of 'self-realisation', because we may doubt what others say, but we cannot be more convinced when we observe anything first hand for ourselves.

Brahm is like this water molecule; it has revealed itself in the form of this multifarious creation, each unit of the latter is Brahm manifested, but Brahm is not limited to that specific definition. All forms that the molecules of water take are nothing else but 'water', undiluted and uncorrupted. Whether we call it moisture, cloud, rain, steam, ice, river or ocean, none of these should deter a wise man from observing 'water', or better still 'two atoms of hydrogen and one atom of oxygen' in all these forms. A learned man would be amused when people fight over these definitions, and he would call them ignorant ones.

So when we observe Brahm with a holistic and all-inclusive view, we find that the entire creation is 'Brahm manifested'; all the different nomenclatures and definitions pertain to the same entity and therefore all of them are correct. But none of these individual manifestations define Brahm in its entirety, and nor do they become Brahm.

This is Maya, which literally means something which does exist but it is an illusion, a deception and misleading. Water appears in so many forms because of this Maya, and so does Brahm vis-à-vis the world.

Now, there must be something that not only binds two atoms of hydrogen and one atom of oxygen together but also injects it with certain qualities that give the resultant product its uniqueness known as water. And this 'uniqueness of water' is not a small matter to be overlooked, because water is the harbinger of life, it is the sustainer of life, and it is the concluder of life. How? Well, it is the first ingredient necessary for initiation of the process of creation; once life starts it sustains it and nourishes it; and the havoc it causes during severe floods, typhoons, tsunamis, cyclonic deluges and oceanic storms when it completely obliterates all traces of life are examples of destruction water can cause. Quite similarly, in different perspectives, Brahm creates, sustains and concludes this creation.

Taken independently, hydrogen and oxygen would not produce water, and neither does their simultaneous existence in a single place automatically means that water would be there, for had it been so then there would be no question of droughts anywhere because both these gases are present everywhere on earth. Therefore, there must be some supernatural force that helps these apparently innocuous looking atoms of these two gases to acquire a special quality known as water. This is called 'Shakti'. What does this Shakti do? It transforms the latent powers and potentials of hydrogen and oxygen into an entity called water that harbours life, sustains and nourishes it, and that even concludes its own creation, none of which functions would these two gases have done left to themselves. But does this Shakti come from outside? No, it is hidden in the atoms of hydrogen and oxygen, and it simply comes to the fore, does its job and collapses in to oblivion, leaving the rest of the process to take care of its self by being controlled or influenced by other forces of Nature.

This allegory or analogy helps to explain how Brahm uses Shakti to create this world, and how the resultant product creates an illusion called Maya about the essential truth. Brahm uses its creative energy, called its *Shakti*, to create this world, both the visible as well as the invisible. Brahm then resides in this creation as its integral and inseparable part even as hydrogen and oxygen are integral to and inseparable from all forms in which water exists. The ignorance about 'who or what' is the basic truth of this existence, or is the essence in this existence, or is the fundamental principle behind what is seen, witnessed or experienced, is called *Maya*.

Maya also has its importance in this context of existence, because if Maya or illusion does not exist then this world would also cease to exist as we know it. If the world ceases to exist as we know it, then there would be no question of any interaction or any kind of interdependence and relationship between any given two entities because there would be no distinction between them, and they would be all alike. Taking the example of water, if we do not distinguish between an ocean or river, or say between the water of a gutter and a well, telling ourselves that the essence of all these fluids is two atoms of hydrogen and one atom of oxygen, then it would be the height of stupidity for us and create a hilarious situation. So for the purpose of existence these differences have their own importance, but when we wish to learn and get educated about them and not remain ignorant fools then we come face to face with the facts. Even then, as long as we live, we cannot treat the water of the gutter and the water of the well alike for drinking purposes. This is Maya—it creates a piquant situation wherein we know that what we see is not the actual truth but we still cannot do anything about it and continue to treat the falsehood as the real thing.]

16. A self-realised spiritual aspirant who has understood the profound truth about his Atma as his real 'self' and as the supreme transcendental cosmic Consciousness personified, exclaims thus—'I am never born (as I am eternal and without an end). I am not to be identified with the gross physical body (or, I do not have a physical body) having the ten gross sense organs (five sense organs of perception—ear, eye, nose, tongue and skin) and five sense organs of action—legs, hands, mouth, excretory and reproductive). I am neither a subtle body having a Mana (mind), Buddhi (intellect), Chitta (the various faculties of the mind and intellect pertaining to memory, fixation of attention and concentration), and Ahankar (the sense of ego and pride in one's abilities and achievements) (16).

17. I do not need 'Pran' (various vital winds) to survive, and neither do I need a 'Mana' (emotional mind, sentimental heart and discriminating intellect) to make my presence felt. I am eternally and uniformly immaculate and without any taints, corruptions, blemishes, faults, flaws and shortcomings. In spite of the fact that I do not have any physical body with an intellect and mind, I am still a witness to everything in this creation. [A witness has to be alert and conscious of what he is observing around him in order to make a sense of what is happening and ascertain facts in a dispassionate and neutral manner. For this, he has to have a sharp intellect and a vigilant mind, with all his faculties working in their prime form. Thus, being a 'witness' to everything, the Atma or the pure self of the creature who is making these profound statements is deemed to be intelligent, attentive, resourceful, alert and vigilant—the activities which fall under the jurisdiction of the mind and intellect.]

I remain in a pure conscious form. [That is, I never become gross, inept and inane under any circumstances.] There is no doubt about it (17).

18. I am neither a doer of deeds called a 'Karta', nor a sufferer or enjoyer of the results or consequences of these deeds, called a 'Bhokta'. In fact, I am simply a neutral and dispassionate observer and witness to what is happening and unfolding in Nature.

It is due to my influence and because of being associated with me, who am pure consciousness personified, that other gross entities such as the body etc. behave as if they have consciousness and life of their own (18).

19. I am that pristine pure conscious Atma which is stable and steady, that is eternal and perpetual, that is an embodiment of 'Anand', or extreme bliss and happiness, and that is 'Shudha', or perfectly immaculate, incorrupt and taintless. I universally live in the bosom of all the living beings as a witness to all and sundry. There is no doubt about it (19).

20. I (the Atma) am that supreme transcendental Brahm who is ascertained by the study of the Vedas, the Vedanta (i.e. the Upanishads) and other scriptures. As such, I am also known by the names of 'Akash' or sky element, 'Vayu' or wind element, etc. But it should be noted that I am not bound by or limited to any given definition or specifics, as I am infinite, am beyond comprehension, and am without any attributes. Hence, I do not have a name, nor a form or shape. I am not to be identified by any deeds, as I do nothing and remain neutral towards all deeds. [This is because the deeds are done by the gross body, and I am not the gross body but a pure and sublime conscious 'spirit'.]

I am that Brahm who is an embodiment or personification of ‘Sat-Chit-Anand’. That is, I represent Truth, Consciousness and Bliss in their purest and most sublime form (20).

21. Since I am not a gross and perishable body that takes a birth and dies in due course, say then how can I take a birth and die?

I am not Pran (the factor known as ‘life’ in the gross body of a living creature), so say how then can I be tormented by thirst and hunger (as these are the characteristics shown by all living beings with a physical gross body having life infusing vital winds called Pran flowing inside it, a body which needs water and food to sustain its self, thereby creating the sense of thirst and hunger, and the need to quench them with drink and food)?

I am not the Mana (mind and heart representing thoughts and emotions), so say then how can various sorrows and miseries as well as different attractions and attachments ever afflict or affect me? [This is because it is the mind and heart that feels sorrows and miseries as well as gets attracted and attached to anything in this world. The pure conscious Atma or soul is aloof from such emotions and thoughts, as it is immune to them and a mere witness to all that is happening to the body and its gross as well as subtle organs.]

I am not a doer of any deed (as these are done by the gross body which is very distinct from me, because I am pure consciousness and most uncorrupt, neutral and subtle entity in the whole of creation), so there is no question of my getting tied to the consequences of these deeds, either suffering their bad effects or enjoying their good results, and therefore there is neither liberation and deliverance nor getting shackled or getting tied by any fetters for me.

This is the great secret revealed by this Upanishad about ‘me’ (i.e. the Atma or soul). This is its mystical teaching’. Amen! (21).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 13

Shuka Rahasya Upanishad/Shuka-Rahasyo-panishad

This Upanishad is named ‘Shuka Rahasya’ because in it Lord Shiva has elaborately expounded upon the four great sayings of the Vedas, called the ‘Maha Vakyas’, which succinctly sum up the basic maxims and axioms of these eternal scriptures (the Vedas) to unravel their profound secrets and explain their metaphysical importance and spiritual significance for the benefit of sage Shukdeo, the son of sage Veda Vyas who was the legendary classifier of the Vedas and the author of the Purans, at the latter’s request.

The Upanishad describes in detail the due diligent process for invoking these Maha Vakyas which are regarded as the greatest and the most profoundest of Mantras pertaining to the supreme transcendental Brahm, the only Truth, the cosmic Consciousness and the Lord of creation, with the ultimate aim of self-realisation and

Brahm-realisation leading to permanent Mukti of the spiritual aspirant which amounts to liberation and deliverance of the soul from the seemingly endless cycle of birth and death, entitling him to obtain complete emancipation and final salvation. This gives the soul (the aspirant's true identity, his Atma) access to a fount of eternal peace and bliss, an access that provides the seeker wholesome beatitude and felicity.

It so transpired that after gaining this eclectic knowledge about the ultimate Truth, sage Shukdeo renounced all his ties with this material world and became lost in the indescribable bliss obtained upon self-realisation. In this he superseded his own father because both had heard Lord Shiva preach the Maha Vakyas in all their finer details, but it was the son who found the bliss of Brahm-realisation first by renouncing this world, and not the father. It was later that the father followed the footsteps of his son, but that was more out of profound sorrow at having lost his only son which overwhelmed him so much that complete renunciation towards this perishable and deluding material world of sense objects sprouted in his mind and heart than it being the direct effect of becoming aware of the great import of these scriptural sayings called the Maha Vakyas (see verse nos. 50-52).

The four great sayings are the following—‘OM Pragyanam Brahm’ (OM salutations! The highest form of knowledge is Brahm), ‘OM Aham Brahmasmi’ (OM salutations! I am Brahm), ‘OM Tattwamasi’ (OM salutations! That Brahma is you), and ‘OM Ayamatra Brahm’ (OM salutations! This Atma is Brahm). These have been enumerated in verse no. 22/1-4, and elaborately explained in verse nos. 23-42. Other references in this context are the following Upanishads—Paingal Upanishad, 3/2; Mandal Brahmin Upanishad, 3/1/6, 3/2; Sarwasaar Upanishad, 12-14, Tejobindu Upanishad, Cantos 2-6, etc.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्यं_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।
 _____ॐ_शान्तिः_।_शान्तिः_!!शान्तिः_!!!_

The meaning of this Shanti Paath is given in appendix no. 1.

1. Now we shall describe the great Upanishad called the ‘Rahasyo-panishad’. [It is so-called because it unravels the profound secrets of the great sayings of the Vedas as elaborately elucidated herein below.] (1).

2. Once, the great sages and seers called ‘Devarshis’, who were highly acclaimed and had attained the exalted stature which made them as holy, honourable and revered as the great Gods themselves, approached the creator Brahma and humbly requested him, ‘Oh Lord! Please preach us the Upanishad called ‘Rahasya Upanishad’. [In other words, please describe the Upanishad which unravels the greatest of metaphysical secrets and spiritual truths to us, along with explaining their meaning, significance and importance.]’ (2).

3. At this, Brahma replied, ‘In some ancient time, sage Veda Vyas¹—who was most enlightened and glorious in his exalted stature, was highly acclaimed for his erudition, sagacity and expertise in the scriptures, was renowned for his depth of knowledge and

ability to peer behind the external façade and arrive at the truth, was very steadfast and diligent in his Tapa (i.e. strictly observed his religious vows and auspicious life style marked by austerity and penance), and was an embodiment of all the Vedas (because he knew them thoroughly and it was he who had classified the Vedas in their present form, making them easy and readily accessible in the present age)—went to Lord Shiva and bowed before him and Goddess Parvati (his divine consort) most reverentially. Then Veda Vyas prayed to him—(3).

[Note—¹A short note on Veda Vyas would be proper here. Veda Vyas was the great grandson of sage Vashistha, grandson of sage Shakti, and the son of sage Paraashar and his wife Satyawati, a fisherwoman. Since he had dark complexion, he was also called Krishna, and since he was born on an island, he was called Dvaipayaana. Hence his other name was Krishna Dvaipayaana.

He is said to be an incarnation of Lord Vishnu himself. The Lord felt that the vast knowledge enshrined in the scriptures were so huge, jumbled up, abstract and complicated that they were beyond the reach of ordinary mortals. Further, till this time, everything was based on memory—hearing and speaking, passing from one generation of disciple to another generation in the oral form. There was a need to sort them out, to codify, systematize and classify this vast ocean of knowledge contained in the Vedas to make them more useful and handy.

So, Vishnu took the form of Veda Vyas to undertake this mammoth, daunting and formidable task. It is believed that Veda Vyas was born at the end of Dwapar Yug during the period of the Mahabharat war.

Soon after his birth, he took permission from his mother Satyawati and went to Badrinath in the Himalayas to do severe penances and austerities (Tapa), and he established his hermitage there. Hence, he was also called 'Badaraayana'.

Veda Vyas gathered all the Mantras of the hitherto undivided Vedas, edited them and grouped them according to the use to which they were put during fire sacrifices. He named them according to the class or section of the priests (called Ritwiji) who would use them for their ritualistic practices, such as the fire sacrifices. This added another epithet to his name—viz. 'Vyas', the one who knew the Vedas like the back of his hands and was therefore able to classify and divide them into four distinct texts as they now exist; the one who is the best preacher of the subject and made it easy for dissemination and teaching purposes. He classified the Vedas into four basic texts called the Rik, the Atharva, the Sam and the Yajur Vedas.

The four classes of such expert priests and the relevant Vedas were—(i) 'Riks'—they were also the senior most priests who presided over the ritual, and were also called Hota. They chanted the hymns of the Rig Veda. (ii) 'Yajus'—these priests were junior to the Riks and were also called Adhwaryu, and they chanted the verse categorised as the Yajur Veda. (iii) 'Samans'—these priests were the chanters of the holy hymns in chorus, in a loud, clear and melodious voice. They can be called modern day classical singers who attend any great function or festivity. They were also called Udgata. The Sam Veda was meant for them. (iv) 'Atarvans'—these priests did the actual, physical offerings of oblations in the fire pit of the fire sacrifice. They were called Brahma because they represented the senior most God, and the hymns used by them were classified and collected under the name of the Atharva Veda. So, as we have seen, the basic function of this classification was to facilitate the performance of the fire sacrifice.

But this exercise did not give peace of mind to Veda Vyas. His soul was yearning for something higher than these futile ritualistic exercises. So, as a next step, he further classified the Vedas into various Sanhitas, the Brahamans, the Aranyakas and the Upanishads.

The result of this tireless exercise produced a much vaster tome of spiritual, philosophical and metaphysical literature so much so that Veda Vyas thought it necessary and fit to write the basic tenets and maxims of the Vedas into a single

volume for quick referral. This was called 'Vedant Sutra', literally, the key to the Vedas.

The concept of the Vedas was still indigestible and daunting for the masses. So, he rendered the precepts palatable and within the grasp of the common man by resorting to the time-tested and more acceptable method of the story-telling form by writing the eighteen Purans and the eighteen sub-Purans—a stupendous literary achievement of mammoth proportions.

He had also penned the epic Mahabharat besides these eighteen Purans and eighteen sub-Purans. It is said that Ganesh, the most revered and wise son of Shiva who has the head of an elephant, was the scribe who wrote down the dictation of Mahabharat as Veda Vyas narrated it non-stop, a job which is not a child's play. It is also believed that inspite of remaining a chaste saint for life, he had begot the three legendary figures of Mahabharat, viz. Dhritraashtra, Pandu and Vidur, from the wives of Vichitravirya at the behest of his mother Satyawati. He gave divine sight to Sanjay, the charioteer who narrated the on going famous battle of the Mahabharat to Dhritraashtra who was blind. Being a contemporary sage of the Mahabharat period, he knew almost all the persons of this great epic.

During the reign of Kurus, he was revered by both the Kurus as well as their arch rivals, the Pandavas. Both the heroes of the epic Mahabharat war held him in high esteem. When he decided to write the story of Mahabharat—the documentary narration of the epic story of clan-fight and the devastating war that followed it—he chose Lord Ganesh as his scribe; Veda Vyas had dictated while Ganesh had written the epic. It is said that the site where the epic Mahabharat was written is called 'Vyas Gufa' (Vyas' cave) located near Bharoach while the place where he did his final Tapa is called Vyas Ashram located in the village of Mana two miles from the shrine of Badrinath in the Himalayas. His hermitage during the epic Mahabharat war was located in a village about ten miles north of the city of Ambala in Haryana state. River Saraswati flows nearby. This place is also famous as Vyas Ashram.

Time flew by, but still Veda Vyas did not get peace at heart. Once, while he sat near river Saraswati, full of remorse, unsatisfied and contrite, sage Narad came to him and advised him to write *Srimad Bhagwat* containing 18000 Slokas. This voluminous work gave him his final peace, so it is said.

His Guru was sage Yagyavalkya. His son was sage Shukdeo, the parrot saint. Veda Vyas chose five chief disciples who were initiated by him in the four Vedas and Purans. They were as follows—(a) He taught Rig Veda to his disciple named Paila; (b) Yajur Veda to his disciple Vaishampaayana; (c) Sam Veda to his disciple Jaimini; (d) Atharva Veda to his disciple Sumantu; and (e) the Purans to his disciple Ramharshan.

It is believed that sage Veda Vyas still lives, albeit in an invisible, intangible and subtle form in the shape of the vast repertoire of spiritual, philosophical and metaphysical literature that he has created for humankind, something which is not possible for any ordinary human being. These fortify the legend that he was an incarnation of Lord Vishnu and not an ordinary human being, a fact that is extensively covered in Vishnu Puran 3.3.

Summary of His Works :—

Veda Vyas classified the Vedas into four volumes— Rig, Yajur, Sam and Atharva.

Each of the four Vedas had various Sanhitas, Brahmanas, Aaranyakas and sub-Vedas as follows:—

(a) The Rig Veda—It had twenty-four branches out of which only five exist today. These are Shaakal, Baashkal, Aashwalaayan, Shaakhaayan, and Mandukeya. The Brahmanas of the Rig Veda are—Aitareya and Kaushitaki. The Aaranyakas of the Rig Veda are the following Aitareya and Shaankhaayan. The Rig Veda had Artha-Veda as its sub-Veda. It deals primarily with economics, politics and other aspects of life.

(b) The Yajur Veda—This is divided into two major types—viz. the Shukla (white) and Krishna (black or dark). The Krishna Yajur Veda has only four branches existing at present out of the earlier eighty-five—Taitirīya, Maitraayani, Katha, and Kapisthal. Its Brahman is known as Taitirīya Brahman. The Shukla Yajur Veda, also known as the Vaajsaneyi Sanhita, originally had seventeen branches, but now only following two branches exist—Kaanva and Maadhyandeen. Its Brahman is known as Shatpath Brahman. The Aaranyakas of the Yajur Veda are—Taitirīya (of the Krishna Yajur Veda) and Brihad-aaranyak (of the Shukla Yajur Veda). The sub-Veda of the Yajur Veda is known as Dhanur-Veda which deals with the science of archery and warfare.

(c) The Sam Veda—Only three branches are available now out of the total of one thousand that originally existed. These three branches are the following—Kauthum, Jaiminiya, and Raanaayaniya. The Sam Veda has nine Brahmanas as follows—Taandya Mahaa Braahman which is the largest and the most important, and the others are Aarsheya, Devtaa-dhyaaya, Praudha, Shadh-vimansh, Saam-vidhaan, Sam-hito-panishad, Talwakaar, and Vansha. Only one Aaranyaka is known now, and it is called Jaiminiya or Talwakaar Aaranyaka. The sub-Veda of the Sam Veda is known as Gandharva-Veda and it deals with the art and science of classical entertainment which involves music, song, drama, theatre, acting, deception etc.

(d) The Atharva Veda—This Veda had nine branches in early times, but only two survive now—Shaunak and Pippalaad. Its Brahman is Gopath Brahman. The sub-Veda of the Atharva Veda is known as Ayurveda, and it deals with medicinal herbs and the science of healing. No Aaranyaka of this Veda has come to light so far.

Each of the Vedas further had different Upanishads as follows—(a) The Rig Veda—there are 10 principal Upanishads of the Rig Veda, such as Aitareyaopanishad, Kaushitaki Upanishad etc.; (b) the Yajur Veda—there are 19 principal Upanishads of the Shukla Yajur and 32 principal Upanishads of the Krishna Yajur Veda, such as Taitirīya, Svetaasvatar, Katha, Brihdaaranakya, Maitri, Ishavasya Upanishads etc.; (c) the Sam Veda—there are 16 principal Upanishads of the Sam Veda, such as Kena, Chandogya Upanishads etc.; and (d) the Atharva Veda—there are 31 principal Upanishads of the Atharva Veda, such as Mundak, Maandukya, Prashna Upanishads etc.

Veda Vyas also wrote the 18 Purans as follows—Brahma, Padma, Vishnu, Vayu, Bhagwat, Narad, Markandey, Agni, Bhavisiya, Brahamavaivarta, Linga, Varah, Skanda, Vaaman, Kurma, Matsya, Garuda, Brahamanand Purans.

His other contributions to spiritual literature include—Mahabharat, Srimad Bhagwat, Vedant Sutra, Vyas Smriti and Laghu Vyas Sanhita.]

4-5. Veda Vyas said, ‘Oh Lord of the great Gods (‘Dev-Dev’)! Oh the most realised, enlightened and wise one! Oh the Lord who can rupture all the entangling nets and break through the fetters that act like shackles tying down the creature to this mortal world of material sense objects! Oh the Lord who is ever steady and stable in his auspicious vows and diligent in his righteous practices! The time has come when my son Shukdeo¹ has to be blessed with the divine and profound knowledge of the great holy Mantras called ‘Pranav’ and ‘Gayatri’ which would complete his initiation into the fold of disciples who study the Vedas, as this process of invoking these Mantras and blessing an aspirant with them has to be done by someone who is the most acclaimed expert in them. [And I am sure that there is no one more suited for this purpose than you. Though I could have myself initiated him by giving him the necessary Mantras and taught him as my disciple, but I felt that you are the most competent teacher in the field of spiritualism and metaphysics, and so I decided to approach you to become my son’s moral preceptor, spiritual guide and teacher. Every father wants the best of education for his son, and that his son excels and outshines

him in the field or vocation he chooses. Besides this point, this would give so many other great saints, sages and seers to hear spiritual discourse from you which itself would be a god-sent golden opportunity for all of us; it would be a rare privilege because it is not always that you preach yourself. So--] Oh the moral preceptor, the spiritual guide and teacher of the entire world! Please accept this request of mine and treat it as your moral duty to bless him (Shukdeo) and initiate him with these Mantras'. [It is a moral duty of any learned person that if any eager student comes to him seeking knowledge then the teacher should not refuse to teach him. If he does refuse, the patron Goddess of knowledge, i.e. Goddess Saraswati, feels dishonoured. No wise man should refuse to part with knowledge to an eager seeker just like a person should never refuse water to a thirsty person. It's a great sin if he does so.] (4-5).

[Note—¹Sage Shukdeo was the son of the legendary seer and renowned sage Veda Vyas. He was highly respected and was born of the celestial maiden named Ghrittachi when she had taken the form of a parrot, called Shuka in Sanskrit, to produce Shukdeo. He had his education under the expert guidance of his father Veda Vyas as well as from the legendary king Janak, the father of Sita of the Ramayan fame and the most self-realised and enlightened king of his time. His self restraint was so profound that the celestial Apsara, the dancing damsel of the court of Indra, the king of Gods, failed to trap in her honey trap. Shukdeo learnt the epic Bhagvata Mahapurana from his father and then narrated it to Parikshit at the culmination of the Dwapar Yug (the third era of the four-era celestial cycle of mythology) and the beginning of the present era called Kali Yug.

In Maho-panishad of Sam Veda tradition there is an incident where the sage Shukdeo had to wait for twenty-one days before king Janak granted him an audience to test his sincerity and steadfastness. Shukdeo had been sent by his father Veda Vyas to king Janak to learn certain secrets of metaphysics (Maho-panishad, 2/21-28).

There are two Upanishads that owe their revelation to sage Shukdeo—on in part and the other in full. The first one is Maho-panishad of Sam Veda whose Canto 2 is especially dedicated to the discourse given by Veda Vyas and later on by king Janak to satisfy the metaphysical queries of Shukdeo. The second is the present Shuka Rahasya Upanishad.]

6. Lord Shiva replied, 'Oh great and enlightened sage! If I teach your son about the grand truth and reality about this creation by enlightening him about the immaculate, pristinely pure, eternal and imperishable supreme transcendental Brahm in a holistic way, without concealing anything and in a truthful manner, then he would be overcome with a profound sense of renunciation and detachment which would inspire and impel him to leave aside all worldly involvement, lose all interest in anything to do with the mundane life, and instead become a reclusive mendicant or friar. Then of course he would be as radiant, splendidous and self-illuminated as the glorious concept of a 'brilliant light' itself. [In other words, when your son learns about the futility of pursuing this world and its false nature as opposed to the truthfulness of his pure conscious self called the Atma, and how and why this Atma has become trapped in the body which is now called 'Shukdeo', there are great chances that he would renounce the world and become a great Sanyasi or a reclusive monk right now. Would any father want his son to become a mendicant and not enter the household phase to raise a family? Suppose this happens, are you ready for this eventuality? Would you not then blame me for the fate of your son?]' (6).

7. At this rejoinder from Shiva, sage Veda Vyas replied respectfully, 'Oh Lord! Come what may, but I still request you to faithfully and diligently teach my son about the

grand truths of Brahm so as to complete his initiation process called the ‘Upnayan’¹ (7).

[Note—¹The *Up-nayan* is the sacred thread ceremony when a new disciple is initiated into the religious fold by accepting certain religious vows and Mantras from his moral preceptor called the Guru. This is the beginning of his career by studying the scriptures under the guidance of some wise and learned teacher. It is much like the investiture ceremonies held in schools, colleges and Universities nowadays.]

8. Oh the great Lord of the Gods (or, oh great God—‘Maheshwar’)! Let my son become all-knowing; let him be an expert in all subjects as well as in all branches of knowledge under your expert guidance and by your divine grace. Let him attain Mukti (liberation and deliverance from this cycle of birth and death) in all its four subtle forms¹ which best suits him.² (8).

[Note—¹The *four types of Muktis* are the following--(i) *Salokya* which refers to finding an abode in the supreme divine abode of the chosen deity of the seeker; (ii) *Sayujya* which refers to intimate union between the individual soul of the creature and the supreme Soul of creation which is the supreme transcendental Brahm manifested in the form of the Lord whom the aspirant worships has his patron deity or Lord God. It implies to become one with the Lord; to merge one’s own identity with the Lord so that one becomes inseparable from his Lord; this form of salvation is very similar to the one that comes under the definition of Kaivalya; it is also called the ‘Param Pad’ or supreme state of being one with the Lord. (iii) *Samipya* which refers to being able to reside near the Lord to serve him; and (iv) *Sarupya* which implies that the aspirant becomes one with the deity whom he worships as his ideal. This last form of Mukti is almost similar to the Sayujya type of Mukti and is very much like the Kaivalya form of Mukti which literally means ‘the only one of its kind’, thereby implying that there is no other forms of Mukti except the one when the Atma abandons the gross body which is like a shackle for it, and then inseparably and indistinguishably merging with the supreme transcendental Soul of the cosmos. This ‘Kaivalya’ Mukti is the ultimate, eclectic and holistic form of Mukti extolled by the Upanishads. This Mukti means the dissolution or merger of the individual soul with the parent supreme Soul. The realisation that the soul of the individual creature is the same as the cosmic Soul residing in all the creatures of this world, to see the supreme Brahm as a resident of the inner-self of the individual creature as its Atma, and identifying oneself with that Atma which is synonymous with that supreme Brahm, which in turn leads to the recognition of non-dual nature of the soul of the creature and the supreme Soul of the cosmos, realising therefore that there is no notion as ‘duality’ when dealing with divinity and the supreme transcendental being called ‘Brahm’ vis-à-vis the creature, and other such basic tenets of Vedanta are the foundation upon which Kaivalya Mukti rests. According to Yoga Upanishads, Kaivalya Mukti is achieved even when the creature is alive because it primarily involves total realisation and disassociation from the body and the world with which it has to interact. When the seeker dies, he simply abandons his mortal coil, the gross body consisting of the different sense organs, and merges his Pran or the Atma with the macrocosm outside. Since the word ‘Kaivalya’ means ‘the only’, this form of Mukti refers to the realisation of the one and the only spiritual Truth which is the absolute and irrefutable Reality in creation. This concept of Mukti from the metaphysical point of view has been described in Sarwasaar Upanishad, verse no. 2 which is Chapter 12 of this volume.

²It is to be noted here that sage Veda Vyas did not hesitate even for a fleeting moment at the prospect of his only son renouncing the world and becoming a reclusive monk or friar. Rather he would expect it from his son if he had actually understood the essence of the teachings of the Vedas. This clearly shows that in

earlier times the great sages not only lectured about religion but practiced its great tenets in their own lives.]

9. Gladly accepting the prayerful request of sage Veda Vyas, Lord Shiva along with his divine consort ‘Sambi’ (or Bhagvati Parvati, also known as Uma) went to the place where a grand congregation of great sages and saints had assembled to hear this divine discourse. The Lord took his auspicious seat with a cheerful state of mind (9).

10. Sage Shukdeo felt most honoured and privileged at having the golden opportunity of being in the company of the great Lord Shiva in the assembly of renowned sages and seers, and also at being initiated by Lord Shiva personally. He accepted the Mantra of Pranav¹ (Brahm) from him with full devotion and conviction at his command.

After that, he most reverentially prayed to the Lord—(10).

[Note—¹The Mantra of Pranav is OM, and it is described in detail in verse no. 20 below.]

11. Sage Shukdeo said, ‘Oh the primary and most ancient God who precedes all other Gods! [That is, Lord Shiva is the greatest, the most ancient, the most revered and the most exalted God in the pantheon of Gods—and this is why he is honoured by the epithet ‘Devadidev’.] Oh the all-knowing and omniscient Lord (‘Sarwagya’)! Oh the Lord who is an eternal embodiment of genuine and unadulterated Truth as well as is a personification of infinite and true blissfulness (‘Sacchidnand’)! Oh the dear Lord of Uma (i.e. the loving and dear husband of Goddess Uma or Parvati—‘Uma-raman’)! You are the Lord who is eternally benevolent and munificent towards all the living beings, and are like an infinite treasure of compassion and mercy for them. Be pleased with me (11).

12-13. I am highly obliged to you because you have not only given me the Pranav Mantra (of OM) which pertains to the invisible, all-pervading and macrocosmic primary manifestation of the supreme Divinity, but also have made me enlightened about that Principal Absolute itself that is irrefutable, universal and absolute Truth of creation and for which this OM is used, which is the target of this Mantra.

But I am especially interested to learn about the essential great sayings called the ‘Maha Vakyas’ as proclaimed by the scriptures, such as ‘Tattwamasi’, ‘Pragyanam Brahm’ etc. complete with their intricate meanings and finer nuances, in a systematic and chronological manner, along with their specific ‘Shadang-Nyas¹’ etc. [This is because this due diligent process would help me to realise that the Truth more systematically and in an orderly fashion. I would then be able to identify myself more closely with that Absolute Truth of creation in more practical terms rather than simply in a hypothetical way.]

Oh the eternal and imperishable Lord Shiva who is ever-present, eternal, steady and unchanging (‘Sadaa-Shiva’)! Please be kind to unfold this profound metaphysical secret for me’ (12-13).

[Note—¹The concept of *Shadang Nyas* has been described in note to verse no. 20 below along with the other form of Nyas called the *Anga Nyas* which complements it.]

14. Lord Sadaa-Shiva began to preach—‘Oh the great and auspicious sage Shukdeo! You are indeed enlightened and wise. You have asked me a question which pertains

to the practical aspects of the profound but most esoteric and secret spiritual knowledge enshrined in the tenets of the Vedas (14).

15. Therefore I shall describe for you this great secret knowledge in the form of this Upanishad, complete with its various connotations along with its Shadang Nyas. When an aspirant becomes well versed in it, when he has acquired this knowledge in a holistic manner, when he has witnessed and personally verified the veracity of the truth enshrined in this knowledge, and when there is not even an iota of doubt in his mind about their trustworthiness, it is certain that such a realised and erudite aspirant would obtain Moksha or permanent liberation from the fetters of ignorance that tie down the creature and prevent his deliverance from this delusory world with its attendant problems. In other words, the aspirant is able to attain emancipation and salvation for his soul (15).

[Note—The signs of a self-realised person are enumerated in Sarwasaar Upanishad, verse nos. 16-21 of Krishna Yajur Veda among others. This Upanishad is Chapter 12 of this volume.]

16. The proper way to preach these Maha Vakyaas, or the great sayings of the Vedas, is to teach them in a holistic and systematic manner, complete with their Shadang Nyas and other connotative finer nuances, by a competent teacher, and not merely as hollow and meaningless statements meant to be memorized by heart without having any faith and conviction as to their truth and veracity, for then it becomes an exercise in futility and a waste of time and energy (16).

17. Even as the Upanishads are regarded as the crown jewels of the Vedas, this particular Upanishad which expounds and elucidates upon the great sayings is like the best amongst all the Upanishads. [This is because it teaches and explains the fundamental and essential tenets which are regarded as the best essence of all the numerous philosophies, various doctrines and ideas, and the uncountable maxims and axioms that are propounded and affirmed by all the scriptures. It virtually distills them and presents the nectar in a nutshell.] (17).

18. That enlightened, wise, intelligent and diligent spiritual seeker who has delved deeply into the profound secrets of the supreme transcendental Truth known as the divine and mystical Brahm as envisioned by and described in this most profound of Upanishads, who has contemplated and pondered on the grand and esoteric secrets of this Brahm in order to access this glorious entity and become acquainted with its inherent truths, who has become firmly convinced about it, and who has, as a result, obtained the refined form of spiritual nectar and learnt the essence of all scriptural teachings that endeavour to show him the path of emancipation and salvation of his soul, the path leading to the creature's liberation and deliverance from all the worldly delusions having their genesis in ignorance and misconceptions about the reality and truth—such a seeker need not perform other rituals or observe certain religious duties for this purpose, such as going on a pilgrim to religious places to perform religious rites, offer oblations to Gods and do penances and other purifying deeds there, or study, chant and repeat the different Mantras. What is the use of all these when the nectar has already been accessed by him in the first place? (18).

19. The great spiritual benefit that is obtained by studying, discussing and debating these Maha Vakyaas for a period of one hundred autumns (i.e. one hundred years) is

obtainable by doing Japa (constant repetition) of them even once in a systematic and prescribed manner. This is done by following the well laid-out process for invoking these Mantras by first honouring the great Rishis, or the sage who had first conceptualised this Mantra and who is remembered first in order to pay homage to his memory and seek his blessings, guidance and graceful intercession. It is to be followed by doing Shadang Nyas of the Maha Vakya (as described in note to verse no. 20 below) (19).

[Note—This verse emphasises the astounding mystical potentials of these *Maha Vakyas*. The important point to note here is the importance of having unwavering faith and firmness of conviction in any spiritual pursuit as implied in the observation that merely doing Japa once has the same effect as debating the Maha Vakyas for a hundred years. This is a figure of speech to effectively drive home the point that anything done with skepticism and doubts in mind, especially in the field of spiritualism, is bound to fail. On the other hand, when there is firm conviction, there is bound to be a steadiness in his gait and commitment of purpose; he would move ahead in his spiritual pursuit with firm steps and not wobble, flounder and totter at every pitfall and turn. He would not fall prey to delusions and enticements, but move on steadily towards his spiritual goal.]

20. [In this verse, the due process of invoking the Divinity by way of doing ‘Shadanga Nyas’* and ‘Anga Nyas’** of the Mantras is being elaborately described.]

‘OM’—this is one ‘Maha Vakya’ or the first great saying, the first maxim and axiom of the Vedas¹. The Rishi² of this Mantra is known as Hans (literally meaning a divine Swan, but used as an epithet to describe the sage who was most wise and enlightened amongst his peers so much so that he selected this monosyllable Mantra from amongst the numerous group of words and syllables available to holistically describe that entity which is supreme and transcendental Truth in creation). The Chanda³ is Gayatri⁴; the Devta⁵ is Paramhans (the supremely enlightened Divinity); the Beej⁶ is ‘Hum/Hun(g)’ (pronounced as *sum*, or *sung*); the Shakti⁷ is ‘Saha’; and the Kilak⁸ is ‘So-a-ham’ (i.e. ‘that is me’, implying that the aspirant who has understood the real essence of this Mantra and its spiritual import exults in the ecstasy of self-realisation when he realises that he is the entity to which this Mantra OM is referring, and it is the supreme Truth known the transcendental Brahm).

In order to successfully obtain access to the supreme transcendental Being who is the patron deity of this great Mantra (OM), the deity known as and honoured by the epithet ‘Paramhans’, I am now describing the process by which this Mantra should be invoked in a ritualistic manner so that desired mystical results are obtained, a process called ‘Viniyog’ (literally meaning a humble and prayerful invocation of the patron God and establishing a union between the individual aspirant and this Divinity).

The aspirant should first touch the thumb (with the closed fingers) and say with firm conviction and faith ‘I most reverentially and devotedly invoke Brahm who is eternally truthful, an embodiment of Gyan (truthful knowledge and enlightenment), and without an end. I invoke him and establish him in my thumb along with his astounding divine powers and stupendous potentials. Namaha⁹.’

Next, he should touch the first finger with the thumb and say with firm conviction and faith ‘I most reverentially and devotedly invoke Brahm who is an embodiment of eternal bliss and felicity. I invoke him and establish him in my first finger along with his astounding divine powers and stupendous potentials. Swaha¹⁰.’ [The use of the word ‘Swaha’ indicates that the aspirant is mentally performing a fire sacrifice.]

The second finger is next touched by the thumb and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is eternally and perpetually blissful and full of felicity. I invoke him and establish him in my second finger along with his astounding divine powers and stupendous potentials. Vaushat¹¹.'

Next, the third finger is touched by the thumb and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is honoured by the title of 'Bhuma'¹². I invoke him and establish him in my third finger along with his astounding divine powers and stupendous potentials. Hum¹³.'

The fourth finger is touched next by the thumb and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is even the Lord of this Bhuma. [Here the reference is made to the supreme transcendental Brahm, the Supreme Being who is the Lord of all that exists and from whom even the Viraat Purush, the Bhuma, has emerged or evolved.] I invoke him and establish him in my fourth finger along with his astounding divine powers and potentials. Vaushat.'

The palm and the opposite side of it should then be touched by the opposite hand and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is one and non-dual, who is unique and without a second. I invoke him and establish him in my palms and hand along with his astounding divine powers and stupendous potentials. Phat¹⁴.'

Next, the heart should be touched and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is Satya (the truthful Being; the personification of Truth), an embodiment of Gyan (knowledge and enlightenment), and Anant (without an end). I invoke him and establish him in my heart along with his astounding divine powers and stupendous potentials. Namaha.'

Next, the head should be touched and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is an embodiment of eternal beatitude and felicity. I invoke him and establish him in my head along with his astounding divine powers and potentials. Swaha.'

Next, the 'Shikha' (the tuft of hair on the top of the head on the crest of the cranium) should be touched and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is an embodiment of eternal beatitude and felicity. Brahm is perpetually and infinitely blissful. I invoke him and establish him in my Shikha along with his astounding divine powers and stupendous potentials. Vaushat.'

Next, the two shoulders should be touched and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is honoured by the epithet of 'Bhuma' (one who is vast and colossus; the Viraat Purush) and revered as such. Hum.'

Next, the two eyes should be touched and the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is honoured and revered as the Lord of the one who is known as 'Bhuma' (i.e. the supreme transcendental Brahm). Vaushat.'

Next, the right hand should be raised and moved in the air above the head in a circle, brought down and a light clap is made by striking it against the left palm. While doing so, the following statement is said with firm conviction and faith 'I most reverentially and devotedly invoke Brahm who is one of his kind and non-dual. He is

unique and matchless in this creation. Let him protect me like a shield around my body. Phat.’

Let this supreme transcendental and almighty Brahm protect me from all the directions represented by the words ‘Bhu’ meaning the terrestrial world and the mortal creatures living in it, ‘Bhuvaha’ meaning the sky in which the creatures that fly live, and the ‘Swaha’ meaning the upper heavens where the Stars and the Gods reside.

This last invocation also refers to the aspirant’s acknowledgement of the fact that the supreme Brahm is present in all the three aspects of creation—the mortal gross world represented by the earth (Bhu), the subtle but visible world represented by the sky (Bhuvaha), and the subtlest and invisible world represented by the heavens (Swaha).’ (20).

[Note—*The concept of *Shadang Nyas* in the context of Vedic hymns or Mantras refer to the six limbs or basic divisions into which any given classical phrase, such as the Mantra, is broken or divided into for the purpose of study. These six divisions are the Rishi of the Mantra, i.e. the sage who had first visualised it in his mind and proved its efficacy, the Chanda which the classical style in which it is composed, the Devta or deity to whom it is dedicated, the Beej, literally the seed or syllable which is the basic sound form from which the Mantra has sprouted much like a tall tree having its origin in the humble ‘seed’, the Shakti or the divine and holy powers that the particular Mantra possesses, and the Kilak or the peg which helps it to be established in the body or the mystical worship instrument used during occult practices to invoke the supernatural powers of this Mantra.

** *Anga Nyas* is the process of ritual worship by which certain fixed points in the body are designated where the chosen deity is mentally invoked through the specific Mantra. This envisions that the mystical divine powers of the patron God or deity being worshipped by the Mantra are mentally invested in these fixed cardinal points of the body, thereby empowering the aspirant with their stupendous potentials as well as symbolically assigning the body to the tutelary God or deity to whom the particular Mantra belongs for his protection and blessing. Usually these six cardinal points are the following—the two legs, two hands, one head and one waist region. But according to this verse, they are the thumb, the tip of the fingers, the heart, the shoulders, the tuft on the top of the head, and the palm of the hand. There are prescribed ways of invoking the Mantras, and when done in a proper way it empowers the ordinary body of the worshipper with extraordinary divine and mystical powers.

Therefore, process of doing Anga Nyas is to symbolically establish the Mantra’s divine mystical powers in the worshipper’s own body and make it holy, auspicious, sanctified and empowered. The deity being worshipped is symbolically requested to come and take his seat in the body, thereby ensuring that the worshipper is getting constant protection from this godhead. In the present context, since the Maha Vakyas speak of the supreme transcendental Brahm, the latter’s invocation and seating in the worshipper’s body would ensure that he becomes a versatile personification of Brahm. He is literally transformed from being an ordinary human being to an exalted being who is as revered and honourable as Brahm as well as a living embodiment of Brahm. Herein lies the importance of having firm faith in these Maha Vakyas because assuming the mantle of Brahm is not an easy task. The worshipper is expected to live up to his responsibilities as Brahm personified!

¹The concept of *OM* has been elaborately described in other Upanishads too.

²The *Rishi* of the Mantra is the sage who had first conceived or visualised it in his mind and proved its efficacy, and who is remembered first in order to pay homage to his memory and seek his blessings.

³The *Chanda* is the classical style in which a particular hymn or great saying is composed.

⁴The *Gayatri* is a special type of poetical composition having twenty four letters or syllables divided into three lines or steps or stanzas.

⁵The *Devta* or God is the patron deity to whom the particular Mantra is dedicated.

⁶The *Beej*, literally the seed, is the syllable which is the basic sound-form from which the Mantra has sprouted much like a tall tree having its origin in the humble 'seed'.

⁷The *Shakti* is the divine and holy powers that the particular Mantra possesses. It refers to the Mantra's dynamic energy that is subtly present in it in a coded form. Proper use of the Mantra helps to de-code this energy and unleash or activate it.

⁸The *Kilak* is the peg which helps a Mantra to be established in the body of the worshipper of that Mantra, or to the mystical worship instrument used during occult practices to invoke the supernatural powers of this Mantra and invest this instrument with these divine and mystical powers. It is like a nail to fix the Mantra at the designated point in the body.

⁹The word *Namaha* is used as a submissive word used to show supplication, great honour and respect to the deity adored by the worshipper. It literally means 'I most reverentially and devotedly bow to you.'

¹⁰The word *Swaha* is pronounced at the time of offering oblations to the holy fire during a fire sacrifice. It is said that when this word is said, the Fire God accepts the offering on behalf of the patron God for whom it is meant.

¹¹The word *Vaushat* refers to the symbolic second leg on which the formal fire sacrifice is based, the other leg being Swaha. Thus, they are often used to mean the same thing, and refer to the oblation offered to the patron deity or God who is being worshipped by the means of the fire sacrifice (Taittiriye Sanghita 7/5/5/3). That is why Vaushat is also related to the Vaishwanar Agni (the all-pervading subtle fire element in the cosmos) (Maitrayani Brahmin, 4/6/7) and the Sun God (Shatpath Brahmin, 1/7/2/11).

¹²The word *Bhuma* literally means the one who is vast and colossus as the visible world of which he is the undisputed Lord. It refers to the Viraat Purush who is the cosmic gross body of the Supreme Being known as Brahm, and from whom the rest of the visible creation has evolved.

¹³The word *Hum* refers to the sanctified food that is kept aside during a formal fire sacrifice and is meant for human consumption as sanctified food. In ancient times, householders used to keep aside some food, equivalent in quantity to sixteen eggs of the peacock, to be offered to guests or mendicants. This formed the symbolic third leg of the formal fire sacrifice.

¹⁴The word *Phat* refers to the sound of clap made by striking the two palms together. It is one of the practices observed during formal occult worship.]

21. [This verse pays respects to the enlightened Guru or moral preceptor and spiritual guide of the aspirant. Careful reading would show that a person who possesses the virtues listed herein is like a personification of the Supreme Being known as Brahm. He deserves the same honour and respect that one gives to Brahm. He is deemed to possess all the mystical powers and potentials, all the authority and divinity possessed by Brahm.]

One should mentally remember one's Guru, show due respect and pay homage to him most reverentially in the following words—'He (i.e. the wise, erudite, sagacious, most learned, enlightened, and self-realised moral preceptor, spiritual guide and teacher) always sports a cheerful and pleasant disposition.

He is an embodiment of the best of blessings and virtues that bestow all round welfare and happiness to his followers (disciples), and whose mere presence is very comforting and reassuring for them.

He is a living personification of Gyan (which is pure and truthful knowledge, wisdom and enlightenment).

He is beyond the reach of perplexities and vexations created by the sense of duality in this world, leading to contradictory thoughts, emotions and sentiments that create unnecessary doubts, dichotomy and confusions. That is, he is mentally stable and steadfast in his convictions and beliefs; he is not swayed by the buffeting effects of adversities, turmoil and suspense that are so characteristic of this delusory world.

He has the subtle and sublime characteristics that are so unique to the sky. That is, he remains aloof and detached from everything like the sky; he is not tainted or affected by anything or any circumstance in this world much like the sky in which uncountable varieties of things are embedded in Nature but which remains inherently untainted and uncorrupted by any of them. This is in spite of him (the Guru) being surrounded by all the material objects, impurities and delusions that are so characteristic of this world. The Guru is constantly being buffeted by so many numerous and divergent impulses originating from this material world which is like a trap in which even the most learned persons fall, but in spite of these distractions and constant gnawing he remains flawless and faultless like the sky. He is a repository of knowledge and has a depth of enlightenment that is as vast, endless and fathomless as the sky; he remains calm and serene like the distant recesses of the vast and endless sky. In short, a true Guru is comparable to the grand virtues as possessed by the sky element.

He keeps his attention fixed on one essential 'truth', the element which is supreme, transcendental, non-dual and most truthful, instead of allowing his mind and intellect to wander here and there in myriad theories, doctrines and philosophies, leading to immense confusions, uncertainties and consternations as well as distress and vexations for the spirit much like a ship that is being tossed around in a choppy ocean.

He is 'one and perpetual'. That is, he is steady and stable as a rock in his beliefs, convictions, words, emotions, sentiments and thoughts; he is not of a fickle mind and character; he is not swayed by and swept off his moorings by myriad distractions and divergent influences which are characteristic attributes of this material world of delusions; he is unchanging and unwavering; he believes in one non-dual supreme Truth which is eternal and infinite.

He is most pure, uncorrupt, untainted and without any blemish of any kind.

He remains unruffled and unmoved, maintaining his equanimity and calmness even under adversities and unfavourable circumstances, such as during periods of extreme emotional turmoil and stress because he is full of the eclectic virtues of being dispassionate, calm, neutral and detached from everything. Instead, he remains ever submerged in a perpetual state of equanimity and bliss.

He is like an all-knowing, wise, expert and sagacious, but a neutral and detached witness to what the mortal world and its inhabitants do, being a dispassionate and un-involved observer to the happenings around him in this world.

He is full of equanimity, fortitude and evenness of mind and heart, remaining untouched and unaffected by the rocking effects of various emotions and sentiments that continuously pummel his heart, mind and intellect, and perpetually disturb him by intruding into his stoic calmness and peaceful demeanors.

He is free from being tainted or affected by the apparent good or bad effects of the three legendary Gunas or qualities inherent in all the living creatures, and which create distortions in the basically clean fiber symbolising the inherently pure and immaculate character of any individual's true self (i.e. his Atma; his consciousness).

[These three Gunas are Sata or the noble quality which creates propensity for righteousness and noble behaviour, Raja is the second quality which creates worldly desires and aspirations, leading to the predominance of such characters that make a creature worldly wise, and Tama which is the meanest and lowest quality, creating the tendency for sinful conduct. All these three qualities are present in a person, but his individuality is decided by the ratio in which these three are present. The 'inherent purity' refers to the immaculacy of the Atma which is the 'true self' of all living beings. These Gunas cast their shadow on the shine of the self-illuminated and immaculate Atma, making the individual appear to exhibit certain artificial taints and characteristics that are extraneous to his true self. This is like the case of the shadow of the moon falling upon the earth when it comes between the sun and the earth, giving rise to the solar eclipse. The sun has not lost its shine and neither is there a night during the day, but the optical impression created by this intervention of the moon makes it appear to be so. Similarly, the immaculate Atma appears to be tainted and darkened when these Gunas cast their shadow upon it. The resultant effect is that the individual does not appear to be as holy and divine as he actually is. In the case of a wise Guru, it is deemed that he has gained sufficient control over his self that none of these three Gunas are able to display their characteristic behaviour, thereby making the Guru absolutely neutral and pristine pure like a piece of crystal.]

I bow most reverentially and devotedly to such a Guru who possesses these virtues as narrated in this verse. [It is to be noted here that the eclectic and sublime virtues enumerated here are the virtues of the Supreme Being or Brahm. In other words, that Guru who is possessed of these attributes is no less revered than Brahm; he is equivalent to Brahm; he is Divinity personified.] (21).

[Note—The word *Guru* has two parts—viz. 'Gu' meaning darkness, and 'Ru' meaning light. Hence the word 'Guru' means a person who can remove the darkness symbolising ignorance and illusions that has engulfed the disciple from all sides and act as a hindrance or an obstacle in his emancipation and salvation by showing him the truthful path, or lighting his path with the light of knowledge and holding out his hands to support him when he falters. Therefore he is an exalted, revered and much sought after person who can remove the darkness of ignorance of his follower by showing him the light of knowledge and guides him whenever he finds himself in a moral dilemma and quandary. He is the person who is both the moral preceptor as well as the spiritual guide of his disciple. He is supposed to act as a neutral advisor to his ward in all matters temporal and spiritual. The disciple is expected to confide in him his greatest of secrets without the fear of betrayal or blackmail. He is the one who is expected to have risen above all kinds of vested interests and keeps the welfare of the disciple as his main objective. He is the one who has transcended the mundane and has acquired sublime awareness of the supreme Reality, because only those who are themselves aware of anything can hope to tell others about it. Therefore it is deemed that only a person of high mental, intellectual, spiritual and ethical caliber can become a true Guru.

A true Guru is treated as being equivalent to the 'Trinity Gods'—(1) Brahma, the creator, because he creates or helps to take birth good virtues and noble qualities in his disciple; (2) Vishnu, the sustainer, because he nourishes, sustains and helps to inculcate and develop wisdom and enlightenment in his disciple and leads him on the truthful path; and (3) Shiva, the concluder, because he helps to end, conclude and eliminate ignorance and negative traits in his disciple. He is 'God like' because he functions in all these capacities at the same time, besides being exalted in all knowledge, being virtuous, of high moral character and beyond reproach, being a source of unbound spiritual energy, being self realised and enlightened, and being eternal in the sense that what he advises to his disciple, the path he shows, the light

that he lights in the dark heart of the creature, makes him immortal. Therefore, a Guru is honoured for the divine virtues that he represents and embodies, that he teaches and implements in his life, for the divinity, for the Lord and for the personification of the great teachings of the scriptures that he exemplifies. It is not his physical body that is of any value for veneration, for the soul and not the body is venerable.

The importance of a Guru and his eclectic qualities have been lauded in other Upanishads as well, notably the Yogshikha Upanishad of Krishna Yajur Veda, Canto 5, verse nos. 56-59, the Shatyayani Upanishad of the Shukla Yajur Veda tradition, in its verse no. 39, the Tejobindu Upanishad of Krishna Yajur Veda tradition, in Canto 6, verse no. 44, Dwayo-panishad, verse nos. 1-7, and Advai Tarak Upanishad, verse no. 14-18 of the Shukla Yajur Veda tradition.]

22. Now in this verse, the four great maxims and axioms of the Vedas, called the 'Maha Vakya's', or the great sayings which form their fundamental teaching and are the essence of their doctrines, are being enumerated. (1) 'OM Pragyana Brahman'. [OM salutations! The truthful and pristine pure knowledge which is all-inclusive, most sublime and eclectic in nature is Brahman personified.] (2) 'OM Aham Brahmasmi'. [OM salutations! Indeed, I am Brahman.] (3) 'OM Tattwamasi'. [OM salutations! That Brahman is you; that Principal Absolute and essence is you; it is you; or 'that art thou'.] (4) 'OM Ayam Atma Brahman'. [OM salutations! This Atma, the pure conscious soul or 'self' of the creature, is Brahman.]

Out of these profound statements, the word 'Tattwamasi' establishes the oneness between the individual creature and the cosmic supreme Brahman. It is the statement of great metaphysical import and spiritual significance as it establishes the doctrine of 'non-duality'. [It essentially states that whatever that exists in this living creation is an image of Brahman, it is a manifestation of Brahman, it is none but Brahman. When the spiritual aspirant sincerely understands the import of this eclectic statement, he exults in joyous abandon because he would have understood the essence of the teaching of the Vedas that proclaim unequivocally that the creature is a revealed form of Brahman that resides as the Atma or pure consciousness of the former. This Atma is the 'true self' of all living beings. Since the Atma is the same in all of them, and since this Atma is the cosmic Brahman in a microcosmic form, it follows that all the living beings are a personification of the same divine entity known as Brahman. This Brahman is one, non-dual, eternal, immutable and constant. The importance of this Maha Vakya 'Tattwamasi' has been elaborately elucidated in verse nos. 40-41 below.]

A wise, erudite and enlightened spiritual aspirant who meticulously contemplates and deeply meditates upon this one 'Maha Vakya' (Tattwamasi) and understands the profound metaphysical implication of its doctrine, obtains the grand and glorious reward of attaining the 'Sayujya' from of Mukti by becoming one with Lord Shiva. [In other words, he becomes as wise, enlightened and self-realised as well as spiritually untainted, auspicious, holy and divine as the greatest God known as Lord Shiva who personifies these divine and glorious virtues all at once. The aspirant realises the non-dual, pristine pure conscious nature of his Atma which is the microcosmic form of the cosmic supreme transcendental Consciousness known as Brahman. Since this Atma is the true identity of the aspirant vis-à-vis the body, the uniformity, inseparability, indivisibility and oneness between him and the supreme Brahman is a forgone conclusion.] (22).

[Note—The Maha Vakya's are described in a number of Upanishads, such as the Atmabodh of Rig Veda; Paingala 3/2 and Mandal Brahman 2/2/5, 2/4/4, 3/1/6, 3/2/1, 3/2/2 of Shukla Yajur Veda; Kaivalya 16, Sarvasa 12-14 and Tejobindu Upanishad, Cantos 2-6 of Krishna Yajur Veda; Atma of Atharva Veda traditions.]

23. [Now, the process of ‘Shadanga Nyas and Anga Nyas’¹ of the phrase ‘Tat’ (meaning ‘that’) pertaining to the Maha Vakya ‘OM Tattwamasi’ is being described in this verse. The aspirant hopes to invoke this great Mantra to obtain the form of Mukti (liberation and deliverance; emancipation and salvation) known as ‘Sayujya’ whereby the worshipper obtains oneness with his chosen deity, which in this case is the supreme transcendental Brahm. The word ‘Tat’ refers to the supreme transcendental state of non-dual existence where the creature’s conscious self, known as his Atma, becomes one with the cosmic Consciousness of creation known as Brahm, because the word implies oneness between the Atma, i.e. ‘twam’, with the supreme Divinity referred to by the word ‘Tat’ meaning ‘that’. Refer verse no. 40 below.]

First and foremost, the worshipper should do ‘Shadanga Nyas’ pertaining to this Maha Vakya as follows:--‘The Rishi of the Maha Vakya is ‘Hans’; the Chanda is ‘Abyakta Gayatri’²; the Devta is ‘Pramhans’; the Beej or basic syllable of the Mantra is ‘Hum’; the Shakti is ‘Saha’; and the Kilak is ‘So-a-Ham’.

I do Japa with this Mantra by paying attention to these six components of it in order to achieve success in obtaining the most exalted stature of ‘Sayujya Mukti’. [That is, I devotionally and with due respect and firmness of conviction repeat this Mantra referring to the supreme transcendental Brahm--‘Tat’--while diligently paying attention to the finer nuances and different components of it so as to derive maximum spiritual benefit from it and become sufficiently enlightened and enabled to achieve oneness with the cosmic Divinity to which this Mantra is dedicated.]’

Now, since the worshipper is offering oblations and worship to the supreme Divinity known as ‘Tat’ or Brahm, the process of Anga Nyas which is being described here is also addressed to that supreme Brahm.

First, the thumb is touched (by the closed fingers) and the following statement is to be said with due respect, devotion and conviction—‘I bow most reverentially and devotedly to the supreme Purush, the Supreme Being’.

Next, the first finger is touched by the thumb and the following statement is to be said with due respect, devotion and conviction—‘Similarly, I bow most reverentially and devotedly to Ishan (Lord Shiva). Swaha.’

Next, the second finger is touched by the thumb and the following statement is to be said with due respect, devotion and conviction—‘I also bow most reverentially and devotedly to Lord Aghorai (i.e. the patron God of a special type of mendicants who worship Shiva and live in the cremation ground; the word literally means ‘most terrible and formidable’ Lord). Vaushat.’

The third finger is touched next by the thumb and the following statement is to be said with due respect, devotion and conviction—‘I likewise bow most reverentially and devotedly to Lord Sadyojataye (i.e. the patron God of new-born; the Lord of the ever evolving creation which is always new and different from its earlier version which keeps changing and evolving every other second). Hum.’

The fourth finger is then touched by the thumb next and the following statement is to be said with due respect, devotion and conviction—‘I also bow most reverentially and devotedly to Lord Vamdeo (i.e. one of the names of Lord Shiva). Vaushat.’

I bow most reverentially and devotedly to the supreme Lord who is the Lord and the ultimate Authority of all other Gods such as Ishan, Aghor, Sadyajat, and Vamdeo. [This is an obvious reference to the Supreme Being known as Brahm, for the latter is the final Emperor above whom there is no other Lord or Authority.]’ Saying

this, the worshipper should clap the hands by mildly striking the palms together, and say 'Phat' (to indicate the clapping sound made by striking the palms together).

This last invocation is repeated while touching the heart as well so as to invest it with the mystical powers and blessings of the Supreme Being. Or to symbolically invite the supreme Lord to come and take up his residence in the worshipper's heart.

Finally, the right hand is to be turned clockwise in a circle around the top of the head while saying the three words 'Bhu' to indicate the terrestrial world, 'Bhuvaha' to indicate the sky, and 'Swaha' to indicate the heavens. This means that the aspirant acknowledges the fact that the supreme Brahm is present in all the three aspects of creation—the mortal gross world represented by the earth, the subtle but visible world represented by the sky, and the subtlest and invisible world represented by the heavens. It also implies that the Supreme Being's blessings are sought for all-round protection³ (23).

[Note—¹The concept of *Shadanga Nyas* and *Anga Nyas* has already been described in verse no. 20.

²*Abayakta Gayatri* Chanda is the subtler and implied form of the Chanda, and is like a silent letter in any word without which the word would be incomplete and misspelt. The word 'Abyakta' means something that is not clearly mentioned and is hidden and implied. Since this word 'Tat' refers to the most esoteric and mystical divine entity in creation which is beyond comprehension and reach of the mind-intellect complex as well as any of the sense organs, it is apt to address it with an epithet that is in tune with its enigmatic and mysterious nature of being invisible and imperceptible.

³These concepts have been elaborately described in the text as well as the note of verse no. 20 above.]

24. The spiritual aspirant should contemplate about that supreme transcendental Being in these terms—'He is an embodiment of perfect and refined form of Gyan (truthful knowledge, high wisdom and profound enlightenment); he is the mystical entity worthy to be researched and known; he is accessible, approachable and attainable only by the means of truthful Gyan, but he is so esoteric, enigmatic and mysterious that he is beyond the reach of every form of Gyan itself. [In other words, though Gyan is the only instrument by which some idea can be had of what constitutes this supreme transcendental Truth known as Brahm, but whatever that is known by pursuing the path of Gyan is not the complete thing and an entire description of Brahm as much remains to be researched and known about him which is beyond the reach and grasp of the mind and the intellect of any living being in creation.]

He is a personification of purity of all sorts at its best and pristine form, of intelligence, wisdom, sagacity and erudition in all their glorious finery, stupendous reach and astoundingly powerful forms, of liberation and deliverance, emancipation and salvation in their best, truthful and real sense, and of eternity, infinity and imperishability in all their nuances and connotations.

It is that divine, eclectic supreme and transcendental entity which is an embodiment of Absolute Truth, of knowledge, erudition and wisdom, and of blissfulness characteristic of pure consciousness that is worthy of constant 'Dhyan'—i.e. it is worthy of being constantly remembered, being pondered upon, contemplated and meditated upon it, and remaining focused upon.

Indeed, we should constantly worship and remember that supreme Divinity which is most glorious, eclectic and magnificent (24).

[Note—Refer Shwetashwatar Upanishad, verse no. 16-21 of the Krishna Yajur Veda tradition.]

25. [This verse is dedicated to the exposition of the spiritual and metaphysical significance as well as the importance of the phrase ‘Twam’, meaning ‘you’ or ‘thou’, of the Maha Vakya ‘Tattwamasi’, and it refers to the individual creature’s pure self or Atma which is treated as the same entity as the ‘Tat’ or that supreme transcendental Being known as Brahm whose microcosmic counterpart is deemed to be ‘Twam’ (individual creature). The process is the same Shadanga Nyas and Anga Nyas as narrated for ‘Tat’ in verse no. 23.]

Now we shall describe the Shadanga Nyas of the Maha Vakya ‘Twam’. The spiritual aspirant should deeply contemplate upon its six components in order to derive its best results. He should meditate as follows—‘The Rishi of this Maha Vakya is Vishnu, the cosmic sustainer, nourisher and protector, its Chanda is Gayatri, its Devta is Parmatma (the supreme Soul, the cosmic Consciousness), its Beej is ‘Aiyang’, its Shakti is ‘Kling’, and its Kilak is ‘Souha’.

I duly and devotedly worship and invoke this Maha Vakya in the prescribed manner in order to obtain Mukti (liberation and deliverance, emancipation and salvation).’

Now, the Anga Nyas is to be done in the following steps—The thumb should be touched and the following statement is to be said with due respect, devotion and conviction—‘I bow most reverentially and devotedly to the Vasudeo (one of the names of Vishnu)’.

Next, the first finger is touched and the following statement is to be said with due respect, devotion and conviction—‘Similarly, I bow most reverentially and devotedly to Sankarshan (one of the names of Vishnu). Swaha.’

Next, the second finger is touched and the following statement is to be said with due respect, devotion and conviction—‘I also bow most reverentially and devotedly to Pradumna (one of the names of Vishnu). Vaushat.’

The third finger is touched next and the following statement is to be said with due respect, devotion and conviction—‘I likewise bow most reverentially and devotedly to Anirudha (one of the names of Vishnu). Hum.’

The fourth finger is then touched next and the following statement is to be said with due respect, devotion and conviction—‘I also bow most reverentially and devotedly to Vasudeo (one of the names of Vishnu). Vaushat.’

I bow most reverentially and devotedly to the supreme Lord who is the Lord and Authority of all other Gods and all other forms by which Vishnu is known, such as Vasudeo, Sankarshan, Pradumna, and Anirudha. [This is an obvious reference to the Supreme Being known as Brahm because Vishnu is one of the many names by which the Viraat Purush is known. This Viraat Purush is the macrocosmic all-inclusive and all-pervading gross body of Brahm, and it is from this Viraat Purush that the rest of creation has come into being, including Brahma the cosmic creator, and Shiva the cosmic concluder.]’ Saying this, the worshipper should clap the hands by mildly striking the palms together, and say ‘Phat’ (to indicate the clapping sound made by striking the two palms together).

This last invocation is repeated while touching the heart as well so as to invest it with the mystical powers and blessings of the Supreme Being. Or to symbolically invite the supreme Lord to come and take up his residence in the worshipper’s heart.

Finally, the right hand is to be turned clockwise in a circle around the top of the head while saying the three words ‘Bhu’ to indicate the terrestrial world, ‘Bhuvaha’ to indicate the sky, and ‘Swaha’ to indicate the heavens. This means that the aspirant acknowledges the fact that the supreme Brahm is present in all the three aspects of creation—the mortal gross world represented by the earth, the subtle but

visible world represented by the sky, and the subtlest and invisible world represented by the heavens. It also implies that the Supreme Being's blessings are sought for all-round protection (25).

26. Oh Lord! You are inherently present in all the creatures as their 'Jiva' or 'life in its most subtle and elementary form as the pure consciousness or Atma'. You are universally and uniformly present in the entire creation and in the form of all the creatures as one non-dual, immutable, indivisible and wholesome entity. Or, this multifarious world and its countless inhabitant creatures are one single image of your indivisible divine form (though these individual creatures appear to differ one from the other, but this difference is only superficial because their Atma is the same).

You (as the pure and enlightened consciousness) are the supreme Authority which exercises control over our 'Chitta' (the sub-conscious mind; the intellect and its faculty of discrimination and rational thoughts; the mind and its memory and ability to focus and remain steady in its course), along with Ahankar (or the negative trait of having vanity, pride, ego, arrogance and haughtiness).

I worship the Supreme Being in all his divine glories, magnificence, radiance and splendour when I worship, honour and pay obeisance to the word 'Twam' or 'you' (or 'thou') which refers to the individual creature in his purest form, i.e. to the Atma of the creature, to the pure consciousness that is the 'true self' of all living beings. ['Twam' is an integral component of the Maha Vakya 'Tattwamasi', meaning 'that is you'—where 'tat' refers to 'that Absolute Truth, that essence, that Principal' which is the supreme transcendental Brahm, while 'twam' refers to 'you, the pure consciousness, the Atma' of the individual creature that is his 'true self' and an entity that is being preached by the wise teacher with the avid intention of kindling profound enlightenment in him which is also the main objective of all scriptural teaching and all spiritual endeavours.] (26).

27. [This verse is dedicated to the exposition of the spiritual and metaphysical significance as well as the importance of the phrase 'Asi', meaning 'is or are, indeed, certainly', of the Maha-Vakya 'Tattwamasi', and it refers to the assertion, the confirmation of the fact that it is indeed true that the supreme transcendental Being represented by the word 'Tat' is the same as the individual creature's pure conscious self or Atma represented by the word 'Twam'. This 'Twam' is a microcosmic counterpart of 'Tat'. The word 'Asi' links or bridges the two aspects of creation—viz. the 'Tat' and the 'Twam' corresponding to the 'supreme Brahm' and the 'individual creature' respectively by unequivocally asserting and affirming that both are the same non-dual universal Divinity and there is no difference or dichotomy between them whatsoever. That is, the individual creature is indeed Brahm personified. The process is the same Shadanga Nyas and Anga Nyas as narrated for 'Twam' in verse no. 25.]

Now we shall describe the Shadanga Nyas of 'Asi' which is an inseparable component of the Maha Vakya 'Tattwamasi'. The spiritual aspirant should deeply contemplate upon its six components in order to derive maximum spiritual and mystical benefits from them. He should meditate as follows—'The Rishi of this Maha Vakya is Mana (mind-intellect and heart)¹, its Chanda is Gayatri, its Devta is 'Ardha-Narishwar², its Beej is 'Abyakta³ (untold, undefined, un-manifest, imperceptible, secret and concealed but implied and truthful), its Shakti (energy, powers, authority and potentials) is represented by 'Narsingh⁴ (the incarnation of the supreme Brahm as a half-lion and half-man to protect his devotee Prahalad who was being tormented

endlessly by his cruel demon father Hiranyakashipu), and its Kilak or peg is the supreme transcendental Soul of creation known as 'Parmatma'.

I duly and devotedly worship and invoke this part of the great Maha Vakya (i.e. 'Asi') in the prescribed manner in order to forge a union between the creature (i.e. my 'self' in its purest form as the Atma or pure consciousness) and the supreme Consciousness of creation known as Parmatma (or Brahm).'

Since the body of the worshipper is made up of the five primary elements in creation, viz. earth, water, fire, air and sky, in their grosser manifestation as compared to the subtle Nature which has them in their primary form representing the invisible Brahm, the worshipper now invokes the supreme Brahm in the form of these five primary elements and invests the body consisting of these elements with the subtle and sublime dynamic powers of their principal originator, the Brahm.

Hence, the Anga Nyas is to be done in the following steps—The thumb should be touched (by the closed fingers) and the following statement is to be said with due respect, devotion and conviction—'I bow most reverentially and devotedly to 'Prithivi', the earth element which is a fractional part of the non-dual cosmic Brahm and which exists in two forms, in its gross form in the physical world as the planet earth which harbours and sustains the living world, and the subtle form as one of the primary elements of creation'.

Next, the first finger is touched by the thumb and the following statement is to be said with due respect, devotion and conviction—'Similarly, I bow most reverentially and devotedly to 'Apaha', the water element which is a fractional part of the non-dual cosmic Brahm and which exists in two forms, in its gross form in the physical world (as wells, springs, rivers and lakes etc.) which harbours, nourishes and sustains the living world, and the subtle form as one of the primary elements of creation. Swaha.'

Next, the second finger is touched by the thumb and the following statement is to be said with due respect, devotion and conviction—'I also bow most reverentially and devotedly to 'Tej', the fire element which is a fractional part of the non-dual cosmic Brahm and which exists in two forms, in its gross form in the physical world (as terrestrial fire on earth) which nourishes and sustains the living world, and the subtle form as one of the primary elements of creation. Vaushat.'

The third finger is touched next by the thumb and the following statement is to be said with due respect, devotion and conviction—'I likewise bow most reverentially and devotedly to 'Vayu', the air or wind element which is a fractional part of the non-dual cosmic Brahm and which exists in two forms, in its gross form in the physical world (as the wind blowing on earth and the air inhaled and exhaled by the creature when he breaths) which nourishes and sustains the living world, and the subtle form as one of the primary elements of creation as well as the Pran living inside the body in the form of the many forms of this element (such as Pran, Apaana, Samaana, Vyan, Udaana etc.). Hum.'

The fourth finger is then touched by the thumb next and the following statement is to be said with due respect, devotion and conviction—'I also bow most reverentially and devotedly to 'Akash', the sky element which is a fractional part of the non-dual cosmic Brahm and which exists in two forms, in its gross form in the physical world (as the visible sky above the earth in which flying creatures move about, clouds float, dust and gases dwell, and which appears in various hues of colours and full of so many visible physical objects) which harbours and encloses the manifested gross world from all the sides, and the subtle form as one of the primary

elements of creation which imperceptibly pervade throughout the entire length and breadth of creation, inside as well as outside of it. *Vaushat*.'

I bow most reverentially and devotedly to the supreme Lord who is the Lord and Authority of all the elements such as earth, water, fire, air and sky, and the creation formed out of them. [This is an obvious reference to the Supreme Being known as *Brahm*.] Saying this, the worshipper should clap the hands by mildly striking the palms together, and say '*Phat*' (to indicate the clapping sound).

This last invocation is repeated while touching the heart as well so as to invest it with the mystical dynamic powers and blessings of the Supreme Being. Or to symbolically invite the supreme Lord to come and take up his residence in the worshipper's heart.

Finally, the right hand is to be turned clockwise in a circle around the top of the head while saying the three words '*Bhu*' to indicate the terrestrial world, '*Bhuvaha*' to indicate the sky, and '*Swaha*' to indicate the heavens. This means that the aspirant acknowledges the fact that the supreme *Brahm* is present in all the three aspects of creation—the mortal gross world represented by the earth, the subtle but visible world represented by the sky, and the subtlest and invisible world represented by the heavens. It also implies that the Supreme Being's blessings are sought for all-round protection (27).

[Note—¹*Mana*, or the mind and heart combine, is the center where all types of emotions and sentiments have their origin. It is the mind and intellect where all sorts of thoughts and decisions are centered. The *Mana* plays a pivotal role in the creature falling into the trap of worldly delusions or being liberated and delivered from it. Further, all Mantras have had their origin in the mind and heart of ancient sages and seers when they contemplated upon any aspect of Divinity and the real Truth in this creation. The great *Maha Vakyas* were then 'revealed' to them in their meditative trance. Hence the importance and primary source of everything in this creation as the *Mana* cannot be neglected or even over-emphasised.

²*Ardha Narishwar* is the half male and half female form of Lord Shiva indicating the primary form in which the Supreme Being revealed himself to initiate the process of visible world which relies upon the union of the male and the female to come into existence. This 'union' is a metaphoric way of saying that the Supreme Being, the divine entity known as the transcendental cosmic Consciousness and *Brahm*, allowed himself to be associated with *Maya*, which is the female revelation of *Brahm*'s delusion creating powers, to unfold the cosmos in all its astoundingly colourful scheme. Even as energy and abilities are needed to undertake any great enterprise of an unprecedented scale, the other half of *Brahm* is also known as '*Shakti*', literally meaning power, potentials, energy and strength. When the union materialized, the resultant offspring was the vast world.

The concept of '*Ardha Narishwar*' also indicates that the supreme *Brahm* is inseparable from Nature and the creation that it represents. They are two aspects of the same coin and intricately related to one another, one being complimentary to the other and supplementing the other's functions. So, while the male half symbolises *Brahm* as *Viraat Purush*, the cosmic gross body of creation that carried the 'genes' of the primary parent known as *Brahm*, the female half represents the stupendous cosmic energy, potentials, powers, abilities and strength that *Brahm* naturally possesses and which have revealed themselves as Mother Nature. Both aspects are supreme Divinity personified.

Lord Shiva is usually depicted in this form of a half male and half female to indicate the primary form of the mortal creation based on union of the supreme *Brahm* in the form of male aspect represented by Lord Shiva, and his *Shakti* represented by the female aspect of Divinity revealed as Mother Nature. That is why, amongst all the

Gods in the Hindu pantheon of Gods, Shiva is honoured by the epithet 'Mahadev' or the greatest God.

³*Abyakta* literally means that which is not said, or which cannot be described in words; something which is invisible and implied but not clear, visible and articulate; something that is an unrevealed and untold secret. Here it refers to the fact that Brahm and the individual creature are one and the same entity—because of the fact that Brahm is a non-dual universal entity, and the fact that the entire creation is nothing but a manifestation of this eternally indivisible and uniform entity which cannot be fractioned and mutated. This is a universal, irrefutable and unequivocal 'truth' though it is very secret and little known. It is impossible to prove its veracity and authority by visible material proof and logical arguments. The only way to become acquainted about its truthfulness is to experience and personally witness this 'truth' in all its splendorous finery and stupendous glory.

Hence, the Mantras or hymns of the Vedas which refer to the supreme transcendental Brahm which is most esoteric, secret, enigmatic and mysterious so much so that it cannot be described in words by the tongue, smelt by the nose, seen by the eyes, heard by the ears, and felt by the skin, i.e. which is beyond the pruvuew and reach of any of the powerful organs of perception as well as the intellect and the mind of the creature, is known as 'Avyakta Brahm', and the Mantra or hymn composed in the pattern of a Gayatri chanda dedicated to this Brahm is called 'Avyakta Gayatri Chanda'.

⁴*Narsingh* is the half lion and half man incarnation of Lord Vishnu to slay the demon Hiranyakashipu who had been tormenting Prahalad, his son, because the latter worshipped Vishnu. This 'half lion and half man' form of the Lord is a visible image that has a cosmic counterpart as the 'half man and half female' manifestation of the Lord that is known as 'Ardha-Narishwar'. This cosmic form of Brahm as Ardha-Narishwar has two components—the right half is depicted in iconography as being a male representing Shiva, the great God, the other half is female representing his divine Shakti known as Parvati or Uma. This Shakti represents the dynamic energy of Shiva. When this applies to Brahm, the male aspect refers to the Supreme Being himself while the female aspect applies to Maya which is the dynamic power that Brahm employed to initiate this magical creation. This depiction is basically envisioned to drive home the point that Brahm and Shakti are inseparable in the context of the creation of the world. This elementary method of reproduction is known as 'asexual reproduction' and is depicted by many asexual plants and animals even today. For instance, the one-celled amoeba reproduces itself by cleavage. On the other hand, if we were to regard Brahm in its purest form as the cosmic Consciousness, then Brahm would not need the other half of the Maya, and would only be one and universal entity which has no definite and describable form and shape, it has no attributes and qualities. This form of the sublime and most subtle Brahm is known as either the Hiranyagarbha or the Viraat Purush depending upon the level of subtlety and grossness which is assigned to it, the former being more subtle than the latter.

Coming to the present context of the Narasingh form of Brahm, the 'lion' part is a metaphor for the grand qualities of unmatched stupendous strength, physical prowess and complete sway over the entire domain of the forest and its inhabitant wild animals that the lion possesses and which are symbolic of the inherent stupendous might of the supreme Brahm as the unquestioned Lord of this forest-like world inhabited by myriad variations of creatures just like a dense forest infested by wild animals. Similarly, the 'man' part symbolises the fact that Brahm is the most highly placed Lord much like a human being who represents the highest level in the ladder of evolution.

In other words, even as the lion is the unquestioned lord of the wilds and the man of all the living beings, the supreme transcendental Brahm is the unquestioned Lord of all that exists in all its variations, whether in its primary form represented by the

wild animals of the jungle or in its more evolved and developed form represented by man.]

28. The spiritual aspirant should deeply contemplate upon the truth of the statements called Maha Vakyas, especially 'Tattwamasi', i.e. the great saying establishing oneness between the creature and the supreme Brahm (pertaining to which the Shadanga Nyas and Anga Nyas have been described in verse nos. 23-27). He should steadily ponder on the essential meaning and spiritual import of this grand observation that Brahm is the creature himself; that the individual creature is a personification of the supreme Brahm—'that Brahm is you', as well as the profound impact of this statement which establishes and endorses the tenet of 'non-duality', along with fixing his mind and attention on its implied universal truth about the 'self' vis-à-vis the rest of the creation.

By constantly meditating upon the truth of this great maxim and established axiom, the aspirant is able to finally establish a union between his own self and Brahm on the one hand, and on the other hand merge all the five elements in creation (such as earth, water, fire, air and sky) into one single unit representing their primary form as the un-manifested, indefinable, attributeless and invisible Brahm who is almighty, omnipresent and omniscient as the supreme transcendental Absolute Truth in creation that cannot be described and comprehended (i.e. the 'Abyakta Brahm') (28).

29. We have discussed the Maha Vakyas and their six limbs or components are ritualistically invoked to invest the body with their stupendous dynamic powers besides making it holy and purified (29).

30. Now, the metaphysical meaning of these Maha Vakyas is being described for the benefit of the spiritual aspirant (30).

31. That faculty by which a creature sees, hears, smells, speaks and experiences different tastes in this world is called 'Pragyaan' (31).

32. [Verse nos. 31-32 describe the meaning and importance of the 1st Maha Vakya 'Pragyaanam Brahm'.]

The same Pragyan (enlightened consciousness) prevails as the Atma (the 'self' as pure consciousness) uniformly and universally in all forms of living entities in this creation, whether it is the four-headed Brahma (the creator), Indra (the king of Gods), all the other Gods and humans, or horses, cows and other domestic (four-legged) animals, as well as all other species of life forms in this creation. This conscious entity is the supreme transcendental Authority known as Brahm. It is this consciousness called Brahm that is also present in me (as my pure conscious 'self' or Atma) (32).

33. [Verse nos. 33-34 describe the meaning of the second Maha Vakya 'Aham Brahmaasmi'.]

This gross body is the medium by which that pure consciousness is realised and experienced. This body is the competent instrument by which complete and holistic knowledge pertaining to the supreme transcendental Truth known as Brahm can be obtained¹. When the knowledge or awareness of the presence of this Brahm inside the body sprouts in the bosom of a wise and enlightened spiritual aspirant, he is

said to be 'self-realised' as he is then able to witness the presence of the supreme Brahm in his 'self' as the pure consciousness which is a neutral witness to what is happening around it, and which is a dispassionate observer of what the body does².

When this wisdom and erudition finds a firm footing in the conscious being of the aspirant, when he is convinced of its veracity by personally witnessing and experiencing it, it is then that he declares 'Aham'—'it is me'. In other words, he says 'that Brahm is my true self, and not the body which only acts as a dwelling in which that Brahm resides as the pure conscious Atma or soul, and which is also the medium by which that Brahm can be experienced and realised'. It also implies that the wise and enlightened aspirant has understood that 'he' is not an ordinary mortal creature surrounded by worldly delusions and miseries, but a divine eclectic entity that has an exalted heritage and ethereal lineage as the Holy Spirit that is eternal, all-pervading and all-encompassing like the cosmic Brahm (33).

[Note--¹This is because it is with the help of the body that a spiritual seeker reads and hears the great scriptures, contemplates upon their profound teachings, understands their maxims and axioms, and can endeavour to rectify past mistakes and mend the future. Meditation, contemplation, good deeds, selfless service etc. are done with the help of the body. The pure consciousness in its primary form as the 'spirit' cannot physically perform auspicious deeds, cannot read and implement the great tenets of the scriptures, cannot do meditation and contemplation. That is why it is believed that the human body is the best form of body and the finest opportunity that the soul gets to obtain final liberation and deliverance from the seemingly endless cycle of birth and death. This is because animals and birds cannot read scriptures, cannot go on pilgrims and perform religious sacrifices, cannot serve others and do other auspicious deeds as done by humans. All forms of life have a body and soul but it is only a human being who is given the privilege to choose his path and decide his future. It is the man who can take decision regarding his spiritual destiny and mould his deeds and outlook of the world by reading and discussing the Maha Vakyas and understanding their great import which no animal or plant can do. This is what distinguishes a man from the rest of the creation. If he does not do so then there is no difference between him and an animal because the body of both a man and an animal carry out the rest of the functions more or less in the same way.

Even the Gods are denied this privilege as they are dependent upon humans for their sustenance as proved by the fact that offerings made to the sacred fire during fire sacrifices are meant to feed the Gods. The Gods do not read the scriptures and nowhere is it mentioned that the Gods have obtained 'Mukti' or spiritual liberation and deliverance. They are perpetually in the state of being in the form of an ethereal Holy Spirit. These Gods have attributes, they have designated duties, they have specific areas of authority and powers, whereas the pure consciousness is not at all subjected to any limitations and boundaries. They are called 'Gods' only because the man has decided to honour them and fear them. Should one day the man decide that he no longer need the support of the Gods, they would lose their relevance.

The edifice of creation revolves around the fact that the soul must have a body to function, and this is proved by the fact that even the almighty and omnipotent Brahm also had to assume a 'body' known as the Viraat Purush, which is the cosmic gross body of Brahm from which the rest of the creation, including the creator Brahma and all other Gods, came into being. This body of the Viraat reflected the grand and majestic stature of Brahm in being all-pervading, all-encompassing, invisible and macrocosmic in form befitting Brahm's supreme transcendental stature, but it was a 'body' nevertheless. Disembodied Brahm cannot do anything. That is why the Atma, the microcosmic soul of the creature which is, in its pure elementary form as the 'pure conscious spirit' representing Brahm, 'does not do anything'—this is a constant

refrain of the Upanishads. It is when it is associated with the body, when it begins to get involved with the activities of the body that it is deemed to be ‘doing anything’.

Hence, the ‘body’ is a necessary requirement for Brahm in its cosmic form as the supreme transcendental Being, or in its microcosmic form as the individual Atma of the creature to ‘do’ anything at all in this creation. In the former case, the body of Brahm is the ‘Viraat Purush’, and in the latter case it is the gross body of the individual ‘creature’.

²As has been observed above, the Atma which is Brahm personified is actually a non-doer of anything. It is the body that actually carries out the instructions of this Atma and fulfils its wishes. So it is to be expected that the body would always act and behave righteously and auspiciously because the instructor Atma embodies these noble virtues. But more often than not the reverse happens—the body does inauspicious deeds and then the Atma is blamed for them. This is because of the interference of the corrupted mind and biased intellect along with the baggage of past deeds and their accumulated affects that form basic Vasanas and Virttis (passions, desires and yearnings, as well as natural tendencies and temperaments) that are an integral component of the individual creature’s character, mental setup and personality. The behaviour and responses of an ordinary creature’s Atma is a combined effect of all these components.

But in the case of a ‘wise, enlightened and self-realised’ creature the situation drastically changes. He would not be under any delusions of who is in actual command—he knows all his past mistakes and the pitfalls that he faces in the present life in the current body. He knows that the same body can prove to be the ladder which can take him to the top of the spiritual pyramid, or down the dark pit of the dry well of ignorance. So ‘he’, i.e. his ‘true self as his Atma’ uses the body prudently, most carefully and wisely, by not allowing himself to get involved in the worldly deeds done by the body but maintain a safe distance from this quagmire. This is metaphorically implied in the observation ‘the Atma is a mere witness of what the body does and what is happening around it’.]

34. The word ‘Brahm’ is used to indicate the supreme transcendental Being who is self-established, self-sustained, self-inspired, self-evident, independent, without a cause and reason of coming into being, requiring no props or basis to occupy and remain present in the grand and exalted position of being the only Absolute Authority in creation, and requiring no proof to establish its truthfulness and veracity (i.e. it is ‘Swataha’).

Brahm is the complete and wholesome Divinity that is immutable and indivisible, being non-dual and the only one of its kind in this creation (i.e. it is ‘Purna’).

Brahm is the supreme Atma or soul of creation which is pure consciousness personified, and nothing else (i.e. it is ‘Parmatma’).

The word ‘Asmi’ refers to the ‘self’ of the aspirant, because it means ‘it is me’. Hence, the complete Maha Vakya ‘Aham Brahmasmi’ means—‘the supreme entity known as Brahm is me’. In other words, Brahm is I and no body else; Brahm and I (me) are inseparable and indistinguishable from one another (34).

[Note—This statement is coming out from the heart of a self-realised person who is convinced of and has firm faith in the existence of the Supreme Being as personified in the form of his pure consciousness called the Atma, which is his pure ‘self’. Since he is a wise and enlightened person, there is not the remotest chance of his showing vanity, haughtiness, arrogance or a sense of false self pride when he makes this statement. He is expected to be most humble and pious, for otherwise he is not only cheating others but has no right to make false claims and assertions of being ‘Brahm

personified' which would smack of deceit and falsehood, for by doing so he is only cheating himself.]

35. [Verse nos. 35-36 describe the significance and import of the third Maha Vakya, i.e. 'Tattwamasi'—'that fundamental essence and principal is indeed you (the spiritual seeker)'.]

Brahm was present even before this creation came into being as a single, immutable, indivisible, and uniform non-dual entity that was one complete universal whole. This Brahm is present even now with identical characteristics.

Brahm is without any specific name and form having as many names and forms as there are creatures and types of creation simply because everything that exists is a manifestation of Brahm, and there is nothing which is not Brahm.

Brahm is the only truthful entity in creation, being the only one of its kind.

It is this Brahm that is being referred by the word 'Tat'—meaning 'that'. [This word is the first half of the Maha Vakya 'Tattwamasi'. When 'Tat' is conjoined with the next part of the Maha Vakya 'Twa', it becomes 'Tattwa' meaning 'the essence, the fundamental aspect of anything, the element, the Principal Absolute'. Hence, the Maha Vakya refers to the Principal Absolute of creation, the essential Truth of creation that is known as Brahm. And this Brahm has been revealed in the form of the spiritual seeker's true 'self' that is being referred to as 'Twam'.] (35).

36. The truthful essence and absolute reality which forms the 'true self' known as the pure conscious Atma or soul of the spiritual aspirant, who studies the great Maha Vakyas as well as the scriptures and endeavours to learn their fundamental principles and unravel their mysterious secrets, is represented by the word 'Twam'—meaning 'you'. [The pronoun 'it' is indicative of the supreme Brahm which has been described earlier and indicated by the word 'Tat'—'that'. The word 'you' refers not to the gross physical body but to the soul or Atma that is deemed to be the 'true self' of all living beings. This Atma is pure consciousness at the micro level of creation just like Brahm is at the macro level of creation.] In other words, the aspirant is taught to realise that his true identity is 'that' Brahm which is the subject of all metaphysical and spiritual research that he is doing, and that Brahm is to found inside his own bosom as his pure conscious Atma or 'self' instead of outside of his own self. [Refer to verse no. 40 in this context.]

This astoundingly enigmatic, most sublime and subtle, and extremely mystical indescribable supreme entity (i.e. Brahm) is beyond the scope and limitations of a physical gross body and its organs.

The word 'Asi'—meaning 'is' or 'is indeed' or 'is certainly'—is a statement of affirmation and firmly asserts that the Brahm (referred to by 'Tat') 'is' indeed the Atma residing as the self of the aspirant (referred to by 'Twam') in his body. Thus, 'Asi' is a bridge that links the Brahm with the Atma which is the true self of the aspirant. [Refer verse no. 26 above.] (36).

37. [Verse nos. 37-38 describe the significance and import of the fourth Maha Vakya 'Ayamaatma Brahm'—'this Atma is Brahm'.]

The word 'Ayam'—meaning 'this'—refers to the self-illuminated and self-enlightened, invisible and imperceptible Atma as the pure consciousness that prevails uniformly in this world in a sublime and subtle cosmic form that is beyond the limits of the visible gross body with physical organs.

This Atma pervades in the entire creation as pure and undiluted consciousness which extends from the subtle notions of 'Ahankar' (literally the sense of pride, arrogance, haughtiness and ego that comes with awareness of the importance of one's 'self' in relation with the rest of the creation, and the achievements of this 'self') to the visible gross body in which this Atma lives¹ (37).

[Note--¹That is, the same 'Atma' resides in the bosom of a haughty and egoistic man with a sense of false pride about himself and his body, as well as in the bosom of a righteous man who is noble, humble and pious. The Atma is untouched by these negative traits, these degrading emotions and demeaning sentiments that occur in the physical body of the creature as a result of the way he has led his past life and how it has affected and moulded his thought processes. A wise aspirant is one who realises that the Atma, being separate from the body and uninvolved in its activities, is not at all affected by any of these negative notions, such as 'Ahankar' cited here, that keep on heaving and subsiding on the mental horizon of an ordinary creature much like the transient waves in the ocean which disturb the calmness of the surface but cannot affect the vast depth of this ocean.]

38. The essential, eclectic and divine entity that pervades uniformly and universally in the entire creation as its integral part, and which gives the latter its inherent value, significance and importance is known as 'Brahm'.

It is the same Brahm that makes its presence felt in all the creatures in this creation as the self-illuminated and glorious pure consciousness known as the Atma of the creature (38).

39. [This verse describes how fulfilled and exhilarated sage Shukdeo felt when he was taught the four Maha Vakyas by Lord Shiva, his teacher and initiator who has shown him the auspicious and spiritual path leading to the ultimate 'truth' and attain self-realisation.]

'I was under a deluding spell of ignorance till now which made me think that those things in this perishable and transient world of material sense objects which are inherently and primarily gross, lifeless and inane, are true and real. I was literally wandering hypnotically and aimlessly in a false and imaginary world of make-belief like a man living in his dreams. That is why I had been having notions of 'me' and 'mine' vis-à-vis this world and its material objects. In other words, I had been hooked to this artificial world thinking it to be for real, and had thought that the material objects of this world actually existed, that they can provide me with permanent joy, happiness, comfort and pleasures, and that they were of worth and essence. I also had erroneously thought, under the influence of delusions and ignorance, that I am a separate entity vis-à-vis other living creatures in this existence, being superior to them in some or the other way, whereas the factual position is that the same Atma or pure consciousness which is present inside me is also present in all other living beings in creation.

When wisdom, erudition and enlightenment dawns upon me and I become aware of the non-dual, eternal and subtle nature of the Atma, which is pure consciousness and my true identity on the one hand, and the transient, perishable and gross nature of the sense objects of this artificial material world on the other hand as a result of understanding the meaning and the truth of the great 'Maha Vakyas' taught to me by a wise, learned and self-realised teacher (Guru), the splendorous and brilliant Sun of self-realisation shines radiantly in the sky of my existence, making me see the 'Truth' in its bright light.

In other words, when I (i.e. the spiritual aspirant) am able to grasp the depth of the meaning of the four great sayings of the scriptures, I become truly enlightened and wise, I realise who I actually am, and this realisation removes all darkness of ignorance and its attendant delusions and hallucinations which had been overwhelming me till now like a dark shadow. Consequentially, I bask in the brilliant light of wisdom and enlightenment that shines like a glorious Sun in the sky of my conscious being. This sunlight of self-realisation makes me see my 'true' nature as pure consciousness known as the Atma. It also makes me aware of the fact that besides the Atma, the rest of the creation has no pith and substance, and therefore it has no spiritual value, importance and significance for me'. [This is the profound impact the teaching of the four great Maha Vakyas had on sage Shukdeo.] (39).

40. In order to understand the real meaning of the Maha Vakyas, one must contemplate on its two aspects—the 'Vachya' or the apparent entity that is being referred to by those words, or is being described or expressed in those words, and 'Laxshya' or the actual target or object of that description that is not apparent in the words used but is the real intent of these words.

For instance, the word 'Twam' means 'you'. In physical gross terms, it refers to the physical gross body of the person to whom this word is addressed. But in a subtler plane and in essence it refers to the living consciousness present inside the body of that person as his truthful identity and his 'real self' that is intended to be addressed by the word 'you', and not the physical gross body or its visible organs of perceptions and action because they would have no value bereft of this consciousness, called the 'true self' or the Atma of that person. [That is why, when a person dies, i.e. when his consciousness has left his gross body, we do not address the corpse with the term 'you'. We say that the man has 'passed' away. Had the gross body been the 'real person' for whom the word 'you' is intended, we would have addressed the corpse also with the word 'you', and would not say that the person has gone away.]

Similarly, the word 'Tat', meaning 'that', apparently refers to the almighty and supreme Lord God who rules over the entire creation, and is its creator, sustainer, protector and concluder. But the real object of this word 'Tat', the actual intended Supreme Being for whom it is meant, is the supreme transcendental entity which is pure cosmic Consciousness, is Truth personified, and is an embodiment of eternal Anand (beatitude and felicity, happiness and bliss). This entity is 'Brahm' which is much superior to the creator, sustainer, protector and concluder forms of Divinity apparently referred to by the word 'Tat'.

The word 'Asi', meaning 'it is', establishes a bridge between these two facets of the above words of the Maha Vakya 'Tattwamasi'. In other words, it establishes a union between the real intended object of the word 'Twam' which is the soul or pure consciousness of the individual creature, called his Atma, and 'Tat' which is the cosmic Consciousness, eternal Truth and Anand personified as the supreme transcendental Brahm (40).

41. The two words 'Twam' and 'Tat' create a sense of duality, a notion of dichotomy, or a separation between two entities because of the 'Kaarya-Kaaran' effect. [The word 'Kaarya' refers to any act or deed, any task or work, any proceeding, any undertaking, any function, any result, any step, any engagement etc., and the word 'Kaaran' refers to the cause, the origin, the purpose, the root, the principal factor or agency, or motive for that particular Kaarya. Sometimes this cause is evident and at other times it is

implied or purported. This concept has been explained in detail in verse no. 42 below.]

When the sense of duality is removed, when it is realised that the same consciousness is the individual creature's Atma as well as the cosmic Consciousness in this creation, the very basis of this dichotomy, the basic cause of duality, is removed. This establishes uniformity between the Atma of the individual creature which is the microcosmic form of the universal consciousness, and the supreme Brahm which is the macrocosmic form of the same consciousness. Both become 'one, non-dual' entity which is eternally blissful and pure consciousness personified. [In other words, the Atma of the individual creature and the supreme Brahm become one, indistinguishable and inseparable.]

Even in this mortal physical world, these two words 'this' and 'that' are used to indicate two separate planes of existence in any given time and place. [For example, we say 'this time' to indicate the present tense, and 'that time' to indicate the past time or the future time.] If one hypothetically removes this notion of 'this' and 'that' vis-à-vis any given two planes of existence, the distinction between these two planes cease to have any meaning and relevance. In other words, what is at present was also in the past and would be in the future. A seamless uniformity is established between the present referred to by the word 'this', and both the past as well as the future referred to by the word 'that'.

Similarly, when the sense of duality of 'this' and 'that' is removed between the individual creature and his Atma, and the cosmic creator and the cosmic Atma known as Brahm, an overwhelming universal sense of seamless and uniform 'oneness' prevails. Only Brahm remains when everything else is removed. For example, in the two statements 'that is Devdutta' and 'this is Devdutta', the entity that is common is 'Devdutta'. When the two words creating a sense of duality, i.e. 'that' and 'this' are eliminated, the main object or target of the two statements, which is 'Devdutta', remains. [When the sense of duality is removed from the sphere of metaphysics and spiritualism, the creature and the supreme Brahm become one and the same, because both are essentially 'pure consciousness personified', and not in their dual form as one with a gross perishable body living on the planet earth and known as the individual creature, and the other as some immortal God who has no body and lives in the heaven.] (41).

42. The Jiva, the living being with a gross body who lives in this physical world of material sense objects and the one who gets involved in doing numerous deeds and taking actions in this world with his physical body, symbolises the 'Kaarya' aspect of this creation—that is, the creature is the one who physically implements all the wishes of the supreme Brahm; the creature reveals the stupendous ability of the cosmic forces of Nature to actually 'do' something in physical and visible terms.

On the other hand, the other aspect of creation is 'Karaan' or the cause of this world and its inhabitant creature coming into being and behaving in the way they do. Without the cause, nothing would ever happen in Nature. This 'cause' is the progenitor of all activities in this creation, although the 'cause' is usually hidden in the form of the subtle motivating factor for any action to be initiated. On the other hand, the 'activity' shown by the creature, or the 'action' that he takes or the 'deed' that he does becomes visible and obvious in apparent and clear terms. Naturally therefore, this cause is superior to everything else in this world and is the basis upon which all actions and deeds are undertaken. Without a 'cause' there will be no 'effect'²; without some divine entity taking the initiative, there would have been no

unfolding of this vast canvas known as creation. Even the world itself has its existence because of this ‘cause’, without which there would have been an eternal void. This ‘Kaaran’ or cause of the entire creation and all that is happening in it is known as Ishwar—the primary Lord, the primary and undisputed cause, the chief motivator and the principal progenitor of this world and the creature that acts in tune with the instructions of this Lord. Neither the world in which the creature lives nor the creature himself can do anything without the express will and in violation of the scheme of things planned by this supreme Lord who is the Authority which decides what is to be done and what is not to be done².

When these two aspects of the physical creation are eliminated, when one delves into the ‘primary root’ which is at the base of all sorts of causes sprouting in this creation and revealing themselves as colourful branches in myriad shapes and sizes symbolised by the contours of this magnificent world of diverse activities and variable norms, the only entity that is left is pure and undiluted Consciousness. The latter is at the very foundation of the entire creation, both at the microcosmic level of the humble creature as well as the macrocosmic plane of the fathomless cosmos. The ‘consciousness’ is the cause of this world coming into being, and at the same time it is this ‘consciousness’ that enables the world to do what it does, for a world devoid of consciousness would be dead and dead entities do not do anything at all.

This knowledge is the highest form of ‘spiritual achievement’ because it entails the realisation that the only ‘truth’ in this world is the supreme transcendental Consciousness known as Brahm which is both the ‘Kaaran’ as well as the ‘Kaarya’ in this creation. [The concept of Kaarya-Kaaran has been explained in Tejobindu Upanishad, Canto 1, verse no. 48 which is Chapter 14 of this volume.]

When this erudition and wisdom dawns upon the mental horizon of the spiritual aspirant, he is said to be completely enlightened (42).

[Note—¹A simple example would explain this phenomenon. When a leaf shakes on the branch of the tree, there must be some breeze blowing or some animal such as a monkey shaking the branch though one might not be able to see either of them. The leaf would not shake on its own. Therefore, the fact that the leaf has shook implies that there is some cause to make it happen.

²For example, when we feel the desire to eat something out of hunger, the ‘cause’ is the desire to eat which is a subtle expression of hunger. Now, this causes us to ‘make efforts’—or ‘take action’ and ‘do something’ so that we can arrange for food, cook it and eat it. This process of ‘searching for food, cooking it and eating it’ is visible to all and is a very obvious activity which cannot be hidden. But the underlying ‘cause’ for all this ‘activity’ is not food but the subtle desire to eat out of hunger. In this triumvirate of ‘hunger, desire to eat, and actually implementing it’, the ‘fundamental cause’ is hunger, for had there been no ‘hunger’, there would have been no desire to eat in the first place, and therefore no need to search for food, cook it and then eat it. The ‘hunger’ in this example is ‘the unadulterated primary cause of everything, i.e. ‘Brahm’, the ‘desire to eat’ is the subtle manifestation of this cause, i.e. ‘Ishwar’ which now acts as the chief motivator and the driving force for all that unfolds henceforth, and finally the ‘process of procuring food and actually eating it’ is the ‘action or deed’ that manifests this cause, i.e. it is symbolic of the ‘creature’ who actually implements this desire of Brahm to acquire and eat food.

The concept of Karya and Kaaran have been explained in Tejobindu Upanishad also in its Canto 1, verse no. 48 which is Chapter 14 of this volume.]

43. A spiritual aspirant can have a holistic knowledge of the grand eternal Truth and understand the profound import of the great Maha Vakyas only when he attentively hears about them from his learned Guru (moral preceptor and spiritual teacher),

imbibes their eclectic meaning, contemplates and deeply ponders upon them and the profound importance and spiritual significance that they have, and finally personally experience and witness this Truth so as to be firmly convinced of its veracity and irrefutability (43).

44. All forms of knowledge that do not teach about the ultimate 'Truth' are irrelevant, immaterial and inconsequential knowledge (because 'truth' is the only imperishable entity in creation, and anything that brings the creature closer to this imperishable entity would obviously imply his being pulled away from all other situations that are perishable). Therefore, the knowledge which enlightens the creature about the ultimate 'Truth' in creation which is known as the supreme transcendental Brahm—the Brahm which is the primary cause of the coming into being of the entire creation and is the cosmic Consciousness that uniformly pervades this creation as its integral and inseparable part, as its vital life and inherent natural energy—is the knowledge that can provide him with eternity and immortality because this knowledge brings him closer to this Brahm (44).

45. Brahma, the cosmic creator, has said (i.e. laid down as a principle) that the wise and learned Guru should preach the great scriptural sayings called the 'Maha Vakyas' to the disciple in a holistic and comprehensive manner, complete with their Shadanga Nyas (see verse no. 12-16), and not only the literal text without explaining the profound meaning of these Maha Vakyas (because then the very spirit of teaching the great sayings would be killed and they would be rendered handicapped in serving their purpose of providing enlightenment and self-realisation to the disciple about his own 'self' and the 'consciousness' present universally in the rest of the creation). If this edict is not followed then the teaching becomes merely a formality and serves no enduring spiritual purpose for the aspirant.' (45).

46. The Lord (Shiva) said to sage Shukdeo—'Oh the exalted sage! Your father sage Veda Vyas is well versed in the knowledge that pertains to the supreme Brahm. It is to please him and also because I am very pleased with his erudition and wisdom that I had accepted to teach you about this great Upanishad and unravel its esoteric and mystical secrets (46).

47. This Upanishad preaches about the eclectic knowledge pertaining to the exalted cosmic Divinity, knowledge which pertains to the essential nature and primary form of the supreme transcendental Brahm who is an embodiment of eternal, uniform and universal 'cosmic truth, pure consciousness and bliss'. If you (sage Shukdeo) constantly meditate and contemplate upon this truthful divine entity to the exclusion of all other deluding entities which are hollow and false, it is certain that you would obtain eternal freedom from the cycle of birth and death, the spiritual liberation and deliverance which is called 'Mukti' (47).

48. He who is addressed by and is the object of worship when the divine monosyllabic Mantra is pronounced at the beginning of all the Vedas (here referring to the monosyllable ethereal word-Mantra OM which is used as a prefix at the start of any auspicious enterprise as well as a suffix at the end of it in order to invoke the supreme Lord's blessings and his intercession on behalf of the worshipper), he whose existence and supernatural divinity is explicitly asserted and unequivocally affirmed by Vedanta (the Upanishads), he who uniformly pervades throughout Nature as its integral and

inseparable part, being an universally all-pervading, all-encompassing and omnipresent entity, but at the same time remaining independent of it and beyond its limitations and scope, surrounding the entire Nature from the outside and being much superior to and grander than all the parameters that define Nature—such an exalted and supreme Being is the Lord of the entire creation. As such, he is called ‘Maheshwar’, or the ‘Great Lord’ (48).

49. Hearing this divinely holy preaching of Lord Shiva, the most enlightened sage Shukdeo became overwhelmed with the radiant splendour and glory of spiritual realisation. He became exceedingly ecstatic, being submerged and getting lost in the sublime thoughts of the supreme Parmeshwar, the Lord of the entire creation whose image this world is and who personifies the latter so much so that Shukdeo got up, bowed most reverentially to Lord Shiva who was now his moral and spiritual teacher and guide, forsook all worldly relations and their incumbent attachments and entanglements, and then went on his way (to do severe ‘Tapa’—penances and austerities, as well as ‘Yoga’—deep meditation and contemplation, in some remote and far away forest or other place conducive to spiritual pursuits without any worldly disturbances) (49).

50. When sage Krishna Dwepaayan (i.e. sage Veda Vyas) saw his son going away in such a state of profound renunciation—showing no remorse at snapping all his filial and other family ties of this world, having forsaken all worldly connections and becoming immune to all its charms and attractions, and being in a state of complete blissful trance of self-realisation and Brahm-realisation so much so that Shukdeo did not even take permission from his father, who was even present on the occasion, to go to the forest to do Tapa and Yoga—he (Veda Vyas) naturally felt deeply saddened as a father would be when he has lost his only son. But sage Shukdeo was unmoved and unconcerned at his father’s predicament and extreme mental agony of having had to abandon his only son who was very dear to him, because Shukdeo was completely overwhelmed with renunciation and detachment; he was swept off by the surging ocean of extreme blissfulness that comes with self and Brahma realisation (50).

51. Overwhelmed by the surging emotional waves of sorrow at having lost his only loving son, sage Veda Vyas could not control himself, and he followed his son from behind, lamenting, crying and calling out woefully to him to return.

At that agonizing and heart-wrenching moment, Veda Vyas’ woeful wailing was answered in complete silence by all the inanimate as well as the animate things in the world. In other words, he met complete silence as a response; there was no reply from any quarter, and there was no one to console him either. Sage Shukdeo did not respond or look back even for a fleeting moment. The world full of living as well as non-living things, the world which was just a moment ago full of colourful things having meaning and substance, suddenly became dead for Veda Vyas and meaningless for him. They lost all their charms and attractions for the father much like they had for his son Shukdeo (51).

52. Hearing that ‘answer’—i.e. being greeted by complete silence as a symbolic answer to his pleadings to his son to come back to indicate that this world is a complete void and he ought to ‘see’ his son as the universal Spirit that pervades uniformly in the entire creation, having manifested itself as the world consisting of the inanimate as well as the animate things and not merely as a particular individual

creature he has been calling as his son, for he might have lost the latter but the ‘real son’ in the form as the universal Spirit is still present all around him to answer his calls ‘silently’, sage Veda Vyas, the son of Satyawati, was overcome with Brahm-realisation himself¹.

This profound realisation made him attain the exalted state of being one with the supreme transcendental Brahm who is eternal, infinite, all-encompassing and all-pervading Supreme Being and the Absolute Truth in this creation (52).

[Note—¹In other words, he now realised the ‘truth’ that inspite of all his scriptural knowledge he had not realised that the universal Spirit is present everywhere and in every form. It is not restricted to any particular body, such as the one he called his son in this case. So though he might have lost the worldly son known as Shukdeo, he still had the entire world to treat as his son if he was foolish enough to regard the physical gross body as the true identity of the Atma, because this Atma lives throughout the length and breadth of the creation in equal measure. On the other hand, if he is wise and enlightened enough to realise the falsehood and transient nature of worldly attachments that revolve around the physical body that is undoubtedly perishable, he would have realised that the real essence of existence is not the perishable gross body of all hues and shapes, but the Atma which is universal and eternally pure consciousness that pervades in this creation. This Atma is the same in Shukdeo as much as it is in the other entities in the visible and living world. So, Veda Vyas should see his son as being present as the universal Spirit that pervades throughout the creation consisting of both the animate as well as the inanimate objects.

Besides this, the answer in the form of utter silence wisened Veda Vyas about the true nature of this world—that no one is no one’s father and son. It is such an paradoxical situation that Veda Vyas who was so wise and erudite as to have classified all the Vedas and written the Purans was not aware of the fundamental truth of creation. It was his son who excelled him in this. Refer Katho-panishad, Canto 2, Valli 2, verse no. 7 which is Chapter 1 of this volume. It precisely describes what Mukti or liberation and deliverance is while the creature is still alive. It is to gain knowledge of the ‘self’ and Brahm—i.e. to become self-realised and Brahm-realised because once this happens the worldly fetters are automatically snapped. This type of Mukti is regarded as the best form of Mukti because it helps the person to break the chain of deeds and having had to suffer their consequences as he no longer gets involved in any deeds and therefore automatically gets rid of the compulsion of having to take a new birth in order to undergo the punishment for evil deeds or enjoy the rewards of any good deed done in the past life.]

53. A spiritual aspirant who comes to be acquainted with the divine knowledge pertaining to the eternal and universal truth concerning the supreme transcendental Brahm as envisioned in and preached by this most esoteric and mystical of Upanishads called ‘Rahasyo-panishad’ is able to break free from the ill consequences of all sins. As a result, he is able to obtain the most divine form of emancipation and salvation for his soul, the one known as ‘Kaivalya Mukti’, or the only form of emancipation in which the soul finds salvation by becoming free from all sorts of delusions and ignorance related to this world and the physical body, and consequentially becoming one with and inseparable from the supreme Soul of the creation from which it had emerged in the beginning and in which it has finally merged to lose its independent existence. [Refer Katho-panishad, 2/3/4 which is Chapter 1 of this volume.] This sublime and holistic knowledge about the divine entity is only available by the grace of one’s Guru (spiritual teacher and guide). This indeed is the comprehensive teaching of this great Upanishad; this is its divine proclamation. Amen! (53).

-----Shanti Paath-----

-----*****-----*****-----

Chapter 14

Tejobindu Upanishad

This magnificent Upanishad is virtually like a citadel, a strong fort of the philosophy of 'Advaita Vedanta' which extols the eclectic philosophy of non-duality and uniformity in creation. It is the pivotal Upanishad of this philosophy, and can easily be likened to the crown jewel in the realm of Advaita Vedanta.

Like the Ishavasya and Keno Upanishads, this Upanishad also derives its name from the opening verses of Canto 1 which describe the source of all cosmic Tej, the magnificent divine powers and the stupendous dynamic energy of creation that springs forth from and is centered around one hypothetical point in creation known as the supreme transcendental Brahm. This 'point source' of all divinity and holiness is represented by the 'dot' placed on the symbol of Brahm which is represented by the word OM and its graphical depiction as the sign ॐ. It describes the supreme transcendental Divinity known as Brahm in a very holistic manner.

The name of this Upanishad has two components—viz. 'Tej' meaning 'dynamic energy and radiance', and 'Bindu' referring to literally to the 'dot' or 'a point source of this energy and radiance'. The Tej is the cosmic energy and vitality that not only set the ball of creation rolling but also kept it rolling once it was set in motion, while the Bindu is the point source from where this energy has emanated and which is the central controlling Authority that overlooks the working of this creation. While the creation is the wheel, the Bindu is its hub and the Tej is the kinetic energy that keeps the wheel rotating.

There are six elaborate Cantos in this Upanishad. From the practical standpoint, this Upanishad has a profound positive value in today's world of depression and darkness. Its Cantos 2-4 are great tools that can be used for meditation purposes in order to remove one's mental depression and a sense of inferiority complex, a sense of hopelessness, haplessness and helplessness that are so prevalent and marked in this competitive world today by kindling the positive energy latent in every individual by using the psychological power of 'auto-suggestion' in which a practitioner suggests to himself that he is good and surrounded by goodness, and all negativity are being removed from him and his surroundings.

For this purpose, the aspirant should first understand the meaning of the verses and then sit down calmly in a comfortable meditative posture, hum or mentally repeat the verses of Canto 2 and 3 one by one in order to first imbibe positive thoughts and draw in fresh constructive ideas about himself, to be followed by a holistic cleansing of the inner-self by purging of all negative thoughts by pondering upon the verses of Canto 4.

It is essentially a psychological process whereby one first tells himself 'I am good and auspicious, and I welcome these virtues in me with an open arm', and then

following it up with ‘I am not bad, and all badness in me are hereby eliminated, purged or expelled for good’. As is obvious, such exercises begin to show positive results very soon and are very helpful in a world ridden with negativity, overcome with depressing thoughts that hover over like darkened clouds that effectively obstruct sunlight, and a world where a creature lives in an environment full of artificiality, hopelessness, haplessness and helplessness.

In fact, meditation using this Upanishad is easier and has a greater practical value for a person than using the Mantra OM because he is able to relate himself more closely with the eclectic ideas expressed in the verses of this Upanishad to derive practical benefits from them in his day to day living by eliminating depressing thoughts and improving his outlooks not only about his own self but also about his surroundings, thereby making his life worth it. In the case of OM as a tool of meditation, and on the other hand it presents a rather difficult proposition for him as it is too abstract a concept and an ordinary person finds it hard to relate with its abstract philosophy in practical terms.

Canto 1 describes the symbolic location of the point where the supreme Brahm resides, and this pin-point of Divinity is called ‘Tejobindu’—literally the spot endowed with miraculous ‘Tej’ or a dynamic fount of cosmic energy and light of knowledge and wisdom representing the stupendous powers and astounding potentials of the enigmatic supreme Authority of creation known as Brahm. It describes the qualities necessary in an aspirant to access this Tej and goes on to elaborately discuss in an excellent way the various principles of Yoga—such as Yam, Niyam, Aasan, Pratyahar, Mulbandh, Pranayam, Dhaarna, Dhyana, Samadhi etc. in a very practical way with the perspective of spiritual enlightenment in its truest and purest form.

Cantos 2-3 are an exposition upon the grand virtues of Brahm as realised holistically by a self-realised spiritual aspirant. It is revealed in the form of an enquiry in this regard by Lord Kartikeya and answered by none other than Lord Shiva who is regarded the wisest God amongst the Trinity of Gods. It should be noted here that it was also Lord Shiva who had preached the profundity of the great maxims and axioms of the Vedas to sage Shukdeo in Shuk-Rahasya Upanishad which is Chapter 13 of this volume.

These Cantos expound upon one of the great sayings of the Vedas—i.e. ‘I am Brahm personified’, and go on to enumerate the numerous glorious and divine virtues of this Brahm. They basically present the holistic view of the Upanishads that everything in existence, from the minutest to the most colossus, from the subtlest to the grossest, from the invisible to the visible—all have the same universal, constant, immutable, indivisible and truthful entity known as their ‘soul’ present in them as a common unifying and binding force that unites them into one single whole known as ‘the creation’.

This unifying element is called ‘Chinmaya Brahm’ in Canto 2, the common denominator which is all-intelligence and the almighty Consciousness personified. This entity is like the sub-atomic particles, such as the electron, the proton and the neutron, without which the atom—which is at the core and the basic identity of all material things in this world—cannot exist. And this Chinmaya is qualified as ‘Anand’, the eternal fountainhead of beatitude and felicity. In other words, the realisation that everything in existence are fundamentally the same, the spiritual aspirant is filled with an overwhelming sense of fulfillment as his research for the ultimate ‘truth of life’ has been completed. He discovers that he himself is that ‘truth’ as much as his neighbour next door!

Cantos 3 repeatedly stresses the point that when the spiritual aspirant realises the fact that his true 'self' and truthful identity is not an ordinary humble being with a gross body but the most exalted and supreme cosmic Consciousness itself personified in this form that he achieves the highest post of spiritual endeavours, and this realisation, if it is honest and heart-felt, is the climax of his enlightenment and Brahm-realisation. This Canto enumerates the glorious virtues, the divine attributes and eclectic qualities that characterize this true 'self'.

Canto 4 describes the two types of 'Muktis' called 'Videha Mukti' and the 'Jivan Mukti'. The word 'Mukti' refers to the liberation and deliverance of the soul of the creature from ignorance and delusions, and its ultimate emancipation and salvation so that it does not have to come back and enter the cycle of birth and death in this mortal world. This is once again elaborately explained by Lord Shiva to his son Kartikeya (Shadaanan).

Canto 5 is a revelation of the divine and eclectic virtues of the Atma, the pure consciousness, along with the factors which distinguishes it from anything that is regarded as 'non-Atma'. This subject is comprehensibly described by the learned sage Ribhu when asked to elaborate upon it by his disciple Nidagh.

Canto 6 finally sums up the divine and glorious virtues of the supreme transcendental Divinity known as Brahm, as well as its representative the pure conscious Atma, as told by the great sage Ribhu to his disciple Nidagh. This Canto employs the unique methodology of establishing the falsehood of this world by citing countless instances of highly incredulous things and saying that if such highly absurd things can be true then the world could also be true. Refer verse nos. 73-99 of this Canto.

The high point of this Upanishad is the employment of the typical pattern of the Vedas to describe the supreme truth about Brahm, i.e. the process of negation known as Neti-Neti. This is very clear in Canto 4, 5 and in verse nos. 1-29 of Canto 6. Lest this negation process create any doubts about the authenticity of the omnipotent and omnipresent existence as well as the supreme transcendental and authoritative nature of Brahm, verse nos. 30 onwards of Canto 6 goes on to assertively declare what *is* Brahm in positive terminology as opposed to the negation pattern of the earlier verses which emphasise what is *not* Brahm.

The Kaivalya, Dhyan Bindu, Brahm Bindu, Brahm Vidya, Shwetashwatar, Sarwasaar and Shuk Rahasya Upanishads of the Krishna Yajur Veda tradition complement and supplement the doctrines expounded and enunciated in this present Upanishad and ought to be read along with it to fully grasp the profundity of its teachings. All these grand Upanishads are included in this present volume as separate chapters. Besides these, there are numerous other Upanishads which deal with the identical subject as done in the present Tejobindu Upanishad, such as for instance the Mahopanishad of the Sam Veda, the Atma Prabadh Upanishad of the Rig Veda, the Adhyatma and Tarsaar Upanishads of the Shukla Yajur Veda, and the Atmopanishad of the Atharva Veda to mention a few.

The universality of the Atma has been also the subject affirmed in the Holy Bible in its 1 Corinthians, 12/3-26.

-----Shanti Paath-----

ॐ_सह_नाववतु_।_सह_नौ_भुनक्तु_।_सह_वीर्य_करवावहै_।_तेजस्वि_नावधीतमस्तु_।_मा_विद्विषावहै_।

-----ॐ शान्तिः ! शान्तिः !! शान्तिः !!!-----

The meaning of this Shanti Paath is given in appendix no. 1.

Canto 1

[Canto 1 describes the symbolic location of the point where the supreme Brahm resides, and this pin-point of Divinity is called 'Tejobindu'—literally the spot endowed with miraculous 'Tej' or a dynamic fount of cosmic energy and light of knowledge and wisdom representing the stupendous powers and astounding potentials of the enigmatic supreme Authority of creation known as Brahm. It describes the qualities necessary in an aspirant to access this Tej and goes on to elaborately discuss in an excellent way the various principles of Yoga from the perspective of metaphysics—such as Yam, Niyam, Aasan, Pratyahar, Mulbandh, Pranayam, Dhaarna, Dhyan, Samadhi etc. in a very practical way with the perspective of spiritual enlightenment in its truest and purest form. It describes what is true Mukti, enumerates the characteristics of a Brahm-realised person, and outlines the obstacles encountered by a spiritual aspirant in his path.]

OM salutations! The 'Bindu' or dot, known as the Anuswar (ँ) in the Sanskrit language¹, placed on the top of the symbol for OM (ॐ --which is a synonym of Pranav, and which in turn is synonymous with the supreme transcendental cosmic Divinity known as Brahm) is a sign or symbol of cosmic 'Tej' (dynamic energy, light, heat as well as splendour, radiance, glory, magnificence) emanating from the supreme transcendental Divinity known as Brahm².

To meditate upon this 'dot' is the best form of Dhyan (contemplation and focusing of the mind on some object that is to be diligently pursued and obtained). This Bindu (dot) is equivalent to the micro-fine, sublime and subtle Atma of this world (much like the invisible atom which is at the core of all molecular structures that determine the shape of everything that exists in this physical world, or a lighted wick of a candle placed in the center of a dark room).

It (i.e. the Atma represented by the Bindu) resides in the subtle heart of all the living beings in this world. It is like an invisible atom whose presence cannot be denied; it is most auspicious and a bestower of auspiciousness; it is inherently peaceful, calm and serene.

It has manifested itself in the three basic forms in which this creation exists—viz. in the gross, the subtle and the subtlest form as the cause of everything in existence³.

That is why it is regarded as the most enigmatic, incomprehensible and mysterious entity in this creation (1).

[Note—¹The Anuswar (ँ) Is a dot placed on the top of an alphabet in Sanskrit language to give a nasal sound as in 'sung or sum'. Suppose it is placed above the consonant 'Ra', then the resultant letter becomes a 'Beej Mantra' or seed or root Mantra for certain deity, in this case it is Lord Ram, the incarnation of Lord Vishnu. This Beej Mantra is used in occult and ritualistic forms of worship such as invocations during fire sacrifices. The concept of a dot has been explained in note to verse no. 5 in the context of the 'Chandra Bindu' of this Canto below.

²This metaphysical phenomenon will be easily understood by way of a simple example. Suppose a lighted candle is placed in the center of a huge dark room or hall. When looked from a distance, the flame would appear to be like a dot of energy and light which spreads its radiance and light that cuts through the all-engulfing darkness

of the room. In the context of metaphysics and spiritualism, this 'dot' is Brahm, and the creation is made visible due to the light of wisdom and knowledge that emanates from this central point, while the light itself represents consciousness that makes it all possible.

³This is because the entire world owes its existence to the Atma, and the world consists of three basic forms—the gross external body consisting of the various organs that are visible, the subtle body which is not visible but is the hidden operator of this body, and it is made up of the mind and intellect complex, and the subtlest form known as the causal body consisting of the subtle heart inside which the Atma or pure consciousness of the creature resides. This Atma is the very 'cause' of the entire setup emerging and working in the manner it does, and therefore the micro-fine and subtlest body that harbours this 'causative' Atma in the gross physical body of the creature is called the 'causal body'—i.e. the body which harbours the 'cause' of everything coming into being or coming into effect is called the 'causal body'.]

2. It is not easy to meditate upon this Bindu (the dot symbolising the atomic form of Divinity) as it is a most difficult and abstract proposition. To worship it, to honour it, to fully appreciate its spiritual importance and metaphysical significance, to contemplate and meditate upon it, to gain access to its stupendous powers and potentials, and to be able to find its refuge and shelter (i.e. seek its blessings and empowerment) is a Herculean task for even the wise, contemplative and skilled ascetics and sages. It is hard to have access to its enigmatic secrets, and even harder to retain their benefits if they are at all accessed after strenuous exercise and diligence (2).

3-4. [The following narration describes the virtuous qualities necessary in an aspirant to make him eligible to have practical understanding of the profound metaphysical secrets of this Bindu and have access to its esoteric knowledge.]

Those who have a balanced diet (i.e. those who are not indulgent in food and held captive by their taste buds), who have vanquished anger, vengefulness and malice, who remain without any company, preferring to lead a solitary life in peace and seclusion, who have successfully exercised control over their sense organs, who treat 'Sukh and Dukh', i.e. the opposite emotions of pleasures and happiness as well as sorrows, miseries and pains with equal equanimity and fortitude, remaining unmoved, unfaltering, steadfast and tranquil in mental and emotional turmoil caused by both types of opposing and contradictory circumstances, who do not have any kind of Ahankar (pride, ego, arrogance and haughtiness), who have no desires, expectations and hopes of any kind, who do not accept anything from anyone more than the bare necessities for sustenance of life (3), who are determined to find that eclectic knowledge and the source of Divinity that is inaccessible to other people and pursue it with whole hearted diligence and steadfastness—only such illustrious persons who have these divine and eclectic virtues in them, those who possess these eclectic qualities in them can ever hope to have access to the great knowledge pertaining to the three facets or aspects (the so-called three 'Mukha' or mouths)¹ of OM along with its three abodes or manifestations². That is why such persons are regarded as being equivalent to the bird Swan or 'Hans', the bird used as a metaphor for purity, immaculacy, wisdom and divinity³ (4). [3-4].

[Note—¹The Dhyānbindu Upanishad, which is Chapter 15 of this volume, also refers to these *three aspects* of OM as its three eyes in its verse nos. 9-13. They are called the 'Triad' of creation and consists of, inter alia, the following-- symbolically refer to so-called 'Triad' of creation—(a) such as the Trinity Gods named Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder; (b) the three states of

mortal creation at the micro level—the gross body of the individual creature called the waker or Vishwa, the subtle body of the individual creature called the dreamer or Taijas, and the causal body of the individual creature called the deep sleeper or Praagya; (c) the three states of immortal creation at the macro level—the sum total of all the gross bodies in creation called the cosmic waker or Viraat Purush, the sum total of all the subtle bodies in creation called the cosmic dreamer or Hiranyagarbha, and the sum total of all the causal bodies in creation called the cosmic deep sleeper or Ishwar; (d) the three Gunas called Sata (the noblest quality in the creation), Raja (the medium quality) and Tama (the meanest quality that a creature can possess); (e) the three Shaktis or powers and potentials that drive the world on—such as Gyan Shakti or the power of knowledge, Ichha Shakti or the driving power of desires and ambitions, and Kriya Shakti or the ability and strength to carry out actions and do desired deeds; (f) the three planes of time—such as the past, the present and the future.

²The three abodes of OM are the three divine Gods of the Trinity, viz. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder.

³The bird Swan or *Hansa* is considered the most pure, clean, wise, erudite and clever among the birds. It is believed that it eat pearls and picks them up from amongst an assortment of gems, which symbolically means it picks up and accepts only the best amid the variety of things available to it in the form of an assortment of various qualities and virtues that define the character of all individual creatures in this world. It is also reputed to drink the purest form of milk, leaving aside the water content of an adulterated form of this nourishing liquid. It is also the vehicle of Goddess Saraswati, the patron Goddess of knowledge, wisdom, intelligence, speech and learning. Hence, the reference to a swan while describing a creature conscious of the vital wind or Pran passing through him means the basic, inherent and intrinsic tendency of that wisened and intelligent creature is to be the best, most pure and divine, wise, awakened and enlightened, adroit, clever and sagacious like the swan, and pick all the goodness and forsake all that is bad in this world. Saraswati rides on a swan, symbolising the creature's inborn enlightenment and excellence of his mental caliber. Symbolically, Saraswati resides in his Pran because it rides on the swan, i.e. in his heart, throat and mind—that is, his heart has purity of emotions, he speaks well of all, and his words are sought after by all as priceless gems of wisdom, and his mind is intelligent, discerning and noble.

The alphabet 'Ha' of the word 'Hansa' is sounded by the vibration of the exhaled wind passing through the vocal cords present in the throat or the wind pipe which connects to the nose, while the alphabet 'Sa' is sounded by the root of the tongue which opens into the mouth when the breath is inhaled. Both the nose and the mouth open in the same cavity called the throat. Hence, the inter relationship between 'Ha' and 'Sa' is evident. During the twenty-four hour period covering a single day and night, a person inhales and exhales, or breathes, roughly twenty-one thousand times because each cycle of inhalation and exhalation is equivalent to saying one Mantra 'Hans' consisting of the two syllables 'Ha and Sa' (refer Dhyānbindu Upanishad, verse no. 63).

The *Dhyān Bindu Upanishad*, verse no. 24 and 62-63, of the Krishna Yajur Veda tradition which primarily deals with meditation and contemplation on Brahm in order to obtain emancipation and salvation of the soul of the creature says that the supreme transcendental Brahm, known also as Pranav, resides in the heart of all the living beings in the form of a Hansa. The main objective of this Upanishad is to make the Yogi (a person who follows its tenets of meditation) aware that he is like the divine swan, but he was unaware of his divinity and sublimity, his exalted stature, till that was pointed out to him in this verse. So he must become one like a 'swan', remind himself constantly that he is like a swan, and he must do not do anything or act in anyway which is not befitting his exalted and superior status which is equivalent to a wise swan.

The *Yogchudamani Upanishad*, verse no. 82-83 of Sam Veda tradition describes this Swan in the context of Yoga. Refer also to *Brahm Vidya Upanishad* of Krishna Yajur Veda tradition, verse nos. 20-28, 61-64, 78-79.]

5. Those who are free from being victims of lethargy and indolence, and who do not seek support from people with worldly tendencies are the ones who can understand the enigmatic secrets of Bindu (the 'dot' symbolising the atomic source of Divinity called Brahm) because this single source of Divinity itself is a vibrant point source of cosmic illumination and independent of any support. This 'Bindu' is the one which gives support to everything in existence.

On the lower side of this Bindu is the crescent shape of the moon (resembling the hollow of a parabolic dish), and this is the symbolic abode of Lord Vishnu, the sustainer and protector of the creation¹ (5).

[Note--¹The combined structure of the dot + dish is called the 'Chandra Bindu'--(◐◑).

Lord Vishnu is the sustainer of creation and is said to be a manifestation of the Viraat Purush, the vast, invisible and all-inclusive macrocosmic form of Brahm. Viraat is the subtler form of Vishnu and the first gross manifestation of Brahm. The bowl-like dish at the lower end of the Bindu represents the cosmic crucible where the creation was first conceived, and the dot represents that cosmic source of energy and empowerment that infused first signs of life in the cosmic ether present in this bowl. This is akin to the celestial sun shining in the sky upon the vast bowl of the earth harbouring the first signs of life under water in the form of aquatic flora and fauna before they migrated over the surface when the conditions became conducive to life on the open stretches of the earth above the surface of the water of the oceans and rivers.

The concave reflecting surface of a mirror or the inner surface of a dish has a focal point where all the rays that fall on it converge. This is a basic theory of light in physics which is employed in concentrating rays emanating from the farthest corners of the cosmos in scientific Radars, telecommunication equipments, in household dish antennas that feed signals to the television sets etc. This same principle is applied in metaphysics—when the spiritual aspirant focuses his attention on this hypothetical Bindu or dot, he is literally capturing the cosmic sound waves that are represented by the ethereal word OM and harnessing the cosmic dynamic energy of creation which is known as Brahm or Consciousness.

There is another way of visualizing this phenomenon. The Sun is the focal point of the solar system and the earth revolves around it in a symbolic gesture to harness the Sun's energy and light from all sides. The earth virtually circumambulates or circumnavigates the Sun and pays its obeisance to it just like a person goes around the sacred fire during the religious sacrifice to pay his respect to it. It is a metaphoric way of saying that the earth ensures that none of the Sun's energy, light, heat, splendour and radiance is allowed to escape from benefiting it by going round it and 'capturing' them from all the sides. This Sun is the focal point or Bindu of the solar system. Similarly, Brahm is the focal point or Bindu of all spiritual endeavours.

From the perspective of creation, this Bindu or dot is the point source that provides heat and energy to the cosmic incubator from which the entire creation emerged.]

6. The three subtle letters of OM (i.e. A, U and M) are like the three mouths of the Vedas (i.e. they represent the three primary Vedas, the Rig, Sam and Yajur, embodying holistic knowledge about all aspects of creation). These three components of OM represent all the three Gunas in creation (i.e. the Sata Guna, the Raja Guna, and Tama Guna which determine the basic character and nature of all living beings in creation).

OM, being ethereal, invisible, sublime and subtle in nature, has no definitive forms, no specific definitions, and no distinctive attributes and characteristics that can ever define or characterize it.

It is steady and uniform; it is without any faults, shortcomings and taints of any kind related to this worldly existence; and it has no support for itself because it is self-supporting and self-sustaining (6).

[Note—As it would be observed here, the ethereal word OM representing the entity that is supreme transcendental and cosmic Divinity personified, and which is known by the other synonym of Brahm or Pranav, has such virtues that appear to be contradictory to each other, making OM and its principal subject, the Brahm, so very abstract, enigmatic and esoteric that it becomes a subject beyond the comprehension by logic and rationality of the intelligence-based thinking process of the mind, making it virtually impossible to be grasped and understood. So the only way to witness the truthfulness of its existence and supernatural powers is to personally experience its all-pervasive presence, and this is achieved by meditation and contemplation, and not by indulging in endless debates and trying to arrive at the truth by too literal an interpretation of the various scriptures which is devoid of their practical implications, because they would only add to confusions rather than removing them. This irrefutable fact has been asserted in Shwetashwatar Upanishad, Canto 4, verse no. 8. The mysterious nature of Brahm has been expounded in this Upanishad in its four Cantos, 3-6. The Brahm Vidya Upanishad, in its verse nos. 3-9, 71-74 very brilliantly describes the components of OM.]

7. The supreme transcendental Brahm represented by the ethereal divine word OM is such an esoteric and enigmatic entity having no attributes and qualifications, and occupying such an exalted and supreme stature that any kind of suitable epithet, title or honour cannot be found for it, making it impossible for it being precisely and conclusively described in words, physically perceived by any of the sense organs of the body, as well as being completely comprehended by the mind.

In fact, it can be subtly perceived only by one's personal experience of its exalted existence as witnessed during meditation and deliberation on the true form of the pure 'self' (because the 'true and pure self' is Brahm personified as the conscious Atma).

It cannot be described and comprehended in the form of independent subtle and microcosmic components of this vast creation, and neither in the composite form in which they visibly reveal themselves as the physical world (7).

8. It is a personification of eternal beatitude and felicity that is beyond any comparison with anything of its kind in this world. It is very difficult to experience and witness it. It is without any birth or beginning, being eternal and imperishable. It is free from the clutches of various natural tendencies of the mind. It is stable and steady in its own state of existence. It is eternal, uniform and universal. And it is ever exalted and steady in its sublime form, being immune to all demotions and degradations that afflict all other entities in this creation (8).

9. This object of all spiritual pursuits is known as Brahm. It is the object of worship when one worships Lord Vishnu (as it is Vishnu personified). It is the incomprehensible pure conscious Atma residing in the subtle sky or space (of the creature's heart, much like Lord Vishnu who resides in the celestial heavens up in the deep recesses of the sky) (9).

10. It (i.e. Brahm represented by OM) is wholesome, all-pervasive, all-encompassing, all-incorporating and all-inclusive, covering in its ambit the entire creation in all its finest and minutest forms, but at the same time it is none of them and is beyond the purview of all entities in existence.

It is established in the subtle space of the sky (as the pure conscious Atma).

It is neither the one who meditates and contemplates, nor the object of such endeavours, or the process of meditation and contemplation. In spite of this, it is the object of all spiritual pursuits, the aim of all forms of meditation and contemplation. In fact, it is a personification of these auspicious and spiritual virtues of meditation, contemplation, focusing of attention on the truth, and diligently pursuing it (10).

11. It is manifested in the form of everything in existence, pervading in all of them universally and uniformly, but at the same time it is beyond them, enclosing the entire creation from the outside like an all-encompassing sheath or shell. It is like the vast void of the endless space of the cosmos, being fathomless and measureless. In fact, there is nothing beyond it in existence.

It is not only most great and exalted but supreme and transcendental, being beyond the purview of comprehension and imagination. It is such a difficult-to-understand entity that the words 'truth' and 'most enlightened or self-illuminated' are not apt descriptions of it. In fact, no one knows what, which or who it is (11).

12. It is the object of worship, adoration and reverence for great sages and seers (who worship it with firm conviction, faith and devotion without arguing and debating endlessly about its authenticity, relying only on the great truths enunciated in the tenets of the Vedas and other scriptures). The irony is that neither the Gods nor those who call themselves experts in metaphysics and theology (i.e. who are scholars in the reading of scriptures etc.) can ever hope to know it.

Such negative traits as Lobha (greed, rapacity and yearnings), Moha (worldly attachments, attractions, infatuations, delusions and their accompanying traps), Bhaya (fears of all kinds), Garva (pride, ego, haughtiness, arrogance and hypocrisy), Kaam (worldly desires, lust, passions, yearnings), Krodh (anger, indignation, wrathfulness, spitefulness) etc. are like hurdles in the path leading to witnessing and experiencing this eclectic divine entity known as Brahm (12).

13. Other hurdles in getting access to this divine and eclectic entity known as Brahm represented by OM are the following—to be unduly perturbed by such extraneous factors as heat and cold, hunger and thirst¹; making of various vows and having numerous aspirations and determinations, as well as having doubts and confusions (which cause endless perplexities and confoundedness for the spirit, resulting in its getting mired in uncertainties and making it restless); being proud of having a birth as a Brahmin (without having any quality behoving this high birth, of which 'being proud' is not one); getting entangled in the web created by allowing oneself to be surrounded by and keeping oneself engrossed in reading the huge tomes of scriptures in an attempt to find Mukti (liberation and deliverance; emancipation and salvation) by reading them because they would bog down the person by their sheer volume and endless interpretations which would act like millstones around his neck to drown him instead of liberating and delivering him² (13).

[Note—¹This is because such people are more concerned with providing comfort to the physical body and therefore are not eligible candidates for spiritual pursuit requiring a lot of equanimity, tolerance, sufferance, sacrifice, austerity, enduring

hardships, and observance of strict codes of conduct and control over the thought processes of the mind—as it is an uphill journey. The true path of spirituality is marked by enlightenment about what constitutes the ‘real self’ and what is the eternal true goal of life as opposed to the ‘pseudo self’ and transient nature of false goals, which in turn means that the aspirant is well aware that his body is not his ‘real self’ and it is the Atma which is not at all affected by the physical discomfort of the body, such as it suffering from heat or cold, or feeling hungry and thirsty, and that the pursuit of the world can never lead to permanent peace and tranquility.

²The scriptures can show the path but would not actually provide Mukti. If only their literal interpretation is done without understanding their intentions, then it becomes a perfunctory exercise from the spiritual perspective. Merely acquiring literal scholarship and expertise in them instead of actually understanding their subtle meaning and putting their tenets into practice is useless. This fact has been asserted by the Yam God while preaching Nachiketa in Katho-panishad, Canto 1, Valli 1, verse nos. 5, 8-9.

The Book of Ecclesiastes, 12/12-14, the *Holy Bible*, Old Testament says almost an identical thing as follows—

12: ‘And further, by these, my son, be admonished: of making many books there is no end; and much study is a weariness of the flesh.

13: Let us hear the conclusion of the whole matter: Fear God, and keep his commandments: for this is the whole duty of man.

14: For God shall bring every work into judgment, with every secret thing, whether it be good, or whether it be evil.]

14. This divine entity is not obtained by those who are under constant fear from the mental and emotional turmoil and restlessness caused by Sukh and Dukh, i.e. by being buffeted by opposing mental emotions as experienced when one is subjected to the buoyant feeling one gets out of various worldly pleasures, joys and happiness on the one hand, and getting immersed and drowned in waves of sorrows, pains, distresses, agonies and torments of all kinds on the other hand. Similarly, it is not accessible by those who are too touchy by nature, feeling insulted, humiliated on the one hand or feeling praised and honoured on the other hand at the slightest hint.

Only those persons who are free from such corrupted thought processes and have been able to exercise control over an unsteady and fickle mind that creates an entangling web of emotional upheavals are eligible and qualified to have access to the supreme transcendental Divinity known as Brahm (14).

[Note--¹This is because such emotions keep the mind perpetually distracted and violently agitated, which is not conducive to any endeavour requiring great peace and stability of mind, because this is a necessity for fixing attention and concentrating the energies of the mind towards higher pursuits. Only a calm and focused mind can do some original thinking and research, whether in the realm of the material world or the metaphysical field of spiritualism.]

15. The supreme transcendental Brahm can be witnessed and experienced by a spiritual aspirant by diligently following the eclectic tenets pertaining to the principles of Yam, Niyam¹, Tyag², Maun³, Desh and Kaal⁴.

Other paths are doing Yoga in accordance with its profound philosophy of practicing various Aasans⁵, other exercises such as Moolbandh⁶, uniform restraint of the various organs of the body and keeping them restrained, calm and restful, and focusing the sight on one’s objective and aims in life without getting distracted by so many different perceptions and confusing ideas and views that occur in this world of myriad notions (i.e. being of a steady mind and intellect as well as unwavering in one’s spiritual pursuits). (15)

[Note--¹The virtues of *Yam* and *Niyam* have been described in Skanda Puran in these words:-

सत्यं क्षमाऽऽर्जवं ध्यानमातृशंस्यमहिंसनम् ॥ दमः प्रसादो माधुर्यं मृदुतेति यमा दश ।
शौचं स्नानं तपो दानं मौने ज्याध्ययनं व्रतम् ॥ उपोषणो पस्थदण्डौ दशौ ते नियमाः स्मृताः ॥
(स्कन्दपु०, ब्रा० ध० मा० ५/१९-२१) _

The ten 'Yams' are—truthfulness, forgiveness, simplicity, Dhyan (meditation, concentration of the mind), lack of cruelty (or presence of compassion and mercy), forsaking violence, restraint of mind and sense organs, pleasant demeanors and sweet towards all).

The ten 'Niyams' are—cleanliness/ablution, bath (purification of body), Tapa (austerities, penances, sufferings), alms and charities, keeping silence, Yagya (sacrifices, religious rituals), self study, observance of vows, keeping fasts, celibacy. (Skanda Puran, Bra. Dha. Ma. 5/19-21)

The Varaaha Upanishad of the Krishna Yajur Veda tradition, in its canto 5, verse nos. 12 ½ --14 also describes these Yams and Niyams.

²*Tyag* can be broadly defined as renunciation, detachment, non-involvement, disinterest and dispassion as well as abandonment of all things that are not conducive to one's spiritual well being, which bog down the creature in the swamp of delusions and false charms of this world based on ignorance of reality, and which cause hurdles in one's long term spiritual goal, enlightenment, emancipation and salvation.

³*Maun* is to keep silent and not speaking anything not true; to abhor talking unnecessarily, and even of things about which no certainty can be ascertained. For example, no one can precisely define Brahm, so it is better to keep quiet about it than to boast of knowing who or what Brahm is by unnecessarily attempting to describe it to prove one's knowledge and expertise in the scriptures.

⁴*Desh and Kaal* refer to a certain period of time, era, location and circumstance to which a reference is being made when something is said so as to properly understand its context and decipher the correct meaning in that context.

⁵*Aasans* are the various sitting postures adopted during Yoga, or while doing meditation and contemplating upon some serious topic. These have been elaborately described in all Upanishads dealing with the subject of Yoga. One of the Aasans dealt with here is Siddhasan in verse no. 26 below.

⁶*Moolbandh* is a form of Yoga exercise fully described in Chapter 15, Dhyan Bindu Upanishad, verse no. 73-74^{1/2} as well as verse no. 27 below.]

16. The spiritual aspirant should practice the six paths of Yoga which are conducive to providing success to him in his spiritual pursuit. These are Pranayam, Pratyahar, Dharna, Dhyan, Aasan and Samadhi. These paths help in witnessing and experiencing the supreme Divinity by the aspirant (16).

[Note--According to Dhyan Bindu Upanishad, verse no. 41 belonging to the Krishna Yajur Veda tradition, the *six limbs of Yoga* are the following—Aasan (sitting posture), Pranayam (breath control), Pratyahar (withdrawal of the mind and its control), Dharna (having a firm conviction, faith and belief on the sanctity and truthfulness of the chosen path), Dhyan (contemplation and concentration of the faculties of the mind and intellect), and Samadhi (a perpetual trance-like state in which the aspirant loses all awareness of the external world and even himself, and remains perpetually in meditation). Also refer Amrit Naad Upanishad, verse nos. 5-8, 16-17.]

17. 'Everything is Brahm'—realising the profundity of this great maxim of the scriptures, one should practice restraint over all the organs of the body, the gross organs (such as the organs of perception—eye, ear, nose, tongue and skin, and the organs of action—legs, hands, mouth, genitals and excretory) as well as the subtle

organs (mind and intellect). This is called 'Yam', and it should be constantly and diligently practiced (17).

18. 'Niyam' has been defined as the acceptance and implementation of knowledge that is eclectic, truthful, holy and spiritual in nature as well as conducive to acquisition of true wisdom, enlightenment, self-realisation and Brahm-realisation, and rejection of that knowledge which has an opposite effect¹.

Wise, erudite and sagacious spiritual aspirants find supreme happiness and bliss if they diligently follow this tenet about what constitutes true 'Niyam' (18).

[Note--That is, all forms of knowledge, skills and learning that pull the creature away from the truth and put a spanner in his endeavours to reach higher goals in life, and instead entangle him in the web of falsehoods and delusions represented by this material world of sense objects characterised by uncountable forms of mental turmoil and physical discomfort, a world which is nevertheless hollow, perishable and transient, should best be avoided and abandoned altogether because such knowledge does not give eternal happiness and peace, because this knowledge is misleading, because this knowledge keeps the creature bogged down in this world of artificiality and illusionary charms that keeps him far away from spiritual enlightenment and salvation, and because such knowledge keeps the creature tossing and churning in the midst of this world much like a piece of helpless wood caught in a choppy ocean during a storm.]

On the other hand, that knowledge which bestows eternal peace and blissfulness upon the creature and helps him to realise his true goal in life, aiding him in his search of finding his roots originating in the divine fount of this eternal peace and blissfulness—the fount of supreme transcendental Divinity represented by the mystical 'Tej Bindu' which is a metaphor for the mystical point from which everything eclectic, sublime, holy and divine has sprung forth in this creation like an eternal cosmic fountain of effervescent cosmic energy along with pulsating spiritual vibrancy and vitality, and which is given the name of 'Brahm'—so that his soul gets final rest and peace by realising its high birth, its noble pedigree, its divine heritage, its eternal and exalted nature as pure consciousness which is completely different from the delusions that are hallmarks of this world. This knowledge provides the soul with emancipation and deliverance from the endless cycle of birth and death as well as from being tossed and kicked around by delusions and ignorance, and therefore it is to be welcomed and grasped with both the hands.]

19. 'Tyag' (renunciation, abandonment, retraction, forsaking, detachment, dispassion, indifference and non-involvement) of all things worldly, non-truthful and non-spiritual is regarded as the best form of spiritual observances. Tyag leads the path to obtaining liberation and deliverance quickly (19).

[Note—It is only when a spiritual aspirant gets totally detached from this material world and renounces all its pleasures and comforts that he can whole-heartedly pursue his spiritual goals without any kind of mental distraction or emotional shackles. He would have nothing to worry about, no assets to protect, no material objects and goals to acquire and achieve, no one to please, no bias towards anything, and no obligations to keep. It is just like a student who is free to concentrate on his studies is expected to do much better than one who has to look after his family if the bread earner father has passed away, for in the latter case this poor lad would find it difficult to devote his entire time and energy on his studies.]

20. The supreme transcendental Brahm is not the subject that can be accessed and learnt by the mind like it does with other material things of this world, or an object that can be visualised and obtained by it by making efforts. Similarly, Brahm cannot

be the subject which can be known and described by the means of words, and neither can be the words proficient enough to do so if even they wish. In other words, Brahm is beyond the scope of both the mind and words. Brahm cannot be imagined and fathomed by the mind, and it cannot be described in words.

Hence, wise ascetics realise Brahm by the path of ‘silence’ or ‘Maun’. They turn inwards to witness and experience this profound fount of supreme Divinity in their own self, and once witnessed and experienced it cannot be described (much like it is impossible to describe just how ‘sweet’ the sweetmeat was after one has tasted it and asked to describe its taste afterwards). A wise, erudite, sagacious and enlightened one is he who meditates and contemplates upon Brahm silently and serenely (and not by showing off his mystical potentials as something to be showcased in a shop window so as to earn name, fame and respect!) (20).

[Note—That is why it is said that ‘silence is divine’ and the best prayer offered to the Lord is the ‘prayer of silence’. Words have their own limitations and it is just not possible to describe the ocean by taking a sample of its water and saying that ‘this is the ocean’. At best, it is a representative of the ocean, giving an idea as to what kind of water one can expect in an ocean, but ocean is just not water but an entire ecosystem and a marine world as fascinating as the one on the outside of its surface, having its own unique rich culture of flora and fauna]

21. When the faculty of speech called the ‘Vaani’ is inept and insufficient to describe it or say anything coherent or intelligible about it in a comprehensive manner, surrendering in its attempt to do so and preferring to keep quiet instead (to save its face and further embarrassment), say then how can it (Brahm) be described by anyone else?

That faculty of speech which is so efficient in vividly describing this deluding myriad world of charming artificiality and fascinatingly enticing colours of numerous shades and hues that keep the creature enchanted and enthralled as if spellbound by a magical wand, fails miserably when it comes to describing the supreme transcendental Truth known as Brahm (21).

22. ‘Silence’ (Maun) is the only and best medium to realise, know and learn, as well as to describe anything about that supreme Divinity.

Since ‘observance of the vows of silence’ is an impossibility for those who are childish and restless by nature (i.e. those who are unwise, those who are inclined towards the world instead of matters spiritual, those who are talkative and fickle-minded, allured easily by the charms of this world and remaining engrossed in them just like chattering children in a school playground or a child surrounded by toys in a toy shop and let loose in it), this eclectic knowledge pertaining to the supreme Truth and Divinity is accessible only to the fortunate few who are deeply conscious of their true ‘self’ and sufficiently mature to pursue the path of Brahm realisation (22).

[Note—Brahm realisation and Self realisation is not a child’s play just like doing original research in any field of science or arts is not everybody’s pie. It requires special aptitude and bearing of the mind besides willingness to follow stern rules and self control, and ‘observance of silence’ is one such golden rule. Silence helps to preserve and concentrate one’s energy and vitality on the task at hand; it prevents the mind from being unnecessarily disturbed by futile chatter and literally gobbling up more than it can cope with. People have sacrificed their entire lives in seclusion while making great inventions and discoveries. Has anyone ever heard cheap market place banter and cacophony of the bar or pop folk theatres in a scientific laboratory where great research is being done? Surely such verbosity is not conducive to serious

scientific research as much as a talkative and fidgety aspirant is totally ineligible and unsuited for spiritual pursuits.]

23. That which has no beginning, no middle or an end, but that which is omnipresent, all-pervading and all-encompassing being uniformly and universally present in the entire creation as its subtle Atma (core or soul)—it is said that such an eclectic mysterious entity has this entire creation as its abode and domain, called its ‘Desh’ (literally, its country or native place where it permanently dwells) (23).

[Note—That is, the supreme transcendental Brahm is not limited to this or that particular entity in creation, but present in every pore and minutest aspect or facet of it. Therefore, the entire manifested creation is its domain and abode.]

24. The truthful awareness of what constitutes ‘Kaal’ (literally an era, the concept of time and phase in individual life of a creature or creation as a whole, any circumstance, the cycle of birth and death) is this—to visualise the entire creation, from the minutest to the grandest, from the smallest individual creature to the cosmic creator known as Brahma, as being part of one big cycle of birth and death is true awareness of the profundity, extensive extent and astounding import of the term ‘Kaal’.

This Kaal is all-inclusive; nothing is beyond its reach and influence. It is indivisible and immutable—the visualization of various phases of time such as minute, hour, month, year, season etc. are simply imaginations of the mind to felicitate understanding of the phenomenon of life. Actually, Kaal is one single non-dual, indivisible whole, just like a fount of eternal blissfulness (known as Brahm)¹ (24).

[Note—¹One day of Brahma is equivalent to the period of time in which the four Yugs—i.e. the four divisions in which one cycle of birth and death are divided into, such as the Sata Yug when the Vedas are said to have been revealed and Upanishads composed, the Treta Yug when Lord Ram manifested, the Dwapar Yug when Lord Krishna came, and the current Kali Yug—pass over one thousand times. And the life of Brahma is one hundred years. By this reckoning, just imagine the measurement of time in the cosmic scale when numerous Brahmas are born and expire.

To draw a parallel from the contemporary world, we measure the distance of far away stars in ‘light years’, i.e. the distance that light covers in so many years. The light covers a distance of approx. 9,500,000,000,000 Km. in one year. So when it said that a particular star is one million light years away, we can well imagine its distance if we try to compare it with the term ‘kilometer’ or ‘meter’ we are accustomed with.

Likewise, the cycle of birth and death of an individual creature is almost like a tiny speck of sand particle on the vast beach of creation, or like a drop of water in an ocean.]

25. ‘Aasan’ is defined as that sitting posture of meditation in which one can sit reasonably comfortably and contemplate and fix his mind upon the thoughts of the supreme Brahm without any kind of discomfort which might cause distraction in meditation, thereby hindering its successful progress.

The thoughts of Brahm is so fulfilling and blissful that when one sits in a comfortable Aasan and meditates upon this eternal fount of beatitude and felicity, all other charms fade away and lose their attractions (just like the case when one finds a spring of fresh and pure mineral water he would forget drinking water drawn from a polluted lake or river, no matter how holy it might be). All his desires to obtain comforts and pleasures from other source of happiness in this deluding world subside once he has discovered this sparkling eternal fount of blissfulness (25).

26. All the Aasans¹ are equally important and are able to help the spiritual aspirant achieve his goal of Brahm-realisation and self-realisation, as well as acquire mystical powers. The various designated Aasans are the best postures that should be adopted if one wishes to achieve success in his meditative practice (without discomfort and distractions). That Aasan by which ascetics obtain mystical powers is called 'Siddha Aasan' (26).

[Note—¹Proper sitting postures are very important in meditation just like they are in every field of life. For example, one should sit in a particular fashion while working at the computer for long hours if one wishes to maintain concentration without damaging the eyes and harming the body over long periods of time. Similarly, there are proper ways in which the body should be borne while one sleeps, walks, runs, and does so many other routine things in life to stay healthy and prevent chronic diseases of the skeleton and muscles and keep the body properly tuned. These Aasans have been described in Upanishads dealing with Yoga philosophy, such as Yogchudamani and Jabal Darshan (Canto 3) of the Sam Veda tradition, and Mandal Brahmin of Shukla Yajur Veda tradition, as well as the Dhyana Bindu Upanishad and the Amritnaad Upanishad of Krishna Yajur Veda tradition.

²The *Siddha Aasan*-- To sit in this posture, the two legs are first stretched out. The left leg is then bent at the knee and folded in so that the heel touches the genitals and the sole lies flat against the inner thighs of the right leg. Then the right leg is folded in and the heel is placed in front of the pubic bone and the sole touches the inner thigh of the previously folded left leg. The two hands are stretched out and the outer side of the wrist of each hand is placed on the bent knee-joint of the respective side. The palm is opened and the thumb is touched by the bent first finger to form a virtual ring, with the remaining three fingers held straight out. The practitioner sits perfectly in a ram-rod straight position, with the spine, the neck and the head in a straight line. The mental sight is fixed on a spot in front of the nose, and this state of intense concentration is maintained as long as is feasible for the practitioner. Then the legs are gradually unfolded and after some period of relaxation, the process is repeated with the opposite leg being folded in first and placed below the other leg. It is believed that this posture is one of the best postures to be adopted for Yoga amongst the eighty four lakh (84×10^5) postures of meditation. The fact that there are as many numbers of Aasans as there are species of living beings is endorsed by Dhyana Bindu Upanishad, verse no. 42 of the Krishna Yajur Veda tradition. This Siddha Aasan is capable of cleansing all the seventy two thousand Naadis (ducts in the body), and is so-called because it is possible to access the divine source of cosmic energy trapped inside the body as well as experience the cosmic power of the kindled Spirit by employing this Aasan. The word 'Siddha' implies one who has acquired stupendous mystical and supernatural powers that are beyond the parameters of the physical and mundane world.]

27. The 'Moolbandh' is closing of that spot in the body which is like the base or foundation for all living beings. It is possible to control the mind and its attention by controlling this Mool or root, which can be done by closing it or doing the Moolbandh. Those who are well versed in the philosophy pertaining to meditation as a tool of Brahm-realisation should be very particular about it (as it helps them to control their mind and its faculties) (27).

[Note--The word 'Mool' means the origin or basis of anything, and 'bandh' means to stop or close. The Moolbandh is done by pressing the genitals with the heels and constricting the muscles of the anus to close this opening. Meanwhile, the Apaana Vayu (the wind present in the rectum and anus region) is pulled upwards forcefully. It is described in Dhyana Bindu Upanishad, verse no. 73-74^{1/2} and Yog-Kundalini

Upanishad, Canto 1, verse no. 42 of Krishna Yajur Veda which are part of this volume, as well as in Yogchudamani Upanishad, verse no. 46 of Sam Veda tradition.]

28. Just like one treats all the organs of his body equally and takes care of all of them with equal concern, he should also treat all the parts of the society (i.e. all the living beings belonging to different categories of life, such as those belonging to the plant kingdom as well as those belonging to the animal kingdom, including people belonging to different races, classes, religions, geographical areas and colours) equally and take equal care of them.

He should see the same Brahm as pervading uniformly and universally throughout the entire creation, right from the dried stem of a large tree to the tree that is vibrant with life. If one distinguishes between the two, it implies that he does not have equality in vision (28).

29. The truthful eye of wisdom, erudition and enlightenment which is possessed by a Brahm-realised person is one through which a person sees the entire world as a personification of one, single, non-dual Brahm. He looks at the world with eyes of equality; he treats everyone and everything in the same manner, having no sense of distinction between any two entities.

Merely fixing the eye at the tip of the nose as done during various Yoga exercises of fixing attention is not the best form of sight (29).

[Note—This is like taking a potshot at those who blindly follow the methods prescribed in the scriptures without understanding their practical aspect and their subtle meaning. It is like a student learning a text book by rote but failing to apply what he has learnt into practice. This fixing of the sight at the tip of the nose is part of some of the famous Mudras or meditative postures such as Khechari Mudra. It is believed that it bestows astounding mystical powers upon the practitioner if done successfully so much so that he is able to see the three planes of time, i.e. the past, the present and the future. But if he does not have equanimity of vision, if he has no compassion and mercy towards all, if he is still clamped down in notions of mine and yours, me and you, then it is futile to exert one's self and make the body suffer by adopting some grotesque postures.]

30. The real 'sight' in metaphysical terms is that in which the distinction between the viewer, the object viewed, and the process of viewing is removed. In other words, truthful spiritual sight is that in which Brahm is perceived as the one who views, the object viewed, and even the medium of viewing. One should strive to have this holistic vision of this creation which is seamless uniformity; it is Brahm or Consciousness everywhere without exception.

To pretend to be fixing one's sight at the tip of the nostrils while one meditates upon one non-dual Brahm is not the holistic way of looking at this Brahm (30).

[Note--This is like trying to deceive ones self because on the one hand one's objective is noble and one is trying to make the most divine entity in creation as one's ideal idol for worship, trying to emulate its grand virtues and become enlightened about it in a holistic way, and on the other hand one has not understood what that icon stands for in real terms, one has not inculcated the ideals that this idol stands for. So the entire exercise goes to waste.]

31. True form of Pranayam (exercising restraint of the vital winds) is when one is able to restrain all his mental 'Vrittis'¹, and have a firmness of mind and conviction with regard to the fact that this entire creation is Brahm personified, that there is nothing in existence that is not Brahm (31).

[Note—¹The term *Vritti* refers to the natural inclinations and habits of the mind and its wayward tendencies. Since the mind controls one's attention, thoughts and intelligence as well as the organs of perception and action in the gross body, the extended form of this term includes the natural tendency of the creature to veer towards things which give it instant gratification and pleasure even at the cost of its long term harm. Even as Pranayam is considered as the bulwark in the field of meditation exercises as it helps to cleanse the body of all toxins and prepare the practitioner to progress further in his spiritual practice, control of *Vrittis* is equally important and effective tool to help him to control his mind which is at the root of all activities.]

32. To remove the mind from the entire array of delusions and magical charms spread all around it in this material world is tantamount to the 'Rechak' phase of Pranayam¹.

Similarly, to have a firmness of conviction and steadiness in belief in the truthfulness of the maxim and the universal axiom of the Vedas that 'I am Brahm personified' ('Aham Brahmasmi') is tantamount to the Puruk phase of Pranayam². (32).

[Note--¹The *Rechak* phase means exhaling breath after holding it for a while inside the body so that all accumulated waste gases and toxins are eliminated along with it. This is like the washing off or the cleansing phase of Pranayam. Here the word 'Rechak' implies the spiritual aspirant has cleansed his inner self of all spiritual impurities and tainting affects of the delusory world that has cast a dark shadow on the aspirant's immaculate Atma which is 'true self'.

²The *Purak* phase refers to inhaling fresh breath after stale one has been let out during the Rechak phase. Here the implication is that after all the corrupting thoughts have been eliminated from the mind, and after the mind is cleansed of all their ill influences, the aspirant is now prepared to receive fresh noble thoughts and fill his innards with refined views of the creation that are invigorating for his spirit much like oxygen rich inhaled air is invigorating for his body.

This statement 'I am Brahm' is one of the so-called 'Maha Vakyas' and they have been explained in great detail in 'Shuk-Rahasya Upanishad which is Chapter 13 of this volume. They are also the subject matter of many great Upanishads, such as Kaivalyo-panishad, verse no. 16; Sarwasaar Upanishad, verse nos. 12-14 of Krishna Yajur Veda tradition, Atmo-panishad and Mahavakya Upanishad of Atharva Veda tradition; Atma Bodh Upanishad of Rig Veda tradition; Paingalo-panishad, 3-2 and Mandal Brahmin Upanishad of Shukla Yajur Veda tradition.]

33. To control the various 'Vrittis' of the mind and intellect (as described in note to verse no. 31) is tantamount to doing Khumbhak phase of Pranayam for wise and enlightened ascetics¹. Stupid and ignorant people think that merely pressing the nose and preventing the winds from escaping from the nose is doing Kumbhak (33).

[Note—¹*Kumbhak* is the phase of Pranayam when inhaled air is withheld inside the body for a fixed time before it is expelled. The idea of 'holding of the breath' is extended here to incorporate the controlling of the wayward tendencies of the mind, as reining in of the mind is of utmost importance for success in any endeavour, be it spiritual or otherwise. This holding of the *Vrittis* is like bridling the horse, putting a harness to it and yoking it to the chariot while it is strictly reined in by an expert charioteer. Otherwise the chariot would have a good chance of tumbling over the roadside if the horse is not put under tight leash.

There is another way of looking at 'Kumbhak' phase of Pranayam from the perspective of metaphysics. When the aspirant has imbibed noble virtues as implied by the 'Purak' phase as indicated in verse no. 32 above, he is asked here to retain them inside his inner being during the Kumbhak phase so as to benefit from them instead of frittering them away by quickly doing 'Rechak' phase or symbolically

eliminating them along with the exhalation of breath. Even as oxygen-rich inhaled breath taken in during the Purak phase benefits the body when it is allowed to remain inside the body for certain period of time so that it can sufficiently oxidize the tissues and reinvigorate the body before it is exhaled, these imbibed good and auspicious virtues should be given time to mould the inherent character and personality of the aspirant for his overall good; they should be allowed to percolate down his inner self to bring about an effective positive change in the overall nature, attitude and outlook of the aspirant. This change would be reflected in his behaviour and thinking processes.

See verse no. 34 below which compliments this verse.]

34. The firm conviction and a holistic view that the same universal cosmic entity known as the Atma is uniformly present in all the objects in this world that are the subject of various perceptions such as sight, smell, hearing, tasting and feeling, to be able to see that single non-dual universal Atma everywhere, is called the true form of Pratyahar¹. This all-inclusive and universal view of the presence of Divinity everywhere and in everything helps the spiritual aspirant in cleansing his mind and intellect of all forms of impurities.

Hence, a wise aspirant should practice it with due diligence and sincerity to become an expert in this view of thinking² (34).

[Note—¹*Pratayahar* is withdrawal of the mind and its control. This verse compliments verse no. 33.

²When one becomes steady in his beliefs then no matter how much he has to suffer or how strong are the forces of delusions sweeping over him like a strong gale, he would stand his ground and not waver from his chosen path even for a fleeting moment no matter what compulsions he has to face.]

35. ‘Dharna’ is to have the vision of the supreme transcendental Brahm in all the places where the mind goes, and to have firmness of conviction and faith in this vision. This is the best form of having the virtue of Dharna as a tool to realise Brahm (35).

[Note—*Dharna* is one of the six limbs of Yoga. It briefly means to have a firm conviction, faith and belief in connection with something. When the spiritual aspirant begins to see Brahm everywhere wherever the mind goes, he would be having a non-dual vision of Brahm, and this view would compliment what has already been said earlier in previous verses.]

36. ‘Dhyan’ is to be steady in the thought of ‘I am Brahm personified’ (see verse no. 32), to be constantly engrossed in meditating and focusing the mind upon the ‘truthful self’ as a personified Brahm to the extent that no other props or supports are needed to reinforce this conviction. This realisation, this firm conviction, this enlightened view about Brahm and the ‘self’ provides immense happiness and bliss (36).

[Note—*Dhyan* is defined as contemplation and deep concentration of the faculties of the mind and intellect. It is also regarded as one of the six limbs of Yoga. Obviously, no great achievement is possible without a focused and concentrated mind. So if the spiritual aspirant is firm in his conviction that his Atma is Brahm personified, it would aid him in his spiritual upliftment as compared to the situation when he is full of doubts about the authenticity of this statement and keeps on jumping ships in the hope of reaching his spiritual destination, in which case he would be left neither here nor there.]

37. The last step in spiritual endeavour is the eclectic and transcendental state of 'Samadhi'. It is the apex of the pyramidal structure of all types of spiritual pursuits because it represents that perpetual state of supreme blissfulness obtained by complete enlightenment that comes with self-realisation and Brahm-realisation that transcends all other forms of mystical achievements.

When all the misconceptions, taints, deformations and defects of the mind and heart that have their origin in delusions and ignorance about the reality are eliminated, when they are thoroughly cleansed of all impure thoughts and made immune to all sorts of distractions and corrupting influences that ordinarily taint the creature's immaculate 'self', and when this makes him steady, sincere and diligent in his spiritual pursuit, it is only then that the excellent notion of 'I am Brahm personified' dawns on the spiritual horizon of any spiritual aspirant. [In all other cases, if a person makes this statement, he is, in all probability, being deceitful and untruthful.]

Samadhi is that state of existence when all other thoughts are sincerely banished from the mind for good except the eclectic and sublime thought of 'I am Brahm personified'¹. This eclectic thought takes firm hold and sweeps away all other thoughts from the spiritual aspirant's mind and heart for good (resulting in the state of utter blissfulness described in verse no. 38 below) (37).

[Note--¹Here, the word 'I' refers to the pure conscious Atma residing in the subtle heart of the spiritually enlightened person. This individual Atma of the creature is a microcosmic counterpart of the all-pervading, supreme, transcendental cosmic Consciousness known as Brahm. This Brahm has manifested itself in the form of the visible world consisting of animate creatures as well as inanimate things, and therefore all that exists is nothing but Brahm, including the person who makes this solemn statement 'I am Brahm personified'. Of course, as it is obvious here, if this statement comes from a convinced heart in a convincing manner, it is indeed a realisation of the great truth by such a man, and therefore he is indeed enlightened. Otherwise, such a statement is unwarranted and uncalled for, and it is full of deceit and like cheating one's own self as well as all the others around.]

Since the aim of all spiritual pursuit is to realise this supreme transcendental Divinity known as Brahm, the ultimate Truth and Reality in creation, so when a person has sincerely made this statement without any trace of deceit and doubt that 'I am Brahm personified', it is deemed that he has realised that final goal of all spiritual endeavours, i.e. he has come to terms with the great doctrine of the Vedas that the Supreme Being known as Brahm is not somewhere high up in the sky but immediately here and even so close to the person that the person and Brahm are indistinguishable from one another. In other words, the enlightened person becomes as holy and divine as the cosmic Divinity itself.

Samadhi is the stage in spiritual efforts when the aspirant has transcended other stages in the spiritual hierarchy and reached a trance like state of existence marked by perpetual blissfulness obtained when one has tasted the nectar of eternity, beatitude and felicity springing forth from the pure conscious Atma, the true 'self' of the spiritual aspirant, which in turn is a personification of the cosmic Consciousness known as Brahm. When this realisation dawns upon the spiritual horizon of the aspirant, no other experiences matter.]

38. The eclectic sense of blissfulness, the perpetual state of beatitude and felicity obtained during Samadhi is eternal, natural, genuine, of a high profile and quality, effusive and effervescent in nature, while all other types of happiness and joys are false, artificial and transient.

Constant practice of Samadhi and other spiritual methods (as enumerated in this Upanishad) makes an ascetic perfect in his spiritual achievements, and he

ultimately attains his goal of Brahm and 'self' realisation. He effectively becomes a personification of the supreme transcendental cosmic Consciousness known as Brahm in the true sense of the word. This divine enlightenment makes him spiritually liberated and delivered; he attains emancipation and salvation for his soul even while he is still alive in this world and has a physical body. This is called 'Jivan Mukti'—to be liberated and delivered even while living in this world with a gross body and going about one's normal duties vis-à-vis the world¹ (38).

[Note—¹In other words, when he has become enlightened and self-realised, it does not matter to him whether or not 'he' (i.e. his 'true self', the pure conscious Atma, the soul, the divine Spirit present in his body) has a physical body or not, for he had totally disassociated himself from the latter and remains in a complete detached state of mind. It does not matter to him whether or not his body suffers from any disease for instance, whether or not the body is comfortable or in discomfort, and so on and so forth.]

39. When he has reached this exalted state of existence as obtained during Samadhi, he does not need the help of any other means in his spiritual progress any further. He has become the 'attained one', the 'realised one', 'the enlightened one'. Such a person is deemed to be a king amongst ascetics and spiritual aspirants. He has obtained mystical powers and potentials which are supernatural.

He becomes totally submerged and soaked in the thoughts of Brahm. All his sense perceptions, his mind and heart, as well as his faculty of speech become devoted to Brahm; they are centered around Brahm; Brahm becomes the pivot around which his entire being, his whole existence revolves.

This unique state of existence in which nothing exists and nothing else matters for him but Brahm makes such a devoted ascetic firmly established in the truthful form of Brahm realisation, i.e. he becomes a living embodiment of the glories and divinity of Brahm (39).

40-41. As soon as the ascetic reaches the state of Samadhi, numerous problems and hurdles suddenly present themselves before him, trying to deviate him from his path and demote him from his spiritual achievements. He is often enmeshed in their web and falls from his chosen path.

Some of these spiritual obstacles are the following—to deviate and waver from the chosen path to research the truth of Brahm, i.e. the path of Brahm-realisation, to be overcome with lethargy, indolence and inertia, to have a desire and longing to gratify the sense organs and enjoy the objects of these sense organs and their attendant pleasures and comforts, to have worldly passions, lust and yearnings, and be infatuated with the objects that arouse such emotions (40), to be engulfed in the darkness of ignorance and delusions causing bewilderment and confusions in the absence of light of truthful knowledge and erudition about the reality and its accompanying enlightenment and wisdom, to be deterred by efforts made during meditation which cause so much exertion that one begins to sweat, to be so much mentally distracted that it is difficult to fix attention on the chosen goal, etc.

A wise and erudite aspirant of spiritualism should exercise special caution and guard against these pitfalls and remain wary of them. He should painstakingly keep them at bay (41) [40-41.]

42. 'One becomes what one thinks about constantly'—this is an established adage. So when one begins to remain indifferent to and immune from all emotions and thoughts other than that of Brahm, when one inculcates the habit of remaining in a state of

perpetual indifference and non-involvement in anything pertaining to this existence other than the thoughts of Brahm, it is natural that gradually the mind and its natural tendencies withdraw from everything else and become concentrated on this one single point, the thoughts of Brahm.

Hence, the true state of Samadhi, its true accomplishment and its real consummation is when the ascetic begins to think that Brahm is present as his own self as affirmed and asserted by the great saying of the Vedas, i.e. 'I am Brahm'. When this happens, the ascetic has come full circle. This is the holistic and all-inclusive view and philosophy pertaining to Brahm. The ascetic must practice this state of fulsome realisation of Brahm during his Samadhi (42).

43. The wise and enlightened ascetic should inculcate this holy and eclectic view point that everyone and everything in existence, including him, is Brahm. This is the holistic, best and most auspicious view of creation. This is the noblest form of thought that distinguishes an enlightened one from others, and any other notion of creation other than this would make a man no different from an animal. Such a man's life is lived in futility (43).

44. Those who have this eclectic, auspicious, holy and holistic view of the divine supreme cosmic Consciousness known as the venerable Brahm, who constantly contemplate and meditate upon this Brahm, are the ones who can be truly called self-realised, Brahm-realised, holy and auspicious. They are indeed the privileged and fortunate ones. They are certainly the wise, erudite, sagacious and enlightened ones. They are worthy of honour in the three worlds—the terrestrial, the celestial and the nether worlds (44).

45. Those who are truly wise, enlightened and Brahm-realised are endowed with this eclectic vision of creation and begin to see all in equal terms; they develop high degree of equanimity and fortitude that makes them exemplarily calm, tranquil and serene. Gradually and by diligent practice this thought process matures and becomes their natural habit and normal way of thinking. [In other words, such ascetics and enlightened persons do not have to make special efforts and exert their mind into thinking that this world in all its varied manifestations is nothing but the truthful Brahm personified, so all should be treated equally. This vision of creation is normal for them; it is part of their natural view and perception of the world.] Indeed, such people have truly realised Brahm; they have truly understood who or what Brahm is.

By simply saying 'I am Brahm personified' without being convinced of its profound truthfulness, its magnificent and wholesome spiritual value, and its far reaching and all-inclusive import, one does not qualify to be called Brahm-realised or wise and enlightened. Such persons have not understood the true and honest form of the supreme transcendental reverend Being known as Brahm (45).

46. Those who make big talks about Brahm (i.e. preach about Brahm, boast about their knowledge of Brahm, pretend to be Brahm-realised) without actually inculcating any of the glorious virtues of Brahm or depicting any sign of a truly Brahm-realised wise and enlightened soul—such persons are totally ignorant of Brahm and do not have anything to do with Brahm. [They are imposters and cheats.] Such people repeatedly die and take birth; they are not freed from this endless cycle. [In other words, such people can never hope to get emancipation and salvation for their self.] (46).

47. On the other hand, those who have actually tasted the ambrosia of Brahm-realisation, those who have imbibed and inculcated the glorious and auspicious virtues of Brahm in themselves, cannot abstain from the thoughts of Brahm even for a moment (because this thought of Brahm gives them so much ecstasy and bliss that they wish to constantly drink this nectar for eternity).

Some of the great sages and seers who come under this category and can be cited as examples here are Shukdeo¹ and Sanakadi², as well as the creator Brahma himself who remain eternally engrossed in the thoughts of the venerable Brahm. Like them, those who are true seekers of this supreme Brahm also remain submerged in the thoughts of the venerable Brahm (47).

[Note—¹*Shukdeo* was the son of the legendary seer and renowned sage Veda Vyas. He was highly respected and was born of the celestial maiden named Ghri-taachi when she had taken the form of a parrot, called Shuka in Sanskrit, to produce Shukdeo. He had his education under the expert guidance of his father Veda Vyas as well as from the legendary king Janak, the father of Sita of the Ramayan fame and the most self-realised and enlightened king of his time. His self restraint was so profound that the celestial Apsara, the dancing damsel of the court of Indra, the king of Gods, failed to trap in her honey trap. Shukdeo learnt the epic Bhagvata Mahapurana from his father and then narrated it to Parikshit at the culmination of the Dwapar Yug (the third era of the four-era celestial cycle of mythology) and the beginning of the present era called Kali Yug.

In Maho-panishad of Sam Veda tradition there is an incident where the sage Shukdeo had to wait for twenty-one days before king Janak granted him an audience to test his sincerity and steadfastness. Shukdeo had been sent by his father Veda Vyas to king Janak to learn certain secrets of metaphysics (Maho-panishad, 2/21-28).

There are two Upanishads that owe their revelation to sage Shukdeo—on in part and the other in full. The first one is Maho-panishad of Sam Veda whose Canto 2 is especially dedicated to the discourse given by Veda Vyas and later on by king Janak to satisfy the metaphysical queries of Shukdeo. The second is Shuk Rahasya Upanishad of Krishna Yajur Veda which was preached by Lord Shiva to Shukdeo.

²*Sankaadi*—Sage Sanatkumar is considered as one of the four Manas Putras or the mental-born sons of the creator Brahma. The other three are Sanak, Sanatsujaat and Sanandan. They are regarded in a perpetual state of boyhood. Together they are called ‘Sanakaadi Rishis’.

According to Kalagni Rudra Upanishad of Krishna Yajur Veda, Sanatkumar was taught how to wear the Tripund, the three lines marked on the forehead of all Hindus, by Lord Kalagni Rudra, a form of Shiva, himself. Sanatkumar had taught the greatness of Vishnu to demon Vrittaasur, the enemy of Indra, the king of Gods. He also taught spiritual wisdom to sage Narad, the celestial sage.

Sanatsujaat taught spiritual wisdom to Dhritrashtra who was the blind father of the Kauravas of the epic Mahabharat fame. Sanak is said to an eternal companion of Lord Vishnu. Sanandan is regarded as the ancient preacher of the Sankhya Shastra, even more ancient than Kapil.]

48. As long as there is a ‘Kaaran’ (cause), there will be a relevant ‘Kaarya’ (effect). This relationship between them is eternal and infinite in creation¹.

This is why the thoughts of charming sense objects of the material world and the pleasures and comforts provided by them (the Kaaran or cause) create a desire for them, the yearning and longing for them (the Kaarya or effect). If one wishes to eliminate the effect, one should first get rid of the cause².

This observation can be extended to mean the reverse order also. That is, if the ‘effect’ is not there, then surely there is no existence of ‘cause’ at all.

So, when one becomes wise and enlightened enough to realise the entrapping, deluding and transient nature of the comforts and pleasures of the material sense objects of this artificial world as well as the long term negative consequences that these would have on the person's spiritual well being and happiness, then one would apply one's intelligent mind to get rid of such things that would cause pain to him. He would have no desire for them. In other words, the 'cause' or 'Kaaaran' is eliminated.

Thus, he would shun the illusive comforts and pleasures of this world altogether as if they did not exist at all. When this erudition takes hold, then naturally the 'effect' or 'Kaarya' is automatically eliminated—i.e. there will be no entrapments of any kind.

The wise person not only loses all interests in this world and its material objects along with the comforts and pleasures provided by them; both these things cease to exist at all for him for all practical purposes³ (48).

[Note—The relationship between Kaaran or cause and its Kaarya or effect can be understood by a simple example. For instance, if clay is the Kaaran, then the earthen pot is the Kaarya. This is because the pot is the effect of the presence of clay; had there been no clay there would have been no cause for the clay pot to come into being. Similarly, fire is the cause and the smoke is the effect. Therefore, if there is smoke then surely there must be some fire somewhere. If there is clay pot then surely there must be clay around. In other words, they are intricately woven into one another; they are inseparably related to one another; they are like the two poles of a magnet. The Kaarya-Kaaran effect has been explained in Shuk Rahasya Upanishad, verse no. 42 of the Krishna Yajur Veda also.

²In other words, if one wishes to remain free from being trapped by the desire for obtaining material comforts and deriving pleasures from the perishable sense objects of this deluding and transient world then one would have to first get rid of the awareness of their presence and wipe off their memory from the mind. It is only then that the desires would automatically cease to exist. As long as the cause persists, the effect cannot be wished away.

³The 'effect' here refers to the charms of this deluding world along with its material comforts and sensual pleasures. No matter how alluring they might seem on the surface, they are actually thorns that would cause long term miseries and torments for the creature and rob him of his peace of mind and become hurdles in his path to spiritual liberation and deliverance. A wise and enlightened man realises that if he allows himself to be devoured by these sense objects then he would get sucked in their vortex, and salvation would elude him forever.

Similarly, the 'cause' here refers to the mind which has erroneously thought that the world really exists and its charms would provide real happiness to the person. So as soon as this erroneous perception is removed, as soon as the man realises the fact that real happiness and peace is not to be found in the sense objects but in spiritual upliftment and accessing the eternal fount of beatitude and felicity that is obtainable by Brahm-realisation, then obviously and naturally he would desist from falling prey to such enticements of the artificial world and strive to remove the very cause that has been at the root of all his delusions and miseries for him in the past. That is why the necessity of controlling of the mind has been constantly emphasised by the Upanishads.]

49. When this happens, the mind and intellect become cleansed and purified of all extraneous corrupting influences. With this Brahm oriented mind-intellect, the light of Brahm-realisation dawns. [For example, only when the sky is clear in the morning can one witness the glorious sun rise in the eastern sky, and not when the sky is overcast with dark clouds. Here the dark clouds resemble ignorance and delusions that prevent the view of Brahm from manifesting itself on the intellectual horizon of the person.]

This state is the exalted, eclectic, sublime and divine state of self-realisation which cannot be defined and delineated by words. Here the aspirant would have witnessed his own pure truthful conscious ‘self’ in the form of Brahm (49).

50. When the spiritual aspirant has been diligently practicing the different tenets of Yoga philosophy as enumerated in this Upanishad, he reaches a certain stage in his spiritual endeavours when he can actually experience and witness the presence of the supreme transcendental universal Truth, the cosmic Consciousness known as the venerable Brahm, the only truth and reality in this creation in his own self, in his own Atma, as well as everywhere around him. Brahm is an entity that can be attained or approached or accessed only by personally experiencing and witnessing its divine presence (because it is subtle and sublime consciousness and not any gross perception that can be accessed by the mind or body).

‘The entire visible world is one or the other form of one non-dual Brahm, and there is nothing in it that is not Brahm; or, in other words, there is Brahm everywhere’—a wise and enlightened ascetic should cultivate this holistic and divine view of this world. He should see uniformity in existence and become blind towards artificial distinctions and illusive variations in it (because such distorted and surreal views of the world would not fit in well with the actual fact of its truthful form and real essence—which is the existence of one single cosmic entity known as Brahm which has uniformly manifested its self in all these myriad, varied and multifarious forms in which the visible world exists). This results in the elimination of all that is not the reality and truth.

Such auspicious views of Brahm and the world give immense sense of contentedness and bliss to the spiritual aspirant; it helps to stabilise his mind and its thought processes. A wise, erudite, sagacious, enlightened and Brahm-realised person is one who is firm in this conviction and established in this universal spiritual truth which keeps him eternally happy, contented and blissful. [Refer verse no. 43 in this context.] (50).

Canto 2

[Canto 2 is a magnificent exposition on the eclectic philosophy of ‘non-duality’ that is the hallmark of Advaita Vedanta. It essentially stresses the fact that whatever exists in this creation is one or the other manifestation or revelation of one single indivisible entity known as the divine Brahm which in turn is the cosmic Consciousness personified and the only Absolute Truth in creation. The entire creation is simply a variation of this one Truth or its extension. What is not this is false, and hence anything that is not Brahm is non-truth and non-consciousness. This entire Canto is basically intended to establish the universality of the conscious Spirit or Soul as the only truthful entity in existence. It is intended to spread the message of universal brotherhood and the eclectic view of treating all alike with equanimity and love, and remove artificial distinctions and distortions in society that are at the root cause of so much strife, disparities and dichotomy.]

1. Kumar¹ (i.e. Lord Karikeya who is also known as Shadaanan) once again asked Lord Shiva—‘Oh Lord! Please preach me about that form of Divinity (i.e. Brahm)

which is steady, immutable, indivisible, uniform, and non-dual pure cosmic Consciousness personified.’

Lord Shiva replied—‘The entire visible world with all its myriad forms and varied manifestations are fundamentally the same thing, the same non-dual, indivisible and immutable supreme entity (known as the cosmic Consciousness or Brahm) revealed in as many forms as there are variations in the existing world. In other words, the same consciousness prevails uniformly through the length and breadth of the entire world. This is the basic principle behind all spiritual philosophies pertaining to the uniformity of creation (1).

[Note—¹*Kumar* also has other names—viz. Kaartikeya, Shadaan, Subrahmanya, and Skanda. He is the son of Lord Shiva or of Agni (the Fire God). Being the beloved son of Lord Shiva and his divine consort Parvati, he is also called ‘Kumar’ which literally means a son, a prince. He is called Subrahmanya because of his fair radiant complexion which is like pure gold. He is also known as ‘Skand’ which refers to someone who attacks; one who jumps, leaps or hops swiftly and with agility as an active soldier in the heat of battle. One reason for this name is that it is believed that he was born in a forest of dense grass which was shaped like arrows.

He was reared by six divine celestial mothers who personified the constellation called Krittikaa (or Pleiades), hence the name ‘Kartikeya’. He assumed six faces to suckle milk from all these six mothers, hence called ‘Shadaan’—one with six heads or mouths. He was appointed as the commander of the army of Gods, hence got the name ‘Deva-Senapati’. He is called the God of War as a leader of Shiva’s ghosts against the enemies of the Gods.

His weapon is ‘Shakti’ (a lance or a spear). It shines brilliantly like the fire. His mount is a peacock. His flag or banner has the sign of the fowl marked on it. He was born to kill the demon Taarkaasur.

The *Ekakchar Upanishad* of Krishna Yajur Veda tradition, in its verse no. 3-4 says that the supreme Brahm had revealed himself as ‘Kumar’ or Kartikeya to protect the creation from evil forces.]

2-10. In fact, everything in existence is basically one single entity if we look at the fundamental ingredient in them either individually or collectively. All the Mantras (mystical words or letters having supernatural powers), all activities and deeds, all forms of knowledge and information, all the three primary Vedas (Rig, Sam and Yajur), all the primary elements of creation such as earth, water, sky etc. (the other two being fire and air), all the scriptures and knowledge contained in them, all the traditional religious sacraments, observances and vows, all the three Gods of the Trinity, i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder, all the living creatures in this world including the individual person and his Guru (moral preceptor, teacher, preacher and guide), all the objectives in life and the uncountable methods to reach these objectives, all the individual units that form an individual living being such as his gross body, subtle mind and subtler intellect etc., all forms of happiness and joys, and all types of perceptions pertaining to life in this creation—verily, all of them are nothing but various and myriad manifestations of the same immutable and indivisible supreme transcendental divine cosmic Consciousness known as Brahm that uniformly and universally pervades in each of these entities in existence, forming their basic and only identity.

Oh Shadaan (Kartikeya)! There is nothing other than this. Even I am that indivisible and immutable Supreme Being personified. Verily, there is nothing except this Truth (2-10).

11-23. Whatever that exists, the gross as well as the subtle, is this one, non-dual, indivisible and immutable Divinity revealed in that form. Indeed, even your true form is this; you are also a personification of this eclectic Divinity.

That which is not known as well as which is known by evidence or inference are all that non-dual universal entity. Even the father or mother, the brother or husband, the minutest and microscopic or the vast, colossus and macroscopic, the grossest and lowest part of the body such as the feet and the anus as well as the most exalted part of it such as the head, the inside of this body as well as the outside of it—all are completely drenched and soaked by this ambrosia-like Divinity known as cosmic Consciousness or Brahm.

Small and big mountains, the moon and the sun, all the corners of the realm, the entire earth, the stars—all of them are inseparable and indistinguishable from that immutable and indivisible ambrosia of Divinity that is eternally calm and serene, that is ever forgiving and tolerant, that is without any specific attributes and qualifications which can distinguish its one form from the other.

Verily, a witness, a friend, a companion, a king, his kingdom and subjects, the divine Mantras headed by OM, the different pathways to spiritual liberation and deliverance such as doing Japa (repetition of Mantras), Dhyan (meditation, deep concentration and contemplation) etc. in order to reach the supreme state of emancipation and salvation called Param Pad, all shades of meaning of enlightenment and wisdom, all sorts of wealth (such as material wealth of this world and spiritual wealth such as self-realisation and other divine qualities and attributes), all things that can be offered to the sacred fire, to the Gods and the holy Spirits, all types of fire sacrifices themselves, all the heavens—every one of them are nothing but various revelations or different manifestations of the one single immutable and indivisible Divinity known as cosmic Consciousness or Brahm that uniformly and universally pervades in each of these entities in existence, forming their basic and only identity (11-23).

24-30. All the entities enumerated above have one uniqueness in them, one common denominator—viz. they are all manifestations of a single, wholesome, non-dual, uniform and universal entity which is indivisible and immutable. This unique, eclectic and divine entity is called ‘Chinmaya’—i.e. it is the almighty universal Holy Spirit that is pure cosmic enlightened and omniscient Consciousness personified that is all intelligence and all-knowing. This is synonymous with the eternal Truth of creation which is the supreme transcendental Brahm [In other words, the all-pervading, all-incorporating and all-encompassing unique entity that is the universal Truth and pure cosmic Consciousness personified is defined as ‘Chinmaya’ and it is also known as Brahm.]

A truly wise, sagacious, erudite and enlightened person is one who is of a firm conviction and steady belief that there is nothing in this world except one ‘Chinmaya Truth’, i.e. one non-dual Absolute Brahm. There is no such separate entity as ‘the world’, for whatever that exists is the pure consciousness personified and known as Chinmaya. This world is also Chinmaya.

The true self of the aspirant known as his Atma or soul is Chinmaya; all the creatures are Chinmaya. You and I, and all others are Chinmaya.

The sky, the earth, the water, the wind, the fire—all the elements are Chinmaya. The Trinity Gods—i.e. Brahma the creator, Vishnu the sustainer and protector, and Shiva the concluder—all are Chinmaya. Even those Gods who are not included in this triad of creation are Chinmaya.

That which has gone away or has become past, that which would happen in the future, and that which is happening in the present—all are Chinmaya.

All objects, all things, all planes of time and era, all forms of Gyan (knowledge), all objects and things which are worth knowing, and all those who know anything—all of them are Chinmaya.

All talk, all things talked about, and all forms of speech are Chinmaya.

All that which is false as well as all that which is true is Chinmaya. All beginnings and all ends—all are Chinmaya (24-30).

[Note—In brief, these verses emphasise the point that a truly enlightened spiritual person is one who has only Brahm in his thoughts and vision. Such a visionary person sees only one universal Spirit as pervading and permeating uniformly in this entire creation. He does not allow himself to be bogged down in numerous doctrines and philosophies which are meant for worldly fame and scholarship but not for spiritual achievements. Once he has realised this single fact about the universal Spirit, there is nothing more to be searched. This gives him his much sought after eternal rest and peace.]

31-43. Everything from the very beginning to the final end is Chinmaya. Everything from the Guru (moral preceptor, teacher, guide and preacher) to the disciple is Chinmaya. [That is, everything from the fountainhead of knowledge represented by the Guru to the hollow bowl represented by the ignorant disciple is nothing but one or the other manifestation of the universal Spirit known as Brahm.]
